Ipswich, Tuesday. — Wheat supplies seem to be getting smaller, and the trade was firm at fully last week's prices; good reds or whites 29s to 30s per qr, delivered at Ipswich. Barley: With an average supply, and a continuance of liberal buying from certain quarters, prices were well maintained; useful malting runs 28s to 31s; fine brewers' samples 32s to 36s per qr. Feeding corns were all strong, with oats 1s per qr dearer on the fortnight at 19s to 21s, and old at 21s to 22s 6d per qr. Maize 6d up on the week at 24s to 24s 3d; and beans and peas firm at full prices. Linseed cakes firm at £8 to £8 10s; and cotton at £5 5s to £5 7s 6d per ton. Milling stuffs steady, and unchanged.

Leeds, Tuesday.—Without being active, wheat is ruled strong throughout the week at prices against buyers. Shipments continue on a more moderate scale, the U.K. still running short of its proper proportion, so that the quantity on passage has reached an exceedingly low level, which strengthens the hands of holders, and, with diminishing supplies of English wheat, prices for all descriptions must be quoted about 6d to 9d dearer. Malting barley without material change. Maize 9d dearer. Beans very scarce. Oats steady.—DUNNS AND CO.

Leeds, Friday.—English wheat firmly held at Tuesday's full prices, but foreign was the turn cheaper. No change reported in either English or foreign barley, and foreign oats maintained the late advance, with a further rising tendency. Peas, beans, maize, and flour were unaltered.

Leicester, Saturday. —With smaller supplies of home-grown wheats, and a full attendance of buyers and dealers, trade ruled brisker at an advance of 1s per quarter. Red wheats, 28s to 30s; white wheats, 29s to 31s per 36 stones; barley (larger supply), 25s to 29s per 32 stones. Oats firm at 6d per quarter advance, at 19s to 21s per 26 stones; beans, 32s 6d to 34s per 38 stones.

Lincoln, Friday. — Good attendance but moderate show of English wheat, which sold readily at an advance of 6d per qr. Oats and beans firm. Barley a slow trade at a reduction of 6d per qr. on the week.

Liverpool, Friday.—Wheat: There has been a fair attendance at the market, and wheat is very firmly held for an occasional ¼d advance, with a very fair business passing at full prices. Indian sorts are exhausted. Flour in better request for both foreign and home-made brands. Prices are unchanged, but the tendency is in sellers' favour. Maize: Mixed is steady at ¼d advance, with a moderate trade passing. Plate is quiet, with prices the turn dearer than last Tuesday. European sorts steady, unchanged. Barley: Malting, owing to decreasing stocks, is held for about 1s advance, with a moderate inquiry. Feeding is firm and in good request at 1d more money. Beans steady but quiet at about unchanged prices. English sorts favour buyers. Peas firm, with very limited offers at ¼d advance. Demand moderate. Oats firmly held, with a rather better demand all round. English are unchanged in price, and foreign mostly the turn dearer. Oatmeal in small demand, but firmly held at fully recent currencies. Oilcake: A good trade passing, and firmly held at full prices for English makes, whilst American linseed and cottonseed meal are quoted 2s 6d per ton higher.—SEGAR AND TUNNICLIFFE.

Manchester, Thursday. — Both English and foreign wheat are dearer on the week 6d per quarter and 1d per cental respectively. Flour unchanged. Indian corn about 2d per cental dearer all round. Good demand for English and foreign oats at full rates. Peas dearer. Barley and beans unchanged. Bran in good request, thirds about 3d per load dearer.

Newark, Wednesday. Wheat a firm trade at an advance of 6d per quarter; barley quiet on former terms; oats, 6d per quarter dearer; beans unchanged. Quotations: Wheat, 28s to 29s; barley, 23s to 30s; oats, 17s to 19s; beans, 30s to 33s per quarter.

Newcastle-on-Tyne, Saturday. Our market was fairly steady for wheats at fully last week's prices. American maize slightly in buyers' favour; Plate firm at last Saturday's prices. Oats were held for fully last week's prices, with a fair demand. Beans and peas slightly in the favour of buyers. No change in barley, which changed hands at irregular prices.—JOSEPH POLLARD AND CO.

Norwich, Saturday. There was a small supply of wheat at our market to-day, prices being rather against the buyers. Barley was in better supply, with a firm trade, at late quotations. Continued wet weather prevails. Wheat, red, 28s to 29s per qr., weight 63lb. per imperial bushel. Barley, average runs, 24s to 28s per qr.; better sorts, 30s to 32s. Corn inspector's return for the week ending October 7, 1905:—Wheat, 1,870, 27s; barley,

Nottingham, Saturday.—Small supply of wheat, and prices advanced fully 6d per qr. Barley a fair show; better qualities made full prices. Oats but few offering and 6d higher. Beans firm.—ROBT. HUBBLE.

Northampton, Saturday. — Good attendance and brisk demand for wheat. Prices remained firm. New wheat, 27s to 27s 6d; malting barley, 26s to 32s; barley, 24s to 25s; new white oats, 16s to 18s; new black oats, 16s to 18s; new beans, 28s to 30s; peas, 27s to 28s; flour, 24s 6d to 28s 6d.

Oxford, Saturday.—The attendance was moderate, and, with supplies on a somewhat small scale, buyers operated sparingly. Only a small demand was experienced for wheat, but holders were firm, and values had a hardening tendency. Feeding stuffs moved slowly at steady rates.

Peterborough, Saturday.—Wheat was again in small supply and buyers had to give 3d to 6d more money. Barley was slow for all but the best, but not quotably lower. Oats scarce and rather dearer.—THOMAS HILL AND SON.

Plymouth, Thursday. There was a very fair attendance on our market here to-day. Barley 1s, maize 6d, oats 3d, wheat 3d to 6d—all dearer.—ORLANDO DAVIS AND CO.

Preston, Saturday.—Wheat closed for the week with a fair consumptive demand at about ½d to 1d per cental advance on the week. English wheat was in small supply. Poor demand for seed. Flour very steady, tending dearer. Quotations: Wheat, white, new, per windle of 220lb., 12s 6d to 13s; ditto red, 12s to 12s 6d; oats, old, per bushel, 3s to 3s 2d; ditto, new, white, 2s 6d to 2s 7d; ditto, yellow, 2s 3d to 2s 4d; beans, per windle of 220lb., 16s to 16s 6d.

Reading, Saturday.—Fair attendance, average trade. Wheat, 29s to 32s; barley, 26s to 35s; oats, 16s to 23s; beans, 32s to 40s; peas, 29s to 35s; tares, 5s to 7s per bushel; hay, 55s to 70s per ton. An order for 1,400 tons of hay at 68s per ton was placed in one hand.

Retford, Saturday. There was a distinct improvement in the wheat trade. The show was small, and the demand limited, with a slight upward tendency. Wheat, 28s to 29s; malting barley (slightly lower), best, 28s; superior lots, 29s to 30s; general run, 25s to 27s; grinding barley, 24s to 24s 6d; maize, 25s; English beans, 30s; black oats, 16s 6d to 19s per quarter.

Ripon, Thursday.—A firm tone prevails, prices having an upward tendency. Holders of new oats are asking an advance of 6d per quarter. A good supply of English wheat at late rates. New wheat, 27s to 29s; wheat, foreign, 32s to 36s; barley, grinding, 22s to 23s; barley, malting, 24s to 28s; new oats, 17s 6d to 18s; maize, round, 25s 6d to 26s; maize, flat, 25s 6d to 26s 6d per quarter.

Shrewsbury, Saturday.—Quotations: Wheat, 12s to 12s 6d per 225 lb.; oats, old white, 15s to 16s per 240lb.; new, 11s 6d to 12s 6d per 240lb.; peas, 11s 6d to 12s 6d per 240lb.; beans, 13s 6d to 14s per 240lb.; barley, 14s to 19s per 280lb.

Stamford, Friday.—A firmer tone was noticeable in the wheat trade, and inquirers for the best had to pay 28s to 29s; secondary qualities, 27s to 28s. There was a wide range in the quality of the barley, but only the very best could command any call, and vendors could not keep the level of prices up to last week's standard; best grinding barley 22s to 24s 6d, malting fully 30s to 33s 6d. Beans, 28s 6d to 30s; oats, 16s 6d to 17s 6d per qr. Peas made late rates with difficulty.

Sunderland, Saturday.—Fair show of grain. Wheat sold at the extreme rates of last week. Barley firm. Oats steady. Arrivals, coastwise:—Barley, 802 qrs.; foreign, nil.—E. AND F. RICHARDSON.

Tunbridge Wells, Friday.—New white wheat, 28s to 29s; new red ditto, 27s to 28s; barley, 27s to 32s; grinding ditto, 19s to 23s; oats, English, 18s to 21s; rye, 23s to 24s; peas, 31s to 35s; beans, 32s to 36s; tares, 48s to 56s; maize, 24s to 28s.

Warwick, Saturday.—Very small supply of grain on offer. Wheat worth rather more money. Oats run 1s per qr. dearer. Fair demand for feeding stuffs, which make a slight advance on last week's prices.

Winchester, Saturday.—English wheat rather quiet trade, prices about 6d better on the week. Foreign unaltered. Barley 6d and maize 3d dearer. Oats occasionally 3d advance. Flour a fair demand at late rates.—FEAR, COLEBROOK AND CO., LTD

Wisbech, Saturday.—A small supply of grain at market. Wheat sold at full prices; reds, 29s to 30s. Oats 6d dearer to buy, 17s 6d to 18s 6d. Barley, 24s to 27s.—JAMES FLETCHER.

Wolverhampton, Wednesday.—There was a moderate attendance, and business was quiet. There were no alterations in the quotations.

Worksop, Wednesday. — Moderate attendance, and very small supply of grain, which sold at practically last week's rates. White wheat, 27s 6d to 28s 6d; red wheat, 26s to 27s 6d; best malting barley, 28s to 30s; secondary, 26s 6d to 27s 6d; grinding barley, 22s to 24s; 25s 6d to 26s 6d per quarter.

Yeovil, Friday.—A firm trade, with a general advance of from 3d to 6d per quarter. For good quality English wheat from 31s 6d to 32s per quarter was paid, secondary wheat, from 31s 6d to 32s per quarter was paid, secondary making from 28s 6d to 30s; foreign, 33s to 35s 6d; malting barley, 33s to 35s 6d; feeding, 21s to 23s 6d; foreign, 19s to 20s 6d; oats, black, 17s 6d to 20s; Irish, black, 16s 6d to 17s 6d; white, 16s 6d to 20s 6d; beans, 32s 6d to 33s 6d; maize, 24s to 24s 6d; rye, 21s to 22s 6d; vetches, 6s to 7s per bushel. A steady trade in flour, with firm quotations, fine making about 25s, and extra fine 27s 6d. Meal and offals in good request, at prices which favoured sellers.

York, Saturday.—Wheat is rather firmer; not so much offering, holders generally asking 3d to 6d advance. Fine white, 28s 6d to 29s 6d; red and mixed, 27s to 28s 6d per quarter of 36 stones. Malting barley meets with a slow trade, the supply being in excess of the demand. Fine, 27s to 29s; good, 25s to 27s; feeding barley, 23s to 25s per quarter of 32 stones. Oats very firm and scarce. White Tartary, 17s to 18s; black, 17s 6d to 18s 6d; white Garton, 18s to 19s per quarter of 24 stones; rye, 21s to 21s 6d per 36 stones; beans, 30s to 33s.

FOREIGN

Hamburg, Saturday.—The weather has continued rainy and boisterous, with frosty nights. According to latest reports, potatoes are turning out a fair average crop and there are no serious complaints about the disease. There is a lively trade doing in all descriptions of grain at higher prices. Fine Holstein and Mecklen-

burg wheat is selling at 31s 9d to 32s 3d per 504lb. f.o.b., and very scarce; American hard winter No. 2 is held at 31s 3d; 80 Ko River Plate Rosso at 31s 3d; 9 30-35 Russian Ulka 31s to 31s 3d per 480lb. c.i.f. Hamburg. Offers of rye are very scarce, while there is a brisk demand; 9 15-20 Nikolojeff afloat is held at 26s 9d; 72 73 Ko Moldavian at 27s per 480lb. c.i.f. Malting barley firm in value; good Danish and East Prussian is taken by our brewers at 29s to 30s; good Bohemian at 32s to 33s; fine Bohemian and Slovakian is held at 36s to 38s; rather thin Chilian was sold at 27s 6d per 448lb.; Russian feeding barley meets with a ready sale at 18s 9d to 19s; American at 18s 3d per 400lb. c.i.f. Hamburg. Oats are constantly improving in values; Russians are selling at 16s 3d to 17s 9d; white clipped American at 16s 6d to 16s 9d per 320lb. c.i.f. Hamburg. Mixed American maize has been sold afloat at 25s, January at 21s 6d; River Plate, October-November, 23s 3d per 480lb. c.i.f. Hamburg.—JOHN TATLOCK.

Paris, Wednesday.—There is very little to report regarding the provincial markets, the attendance at which continues scanty. The general tone remains calm, due to the paucity of offers, but as millers are not inclined to pay the prices asked, only fine grades of wheat are able to maintain their late price level, while ordinary kinds show a tendency to fall. At the Bourse de Commerce business was still extremely quiet; buyers are most reserved in view of the larger offers reported at to-day's weekly spot market, and refuse to pay the prices asked. The tone of the market is consequently heavy, and the prices, both of flour and wheat, have lost from 5c. to 10c. Rye: Nothing doing; prices unaltered. Oats are still firm, with a slight advance in price, due to shorts' covering. At the weekly spot market the prices of home-grown wheat remains the same, excepting in Beauce. Business has been somewhat steadier, there being more buyers. Foreign wheat is firm. In consumption marks flour business is quiet, but the prices of all grades are well held. The stocks of flour are generally very low. Business in rye is very quiet, because holders are waiting for rye to rise in price. Oats, having got in the hands of speculators, have again risen in price, despite the official figures published, showing that the crop this year is much above the average. Should the present weather continue the quality of barley will be much improved, which will also have a favourable effect upon demand; prices have already become firmer.—*Dornbusch.*

THE BALTIC.

Wheat cargoes are not so active as the spot market, but the tone is strong. Sales have included Rosario at 31s. per 480 lb., Bahia Blanca at 32s. per 504 lb., Walla Walla at 32s. 6d. per 500 lb., Roumania at 31s. 6d. per 492 lb., and No. 2 Manitoba at 31s. 6d. per 480 lb.

Maize cargoes are very strong for near sales, but quiet for remoter futures. Sales include Argentine at 23s. 6d. per 480 lb. on passage, American at 21s. 6d. per 480 lb. to arrive early in January, and Russian at 24s. per 480 lb. for November shipment.

Barley cargoes are well held. Roumanian has made 20s. 6d. for a 416-lb. cargo on passage, and fine Kustendje, 424 lb. weight, has made 21s. 6d. per qr. Odessa offers to ship 400 lb. barley at 19s. 3d. per qr.

Oats are quieter. Roumanian 312 lb. samples are offered for prompt shipment at 15s. 6d. per qr. A cargo of Black Irish has made 16s. per 304 lb. on arrival. Other cargo sales include White Indian peas at 28s. 3d. per 504 lb., Portuguese locust beans at 97s. 6d. per ton, and Egyptian cottonseed at £5 11s. 3d. per ton.

The London Corn Trade Association c.i.f. quotations for the settlement of rejections and difference in Weights on wheat under Rule No. 4 of the Association East Indian Wheat Contract are as follows:—No. 2 Club Calcutta, 32s.; Soft Red, 30s. 6d.; Bombay Soft White Delhi, 32s. 3d.; Kurrachee Soft White Delhi, 32s. 3d.; Kurrachee, Choice White, 32s.; Soft White, 31s. 3d.; Soft Red, 30s. 9d.—all per 492 lb.

The arrivals of grain and seed-laden vessels at Ports-of-Call for the week were 4 wheat (1 Buenos Aires, 1 Melbourne, 1 Port Victoria, 1 Port Wakefield), 1 linseed (Rosario).—Total 5.

The sailings of grain and seed-laden vessels from Ports-of-Call were 2 wheat (1 Rotterdam, 1 Waterford).

Since January 1, 1905, the total arrivals have been 294 wheat, 2 flour, 2 wheat and oats, 1 wheat and linseed, 1 flour and wheat, 13 barley and wheat, 10 barley, 8 maize, 1 beans, 4 locust beans, and 50 linseed.—Total 386.

Last year during the same time the arrivals were 258 wheat, 1 wheat and maize, 35 barley and wheat, 17 barley, 8 maize, 5 beans, 4 locust beans, 1 rye, 35 linseed and 1 canaryseed.—Total 365.

CHEESE.

Glasgow, Wednesday.—Market well stocked; indeed, better stocked than is usually the case at this period of the year; demand slow. Conditions quiet at sale, but they seem to be more popular in East of Scotland. Values steady. Home Cheddars in Glasgow market are quoted from 56s to 61s per cwt., and Dunlops from 58s to 63s.

Newport, Wednesday.—A good supply and business was fair. Quotations: Cartpitches, 58s to 59s per cwt.; factory ditches, 57s to 58s; truckles 58s to 60s. Dunlops, 55s to 57s; and Cheddars, 59s to 60s.

Review of the British Corn Trade

DURING THE PAST WEEK

Written exclusively for the Mark Lane Express.

Low temperatures have warned farmers to hurry up their autumn work and to get roots stored. The fine weather has favoured threshings, and a large supply of new wheat and barley has been a feature of the country markets. The weather in France has been extremely cold for the time of year, and an increase is reported in trade generally. Germany is a free buyer off Austrian and Roumanian grain surpluses, and shows, if possible, an increased tendency to rely on these countries to the neglect of America and Argentina. The Russian crops are threshing out better than anticipated. Oats often show fine quality, rare in Russia, and the weight is 312 lb. to 320 lb. from lands where 304 lb. is the average expectation. The maize crop of South-East Europe, however, is not up to a full average.

Argentina reports a large net increase in the area sown to wheat. In Buenos Ayres proper the increase is as much as 20 per cent. There is some little increase in the sub-tropical regions, but the temperate districts are those where wheat growing is most rapidly developing. There are no returns as yet to hand from Bahia Blanca and the South but the demand for the wheat of that region is so excellent that we anticipate increased sowings will fully equal the increment in Buenos Ayres.

The American crop reports point to the newly-secured maize equalling at least three hundred and fifty million quarters, a prodigious production, which is likely to give us cheap American meat in 1906, no less than cheap feeding stuffs. There is need of further particulars, but no doubt is now expressed either at Mark Lane or Liverpool concerning the main fact of the American maize yield of 1905 being "a record."

Canada reports 80 per cent. of the new wheat to grade No. 1, 18 per cent. No. 2, and 2 per cent. No. 3. There is no frosted wheat to mention this season, the frosts not setting in until mid-September, by which date all the corn had been secured. Canada is likely to expect more wheat in 1906 than in any previous season; population is increasing slowly production at a much more rapid rate.

The wheat markets of the United Kingdom are decidely stronger from a week ago, the demand being especially good for new English. Farmers should make an effort to hold the remainder of the crop much more stiffly; the sales up to 21st inst. were extremely heavy, and the prices consequently have been miserable. Owing to the small supplies on passage, foreign wheat is held for at least the prices of the 16th. As a rule, a little more money is obtainable for Indian, Argentine, and Australian, while Russian and American are in improved request at old prices. Flour is 3s. per sack cheaper on the year for the ordinary household type, but bread is as dear as it was in October, 1904. This increased profit should be a boon to bakers, who, we notice, are only big buyers just now of country flour.

The recent heavy threshings of grain have led to large deliveries of straw. Luckily the demand is excellent and prices have been maintained. For ordinary wheat and oat straw to private buyers 30s. to 36s. per load is charged, while wholesale transactions take place at 28s. to 29s. for sound wheat straw, 25s. to 27s. for oat straw, and 30s to 36s. for rye straw; the latter is peculiarly good this season. Barley straw is as usual, but a poor fourth to the other three white crops, but it has certain buyers at a price.

Some minor arrivals into London of late have included castorseed, carraways, pearl barley, French straw, New Zealand grass-seed, haricots, cloverseed, and dholl. The demand for moss litter increases. We seem to get a considerable proportion from Holland.

Potatoes are plentiful, and while their quality exceeds expectation and their price is moderate, it is not surprising that they are affecting the demand for breadstuffs in retail. The restaurants at least come to the aid of the baker, for while bread costs three times that of potatoes, wholesale bread is an uniform penny at all places of refreshment, while potatoes are never less than two pence, and are often three pence for an equal quantity.

The sales of British wheat at the statute markets since harvest have been heavy, the resulting price low.

This season, 631,000 qrs. at 26s. 11d. per qr.
Last season, 341,000 qrs. at 30s. 0d per qr.

The sales of British barley from September 1 to October 7 were below the average, but they are now overtaking arrears, and for the last six trading days have been exceedingly heavy.

This season, 663,000 qrs. at 24s 0d. per qr.
Last season, 622,000 qrs. at 25s. 4d. per qr.

The sales of oats of the home crop have been small.

This season, 201,000 qrs. at 16s. 1d. per qr.
Last season, 266,000 qrs. at 15s. 11d. per qr.

The reserve with which farmers have met the enquiry for oats has had its reward, that staple being the only one which has kept up in value.

Last week's imports into the United Kingdom were as follows:—

Wheat, 444,000 qrs.: above the average.
Flour, 122,000 sacks: rather less than usual.
Barley, 295,000 qrs.: an exceptionally large supply.
Oats, 109,000 qrs.: rather below the mean.
Maize, 266,000 qrs.: above the average.

Returns of oilseeds imported are not yet issued, but are known to be considerably above the mean for linseed.

Supplies of wheat on passage are much below the average.

	Quarters.
Californian	30,000
American	170,000
Russian	370,000
Indian	125,000
Argentine	160,000
Australasian	115,000
Various	40,000
Total	1,010,000
A week ago	1,096,000

Flour on passage amounts to 279,000 sacks.

Of maize the quantity afloat shows a striking diminution. It now is as follows:—

	Quarters.
Russian	15,000
American	120,000
Argentine	470,000
Total	705,000
A week ago	905,000

Of barley 510,000 qr. are on passage from America, California, Russia, Roumania, and Persia. An unascertained quantity is on passage from Turkish ports in Europe and Asia. Of linseed 137,000 qr. are on passage, and of cottonseed 21,000 tons are afloat.

The dearness of maize for November and December delivery is in remarkable contrast to its cheapness for January, February, and March. There is an enormous quantity already sold for shipment in those three months, and we expect imports for February, March, and April will be fully three million quarters. The difference between spot and January prices at most markets is 3s. per qr., so that farmers will do well to do on as little maize as possible between now and Christmas.

The dearness of oil cake is leading to an increased business in proprietary articles, calculated to take its place, and is also a cause of increased inquiry for barley meal. The heavy oats from Russia find favour, and so does the excellent 416 lb. poultry barley from Roumania and Bulgaria. The dearness of foreign beans leads to these being neglected by most buyers, but there is an increased sale of fine small split lentils at 10s. per cental. There is also an improved demand for rye at 22s. per 480 lb., for dun peas at 29s. per 504 lb., and for feeding millet and sorbhum at a guinea per 480 lb.

Shipments last week were as follows:—America: Wheat 191,000 qrs.; barley 60,000 qr.; oats 55,000 qr.; maize 91,000 qr.; and flour 130,000 sacks. Argentina: Wheat 68,000 qr.; maize 179,000 qr.; and linseed 125,000 qr. Russia: Wheat 480,000 qr.; barley 377,000 qr.; oats 296,000 qr.; and maize 12,000 qr. Roumania: Wheat 270,000 qr.; barley 100,000 qr.; and rapeseed 10,000 qr. India: Wheat 39,000 qr. and linseed 25,000 qr. Items showing an increase on the week wer what shipments from America and India, maize shipments from Argentina, and linseed shipments from India. Items showing a decrease were wheat shipments from Russia and Roumania, and oat shipments from Russia and the United States.

OIL SEEDS.

MARK LANE, MONDAY, October, 23.

LINSEED. per 416 lb.	s. s.
Russian	43 to 44
Morocco	46 to 48

POPPYSEED. per 377 lb.	
Indian	39 to 40s

SUNFLOWERSEED. per 448 lb.	
Finest	48 to 52
Ordinary	40 to 44

TO-DAY'S MARKETS.

MARK LANE, MONDAY, October 23.

[FIRST REPORT.]

The demand for English wheat to-day was excellent, and prices were 6d. dearer from the 16th. They are still, however, a good deal lower than the situation warrants. Foreign was firm, and rather dearer for Australian, Argentine, and Indian, but dull for American. Prices for Russian were steady, with a fairly good trade doing at currencies. Maize was 3d. dearer from Friday, but prices appear to have reached their highest, a demand for 25s. generally stopping business. Barley was firm for English malting and for foreign feeding, but was rather weak for brewing grades. Beans were scarce and dear; peas firm at full rates. Oats were sometimes 3d. dearer for both English and foreign; the inquiry was good, though of a non-speculative disposition. Poppyseed, rapeseed, and cottonseed advanced about 3d. per cwt., but linseed, though a firm market, was not quotably dearer.

CLOSE OF THE MARKET.

THERE WAS A GOOD DEMAND FOR SEED WHEAT AT 34s. TO 36s. PER QUARTER, AND ALL STAPLES CLOSED IN SELLERS' FAVOUR.

THE FLOUR TRADE.

MARK LANE, MONDAY, October 23.

There was a fair sale of London makes to-day, and a brisk one for country sorts, prices for both descriptions being fully those of the 16th, but not advanced therefrom. Hungarian touched but did not exceed 31s. 6d. per sack. Manitoba flour was obtainable at 28s. and rather undersold finest Minnesota, Duluth, and Minneapolis. Fine Kansas Patents made 26s. For Iron Duke a guinea was accepted. French flour was rather neglected. A small trade in rice flour took place at a guinea per sack for best. Middlings tended to rise in price. Barley meal was in improved request at fully previous values.

LONDON TERM MARKET.

This market is open to elected members only and is held at the Baltic Club, St. Mary Axe. No business except for future delivery is done, and the smallest quantity that can be purchased is 1,000 quarters, or 4,800 cental.

Prices quoted on Saturday at the close of the week's trade were as follows:—

WHEAT (per cental).

No. 2 American Red	6s. 10d.	Nov. delivery.
,, ,,	6s. 10d.	Dec. ,,
,, ,,	6s. 10d.	Jan. ,,
,, ,,	6s. 9d.	Mar. ,,

MAIZE (per cental).

American	5s. 0d.	Oct. delivery.
,,	5s. 0d.	Nov. ,,
,,	4s. 0d	Dec. ,,
,,	4s. 5d.	Jan. ,,
,,	4s 4d.	Mar. ,,
,,	4s. 3d.	May ,,

To-day 6s. 11d is asked for American wheat December delivery, and 5s. 1d. for American maize also December delivery. These demands check trade. Maize, for March delivery, at 4s. 4d. sells steadily.

SEEDS

London, Monday.—Seed wheats, winter tares, still in demand, the former at higher prices. Blue peas attract more attention. In spring sowing, seed buyers, of both clovers and grasses, show signs of increasing interest; prices slowly developing. JOHN PICARD AND CO.

GAME AND POULTRY.

Smithfield, Saturday.—Good supplies, demand fair. Prices: Pheasants, 5s to 6s 6d; young grouse, 4s 6d to 5s 6d; old, 3s; young partridges, 2s 6d; old, 1s 4d to 1s 6d per brace; ducks, 2s to 2s 9d; geese, 5s to 6s 6d; Surrey fowls, 2s 9d to 3s 6d; Essex fowls, 2s to 2s 9d; Lincolnshire fowls, 1s 9d to 2s 6d; Irish fowls, 1s 6d to 1s 9d; Russian fowls, 1s 3d to 1s 6d; black game, 1s 4d; wild ducks, 1s 6d; snipe, 6d to 1s; quails, 9d to 1s 3d; venison, haunches, 12s 6d to 16s each; forequarters, 3d per lb.

GRAIN AND FLOUR FACTORS REPORT.

Offals.—No further change in bran; demand steady, and prices continue firm with upward tendency. Flour.—At the moment, the flour market is steadier than of late, and there is greater firmness in prices. GREENHILL BROTHERS (Belfast)

Flour.—There is a better demand, with sellers asking 6d. advance for shipment. Grain.—Indian corn is 3d. dearer on the week, but fair demand. Plate maize is unchanged at 13s. 10½d. More business is passing in the cheaper qualities foreign oats at 3d. to 6d. advance. Scotch oats are 3d. dearer also. Barley active, American now 14s, 9d. per 320 lb. Beans dull, especially for English. Oatmeal firm. Mill stuffs.—Demand is improving for bran and common thirds. Fine thirds remain scarce. MCKINNON AND MCDONALD (Glasgow).

We have moderate supplies of wheat. The trade is firm, and prices are 3d. per qr. higher. Flour is 3d. per sack dearer. Maize, barley, and oats are 3d. per qr. dearer.—COVENTRY AND SHEPPARD.

Flour.—Trade to-day has been firm with a fair demand, and prices show an advance of about 6d. on the week.—T. S. MEDILL AND SONS, LTD.

Milling offals remain in fair demand at last Monday's prices.—JOHN BAWCOMB AND CO.

FEEDING STUFFS.

London, Monday.—Linseed cake: The demand is not as fast as it should be, considering the time of year, but, with shippers asking rather more money, and no weakening in prices for London made, the market keeps very firm. Cotton cake: Slow and unchanged. Decorticated cotton cake and meal: Stocks are now almost cleared, and the little that is left on spot is firmly held. Linseed: Trade is very good, and prices are advancing.

OATS.—American, 16s per 320lb., November shipment.

PEAS.—White Indian, 27s 9d per 504lb., April shipment (new crop).

LINSEED.—Calcutta, 37s 6d per 410lb., arrived; Argentine, 36s 9d per 416lb., on passage; Argentine, 35s 3d per 416lb., February shipment (new crop).

RAPESEED.—Brown Cawnpore, 37s 3d per 416lb., November shipment.

POPPYSEED.—Bombay, 38s 9d per 377lb., November shipment.

COTTONSEED.—Egyptian, £5 12s 6d per ton, November shipment; Bombay, £4 14s per ton, January shipment.

WOOL

Canterbury, Saturday. — Kent fleeces, 12½d; lamb wool, 8d; halfbreds, 12½d; Downs, 13½d; locks, 4d to 5d per lb.

Halifax, Saturday. — Business in wool is somewhat sluggish, being chiefly confined to small lots; but while crossbreds may be bought at slightly easier prices, other descriptions keep steady.

London, Saturday. English—per package of 240lb.—Fleeces, South Down hoggs, £14 to —— 10s; half-bred hoggs, £13 to £14; ditto wethers, £12 10s to £13; Kent fleeces, £13 to £13 5s; South Down ewes and wethers, £13 10s to £14 10s; Leicester ditto, £12 10s to £13 10s Colonial— per lb.—Vic.: Fleece super., 1s 11d to 2s 1d scoured good, 2s 1d to 2s 2d; scoured average, 1s 11d to 2s; greasy average to fair, 1s 1½d to 1s 2½d. N.S.W.: Second average, 1s 8½d to 1s 9d; greasy average, 11½d to 1s. S. Aus.: Greasy average, 9d to 9½d. N.Z.: Scoured average, 1s 9½d to 1s 10d; greasy average, 10½d to 11½c Cape: Scoured super., 1s 10d to 1s 11d; fleece average, 10d to 10½d; greasy average, 7½d to 8½d. Natal: Scoured, 1s 5d to 1s 6d; greasy average, 8½d to 9½d. Crossbreds—Grs.—Vic.: Good to super., 1s 2d to 1s 3d. New Zealand: Fine, 1s 2d to 1s 3½d; medium, 1s 0½d to 1s 1½d; coarse, 11d to 1s.

CATTLE.

Metropolitan Market, Islington.

	Monday, Oct. 23, 1905. British.	Total. Oct. 24, 1904.	Monday, Oct. 24, 1904.
Beasts	1,280	1,280	1,280
Sheep and Lambs	6,440	6,440	5,950
Calves	10	10	10
Milch Cows	50	50	50

Quotations per 8 lb. (sinking the offal):—

ENGLISH.

	Inferior.	Second.	First.
Beasts	2s 10d	3s 6d	4s 6d
Sheep	3s 10d	4s 8d	5s 10d

Milch cows, per head, £16 to £22.

British arrivals include as follows: Scotland, nil; Eastern Counties, 66; Devon, 35; Ireland, 78.

We note to-day an increase of 250 in the number of beasts on offer compared with the corresponding day last week. Trade for both prime and second quality cattle was a slow one, nevertheless late currencies governed all transactions. The Irish arrivals consisted of 34 Dublin Shorthorns, and 44 Waterfords; trade ruled very dull for this class of cattle, with a downward tendency in value, though not quotably so. Fat butchering cows and bulls met with a fairly steady demand by both town and country buyers at late rates. A clearance is expected to be made.

The following are top quotations per 8 lb. (sinking the offal):—

	To-day.	Monday, Oct. 24, 1904.
Devons	4s 4d to 4s 6d	4s 4d to 4s 6d
Herefords	4s 4d to 4s 6d	4s 4d ex 4s 6d
Runts	4s 6d to 4s 4d	4s 4d to 4s 6d
Lincolns	3s 8d to 3s 10d	3s 8d to 4s 0d
Irish	3s 10d to 4s 2d	3s 10d to 4s 2d
Fat Cows	3s 4d to 3s 6d	3s 4d to 3s 6d

There was a decrease of 910 in the number of sheep and lambs penned compared with Monday last. Trade opened and continued throughout the day of a slow but steady nature, wethers selling best; nevertheless la e currencies were well maintained. The first consignment of Scotch Longwools were received here to-day; these shared in the slow trade at late values. Irish were in excess of the demand, the tendency in regard to value ruling in the favour of the buyer. A clearance will be made in this part of the market. The supply included 300 Scotch, 1,889 Irish, and 472 from the Eastern Counties.

Undermentioned quotations are at per 8 lb. (sinking the offal), and are for the best of each class penned:—

	To-day.	Monday, Oct. 24, 1904
8 st Scotch (Longwools)	5s 8d to 5s 10d	5s 10d to 6s 0d
7½ to 8 st Downs	5s 8d to 5s 10d	5s 10d to 6s 0d
9 st Downs	5s 6d to 5s 8d	5s 8d to 5s 10d
10 st Half-breds	5s 4d to 5s 6d	5s 6d to 5s 8d
10 st Irish	5s 0d to 5s 2d	5s 0d to 5s 2d
10 st Down Ewes	3s 10d to 4s 0d	4s 0d to 4s 2d
11 st Half-bred ditto	3s 8d to 3s 10d	3s 10d to 4s 0d

Calf trade not worth noting.

No pigs offered for sale to-day.

London (Central), Monday.—Good supplies. Steady demand. Beef: Scotch, 3s 8d to 4s 6d; English, 3s 4d to 3s 7d.; American, 3s to 3s 7d. Mutton: Scotch wethers, 4s 4d to 4s 10d; ewes, 3s 4d to 3s 6d; English wethers, 4s 2d to 4s 8d; ewes, 3s to 3s 4d. Lamb: New Zealand, 2s 8d to 3s 2d; veal, 3s to 3s 6d; pork, 4s to 5s per 8lb.

St. Ives (Hunts), Monday.—Beasts 873, sheep 478, pigs 482. Beef, 8s to 7s 6d; mutton, 8s 2d to 10s 6d; pork, 6s 6d to 7s 6d. Fat cattle fair demand. Stores better trade. Fat sheep good demand. Stores fair. Fat and store pigs good demand. Milch cows fair show; trade prices £14 to £23.

FOREIGN.

Deptford, Monday.—Beasts, 1,282. To-day's supply of beasts, compared with Monday last, showed an increase of 355 head, and consisted of 868 from the United States and 414 from Canada. Trade, taken as a whole, was of a very slow nature; prices, however, were good, the tendency in regard to value being an upward one. Best quality States, 4s.; seconds, 3s 8d; Canadians, 5s 9d; good seconds, 3s 6d (offal given in). No sheep on offer for sale to-day. On Saturday 1,480 beasts from the United States were offered for sale; these met with a very slow trade at from 3s 9d to 4s per 8lb. (sinking the offal).

Liverpool, Monday.—The supply of cattle was about the same as on Monday last; demand fair, and prices unchanged. A considerable decrease in the number of sheep on offer; the trade in consequence was more active, and sales were more easily effected; prices, however, were not quotably higher. Best, 6d to 4d per lb; mutton, 5½d to 6d. At market: 1,421 cattle and 4,797 sheep.

FRUIT AND VEGETABLES.

Covent Garden, Saturday.—Prices of English fruit and vegetables are as follows:—Apples, 4s 6d to 12s per bushel; pears 3s to 4s per box; peaches 4s to 16s 6d; green figs, 4d to 1s 6d per dozen; grapes, 6d to 3s; melons, 9d to 2s; cobnuts, 4s 6d to 5s 6d; filberts, 4s to 5s per 12 lb.; tomatoes, 2s to 3s 6d per 12 lb.; onions, 4s 6d to 5s 6d; ditto (picklers) 5s to 6s 6d per cwt.; celery, 7s to 10s 6d per dozen rolls; Brussels sprouts, 1s 3d to 1s 6d; Jerusalem artichokes, 1s 6d to 2s per half-sieve; parsnip, 2s 6d to 3s 6d per bag; cauliflowers, 3s to 4s.; cabbages, 2s 6d to 3s 6d per tally; parsley, 1s 6d to 2s; leeks, 1s 3d to 1s 6d; mint 2s to 2s 6d; radishes, 6d to 9d; carrots, 1s 6d to 2s 6d; turnips, 1s 6d to 2s 6d per dozen bunches; horseradish, 8s 6d to 12s 6d per dozen rolls; cucumbers, 1s to 3s; endive 9d to 1s 3d per dozen; cos lettuce, 9d to 1s 6d per score; beetroots, 2s to 2s 6d per bushel; spinach, 1s to 1s 6d per half-sieve; potatoes, 55s to 70s per ton.

HOPS.

London, Monday.—W. H. and H. Le May, 67, Borough, London, report:—The demand continues for English hops, consumers are availing themselves of the opportunity to stock up at the low prices now ruling, which, in the majority of cases, is below the cost of production. Fine hops are eagerly sought after and are hardening in value.

Worcester, Saturday.—There is now a material falling off in the quantity of hops on offer here. Choice qualities are especially scarce and command higher prices; failing them, the best medium hops are of good value, and come comparatively cheaper. Useful copper hops also obtain a good sale when offered at reasonable prices. Yearlings have been more inquired for, and sell at current prices, whilst are above the values of new. 3,551 pockets have been weighed this week, making the total 28,316 of new; some few small lots of 1904's have also been sold.—CHARLES FARAM AND CO.

LIVE STOCK AND MEAT TRADE REVIEW

(WRITTEN SPECIALLY FOR THE "MARK LANE EXPRESS.")

Trade in London.

With a rather larger supply of both prime and second quality beasts at Islington, of which the majority arrived from the Midlands (as is usual at this time of the year), trade opened and continued throughout the day of a dull and dragging nature, salesmen experiencing difficulty in maintaining late currencies. The Irish arrivals consisted only of 4 Dublins and 24 Waterfords, these also meeting with less demand, but no quotable decline in value was noticeable. On Thursday a few fat cattle were held back in the lairs, the trade, as usual, being confined to fat butchering cows and bulls, these on both days meeting with a poor country demand, on Monday there being too many middling quality on offer.

At the Foreign Cattle Market, Deptford, there was a fair supply, the majority arriving from the United States; trade, taken as a whole, was of a slightly firmer nature. Wednesday's consignment of States, however, were very middling quality cattle. The total number of beasts offered for sale at both markets was 4,337, as against 5,470 during the preceding week, consisting of 1,130 British (increase 60) and 3,207 foreign, these latter comprising 2,616 from the United States and 591 from Canada. The following were the top rates obtained per 8 lb. (sinking the offal):—80 to 90 stone Devons, 4s. 4d. to 4s. 6d.; 90 to 95 stone Herefords, 4s. 4d. to 4s. 6d.; 95 stone Runts, 4s. to 4s. 4d.; 100 stone Shorthorns, 3s. 8d. to 3s. 10d.; 95 stone Irish, 3s. 10d. to 4s. 2d.; 90 stone States, 3s. 10d. to 4s.; 95 stone Canadians, 3s. 7d. to 3s. 9d.; 90 stone fat cows, 3s. 4d., ex. 3s. 6d.

The sheep trade chiefly confined to Islington on both market days was of a decidedly slower nature, with a decline of 2d. per 8 lb. in value, and a further decline of 2d. on Thursday. Irish on Monday were in full supply and shared in the general depression, Scotch also, though in smaller numbers, were quoted 2d. lower. A small consignment of Canadian ewes were offered for sale at Deptford, and made good money. The total number of sheep penned at both markets was 8,026, as against 6,450 during the preceding week, consisting of 7,570 British (increase 1,120) and 456 Canadians. Best pens made per 8 lb. as follows (sinking the offal):—7½ to 8 stone Downs, 5s. 8d. to 5s. 10d.; 8 stone Scotch, 5s. 8d. to 5s. 10d.; 9 stone Downs, 5s. 6d. to 5s. 8d.; 10 stone Irish, 5s. to 5s. 2d.; 10 stone Downs, 5s. 4d. to 5s. 6d.; 10 stone Halfbreds, 5s. 2d. to 5s. 4d.; 10 stone Down ewes, 3s. 10d. to 4s.; 11 stone Canadian ewes, 4s. 2d. to 4s. 4d.

Calves numbered 20; trade nominal.

Pigs (40): trade slow but firm, best small breeds being quoted at from 4s. 6d. to 4s. 8d., heavy ditto 4s. per 8 lb. (offal given in).

Trade in the West.

Business at the closing sales of sheep for the present season is proving rather more satisfactory, both as to price and demand, than many had, from the inactivity which has characterised the trade of late, expected, and the trend of prices has been decidedly against buyers, this being particularly so with lambs, which during the last week or so have been making from 2s. to 3s. a head more than was obtainable a month back, and this, too, despite the early frosts and their injurious effects on pasture keep. Best wether lambs, suitable for the butcher, may be quoted from 48s. to 57s. apiece, good working wether lambs, 38s. to 47s., plainer lots bringing 32s. to 36s. 6d.; chilver lambs, 31s. to 42s.; mixed lambs, 25s. to 32s.; ordinary runs of grazing ewes make up to 41s., ranging down to as low as 28s. for anything very plain. The few good flock ewes now to be met with are selling exceptionally well at from 45s. to 55s. each, specially good drafts in some cases bringing phenomenally high prices where purchased for some particular purpose. And as sales dwindle to a close the more apparent the scarcity of sheep all over the country becomes. In store cattle a very quiet tone characterises business all round, milch beasts of a good stamp being the only sorts at present claiming any attention, and for these from £17 to £21, or occasionally £22, is the best price obtainable; any secondary, either in heifers or cows, meeting a very slow trade at any price ranging down from £16 to as low as £10 or £11. Barreners, too, are slow, even for the best, and, though occasionally a single grazier makes up to £14 or £15 each, a more general run may be given as from £20 to £26 per pair for decent quality animals, anything decidedly plain being still much neglected, though offering at £16 to £18 or £19 per pair. Young stock find a little sale, though very low prices rule. Calves for rearing are not only dear but very difficult to procure, many more being wanted than there is at present offering on the market. Some make over 50s. apiece, where they promise to develop into something useful for the dairy.

If things are quiet in the store line they are still more so, with a few solitary exceptions, as regards fat stock. As a rule, there are rather more beasts offering than is wanted, and, as a consequence prices are injuriously affected. Anything ripe and well finished in Devons, however, may be quoted at 4s. 6d. to 4s. 8d. per stone, exceptional qualities occasionally making another 2d.; beasts not quite so well finished, 4s. to 4s. 4d.; other bullocks, cross breds or Shorthorns, 3s. 8d. to 4s. All the lighter weights in mutton, choice wether lambs, sell at full rates—5s. 8d. to 6s.; but heavier sheep cannot be quoted more than 5s. 2d. or 5s. 4d.; whilst ewes meet a very slack demand at 4s. to 4s. 4d.

Trade in Scotland.

The number of fat cattle on offer this week has been slightly under the average. Good quality still continue scarce. The best class met a satisfactory trade, while secondary kinds have also made an advance of 1s. per cwt. There was a moderate supply of sheep. These have been dearer throughout, and for those adapted for shop purposes from 1s. to 2s. a head dearer. Ewes being rather scarce have made high prices. A smaller supply of lambs, which sold well. Fat calves a full average show and slightly cheaper. Pigs rather more plentiful, and they met the best trade of the season. There was a very large number of store cattle. These have met a very dragging trade, and while the better class got fairly well sold out, the inferior were very bad to sell, and a considerable number of this description were left unsold. A small supply of store sheep, mostly of a very secondary class. Anything good made previous prices, but some of the inferior descriptions were left over. Milch cows a fair show, and they met a quieter trade at prices favouring buyers. Quotations:—Top price of best cattle per live cwt., 38s. 6d.; Current, from 35s. to 36s. 6d.; Irish, from 32s. to 36s.; Mutton, from 7d. to fully 8d. per lb.—JOHN SWAN AND SONS, LTD.

Trade in Ireland.

Buying opened fairly briskly, but a change soon came, and it was with difficulty that sales could be made, even at reduced rates. About 1s. 6d. per cwt. may be put down as the reduction on the primest bullocks and heifers, but on ordinary and coarse beasts the fall was much more pronounced, and a large number remained over unsold. Prime ox and heifer beef made from 48s. to 52s. per cwt., and a few lots of extra quality up to 55s.; good second-class beef from 45s. to 47s., and inferior from 42s. 6d. per cwt. upwards.

The sheep market was almost as disappointing—though supplies were almost identical with the previous week. Heavy mutton was particularly dull, but there was a general drop all round, neither butchers nor exporters seeming to be in anything of a speculative mood. Even prime, light-weight mutton, which is usually in request, was hard to sell. Lambs still linger on in the market, but are not sought for now, the season being out. Prime wether mutton sold at from 6¾d. to 7¼d. per lb; ewe, 6¼d. to 6½d.; and inferior from 5d. to 6d. per lb. Some nice Cheviots made from 7d. to 7½d. per lb. Hoggets suitable for the English markets gave way about 2s. per head, with very little buying. Prime veal was in slow request at from 7d. to 8d. per lb.; all other sorts neglected at from 5d. per lb. upward. A fair supply of milch cows, but these met with a disappointing sale, especially for secondary or inferior animals. Prime new milch cows and springers were in fair request at steady prices, selling at from £17 to £21 each; inferior from £9 upwards. Store cattle were in small supply, and were nearly all young cattle.

The great four-day fair of Tuam, which took place on Tuesday of last week and three following days, was a very large one for cattle. It was a disappointing one for sellers, prices for cattle being from 20s. to 25s. per head under last year's fair. In very few cases was there any margin left in excess of the year's feeding, and cattle bought last May did not realise the cost price, except where they had been fed on the best pastures. Still, there was a good clearance. Two-year-olds made from £8 10s. to £11; three-year-olds from £10 10s. to £13 10s.—stockowners seeming anxious to sell out at any loss sooner than hold over. There was a large fair of sheep at Tuam, on the opening day (Tuesday) some 15,000 being offered for sale. Prices all round were lower than last year. The Mohill Great October Fair was also held last week, but the demand was very poor and prices very low. Hundreds of fine cattle were driven out unsold, as in many cases the best did not pay 5s. a head for the summer's grazing.

LONDON.

Islington, Thursday.—Beast supply, compared with Thursday last, showed increase of 70 head, and consisted chiefly of fat butchering cows and bulls, middling quality predominating. A few prime quality beasts were also offered, but met absolutely no inquiry, rates consequently being unquotable: on the other hand, fat shed cows and bulls met slow but steady trade, last Monday's quotations governing all transactions. Top prices paid per 8lb.: Fat cows, 3s 6d; fat bulls, 2s 10d to 3s 2d. Decrease of 180 in number penned in sheep market, compared with last Thursday, supply consisting entirely of Downs and halfbreds, trade for which was exceedingly slow, though no lower rates are quotable. Best pens made per 8lb. as follows: 8 stone Downs, 5s 10d; 9 stone ditto, 5s 8d; 10 stone ditto, 5s 6d; 10-stone halfbreds, 5s 4d to 5s 6d; 10-stone Down ewes, 4s. Calf trade nominal. Pig trade fairly firm, best small porkers quoted 4s 8d per 8lb. Quotations per 8lb., sinking the offal: Beasts, 2s 10d to 3s 6d; sheep, 3s 10d to 5s 10d; calves, 5s 6d; pigs 2s 8d to 4s 8d Total supply: Beasts, 100; sheep, 220; calves, 10; pigs, 40.

London (Central), Friday.—Large supplies were on offer, for which a slow inquiry again prevailed, prices, however, remaining firm. Quotations: — Beef, Scotch short sides 4s 4d to 4s 6d; long sides 3s 10d to 4s; English 3s 6d to 3s 7d; American (Deptford-killed), 3s to 3s 5d; Liverpool sides 3s to 3s 4d; American refrigerated hindquarters, best, 3s 6d to 3s 9d; forequarters, 2s 3d to 2s 5d; Rancher hindquarters, 2s 4d to 2s 10d; forequarters, 1s 11d to 2s; New Zealand hindquarters, 2s 3d to 2s 4d; forequarters, 1s 8d to 1s 9d; River Plate hindquarters, 2s 2d to 2s 3d; forequarters, 1s 8d to 1s 9d; Argentine chilled hindquarters, 2s 4d to 2s 8d; forequarters, 1s 10d to 2s. Mutton: Scotch tegs, 4s 4d to 4s 10d; ditto wethers, 4s 4d to 4s 10d; ewes, 3s 4d to 3s 6d; English wethers, 4s to 4s 8d; ewes, 3s to 3s 4d; New Zealand, 2s 4d to 2s 10d; River Plate, 2s 1d to 2s 3d; Dutch wethers, 4s to 4s 2d; ewes, 3s. Lamb: New Zealand, 2s 8d to 3s 2d; Dutch, 4s 2d to 4s 4d. Veal: English and Dutch, 3s to 4s 6d; Irish, 2s 6d to 2s 10d. Pork: Town killed, 4s to 5s; country, 4s to 4s 8d; Dutch, 4s to 4s 8d per 8 lb.

COUNTRY.

Ashford, Tuesday.—Trade dull and attendance small, owing to Maidstone Fair being held same day. Beef cheaper, 4s per stone being top price. Mutton slightly easier, but not notably lower; best wethers made up to 5s 10d. Veal, 2d lower; nothing above 5s 2d. Pork dearer, best small roasters up to 4s 4d. Ram tegs sold fairly well.

Basingstoke, Wednesday.—At Raynbird and Sons' sale-yard there was a good attendance of buyers to meet a supply of 35 fat beasts, 70 calves, 395 fat sheep and lambs, 210 pigs, and 145 head of dairy and store cattle, for which the following prices were realised:—Prime Devon steers made up to £20 10s; young Shorthorn steers up to £16 5s; ditto cows up to £15 5s, and bulls to £18 10s; fat calves, 70s to £5 15s; small, 20s to 50s; fat hogs, 60s to 93s; fat porkers, 42s to 58s; small, 26s to 38s; store pigs, 9s to 15s 6d; dairy cows, £8 to £21; prime quality fat Down wethers and young ewes made from 50s to 56s; smaller, 45s to 48s; nine-months-old ditto, 48s to 56s; smaller, 36s to 44s; three-months-old sucking lambs, 30s; old ewes, 32s to 38s; Down store rams in demand from 50s to 63s; fat rams, 42s to 50s. The short supply of fat beasts met a dull inquiry with a reduction in prices from late sales. A slower trade for fat sheep and lambs, with a reduction in price for half fat and inferior lots. With a large supply of dairy cows and heifers on offer, prices ruled high for the best-class milchers, a brisk trade being maintained throughout. Store cattle sold slowly, except for strong two-year-old heifers, which are inquired for. Fat calves sold readily at late rates. Fat hogs and porkers were in demand and sold most readily at a slight advance. Store pigs also met a good trade. Ruling values:—Prime fat beasts, Devons, 6½d to 6¾d; ditto Shorthorns, 5¾d to 6¼d; bulls, cows, and inferior, 5d to 5¼d per lb.; best fat sheep, 8¼d to 8¾d; second ditto, 7d to 7¼d; old ewes, rams, and inferior sheep, 5½d to 8d per lb.; fat calves, 6½d to 8d per lb.; fat porkers, 9s 6d to 11s; hogs up to 10s per score.

Berwick, Saturday.—A large show—825 cattle—462 more than the previous week. Trade better than last week. Calves, £6 to £7 10s; heifers, £8 to £10 10s; stirks, £8 to £11; two-year-olds, £12 to £13 10s; three-year-olds, £13 10s to £16 10s.

Birmingham, Thursday.—Fair supply of pigs; small supply of beasts and sheep. Trade fair for pigs, but slow for beasts and sheep. Prices:—Beef, 5d to 6¼d per lb.; mutton, 6½d to 8¾d per lb.; lamb, 8d to 8¾d per lb.; bacon pigs, 9s 10d to 10s per score; cutting pigs, 10s to 10s 6d per score; porkets, 10s 10d to 11s 6d per score; sows, 8s 6d per score.

Bristol, Thursday.—Fat beasts were in fair supply, but demand was by no means brisk, and trade was slow at last week's prices. Sheep were not numerous. Business was steady at current rates. Pigs were in limited supply, and porkers advanced 3d per score, whilst bacons declined 3d.

Canterbury, Saturday.—Ready sale for good sheep, but trade dull for bullocks. Lambs, 17s 6d to 22s; better class, 25s to 32s 6d; ewes, 40s to 54s 6d; working wether tegs, 36s to 38s per head.

Carlisle, Saturday. Today was what is known as the Head Hempton Fair at Carlisle, but the supply on the Sands was small for the occasion, consisting of about 350 or 400 Irish bullocks and heifers. The attendance of buyers was small, and business was very quiet at from £8 10s to £10 10s for bullocks, £7 10s to £11 10s for wintering heifers, and up to £15 10s for heifers for finishing off.

Calne Friday.—Present prices for prime pigs, in lots of not less than ten, on rail within 100 miles of Calne.

Under 12 sc.	3 in. ...	7	9

C. AND T. HARRIS AND CO., LTD.

Chester, Thursday. There was a large supply of all descriptions of stock, but the sudden advance of winter seriously checked the demand, and little trade was transacted. Quotations:—Milch cows, £16 to £21; calves, £16 to £18; barren stock, £10 to £12; heifers, £9 to £14; stirks, £5 to £9; bullocks, £11 to £15.

Colchester, Saturday. Grass beef, 4s to 4s 6d. Mutton, 5s 6d to 6s. Pork, 3s 6d to 3s. There was a good supply all round, and a good trade for pork. Trade was, however, slow for mutton and beef.

Doncaster, Saturday. — Large supply of cattle, especially Irish stores, but trade continues dull, and prices

unchanged. Milch beasts, £16 to £22; bullocks, £12 to £16; heifers and drapes, £11 to £14; stirks, £6 to 9; young stock, £4 to £6 each. A fair supply of sheep, but smaller than usual at this season, and trade almost stationary. Ewes, 35s to 50s, and lambs, 28s to 42s each.

Dorchcester. Saturday.—At the Dorchester Repository to-day there was an exceptionally heavy supply of fat and store things, milch beasts making an exceptionally good display. All the better class things made a fairly brisk sale, but this was hardly the case with the more ordinary runs, which speculators were very coy about buying. The best heifers and calves sold from £16 10s to £21; and seconds, from £13 15s to £15 15s; cows and calves, £15 to £19; two-year-old in-calf heifers, £9 10s to £10 7s 6d; yearlings, £5 10s to £6 7s 6d. Barreners still slow of sale, up to £26 per pair, the top price for the best; others, £20 to £2 10s. Fat bullocks found a fairly steady sale, but prices are certainly easier than they were; heifers, £16 to £19; steers, £16 5s to £17; cows, £16 to £18 15s. Best beef sold up to about 11s per score ,and secondary qualities 9s 6d to 10s 6d. Mutton is very quiet at 7d to 8d per lb., for the best ewes and wethers.

Dublin, Thursday.—Numbers in market; Beasts 4,461, increase 1,048; sheep 7,044; decrease 12; calves 37, decrease 2. With the exceptionally large increase of 1,048 beasts, and worse trade across the Channel, buyers operated very cautiously and secured their wants, even the very choicest, on much better terms; middling and inferior cattle being very difficult to place, and a large proportion left unsold. Sheep of all descriptions in poor request and generally lower, the exports wants being few, and heavy qualities in excess of requirements. Cattle, live weight, best, 28s to 30s per cwt.; exceptional, 31s per cwt.; middling and inferior sorts, 24s to 27s per cwt. Mutton, dead weight, 5½d to 7¼d per lb. —GANLY, SONS, AND CO.

Edinburgh. Wednesday.—A large and fine show of cattle and sheep. Good cattle sold well, secondary slow. Sheep of good quality met a ready sale, as also did milch cows. Best polled bullocks, £11 11s to £15 15s; horned cattle, £11 to £14; stirks to £10; Cheviot dinments. 39s to 36s; Cheviot ewes to 30s; best milch cows to £26; Ayrshires to £20; crosses, £23

Exeter, Friday.—Beasts 380. Only choice animals maintaining late rates; 11s per score for steers and maiden heifers; 9s to 10s cows. 1,035 sheep; quiet trade; hogs, 8d to 8½d; wethers, 7½d; ewes, 6d to 6½d; small lambs, 9d to 10d; most of the best quality sheep sold. 85 calves, 7½d.

Glasgow, Wednesday.—There was a better show of cattle and sheep, and a fair demand for best quality. Top Scotch cattle, 63s; secondary, 55s to 58s; top Irish, 58s per cwt.; top hoggs, 9d.; top wedders, 8d to 8½d; secondary, 7½d to 7¾d per lb. Dead meat was in fair demand, and values steady; best Scotch beef, 6d; best States, 5½d; best Canadians, 5d per lb.

Gloucester, Saturday.—Messrs. Bruton, Knowles, and Co. report their sales as follows:—A large supply of cows and calves (90), with trade no worse, the best prices being £22 12s 6d, £22 5s., and £21 10s. A large supply of store cattle, with slightly improved trade, nearly all being sold.

Hereford. Wednesday.—The October fair took place to-day, and was as well attended as in former years, and trade was fairly good. Bullocks and maiden heifers realised 6d to 6½d to 6¾d per lb. Fat cows, 4½d to 5½d per lb. Veal, a small quantity, sold dear, up to about 7½d per lb. Choicest wether sheep found ready customers at 8d to 8½d per lb., and fat ewes were in fair demand at 6d to 6½d. Fat lambs also sold a little better up to 34s apiece. Pigs, not a very large supply, met with a brisk trade, bacons and porks selling at 10s 6d per score and upwards, or from 5d to 7d per lb.

Ipswich. Tuesday.—Messrs. Robert Bond and Sons report there was a slight increase in the numbers of fat cattle penned, and a brisk trade for all well-finished animals at from 9s 6d to 8s 9d per stone. A large show of English and Irish grazing cattle. At the third special sale, about 350 were offered, and included several choice lots of steers bred in Cumberland and Westmorland. There were more buyers present and a better clearance was affected at a slight improvement in prices for the best bred animals. Those short of condition, and second qualities, were very dull, many not paying for the summer's grazing. Two-year-olds, £12 5s to £11 12s 6d; eighteen months, £9 15s to £7 15s; sixteen to fourteen months, £8 5s to £5 15s; Irish calves, £5 17s to £3 15s. Several cows were on offer, and rather more money was obtained for good cows and heifers freshed calved, and near prices ranging from £19 10s to £16 10s; some in-calf Dutch heifers made from £20 to £17. Fat sheep were dear up to 11s 6d per stone; hoggs to 60s; shearlings to 71s; grazing hoggets were not brisk; Suffolks 43s 6d to 40s. Fat swine were short, and met a sharp demand at higher prices. Numbers at sales and market:—1,552 cattle, 1,511 sheep, 1,601 swine, and 118 horses.

Leicester. Saturday.—Full average deliveries of home-bred bullocks. Trade ruled brisker for choice lots, but secondary sorts met a dragging sale. Choice milch cows, £20 to £25; good lots, £17 to £19; inferior, £14 to £16; Hereford bullocks, £15 to £17; Irish cattle, £10 to £13 10s; Welsh bullocks, £9 to £14; young stock, £5 to £7; calves, 15s to 35s. Sheep were a moderate supply and lambs sold freely at 24s to 37s 6d.

Lincoln, Friday.—There was a fair consignment of horned stock, and a slow trade. Yearlings, £9 to £10; two-year-olds, £12 to £14. Sheep were in small supply, and in fair demand. Drape ewes, 30s to 40s; lambs, 20s to 40s.

Lynn, Tuesday.—Average show of store beasts, trade slow at £6 to £17 each. Fat beasts smaller show, trade late rates, 7s to 7s 9d per stone. Few store sheep on offer made 42s to 49s each. Fat sheep smaller supply, trade very firm at 2s to 16s per stone. Few store lambs 30s to 40s each.

Manchester, Friday.—Beef, first-class, 4½; second, 4d to 4¼d; third, 3d to 3½d. Mutton, first-class Cheviots (Scotch), 7½d; others, 7d; second-class, 6d to 6½d; third, 5d to 5½d. Veal, first-class, 6½d; second, 5½d to 6d; third 4½d to 5d. Bacon pigs, first-class, 5¾d; second, 4¾d to 5¼d; third, 3¾d to 4¾d. Porket pigs, first-class, 7½d; second, 7d to 7¼d; third, 6¼d to 6¾d.

Norwich. Saturday.—Good trade for best quality fat beasts, but supply short, prices averaging 7s to 8s per stone; store cattle met with quiet demand, business was marred by inclement weather, and values ranged from £6 to £13 per head. Less store sheep offered, and trade by no means brisk; breeding ewes, 45s to 55s per head; lambs, 25s to 30s. Fair trade for fat sheep, which were in good supply at 9s 6d to 10s 6d per stone. Fat pigs sold readily at 6s 9d to 7s 3d per stone.

Nottingham. Saturday.—Fair show of milch beasts; best cows, £18 to £22; and in-calf heifers, £14 to £18 10s. Small show of store beasts, which met with a slow trade; strong heifers and steers, £9 to £14; and younger beasts, £5 to £9. Large show of calves, with rather slower trade, making 25s to 50s. No sheep or pigs.

Retford. Saturday.—The store stock on offer was scarcely beyond medium quality, and changed hands slowly at barely late rates. Milch cows, £16 to £18; two-year-old steers and heifers, £10 to £12; yearlings, £6 to £8; and calves, 36s to 40s.

Romford, Wednesday.—Average supply of fat beasts; trade slow. Best, 4s 2d to 4s 4d; middlings, 4s to 4s 2d per stone. Fewer calves offered, trade better, at 5s to 5s 4d per stone. Sheep in average supply, trade slower; best, 5s 10d to 6s; middlings, 5s 4d to 5s 6d; ewes, 4s to 4s 2d per stone. Slow demand for store beasts. Large supply of pigs, trade rather better.

Shrewsbury, Tuesday.—Moderate demand for store cattle, and usual trade for fat at slightly lower rates. Sheep and pig trade good. Quotations:—Beef, 5½d to 6¾d per lb.; mutton, 8d to 9¾d per lb.; veal, 6½d to 7d per lb.; porket pigs, 9s 6d to 10s 3d per score; bacon pigs, 9s to 10s per score. Numbers offered as follows:—606 cattle, sheep and lambs 1,170, calves 107, pigs 367.

Truro. Wednesday. Business fairly brisk; attendance very good. Fat bullocks, 54s to 58s per cwt.; barreners and store bullocks, 40s to 45s; cows and calves, £10 to £16 each; rearing calves, 20s to 38s; ewes, 38s; wethers, 7¾d per lb.; ewes, 5½d; lambs, 7½d; pigs, 8s to 9s each. Beef, 6d to 8d per lb.; mutton, 6d to 8d; lamb, 6d to 8d; veal, 6d to 8d; pork, 6d to 8d; bacon, uncured, 6d to 7½d; cured, 7d to 9d; pork carcases, 4½d to 5½d. Number in cattle market: 372 bullocks, 62 calves, 352 sheep, 261 pigs, 20 horses.

Wolverhampton. Wednesday.—Beasts a moderate supply all round; fair trade for sheep. Quotations: Beef, 5d to 6¾d per lb.; mutton, 6d to 8¾d per lb.; lamb, 8d to 8¾d per lb.; veal, 6d to 7d per lb.

Worksop, Wednesday. Fair supply of stock, with late present high prices fully maintained. Best beef made 7s to 7s 6d, secondary qualities, 6s 6d to 7s per stone; best Southdown and cross-bred shearlings, 8d to 9d; ewes, 6¾d to 7d; lamb, 9d to 9¼d per lb.

York. Thursday.—This was the last of the extra markets, and there was only a very light show of Irish cattle, owing to Yarm Fair. The English cattle were principally stirks, which made £6 to £11 10s. No two or three-year-olds were shown. A few calving and milch cows were shown, but there were no quotations, and trade was practically at a standstill. A poor show of sheep of all classes. North-country ewes, 44s to 50s; Cheviot ewes, 26s to 32s; Masham ewes, 38s to 46s. North-country gimmers, to 48s; North-country lambs, 28s to 33s; twice-crossed shearlings, to 50s; Masham shearlings, 38s to 44s; twice-crossed lambs, 28s to 35s; Masham lambs, 21s to 26s. A few rams made late rates.

FOREIGN

Yorkhill. Monday. — Large supplies of Canadian cattle were on offer at the usual weekly sales held to-day, 620 head being penned in the lairages. All the cattle, which were of fair average quality, were delivered in good shape and condition, and presented a nice apearance in the pens. There was the usual large attendance of buyers and a steady selling trade was experienced, clearances being effected at all the stances, but values, owing to a glut and lower quotations in other markets, were considerably easier than those obtained last week, there being a drop of about 2s per cwt deadweight on all classes of bullocks. Bullocks of handy sizes and weights made up to 55s per cwt deadweight, and secondary and inferior qualities from 50s to 53s per cwt. Zulls of prime quality made about 46s per cwt. deadweight and other sorts were sold down to 42s per cwt.

MANURES.

Liverpool, Friday.—Nitrate of soda is firmer in all positions at the late advance. The autumn demand for kainit and basic slag at present is only quiet, and this likewise applies to feeding stuffs, which meet only a slow consumptive sale:—Fattening cake, prime Liverpool make, in bags, £6 7s 6d; feeding or dairy cake, prime Liverpool make, in bags, £6; nitrate of soda, best quality, i.e., guaranteed 95 per cent. pure, in bags, £10 15s to £11; East India bone meal, in bags, £5 5s to £5 7s 6d; kainit, prime 23 per cent. sulphate of potash, in bags, £2 1s 3d to £2 2s 6d; palm nut cake, prime, in bags, £5 17s 6d to £6; linseed cake, American thin oblong, prime, in bags, £7 7s 6d to £7 10s; ditto English prime, in bulk, £8 7s 6d to £8 15s; linseed meal (pure rolled linseed), prime, in bags, £14 to £15; cottonseed cake, N.A. decorticated, good to prime, in bags, £6 17s 6d to £7 3s 9d; ditto English decorticated, prime, soft, in bags, £7 5s to £7 7s 6d; ditto English undecorticated, prime, in bulk, £4 10s to £4 15s; cottonseed (crushed), 20 to 25 per cent. oil guaranteed, prime, in bags, £6 17s 6d to £7; maize germ meal, prime, in bags, £5 18s 9d to £6; corn oil cake, prime, in bags, £6 to £6 2s 6d per ton; rice meal, Rangoon, as imported, in bags, nominal; Indian meal, coarse to fine grinding, prime, in bulk, nominal; linseed, fine bold feeding, in bags, £2 6s per quarter, 416 lb.; cod liver oil, cattle feeding, prime, in casks, 4s 6d per gallon; treacle, feeding, prime, in barrels, 4s 3d to 4s 4½d per cwt.; D.N.S. brand superphosphate of lime, guaranteed 25 to 27 sol., in bags, £2 to £2 2s; ditto ditto guaranteed 30 to 31 sol., in bags, £2 5s to £2 7s; ditto ditto guaranteed 35 to 36 sol., in bags, £2 15s to £2 17s; basic slag, prime quality guaranteed 30 to 35 per cent. phos., in bags, £1 11s 6d to £1 13s 6d; ditto prime quality, guaranteed 38 to 45 per cent. phos., in bags, £1 19s to £2 0s 6d; ditto finest quality, guaranteed 42 to 50 per cent. phos., in bags, £2 2s to £2 3s per ton—at depots inland.—H. JONES LANGAR AND CO.

POTATOES.

Borough, Saturday.—Good supplies were forthcoming and experienced a steady inquiry. Best silts 60s to 70s; Blacklands 55s per ton.

Goole, Wednesday.—There was a good attendance, with plenty of potatoes on offer. On the whole the market was a trifle firmer, though the business done was only slight. Plenty of Evergoods were on offer, but merchants were not disposed to purchase this variety. A few lots of the better kinds of potatoes changed hands at 45s per ton, but 42s 6d was the average price, and where they were sold in loads 4s 9d was the price. On the retail market potatoes still remain at 4d to 6d per stone.

Southwark (Waterside), Saturday.—During the past week the arrivals have exceeded the demand, and prices have had a downward tendency. The following are this day's quotations: Essex, Kent, and Surrey Up-to-dates, 60s to 65s; ditto Pioneers, 60s to 65s; ditto British Queens, 55s to 60s; Lincoln Evergoods, 55s to 60s; ditto Up-to-dates, 55s to 70s; Blackland Up-to-dates, 50s to 55s; ditto British Queen, 50s to 55s per ton.

Spitalfields, Saturday.—Arrivals were on a moderate scale, and the demand showed a slight improvement. Royal Kidney 60s to 65s; British Queen 60s to 65s; Blacklands 55s to 60s; Up-to Dates 60s to 70s; Scottish Queens 55s to 60s; ditto Up-to Dates 60s to 70s per tton.

FEEDING STUFFS.

London, Monday. Brewers' and distillers' wet grains: The trade for these feeding stuffs, so well known for forcing milk, continues firm on slack supply and good demand, 1½s 6d to 2os ale, and 1½s 3d to 1½s porter, per ton on rails, London, being made, paid, and with a continuance of cold frosty weather the demand will increase and the supply decrease. Distillers' grains: Owing to the very small supplies in London not nearly sufficient for the demand, prices rule very high, viz., 30s to 32s 6d per ton. At this figure they are not such good value as brewers' grains as relatively they should not be more than about 7s per ton higher than ale grains. Pressed white distillery maize meal: Small supplies, and ready sales at late prices. Dried grains are low in price, in comparison with all other feeding stuffs, and higher prices are looked for, as larger parcels every year are shipped abroad, where their merits for sheep and horses (being a cooked food and easily digestible) are well known. Most drying plants are closed down for the season, prices of wet grains making it unprofitable to dry at present. Ale range from 95s, mixed 90s, porter 87s 6d; distillers 110s. Dried distillery meal, containing 45 to 80 per cent. oil and albuminoids, 118s per ton and upwards, on rails, London; bags extra. —HAMLYN AND CO., 37 and 38, Mark Lane, E.C.

London, Thursday.—Linseed: Market steady, with a fair demand for near seed, but upward is quiet and more disposition shown by Plate importers to sell. Calcutta-London—Spot, 37s 6d, and afloat, 37s 3d; Oct.-Nov., 37s; April-June, 35s 6d. Hull dull, with a very poor demand. La Plata spot, 35s 3d; passage, 35s 6d; Oct.-Nov., 36s 6d; Dec.-Jan., 35s 6d; and Jan.-Feb., 35s. Rapeseed has improved in value, importers being so firm. Brown Cawnpore, Nov.-Dec., 37s; Brown Calcutta, 36s; April-June, 35s 9d; Ferozepore, 37s. Cottonseed has met with a better inquiry; prices having advanced in Egypt, have caused values to improve here. London—Passage, new, £5 17s 6d; old, £5 12s 6d; prompt new, £5 16s 3d; October, £5 15s; Nov.-Jan., £5 15s. Hull—Spot and passage is selling at £5 15s. Early loading October, £5 15s; Nov.-Jan., £5 13s 9d paid. Oil cakes: Linseed cakes firm. London made £7 15s to £7 17s 6d. Cotton cakes quiet. London made £4 12s 6d —THE PRODUCE BROKERS CO., LTD.

Hull, Tuesday.—Linseed: The arrivals are 540 quarters from Buenos Ayres, 703 Cronstadt, 37 Harlingen, 32,276 Rosario, 4,540 San Lorenzo; total, 38,096 quarters. Cottonseed: The market has shown considerable improvement for Egyptian seed during the week, and up to £5 12s 6d paid old crop on spot. A good business done in new crop at £5 11s 3d to £5 13s 9d in all positions to January, latter being to-day's value Nov.-Jan., but £5 15s required passage and October. Bombay afloat and shipments to December sold at £4 15s, and a few hundred tons Dec.-Jan., also Jan.-Feb., found buyers at £4 12s 6d, to-day, £4 13s 9d being quoted. Oilseed cakes: A very firm tone, with rather better demand for all sorts.—KEIGHLEY MAXSTED AND CO.

Mark Lane, Monday.—Linseed cakes: The trade at last shows signs of improving, there being a better consumptive demand and rather more disposition to buy ahead; at the same time, shippers continue to offer sparingly and importers are compelled to pay full prices. Russian are scarce on spot, and firmly held at a slight advance in price. American move off quietly and are unchanged. East India seed pures are also without alteration. London-made meet a better inquiry at last week's prices. Cotton cakes: Egyptian remain fairly plentiful on spot, and, with a considerable quantity about due, the market is barely as strong, but quotations are unaltered. English sell slowly at about late rates. Decorticated London-made is in good request at £6 15s to £6 17s 6d for cake and meal and £5 5s for special digestive meal, while American "Open Hand" brand offers at £7, and meal at £6 12s 6d. Rape cakes: Scarce and dear; Ravison and East India unchanged. Maize germ meal: Landed lots of white American make £5 15s, but for winter despatch there are sellers at £5 10s. English is fully as dear at £5 11s 3d to £5 12s 6d. Maize gluten meal is nominally quoted at £5 15s per ton. Rice meal: The market is still bare of stocks, and shippers ask £4 16s 3d ex ship terms for steamer parcels to come along. Locust beans are without change at £5 5s per ton for whole, and £5 15s per ton for kibbled. Nitrate of soda is the turn dearer at £10 15s per ton ex quay.

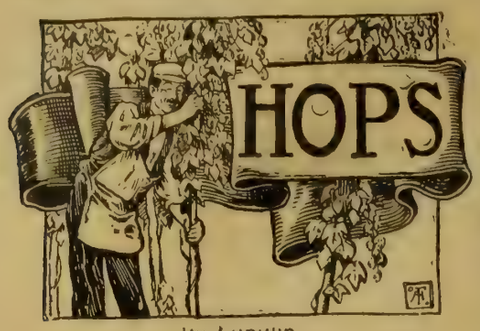
MOLASSINE FEEDING MEAL, packed in bags of 1 cwt. each. Price per ton, £6 15s., in ton lots and upwards. £7 10s. per ton in less than ton lots. Free on rail, Liverpool or London. Uniform delivered price for small quantities, 10s. per bag of 1 cwt.

HAY AND STRAW.

Manchester, Friday.—Hay, 4½d to 5½d; clover, 5½d to 6d; straw (wheat), 3½d to 4d per stone.

Whitechapel, Saturday.—Supplies were on a liberal scale and trade ruled quiet, prices, however, being unchanged. Best clover 72s to 80s; inferior ditto, 60s to 70s; specially picked hay, 75s; good ditto, 63s to 72s; inferior ditto, 45s to 60s; meadow and sainfoin, 67s to 72s 6d; straw, 27s to 36s per load.



By Lupulin.

Trade Notes.

England.

Since the opening of this season's market, the Borough has been going through an unprecedented experience. Growers, having large quantities to offer, and desirous to realise, have constantly crowded one factor's offices, and merchants, being willing to take advantage of the very low currency, have bought freely, so that factors, with their clerks and warehousemen, have been compelled to work hard, both early and late, in order to cope with the heavy business. It is impossible to state accurately the proportion of the crop that has changed hands, but it is generally estimated that more than one-half, and probably two-thirds, of the 1905 hops have been already sold. During the past week a slight relaxation of the pressure is perhaps apparent, but the evident desire of brewers to protect themselves against future contingencies suggests that further extensive purchases will be made, and that all the bright healthy portion of our growth will soon be taken over. In the meantime the line of cleavage between the values of the best and the medium and inferior samples becomes more definite. While buyers are willing to pay more for choice colouring samples, the values of the lower grades are receding. From 20s. to 40s. approximately represent the currency of the latter, the former having advanced to 70s. or 75s., and a few very choice lots have realised 80s. There are some excellent parcels of good mediums still remaining, and it appears probable that more attention will be given to these when the better growths are exhausted, and that they will in their turn feel the effect of the demand. It is anticipated by one of our leading merchants that brewers will not suspend their operations until they have secured at least one and a half years' consumption, or, say, about 900,000 cwts. Should this be the case, imports will be required to the extent of about 170,000 cwts.; but thus far the prices of foreign hops, being above our own, do not offer much inducement for shipment. We may, therefore conclude that the bulk of the English crop will be absorbed before any important business can be done in foreign growths.

America.

The New York market is practically denuded of choice 1904's, but a few medium yearlings are being dealt with at 14 to 16 cents. New Sacramentos of middling quality, offered at 16½ cents, have not found buyers. Washingtons are selling at 10 to 12 cents. The New York State crop is reported, from samples received, to be probably the poorest in quality that has been harvested for some years; buyers will not handle them at higher prices than 15 to 16 cents.

Belgium.

The firmer tone, briefly noticed in last week's report is fairly maintained, and growers are more reserved. Values on the Brussels Bourse are quoted at 32 to 40 francs, and the active demand in the country markets has raised prices a few points.

Burgundy.

Business at Dijon is becoming more active, and values are improving, prices ranging from 40 to 60 francs.

Germany.

The Nuremberg market has been rather slow during the past week, demand having slightly fallen off. Without any quotable reductions in values, the tendency is towards weakness as regards the lower qualities, while choice descriptions are still firm, and perhaps a few marks higher. At Munich, Saaz hops are seling at 135s., Hallertaus at 115s., and Wurtembergs at 125s. These figures represent about half the values quoted on this market a year ago.

An exhibition of English ciders is to be held in the Zoological Gardens, Amsterdam, the first week in November under the auspices of the Dutch Government. Any English cider maker can send on communicating with Dr. J. J. L. van Rijn, Friesland Agricultural Commissioner to Great Britain and Ireland.

Weather and Yield of Milk.

There is a general opinion that a severe storm or a cold snap of weather diminishes the yield of milk, and also reduces the quality. Careful observers, however, have noticed that the effect of a storm is sometimes to decrease the quantity, at other times to increase it. An explanation of such contrary results is difficult to give, but it appears to depend partly on the violence of the storm, and partly on the quantity and quality of the food. When a cow, during the summer months, is in good pasture, and can eat its full, a storm will not have a bad influence, but if the food is deficient in quantity or quality, then the effect of the storm will be to reduce the yield, because there has been an extra call on the vital power of the animal.

What do people do in changeable weather? If the temperature falls, we put on warmer clothing, and if it is not sufficient, we cannot endure severe cold without suffering. Every storm or bad weather to which a cow is exposed, so that she suffers, diminishes the yield of milk, and this decrease should serve as a sign to the owner that his cow is not being sufficiently looked after. Self-preservation is a law of nature, and a cow takes first from her food that which is requisite to maintain bodily warmth, and the surplus she uses for milk production. When the bad weather comes she eats more than usual, and sometimes has an extra surplus available for conversion into milk, so that it does not always follow that a storm acts prejudicially on the quantity of milk. There is, however, a marked difference in the effect between moderately cold weather, and a temperature so severe that the cow suffers from it. In general, can it be said that anything which causes discomfort to the cow will diminish the milk yield? It may be physical pain, or a fright caused by dogs. It may also be simply nervousness, such as visits from strangers, unusual noises, or even a change to a new stall. Any circumstance giving rise to discomfort on the part of the animal will influence the yield and quality of the milk.

If the cow has plenty of nourishing food, and the temperature falls, she will eat more and more as it gets colder, and at the same time she will usually give a small increased yield. If the temperature continues severe, the extra food being limited by the digestive powers of the animal, the milk will fall off in quantity and probably also in quality. Cows differ in their capacity to bear cold and wet, and the owner must learn by observation when extra food and protection is desirable.—*Deutsche landw. Thierzucht.*

Dear Meat in Germany.

The great advance in the price of meat, especially pork, in Germany, is entailing great hardship on the mass of the working population in that country, and has given rise to a feeling on the part of the inhabitants of the manufacturing centres, that the import duties on meat should be given up, or at any rate greatly lowered in order that cheap supplies from South America, the States, and Australia should be at the disposal of the buyer. On the other hand the powerful agricultural circles protest that such a course is not necessary, and that the importation of live stock would be attended with great danger; they point out, moreover, that the high price is of a temporary character; and will soon pass away, as happened in 1902.

According to official statistics, the numbers of stock for food is as follows:—

	Cattle.	Sheep.	Pigs.	Goats.
1900	18,939,692	9,692,501	16,807,014	3,266,997
1904	19,351,568	7,907,173	18,920,666	3,329,881

So that there has been a continual increase in the different classes, excepting sheep, but the greater number does not fully represent the actual increase of meat, because in consequence of progress in breeding and feeding, the individual weight of the animals is also considerably greater, as shown by the following official figures:—

	1883. lbs.	1892. lbs.	1900. lbs.
Average weight of oxen, age two years and over	1,025	1,093	1,168
Cows	836	915	975
Pigs, one year and over	255	263	287

In regard to the diminution of sheep, this has been caused by the great reduction in the value of wool, and the preference shown by the Germans for pork to mutton, also by the decrease in export. During the period 1883-88 there was an average export of 1,272,000 sheep, but in consequence of the imports being prohibited in other countries, chiefly in France, the German exports fell to 115,500 in 1904.

The total quantity of flesh at the disposal of the population was last year, according to a careful calculation, in round figures:—

	Tons.
From the licensed slaughterhouses	2,500,000
From the private killing	580,000
From imports	130,000
Total	3,210,000

equivalent to an average consumption per head of the population of 119 lb., of which 114 lb. was covered by the home production. For the sake of comparison it is mentioned that the average per head consumption of meat in England is 123, which is recognised as being very high.

From these data it is contended that the home production of flesh in Germany is practically equal to the demand, and that the dearness of meat does not arise from any growing scarcity of the material. The present excessive prices must therefore arise from some other cause. It might be thought that, although there were enough cattle, the farmers raised the price artificially by keeping back stock from the markets, but the official figures of the different markets show that this has not been case. However, the high prices remain a fact not to be denied, and therefore some other cause must exist.

The hot and dry summer of 1904 led in many parts of Germany almost to a fodder famine, so that all kinds of feeding stuffs advanced enormously in value, and the cost of fattening cattle was proportionately increased. This extra cost the farmers had to recover by getting more for the animals sent to market. Another, and perhaps more, important factor is that the butchers availed themselves of the rise in value to put up their retail prices out of all proportion to the extra cost to them. Just as in this country, when flour goes up, the bakers seize the opportunity to clap on an extra profit for themselves, so the German retailers have been making a very good thing out of the rise by using it as an excuse for putting up their retail prices still further.

Therefore the German agriculturists maintain that the inconvenience caused to the public must not be attributed solely to them, and they contend that, as there is actually no scarcity the prices will soon return to a normal level. They are aware of the responsibility resting on them to satisfy the flesh requirements of the population, and, as the representative of the German National Agricultural Society says, will continue to make every effort to fulfil their mission in this respect.

Lord Minto's Harness Horses and Hunters.

There was a very big attendance at Messrs. Tattersall's sale at Albert Gate on Monday to witness the dispersion of Lord Minto's fine stud of harness horses and hunters, in consequence of his impending departure for India. The best of the draft was the chestnut gelding Mikado, by Balsamo, a winner of the championship as a three-year-old at St. Boswells, and since his yearling days frequently successful at all the leading Border country shows. He changed hands at 195 gs., the top price of the sale. There was also keen competition for Emperor, another prize-winner, and he changed hands at 100 gs., while 75 gs. was the price at which Empress, the winner of the medal of the Hunters' Improvement Society at Kelso, was allowed to go. The harness horses did not sell so well, the top price, 62 gs., being paid for Toronto, a brown gelding of quality.

The Fruit Growing Industry.

Addressing a large conference of fruit growers from various parts of Kent and Sussex at Tunbridge Wells, on the 14th inst., Major A. Griffith-Boscawen, M.P., chairman of the Departmental Committee on the Fruit Growing Industry of Britain, alluded to the remarkable fact that fruit growing was the one department of agriculture in this country which was actually gaining ground, and urged that farmers should adopt every possible means of developing it. With the one exception of hops, no agricultural industry gave so much employment.

There was every reason to believe that much of the fruit at present imported from abroad could be grown equally as well in this country. One thing necessary to achieve this end was the imposition of a tariff upon imported foreign fruits, but he pointed out that the home grower, by devoting his attention to co-operation and to the better packing of his produce, matters in which he was at present far behind the foreigner, could do much without the aid of the Legislature.

Some resolute action was needed to prevent the present large quantity of bad foreign fruit being dumped into England, to be made, he feared, into very inferior jam. A practical suggestion made by Major Griffith-Boscawen was that the fruit industry could be considerably benefited in the future by the teaching of horticulture to children in rural schools.

Wisbech Mustard Seed Market.—There was a good attendance at the third mustard seed market at Wisbech on Saturday, when growers were present from Lincolnshire, Cambridgeshire, and Norfolk. There was a good show of seed, a fair amount of threshing having been done during the past week or two. The crop is reported to be above the average, and the condition of the seed is excellent. Prices were firm, and inclined to be dearer. The best brown seed made 10s. 6d., ordinary samples 9s. 6d. to 10s., and Whit seed 7s. to 8s. per bushel.

Live Stock Record.

AUTUMN MANAGEMENT OF BREEDING EWES.

Experienced flockowners and shepherds are well aware that a successful lambing season usually depends on the amount of provident care, attention, and rational feeding in-lamb ewes receive, especially in the latter part of autumn and in the early winter, up to the period of parturition. Some think it does not matter much during the first month after they have taken their season, but that will very much depend on circumstances. Rational feeding is needful always and it should be remembered that the sheep by nature is a hill-country animal—the reason why its internal organs are injuriously affected when forced to subsist on the herbage of marshes or a too watery diet. Like all other animals, sheep may gradually acquire almost a second nature by long habitude and usage to particular soils and situations, but there must be a watchful eye to make sure of their food always agreeing with them. In lowland districts, hay-feeding can scarcely be commenced too early, or, at least, the custom of placing a little sweet hay in racks to which sheep have access. In the majority of instances they might partake little, perhaps none of it; but, it might, in other cases, be partaken of more freely by the instinct of the animal being sensible of a salutary effect being produced; perhaps neutralisation of injurious influences of semi-poisonous plants. Pieces of rock salt for sheep to lick should always be put into the fields or folds where a ewe flock has abiding. The late Mr. Robert Russell used to say that, in his opinion, there are two things the shepherd should take care sheep placed under his charge should have daily access to — these being salt and drinking water. Yet how numerous are the cases of no provision being made of either.

No doubt abortions, caused by injurious feeding, are more likely to come with the November south-westerly gales than at an earlier period, partly because of the chilly effect of too much water on the organic internal system, when every particle of food partaken of is soaked, and, perhaps to a still further extent by the wet blankets about the bodies seldom being allowed time to dry before a fresh soaking comes. This cannot but exert a very baneful influence. Enervation must be produced by the perpetual evaporation from the skin. Who then, can wonder at the internal organic system getting deranged, or that in the general chill and disorder of organic functions, the generative embryo should be injuriously affected, and, in some cases, destroyed? When the late Mr. Henry Woods, of Merton, some thirty years since, published his pamphlet proving how enormous was the loss of lambs in some flocks, compared to others, it was attributed chiefly to injudicious feeding, and especially to giving too many turnips. We have had ever since numerous homilies on the subject, and some have striven in practice to dispense with turnip-feeding altogether for in-lamb ewes, preferring to keep them in grass fields where they are able to pick up a little herbage and supplementing this with full racks of hay. Scarcely is it to be supposed that a few turnips, if given along with some dry food, would injure pregnant ewes. Many hill-flockowners are compelled to give turnips in part, taking due care that the quantity of hay or dry trough food is sufficient to prove a healthful complete alterative. But giving salutary diet is only one part of the question. In a large number of cases, when for several days and perhaps two or three weeks, the fleeces of ewes are seldom dry, is seems a matter of urgency to provide shelter as well as plenty of dry food. No doubt large numbers of flockowners will declare it to be an impossibility to do this, but where there is a will there is usually a way. Temporary lambing folds have, many of them, either little huts or overhead sheeting to enable ewes to lie in the dry in the night season, and even the best of them do not cost so much that the amount ought to prevent so needful a provision being made. There should be always such a place into which the flock might be turned under the worst circumstances, when the judgment of the owner or shepherd perceives that the animals suffer privation, and especially on the approach of bad nights.

Contagious Diseases of Animals.

Summary of Returns issued by the Board of Agriculture for the week ending Oct. 14, 1905:—

NOTE.—The figures for the current year are approximate only.

The President of the Board of Agriculture.—Mr. Ailwyn Fellowes, M.P., President of the Board of Agriculture, has made several engagements for the next few weeks. On Friday, October 27, the annual conference between the Scottish Chamber of Agriculture and himself will take place at Perth; on Friday, November 3, he will address the Hunts Chamber of Agriculture at Ramsey; on November 7 he will attend the dinner in connection with the Alford Bull Fair; on November 9 he will be present at the annual dinner of the Gloucestershire Root, Fruit, and Grain Society at Gloucester; and on December 8 he will attend the annual competitive festival of the Monmouthshire Dairy School, and will present the prizes awarded by the Monmouthshire Technical Education Committee at Abergavenny.

STOCK AND SHOW NOTES.

By Herdsman.

On the front page of this issue we give a photo of the head of a splendid and typical Shorthorn bull, and it may interest many readers to know that the animal whose head is thus given is Meteor, with whom Mr. R. C. Cooper, of Shenstone Court, Lichfield, has won numerous prizes, including firsts and championships, at our leading shows. Meteor was born on March 29, 1903, and was bred by Mr. C. Morgan-Richardson, Noyadd Wilym, Cardigan, its sire being Moonlight 75110, and its dam Calluna, by Major 59419.

At a meeting of the Council of the Clydesdale Horse Society, held last week, the Editing Committee reported that 1,982 entries had so far been received for Volume XXVIII. of Stud Book, being an increase of 200 over the total number received for Volume XXVII. It was resolved to insert the portraits of the Cawdor Cup winners in next volume—namely, Hiawatha Godolphin and Rosadora. Several requested alterations in colour and marks, ages, etc., of horses exported during the last twelve months were delayed till next meeting. A lengthy discussion took place on the proposal to reduce the fees payable for entries by members of the society, and to increase the fees payable by non-members by charging an inquiry fee of 10s. for each entry. The proposal was, however, negatived by a majority. Intimation was made of numerous awards of medals and champion prizes during the past season, which were in all cases confirmed except two.

The Council of the National Sheep Breeders' Association has been summoned to a meeting in London, at which a resolution will be submitted by Mr. J. E. Quested, asking the Council of the Royal Agricultural Society to make it a condition of entry at their shows that all sheep entered for competition in the pure-bred classes shall be either entered, or be eligible for entry in their respective flock books, and that the judges appointed to award the prizes in all pure-bred sheep classes should be selected by the Council from gentlemen nominated by the respective sheep societies. One reason given in support of the proposal is that it is unfair that judges should be drawn from outside the circle of recognised breeders of sheep, or any other animal, to determine the merits of representatives of a breed with which they are in no way identified. One or more instances of this sort occurred, it is said, in connection with the Yorkshire Agricultural Show at Hull.

Messrs. Alfred Mansell and Co., live stock exporters, Shrewsbury, despatched from Liverpool on Saturday, October 7, per steamship "Highland Enterprise," a choice lot of Romney Marsh Shearling rams for two Argentine customers. They were specially selected as being typical specimens of the breed, special attention being paid to securing good even fleeces throughout.

Messrs. Alfred Mansell and Co., Live Stock Exporters, Shrewsbury, have been doing quite an extensive business of late with Chili, their shipments including several notable Shorthorn bulls, blood reds, from the noted herds of Mr. Geo. Harrison, Mr. John Hardley, and Mr. J. T. Nickells. In addition to the foregoing must be included a blood red Shorthorn heifer, Hereford bull, Hampshire sheep, and Aylesbury ducks.

Messrs. Alfred Mansell and Co., the well-known live stock exporters, of Shrewsbury, shipped on the 30th ult., per steamship "Rem-

brandt," from Liverpool to a South American client a Shorthorn bull and heifer of exceptional merit, viz., Aikton Abbotsford, a well-grown roan bull bred by Mr. D. Bragg, sired by Abbotsford, a notable bull bred by Mr. John Cran, of Keith, from Duchess 26th, a big-framed cow from a well known prize-winning family. Aikton Abbotsford was seldom exhibited; but at the Longton Show of this year he obtained first and special prize; but his own brother, Abbotsford Duke, a year older, exported to Australia, had a very successful showyard career. The heifer hailed from Mr. R. P. Cooper's prize-winning herd, and was a member of the highly-esteemed Waterloo family. She was a blood-red in colour, and was in calf to that grand prize bull, Speculator, purchased as a yearling at 220 guineas, and a winner at the Northampton, Hereford and Worcester, Peterborough, Staffordshire, Shropshire and West Midland, Warwickshire, Oxfordshire, Gloucestershire, and Leicester shows, and subsequently sold at a high price for exportation.

Messrs. Alfred Mansell and Co., of Shrewsbury, have just received advice that the show of Shropshires at the recent Melbourne Show comprised a large and good entry, and that the sales which followed established a record in prices for both rams and ewes. Mr. A. E. Mansell, who won first and second with pens of three rams, sold ten Shearling rams at an average of £107 2s., the best prices being 205, 160, and 105 guineas. Mr. H. Williams won first for Shearling rams in a class of 45, and first and champion for aged ram. These made 130 and 100 guineas respectively, and he also made the splendid average of £31 10s. for seventeen Shearling ewes

Mr. G. Harrison, of Gainford Hall, Darlington, has sold a Leicester ram lamb for South America.

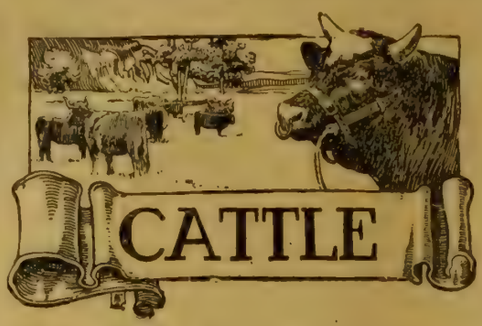
The fifty-seventh Birmingham Cattle Show takes place at Bingley Hall on November 25 to 30, and entries close on Wednesday, November 1. When applying to the secretary, Mr. W. H. Lythall, for entry forms it is necessary to state for which section they are required. The prize money offered amounts to £3,500, including the Lord Mayor's prize, the High Sheriff's prize, the challenge cups, value 100 guineas each, presented by Messrs. Elkington and Co., Mr. Joseph Thorley, and Messrs. Webb and Sons; the Birmingham Daily Post challenge cup, value £50, for the best animal not exceeding two years old; and the Maisemore Park challenge cup, value 50 guineas, for the best Aberdeen-Angus animal. The usual extra prizes of £50 each for the best Hereford, Shorthorn, and Scot; £30 for the best cross-bred; and £20 for the best Devon, appear in the prize sheet. The Cooper challenge cup for sheep, and the Hotel and Innkeepers' challenge cup for pigs are again offered. There are the usual number of classes for roots, potatoes, and corn.

Volume XI. has been issued of the Flock Book of the Kent or Romney Marsh sheep. It is a well-got-up volume, and gives details of rams Nos. 14458 to 16195, ewes 191 to 248, and flocks 1 to 86, also particulars of prizes won by the breed at the various shows, wool prizes, record of sales and export certificates, etc. The book is published by the Kent or Romney Marsh Sheep Breeders' Association, Incorporated, and all communications respecting it must be addressed to the secretary, Mr. W. W. Chapman, Room 4, Mowbray House, Norfolk Street, Strand, W.C.

At a meeting of the Council of the Devon County Agricultural Association it was decided to hold the 1906 show at Tavistock on May 22 and 23, and to ask the Duke of Bedford to be president for the year.

Mr. William Ball, one of the best-known agriculturists in the Fylde, and secretary of the Lancashire Farmers' Association, has decided to go to Canada to take up farming there.

At Donington Fair, held on Wednesday, horses suitable for town work met with a ready sale, and the best made up to 65 gs.; yearlings and two-year-olds, £20 to £35. The beast fair was numerically below the average, and business inactive. Three-year-old beasts made up to £18, and two and a half year olds to £15.



Notes and Jottings.

In our last week's "Notes" attention was once more called to the want of finish in so many of the cattle that are being marketed for the butcher, and again this week the same note needs repeating. It is a long time since so many half-finished and indifferent quality animals were seen in our markets than has been the case recently. The season, it must be admitted on all hands, has been anything but a good one, and one, there is no doubt, in which the better-bred animals stood at a great advantage over the mongrels, and when the scarceness of keep became general these were the first to be got rid of. Whether this is the cause of the extra number of bad classed ones and the minimum number of good ones is hard to say, but is quite probable.

Another cause may certainly be attributed to the increase in dairying for milk selling purposes, which is having a rather prejudicial effect upon a large number of the store cattle reared. The establishment of milking trials at our shows has led to milk records being taken in many herds, and the young stock of these are not of as good a type for feeding as are the produce of more medium milkers (dual-purpose cattle); the bulls used, too, in many of these herds recently, have been of this same light-fleshed and heavy milking type, and have impressed the want of flesh upon their offspring, in some instances, in a very marked manner. It is not, perhaps, wise to take a pessimistic view of such things, but breeders will do well to be a little cautious in breeding too extensively for milk.

Depend upon it, the day is not far distant when this country will be very largely supplied with milk from abroad. Sterilisation is already being practised much more generally than it was, and, with this process becoming fashionable and known to the public, the demand for it is certain to increase, and it is pretty well known that European countries can do these things much more cheaply than they can be managed in England. Female labour costs less there and is of better quality, the womenfolk taking a large share in the labour of caring for and milking the animals. It is true that in some parts of the north of England, in Scotland, Ireland, and Wales a good deal of milking is performed by females; but in the great dairying districts of the Midlands and South the milking is a great trouble.

The report of the Commission on our food supply in time of war brings out some extraordinary statements in a portion of the evidence affecting the importation of Canadian store cattle. One witness states, it is reported, his difficulty in maintaining his farm in a high state of cultivation on account of the want of more cattle, which he insinuates is in a great measure owing to the prohibition against Canadians. Surely this individual, and others who take similar views, must have forgotten the old proverb, "Where there's a will there's a way." If they or any one else are desirous of peopling their farms more thickly with cattle they can do so at a much less cost at home than by buying strangers were our gates open to them.

Young store cattle for growing on are purchasable to-day at a cost far below the expense of breeding them. It is the best class of stores that need but little finishing that are so dear. What is to hinder such feeders buying these young stores and giving them a little more time? If well fed, they will make rapid growth and increase in value, and, at the same time, make a lot of very useful manure for the fertilising of the farm, and a hundred of these can be purchased for the same sum that would purchase thirty forward conditioned ones the young ones would also require much less expense in feeding, and leave a far greater profit behind them in the long run.

A neighbour of the writer purchased the other day a number of capitally bred Shorthorn steer calves, born about last February, at less than £5 per head. What could pay more money than these? The producer of them, certainly, has been a loser. In Ireland, too, the stock of cattle has so vastly improved since the Government assisted in the matter, that young stock of the highest quality may be purchased there in any number, and the prices quite within easy range. Fine blue-grey Polled crosses, and well-bred symmetrical nice-quality Shorthorns of a year and a half old at £7 to £8. What is likely to pay better than these, again?

Speaking of Irish cattle and their improvement, it is not generally known what a large number of our dairymen's cattle come from that country now, as compared with a few years ago. Irish drapes or barreners of the Shorthorn class are largely purchased and brought over here now for bulling purposes, and leave in the average of years a good margin of profit. In the South of Ireland there has for years been an excellent class of Shorthorn milking cows, full of good breeding and quality, and with well-shaped bags under them. Breeders over there have paid quite as much, or more, attention to that important point than many of our English breeders, and their cattle are proportionately valuable.

The demand for the Scotch-bred Shorthorns appears one sure to be well sustained according to the results of the Collynie sale, several bull calves exceeding 40 gs., and heifers reaching 155 gs. These are remunerative figures, and should encourage other breeders to stick to their best stock and try to breed better. At Pirriesmill, too, good prices were realised, and also at Stoneytown. The Lincoln Red branch of the Shorthorn family at Louth did not experience quite as good a demand or such satisfactory prices; but these cattle have been very much picked over lately, a great number of the finest specimens being purchased for export. Such a proceeding has a more damaging effect upon this branch of the breed than upon the Coates' Shorthorns, owing to the more limited number of herds.

The famous Stonebrook House herd of Herefords were well patronised, and what must be considered an excellent average (78 lots, £30) was obtained. Mr. Fenn, who has so long had the pleasure of owning and managing this beautiful herd of Whitefaces, has sold them to go into almost all parts of the world, and it speaks very loudly for the cosmopolitan character of the Hereford breed that such satisfactory accounts of them have been received. Mr. Fenn's words, when acknowledging the toast of his health, are worthy of special attention—he trusted that the cattle would give purchasers as much pleasure and profit as the herd had given him for nearly fifty years. It is not every breeder that can add the words profit and pleasure together so conscientiously.

How seldom we hear the question of profit touched upon in connection with our pedigree cattle sales! Why is it? In these days surely good profits are, as Mr. Fenn intimated, frequently or generally made. Why, then, are breeders so backward at adding that word profit? A little more of this would do wonders in helping to improve our nondescript herds of cattle. Many of the owners of these live from year to year under the impression that all pedigree stock breeding is carried on at a loss, that the old saying "the breed goes in at the mouth" is correct, and therefore too costly. Could they be taught that there is profit attending the pursuit as well as pleasure, they would take up the matter much more readily and with energy, and great good would result.

Aberdeen-Angus cattle appear to be looking up a little in the States, which is as it should be. In the corn belt, as the tillage States are called, nothing is so likely to give satisfaction; and they feed well together and quietly, whilst a good supply of corn enables them to grow and put on flesh as well. Recent sales in that country point to a much better demand and attendance, which is a healthy sign, even though prices may not jump up altogether suddenly. A good demand is a great matter, and excessively high prices are not always the best thing that can happen to a breed of cattle. When at a low ebb, strangers that had no intention of purchasing sometimes are induced to become buyers, and so a great spread of the knowledge of the breed follows.

The time will very quickly be upon us now when we shall be hearing and thinking more of the Angus cattle at home. One always associates Christmas and its joys with these "bonnie Blacks," the sirloin for the big roast and the suet for the confectionery, and, above all, the Christmas puddings when these Blacks are in season are always of the best. In the beef the lean and fat are usually well mixed and marbled, the meat is tender, and the flavour just the very best. This year prices for them are pretty sure to be satisfactory, or at least fairly so, as the number of first-class Christmas cattle is certain to be very limited from a large area of England, and Ireland does not appear to be overdone with them.

Shorthorn Sale at Aberdeen.

A joint sale of Shorthorn cattle from various herds was held at Aberdeen Agricultural Hall, on the 15th inst., this bringing to an end the week of Shorthorn sales in Scotland by Messrs. Macdonald, Fraser, and Co., as reported in our last issue. The event was something of a new departure, several of the more prominent North-Eastern breeders having arranged an annual sale in connection with the Scottish Shorthorn autumn gatherings. At this fixture it is intended that the following herds shall be represented:—Cromleybank, Jackston, Kinellar, Westertown, Heatherwick, Saphock, Fingask, Tilieygreig, Woodend, Nether-Augustone, Deystone, and Harthill. They were not all represented on the 13th inst., but the consignment, which numbered eighty in all, included quite a large proportion of high-class stock, and it was thoroughly representative of the breed. It is anticipated that this combined sale will meet the convenience of local and district breeders, and of exporters and buyers of first-class stock generally, and the fixture, which was something of the nature of an experiment, proved, it is satisfactory to record, one of the most successful of the Shorthorn sales that have been held at Aberdeen. The stock brought forward were mostly typical of popular Northern Shorthorn families, the sires represented including such high-class stock as the Jackston Lord Lynedoch, the Westertown Diamond Mine, and Heatherwick First Fiddle. The great majority of the pedigrees traced back to registration prior to 1850, and buyers had consequently an exceptionally choice collection from which to choose. Of the eighty animals catalogued only three were absentees, and the total proceeds of the sale amounted to £3,846 3s., bringing out the very satisfactory gross average of £49 19s. The best sectional average was obtained for the two-year-old heifers, of which fourteen were put through the ring, the total realised working out at £66 12s. per head. The chief sales were as follows, the names of the sellers being given at the beginning of each paragraph:—

MR. WILLIAM ADAM, BAADS.

Cow.—Lady Pride, 8 years—Mr. T. A. Buttar, Corston, 48 gs.

TWO-YEAR-OLD HEIFERS.—Beauty V.—Mr. M'Intyre, Findon, Mains, 45 gs.; Jenny Lind XX.—Mr. Young, Cadboll, 72 gs.

BULL CALF.—Granite King—Mr. T. A. Buttar, Corston, 41 gs.

MR. WILLIAM ANDERSON, SAPHOCK.

TWO-YEAR-OLD HEIFERS.—Elizea VIII.—Mr. Reith, Old Meldrum, 50 gs.; Rosemary F. VI.—Mr. Milne, Cairnhill, 50 gs.; Rosemary CIII.—Mr. Young, Cadboll, 45 gs.; Agatha III.—Mr. Wilson, Dallachy, 33 gs.

YEARLING HEIFERS.—Vine XXXV.—Mr. Paterson, Mintlaw, 20 gs.; RosemaryCIV.—Mr. A. A. Haley, Yorkshire, 46 gs.; Lady Flower IV.—Mr. Robinson, Ireland, 32 gs.; Lady Flower III.—Mr. Hughes, Crewe, 62 gs.; Spicy Rosie—Mr. Wordsworth, Ireland, 31 gs.

MR. GEORGE ANDERSON, WEST FINGASK.

COWS.—Rosie, 4 years—Mr. Wilson, Bowiebank, King Edward, 47 gs.; White Queen, 3 years—Mr. Gray, Kersie Mains, Stirling, 27 gs.

YEARLING HEIFERS.—Flora Wenlock—Mr. W. Malcolm, Dunmore, 23 gs.; Rosebud—Mr. W. Callender, jun., Insch, 28 gs.; Lovat Cowslip—Mr. Forbes, Muirton of Barra, 27 gs.; Lady Bess—Mr. Young, Tilbouries, 28 gs.; Merry Beauty—Mr. Reith, Old Meldrum, 26 gs.; Red Bessy—Mr. Reith, Old Meldrum, 28 gs.

BULL CALVES.—Golden Pride—Mr. Fleming, Keith, 22 gs.; Dandy Boy—Mr. John Handley, Milnthorpe, 38 gs.

MR. A. BRUCE, HEATHERWICK.

YEARLING HEIFERS.—Bellanna—Mr. Coey, Larne, 46 gs.; White Rose—Mr. A. T. Gordon, Combscauseway, 38 gs.; Clarissa—Messrs. Lumsden and Mackenzie, Perth, 70 gs.; Chrissie—Mr. A. T. Gordon, 70 gs.; Gertrude—Mr. Smith, Pittodrie, 34 gs.

BULL CALVES.—Mozart—Mr. C. H. Fleming, Keith, 42 gs.; Beethoven—Mr. Fleming, 56 gs.; Senator—Mr. Bell, Tyrie Mains, 24 gs.; Stand Firm—Mr. J. Thompson, Balbegno, 85 gs.; Wagner—Mr. Keith, Aberdour, 31 gs.

MR. S. CAMPBELL, KINELLAR.

COWS.—Sweetmeat II. Mr. Bruce, Myreton, 50 gs.; Marigold XXXIV.—Mr. Reid of Hillhead, Ellon, 26 gs.

YEARLING HEIFER.—Marigold Maud II.—Mr. J. Cran, Keith, 90 gs.

BULL CALF.—March Past—Mr. Malcolm of Dunmore, 51 gs.

MR. GEORGE CAMPBELL, HARTHILL.

YEARLING HEIFERS.—Peggy III.—Mr. T. A. Buttar, Corston, 26 gs.; Clara F. V.—Mr. Reid of Hillhead, Ellon, 58 gs.; Beauty XII.—Mr. Robertson, Coleburn, 36 gs.; Rosalie, Mr. Strachan, Cork, 31 gs.

MR. A. CROMBIE, WOODEND.

TWO-YEAR-OLD HEIFERS.—Victoria LXXII, Mr. Hughes, Crewe, 125 gs.; Rosabell VI.—Mr. Morrison, Phingask, 41 gs.

YEARLING HEIFERS.—Honey Queen V.—Mr. Smith, Pittodrie, 38 gs.; Rosabell VII.—The Irish Department of Agriculture, 165 gs.; Rachel XIV.—Mr. J. Robertson, Coleburn, 62 gs.; Rosabell VIII.—Mr. Robinson, Ireland, 30 gs.; Woodend Beauty V.—Mr. Norrie, Cairnhill, 22 gs.; Augusta Bruce V.—Mr. Tory, Dorset, 47 gs.

MR. JAMES DURNO, JACKSTON.

TWO-YEAR-OLD HEIFERS.—Choice Blossom—Mr. M'William, Stoneytown, 100 gs.; Florence—Mr. Hill, Little Haddow, 100 gs.

YEARLING HEIFERS.—Beatrice—Mr. A. T. Gordon, Combscauseway, 34 gs.; Juliet—Mr. John Cran, Keith, 44 gs.; Lynedoch Blossom—Mr. Ferguson, Lumphart, 61 gs.; Diamond Bloom—Mr. Coey, Larne, 70 gs.

MR. JAMES DURNO, WESTERTOWN.

TWO-YEAR-OLD HEIFERS.—Myrtle XXX.—Mr. Ferguson, Lumphart, 50 gs.; Landlady—Mr. Robinson, Ireland, 62 gs.

YEARLING HEIFERS.—Rosie XIX.—Mr. Singer, Gloucester, 55 gs.; Diamond Rosie—Mr. Anderson, Fingask, 40 gs.; Fairy Diamond—Mr. Douglas, Spots Mains, Kelso, 41 gs.; Diamond Ruby—Mr. Hugh Fraser, New Aberdour, 71 gs.; Vine XXXV.—Mr. Cruickshank, Logie-Newton, 35 gs.; Diamond's Ringlet—Mr. Parkin Moore, Mealsgate, Carlisle, 35 gs.; Diamond Queen—Messrs. Lumsden and Mackenzie, Perth, 48 gs.; Myrtle XXXI.—The Duke of Richmond and Gordon, 60 gs.

MR. GEORGE WALKER, TILLYGREIG.

TWO YEAR OLD HEIFERS.—Lustre XXXII—Mr. Hill, Haddow, 75 gs.; Maggie XVI.—Mr. Young, Cadboll, 40 gs.

YEARLING HEIFERS.—Josephine Cordy II.—The Duke of Richmond and Gordon, 50 gs.; Bright Gem—Mr. C. H. Fleming, 32 gs.

BULL CALVES.—Proud Lord—Mr. Crawford, Ireland, 36 gs.; Golden Chief—Mr. Snowball, Knapton, Yorks, 48 gs.; Dignity—Mr. Singer, Gloucester, 42 gs.; Gay Prince—Mr. Beaton, Fyvie, 22 gs.; Director—Mr. Bell, Tyrie Mains, 26 gs.

Sale of Sir W. H. Wills' Shorthorns.

A highly successful sale of Shorthorns, the property of Sir W. H. Wills, Bart., was conducted by Messrs. John Thornton and Co. on Tuesday, at Blagdon Lodge, near Bristol. There was only a small number of animals for sale, but a very large company assembled and bid quickly and well for them. Sir William Wills presided at the luncheon, and said he was pleased to see so large a gathering of breeders and neighbours, and hoped the cattle would do well in the hands of their purchasers. Captain Whitting, of Weston-super-Mare, kept several of the best lots in the county, among them being the red yearling heifer, Blagdon Gwynne, at 205 gs., the top price of the sale. Captain Whitting also gave 90 gs. for the dam of this heifer, and 105 gs. for a calf from the same cow. The three-year-old heifer, Blagdon Penelope 2nd was in good request and went to Mr. R. W. Hudson at 120 gs., and his neighbour, Mr. Scott-Murray, paid 81 gs. for Blagdon Prudish. A beautiful white calf, promising for exhibition, was bought by Mr. A. Hiscock at 47 gs. This and most of the highest priced young stock were by the grand bull Royal Scotsman, a bull bought at a very high price in Aberdeenshire. The following were the principal sales:—

COWS, HEIFERS, AND CALVES.

	Gs.
Fairy 78th, red roan, c. July 30, 1896; s. Oxford Marquis 69216 ..... Mr. H. Butler	23
Charity 3rd, roan, c. May 1, 1899; s. Escutcheon 68600 ..... Lord Wolverton	30
Socks, red, c. May 18, 1899; s. Escutcheon 68600 ..... Mr. H. Butler	25
Her roan Bull Calf, c. Jan. 5, 1905; s. Blagdon Lord 3rd 82897 ..... Mr. W. Young	24
Kingscote Gwynne 12th, red, c. Jan. 9, 1900; s. Beau of Berkeley 69965 ..... Captain Whitting	90
Her red roan Cow Calf, c. March 31, 1905; s. Royal Scotsman 82190 ..... Captain Whitting	105
Blagdon Fairy, red, c. March 24, 1900; s. Blagdon Medallion 74064 ..... Mr. S. H. Pimm	26
Her red roan Cow Calf, c. May 10, 1905; s. Blagdon Lord 3rd 82897 ..... Mr. R. W. Hudson	25
Waterloo Cranford 3rd, rich roan, c. July 30, 1900; s. Duke of Cumberland 10th 72325 ..... Captain Whitting	55
Her red roan Cow Calf, c. April 2, 1905; s. Royal Scotsman 82190 ..... Captain Whitting	80
Blagdon Charmer, roan, c. Jan. 2, 1901; s. Wiltshire Victor 71883 ..... Mr. W. M. Scott	27
Blagdon Mayflower (twin to a heifer), roan, c. Feb. 18, 1901; s. Wiltshire Victor 71883 ..... Mr. J. T. Dibsdall	30
Her red roan Bull Calf, c. May 3, 1905; s. Royal Scotsman 82180 ..... Mr. J. T. Hobbs	19
Solo, roan, c. May 7, 1901; s. Alto 68147 ..... Mrs. Bourne	32
Her red Cow Calf, c. April 29, 1905; s. Royal Scotsman 82190 ..... Mr. R. Stratton	19
Plume, roan, c. August 18, 1901; s. Treasurer 78015 ..... Lord Wolverton	27
Her white Cow Calf, c. March 9, 1905; s. Royal Scotsman 82190 ..... Mr. R. Stratton	15
Blagdon Princess 2nd, red, c. Jan. 3, 1902; s. Wiltshire Victor 71883 ..... Mr. Julius	45
Blagdon Penelope 2nd, roan, c. March 14, 1902; s. Wiltshire Victor 71883 ..... Mr. R. W. Hudson	120
Pink Peeress, white, c. April 23, 1902; s. Experiment 78834 ..... Mr. J. Pears	25
Her white Cow Calf, c. Jan. 31, 1905; s. Royal Scotsman 82190 ..... Mr. A. Hiscock	47
Blagdon Princess 3rd, red and white, c. Feb. 16, 1903; s. Royal Scotsman 82190 ..... Mr. W. H. Greville Edwards	26
Blagdon Prudish, red roan, c. Feb. 17, 1903; s. Royal Scotsman 82190 ..... Mr. C. A. Scott Murray	81
Charity 4th, white, c. March 15, 1903; s. Royal Scotsman 82190 ..... Lord Tredegar	27
Blagdon Victoria May, roan, c. August 28, 1903; s. Alto 68147 ..... Mr. Julius	95
Blagdon Gwynne, red, c. May 24, 1904; s. Royal Scotsman 82190 ..... Captain Whitting	205
Charity 5th, roan, c. June 19, 1904; s. Royal Scotsman 82190 ..... Mr. W. M. Scott	42

BULLS.

Blagdon Lord 4th, roan and white, c. Oct. 26, 1904; s. Lord Lieutenant 77067 ..... Mr. W. H. Greville Edwards	37
Blagdon Rover, white, c. May 12, 1904; s. Royal Scotsman 82190 ..... Mr. J. Inskip	41
Blagdon Fitz-Rose, roan, c. August 6, 1904; s. Blagdon Lord 3rd 82837 ..... Mr. Julius	67
Blagdon Spot 2nd, red roan, c. Jan. 2, 1905; s. Royal Scotsman 82190 ..... Mr. W. S. Dowding	22

The Paunton Court Herefords.

This well-known herd, the property of Messrs. A. R. and G. W. Firkins, was, in consequence of Mr. A. R. Firkins's retirement from agricultural pursuits, dispersed by auction on the 13th inst. by Messrs. H. F. Russell and Son. The catalogue comprised only breeding cows and calves and two stock bulls, and was arranged for cows and heifer calves to be sold first, and then bulls and bull calves, in sequential order. Among the cows were daughters of Lurdan, a first prize winner from the Wintercott herd; Clarence, from the Leen herd; and other meritorious sires. They were all, except two, in calf to that noted twelve-years-old sire Tumbler, of The Leen and Hampton Court blood, and others to Happy Hampton, the two-year-old son of the champion bull Happy Christmas, which Messrs. Firkins bought at Leinthall sale for 330 gs. The main of the calves were by Tumbler, others by Curly Boy, used with great success in the Whittern herd, and Happy Hampton. The last mentioned was the only animal reserved at the last sale, and being from Posy, dam of the Royal winner daisy, and also a first prize winner, was expected to meet with great competition. But the veteran Tumbler's wonderful career was considered, and a spirited contest took place for him between Mrs. Baughton, Mr. Thompson, and the in-coming tenant, before the last-mentioned secured him at 81 gs. Altogether sixty head were sold at an average of £24 8s. 5d. apiece. A sale list is appended:—

COWS AND CALVES.

Fairy—Mr. W. T. Cooke, King's Pyon, 22 gs.; her heifer calf—Mr. W. T. Cooke, 7½ gs.; Beauty—Mr. D. A. Thomas, M.P., Merthyr, 38 gs.; her heifer calf—Mr. D. A. Thomas, M.P., 13 gs.; Gaylass 6th—Mr. T. Sale of Mr. Harwood's Shorthorns

The second sale of Shorthorn cattle held last week in the West of England took place at Woodhouse, Almondsbury, near Bristol, on Wednesday, when Messrs. John Thornton and Co. sold Mr. E. Harwood's herd. The stock were in excellent condition, and there were a capital lot of calves by Bapton Yeoman, a son of Mr. J. Deane Willis's C.I.V. Mr. Willis was a purchaser at the sale, securing a couple of the heifer calves at 51 gs. and 27 gs. Lord Moreton and Mr. Julius each gave 71 gs. for a cow and heifer respectively, and Captain Whitting purchased Dora 14th, a red six-year-old, at 65 gs. The old bull Bapton Yeoman was reserved at 300 gs., but Woodhouse Dalesman went at 105 gs. to Mr. Casares for South America, and Woodhouse Jester at 61 gs. to Mr. Julius. The sale was considered satisfactory, an average all round of £29 18s. 3d. being obtained for forty-nine head, which included several calves. We append a list of chief lots:—

COWS, HEIFERS, AND CALVES.

	Gs.
Alpine Beauty 2nd, roan, c. Oct. 18, 1894; s. Rosedale Jovellar 63237 ....Mr. J. R. Codrington	20

Sale of Sir Robert Greenall's Black Angus, Galloways, etc.

The fifth annual sale of Black Angus, Galloway, and Blue Grey Polled cattle belonging to Sir Gilbert Greenall, Bart., took place at Terrington Stud Farm, near King's Lynn, on Wednesday, when between 300 and 400 prime Polled beasts were brought under the hammer by Mr. W. Banbridge, of Warrington. They mainly consisted of big two and three-year-old bullocks and heifers, amongst which were some splendid Blue-Greys. A number had been cake-fed, whilst the stores were very thick and forward, and should make heavy weights and finish quickly. There was a large attendance of farmers, dealers, and butchers from the Lynn and Marshland districts, with a sprinkling from the far side of the county and Cambridge. For the pick of the animals bidding was brisk, but prices were not very high. The average price was about £14, and the highest figure was £21 5s., paid by Mr. Palmer, of Middleton, for a very big Shorthorn bullock. Mr. Palmer was the biggest buyer, and he also paid the second highest price, giving £19 each for two other massive Shorthorns, which had been keenly competed for. He took eight of the first eleven lots, his purshases being four Shorthorn crosses at £15 5s. each, two at £15 10s., two at £13 10s., two at £16, and two at £18 10s., the last pair after sharp bidding with some half-dozen graziers. Later Mr. Palmer successfully bid for two bullocks at £14 each, three at £14 15s., two at £15 15s., four black Angus at £16 5s., and six at £13. Mr. A. Rowell, of Stow, was also a large buyer. The first three lots, consisting of six blue-grey bullocks, were all knocked down to him—four at £14 15s. and two at £14 each. His subsequent purchases included two bullocks at £16 2s. 6d., two at £14, two blue-greys at £12 17s. 6d., and six at £13 5s. Mr. J. Gamble, North Runcton, started with eight black Angus at £14 7s. 6d. each, and shortly secured quite a big herd of very promising cattle—three at £15 17s. 6d., eight at £14 2s. 6d., eight at £13 2s. 6d., six pure-bred Galloways at £11 10s., six blue-greys at £13 15s., and seven more at £13 2s. 6d. each. Mr. H. Stratton, of Norwich, secured a dozen animals—two bullocks at £14 5s., two at £15 10s., six at £13 17s. 6d., and two heifers at £13 each. Mr. J. Rush, of Cambridge, got a good bargain in ten pure-bred Galloway heifers at £13 15s., and a similar lot at £12 each, the starting price in each instance being £10. Mr. Nicholls was also an extensive buyer, securing altogether forty-nine animals of various sorts, at prices ranging from £11 for an Angus up to £15 each for six blue-greys. Numerous other transactions took place at similar prices.

Bull Sale at Carlisle.

Messrs. Harrison and Son held a sale of pedigree and non-pedigree bulls at their Carlisle auction mart on Thursday, some 250 bulls being catalogued, and most of the chief breeders of the Borders were represented. Buyers attended in large numbers from all parts of the United Kingdom, and a strong demand was experienced throughout, at prices considerably in excess of the quotations at the corresponding sale last autumn. For the pedigree bulls the demand was exceedingly keen at prices ranging up to 66 gs., this figure being got for a fine bull consigned by Mr. Ecroyd, of Low House, while the average price all round was about 30 gs. Non-pedigree bulls made up to 41 gs., and some white bulls up to 22 gs.

Sale of Devons at Taunton.

The annual sale of Devon cattle at Taunton, held under the auspices of the Devon Cattle Breeders' Society, took place on Thursday, when there were altogether sixty-nine lots, and the great majority of beasts found purchasers. Mr. E. Clatworthy, of Taunton, paid the highest price, 48 gs., for a bull calved in April, 1904, and bred by Mr. Tom Dibble of Bagborough, Taunton, and Mr. T. S. Morgan, of Whimple, paid the second highest price for a bull calved in November of last year, the property of Mr. A. J. Hill, of Washford, 45 gs. being the amount realised; while Mr. H. Gillham, of Taunton, paid 40 gs. for a heifer, bred by Mr. S. Kidner, of Milverton. The best prices paid for other lots were 36 gs. by Mr. S. Kidner for bull calved September, 1904, and by Mr. Haydon, Burlescombe, for bull calved October, 1904; 32 gs. by Mr. W. Kidner, Kingston, for bull calved in January, 1901, and by Mr. R. Denny, Chard, for bull calved in June, 1904, while several other lots fetched 30 gs. and upwards.

IMPORTANT TO FARMERS. The best Farm Account Books are "WEBB'S PRACTICAL FARMER'S ACCOUNT BOOK," with Preface by Clare Sewell Read; 72nd edition; 6s.; larger size, 7s. 6d. List of Game and Dairy Account Books, post free, of Jarrold and Sons, 10 and 11, Warwick Lane, E.C.—[ADVT.]

Horse Notes.

"He doth nothing but talk of his horse."
—Merchant of Venice.

For many years the old theory that all our various breeds of horses come from one common stock has been the subject of attack, and though some able and practical men have, even in these later days, adhered to the theory, it is now generally admitted that horses have descended from various stocks and not one parent stem. Amongst those who were believers in the "common origin" theory was the late Captain Horace M. Hayes, who founded his belief on the fact that our various breeds of horses interbred and that their produce was fertile. But, as Professor Ridgeway points out, the dog, the wolf, and the jackal amongst carnivorous animals, and the common ox, the zebu, and the yak, amongst herbivorous animals do exactly the same thing, yet no one asserts that they all come from one parent stock.

It was pretty clearly demonstrated by Professor Cossar Ewart, Professor of Natural History at Edinburgh University, that our horses had not a common origin, and that gentleman's "discovery" of the Celtic pony, types of which existed in prehistoric times, was an event the importance of which it would be difficult to over-rate. I referred to Professor Ewart's discoveries some months ago, and there is no need to discuss the matter further here.

There are three recognised species of horses at present—for the purposes of this article it is unnecessary to take into consideration those equidæ which may be roughly divided into asses and zebras. These three species are: (1) The horse (Equus caballus); (2) the Celtic pony (Equus caballus celticus), and (3) Prevjalsky's horse (Equus prezwalskii Poliakoff). To these Professor Ridgeway would add a fourth, which he terms the Libyan horse (Equus caballus lybicus), from which he assumes that the English thoroughbred, the Arab, and the Andalusian horse are descended. It is not my intention to go through the various reasons which Professor Ridgeway gives for arriving at this conclusion on this occasion, though I may refer to them at some future time. I may point out, however, that he proves that the Arabs had not horses in early historic times, and that they got their horses from Egypt.

Without going into the scientific side of the question at all, there seems to be good reason for Professor Ridgeway's conclusions. Historically he proves that the Arabs got their horses from Egypt, the presumption being that these were Libyan horses. That there was in early days a breed of horses in England on somewhat similar lines to our thoroughbreds is certain. In the twelfth century there was racing of sorts at Smithfield, and in the sixteenth century the unfortunate Ferdinando, Earl of Derby, built for himself a house at Wallasey, from which to view the racing, this probably being the first grand stand ever erected. Two centuries later we find a writer in the *Gentleman's Magazine* deprecating the introduction of Arab and Eastern blood into this country. He said that it was possible that the infusion of Eastern blood might improve the speed of our horses, but that it was certain that it would have a prejudicial effect on the stamina, for which they had been famous for so many years. And this, by the way, throws a somewhat curious light on many latter-day controversies and theories. We find the Andalusian horse spoken of enthusiastically by old writers, and it is very easy to see how readily his ancestors could get from the Great Libyan Desert to their new home, but it is with the English horse that we have more especially to do here.

A common saying—one that has passed into a proverb of universal application—is "as thoroughbred as Eclipse." But, as the late Mr. Joseph Osborne pointed out in his useful "Horsebreeders' Handbook," Eclipse was not thoroughbred at all. If we examine his pedigree closely in the fourth generation we find that in nine out of the sixteen quarterings the pedigrees cannot be traced—that is to say, that the ancestors were of undoubted English blood. About the superiority of Eclipse

there can be no mistake. He stands out as undoubtedly the greatest horse of his time. But he would be a bold man who would assert that he owed his superiority to his Eastern blood. It, of course, might be urged that the unknown element in his pedigree was of Eastern origin, but beyond a doubt this was not the case, as all the Eastern pedigrees were very carefully recorded at the time. Indeed, pedigree was then beginning to be studied, and the value of it to be understood. It is also a fact worth recording that the article in the "Gentleman's Magazine" was written within a short time of the birth of Eclipse; I forget the exact date, but, speaking roughly, within thirty years. So that undoubtedly we then possessed a stout and valuable breed of horses practically clear of Eastern blood, and there seems no reason why these should not have been descended from the Libyan horse of which Prof. Ridgeway writes.

It came as a shock to me when the late Admiral Rous spoke of Eclipse as falling far short of the modern thoroughbred in point of pace and stamina. Of course, all theories on this score are and must ever remain theories, for there is no way of proving them. The curious thing, however, is that there has always been in every age men to be found who, finding fault with the horses of their own time, had nothing but laudation for those of a previous one. If the statement that Eclipse galloped a mile in a minute be true, which, of course, it is not, there is no doubt about the position he can claim amongst the horses of all time. But the timing at the present day is none too reliable, and what it was in the middle of the eighteenth century may be easily guessed.

Many curious calculations and statements have been made about Eclipse, and it is a great pity that his skeleton has not been preserved. It would have been very interesting to compare it with, say, that of Hermit. Mr. Charles Vial de Saint Bel, professor of the Veterinary College of London, published a book in 1791 on the proportions of Eclipse. This ingenious writer calculated that Eclipse without any weight on his back could cover 25 ft. in his stride, and could repeat this action twice and one-third in a second. A matter of multiplication shows that this, if he kept it up, would enable him to run close on four miles in 6 min. 2 sec. It is manifestly absurd to assert that a horse could do such a thing, and it is difficult to see the object of such a calculation.

It is equally difficult to understand the somewhat arbitrary standard of measurements set up by the veterinary schools in France at the beginning of the nineteenth century. According to this, Eclipse was a good deal out of proportion. For instance, in height, according to this standard, he was one-seventh too high, and his neck was a third too long. Then a perpendicular line drawn from his stifle downwards should just have reached his toe. We learn that it touched the ground half a head in front of it. Once more we are told that the length from the elbow to the bend of the knee should be the same as from the bend of the knee to the ground, but that the former in Eclipse was two-thirds of a head longer than the latter. Curiously, we have not anything about the length from the hip to the hock—a very important point. Now with all due regard to the French standard, if the measurements of Eclipse as stated are correct, I should be inclined to say that he was correctly proportioned, and the French standard was a wrong one. I do not hold with the theory that horses go in all forms. A horse with true action must be truly made. He may be angular, his neck may be wrong side up, but it stands to reason that true action is the corollary of correct shape. It has been stated about Eclipse that his heart weighed 13 lb., and we have it on the authority of Mr. Joshua Brookes, a somewhat eminent anatomist in his day, that the chief professor at the Veterinary College said that on dissecting him he found his muscles abnormally large, as large as the muscles of a carthorse.

This abnormal development of muscle had, no doubt, much to do with Eclipse's superiority. I once had a horse that had this development in an extraordinary degree. He was a hunter by Cape Flyaway, who was by the Flying Dutchman. His dam was a pony. He was nine years old when he came into my possession, and I rode him nine seasons. Though he was only a little horse, he stood under 15 hands 3 in.—he was one of the best weight carriers it was ever my lot to ride. He looked up to 13 st., and carried 15 st. with consummate ease. When he was badly lamed by an accident I sent him to the kennels with instructions that his skin was to come back. The huntsman subsequently told me that he was one mass of muscle, that there was no flesh in the proper sense of the term upon him, and that he would not even make broth. There is no doubt that his exceptional muscle enabled him to do his work so easily and well.

THE LOOKER-ON.

Notes and Jottings.

The Lincoln ram sales of home-bred sheep in the Argentine, according to advice that has been received, are hardly up to the expectations of the owners. Mr. Cobo averaged for twenty-seven £41 6s., the first twelve making £92 15s.; the champion ram made £175. This is the only sale of home-bred sheep of which details have yet come to hand. Some of the imported sheep have been sold. Amongst the prices realised are the following, imported by Mr. F. Miller, £122 10s., £83 12s. 6d., £78 15s., and £61 5s. Some Lincoln ram lambs imported by this gentleman made £36 15s. to £21 17s. 6d.; imported Lincoln ewes realised £26 5s. Another consignment of Lincoln rams, imported by Mr. Sidey, made from £39 7s. 6d. Four imported by Mr. D. Church made £96 5s., £61 5s., £52 10s., and £35. Messrs. Dean and Son's importation of yearling rams realised from £78 15s. to £52 10s., his yearling rams making £28 17s. 6d. each. Mr. J. E. Casswell's consignment of yearling rams sold at from £32 2s. 6d. to £21.

Other sales from the Argentine will be arriving by next mail, but it would appear that the importation of Lincoln sheep has been fully as large as required; in fact, there is a marked tone of dullness in the demand as compared with some former years. This may wear off as the season advances, particularly as both mutton and wool are selling so well.

The Palermo show exhibit of Lincoln sheep is reported as being a very fine one indeed. It was not so large as last year, but the reduction in number was compensated for by the average merit. The Hampshire Downs were well shown, and it is reported that their entries were larger than usual. The Oxford Downs and Shropshires were also well represented.

The home trade for sheep remains a good one, and as the appearance of the probable supply of food looks very promising indeed, there is every reason to anticipate a continuance of the present prices. The increased supplies of mutton that are being received from our sources of supply abroad and in the Colonies, however, render it most imperative that our feeders should take every care to make their mutton fat before they send it to market. The current rates of first-class mutton, as compared with those for the lower grade, show a remarkable difference in price, and when it is remembered that the cost of production of the two articles is almost identically the same, the difference in the profit realised will at once be apparent.

Every market one attends the same striking difference is found between the tip-top article and that of lower grade. To produce the best mutton, of the choicest quality and the neatest joints, it is essential that the feeders should start with sheep calculated to produce the above. It is no use to buy ungainly sheep, bad in formation, without proper symmetry, etc., for these, fat as well as you will, will never, when they come to the market, have that same neat and taking appearance as sheep with proper conformation and even symmetry. It may be that those of the latter type will cost a few shillings per head more when purchased at stores, but if careful accounts be kept, it will be found that the few shillings more in the cost is more than compensated for by the many shillings per head more such sheep realise when properly finished for the butcher. The outside observer probably notices this difference more clearly than the feeder who is always engaged in the business.

It may be that many will think that these remarks are unnecessary, but such cannot be the case when in every market to which you may go the marked difference between the best and the worst is so clearly apparent that it is well worth while to call attention to this particular point.

Again, experience and facts both show that the keenness of the competition with regard to the imported mutton is felt far more severely in the lower grades than in the higher; in fact, the price of mutton of the highest quality and merit at the present time is nearly, if not quite, as good as ever it was, the decreased price having only to be taken for those sheep that produce the lower grade of mutton, and do not cut to the same advantage as those of higher grade and having better conformation.

The "fag end" of the ram sale season has now arrived, and it is, as usual, apparent that there are on offer at the present time far more rams of the lower grade than the demand really requires. This fact is applicable not to one but to many breeds, and it brings home clearly to the mind of the observant man how essentially important it is, for the benefit of all connected with the ram-breeding industry, that greater care and more discrimination should be exercised in the selection of sheep for this purpose.

At one or two sales at which we have been present we have seen rams and ram lambs of two or three different breeds offered and sold at prices which, had they been wethers, would have been considered very cheap indeed. This shows that the extra cost and trouble connected with ram-feeding and breeding has been wasted, and it further proves that the selectors of these particular sheep for stud purposes committed an error in judgment in so leaving them. Time after time this important point has been brought before the notice of breeders. In some years it appears that the lessons of former years have been taken to heart and acted upon; and then, again, comes a season like the present, when the top prices for many breeds are higher than usual, and the lower grades are almost unsaleable, or, at any rate, only saleable at prices which leave a certain loss.

Sheep Fairs and Sales.

Maidstone Fair.

This well-known Kentish fair is one of the most important held in the district, all kinds of live stock are on offer—cattle, sheep, and horses. The fixture is quite one of the great days of the Kentish market town, and in years when the hop trade has been good few better centres for the disposal of live stock exist. Unfortunately the poor price of hops realised this season had a damping effect upon the demand, and prices for most classes of stock must be written as dull. Most of the 8,000 sheep and lambs on offer were disposed of, but the general run of prices were lower than at the earlier fairs.

With one exception, there were no Argentine buyers present for Kent or Romney Marsh rams, and, consequently, the prices that were realised were hardly so good as in former years. Mr. George Farmer, who has sent a consignment of rams to this fair for many years past, was represented upon this occasion by thirty-two first-class rams, the average realised was £8 15s. 2d., as against £9 3s. 4d. last season. The whole of the lot offered were sold, and amongst the prices being 16, 11½, 10, 9½, 9, 8, 7½, and 6 gs. each. Mr. C. P. Wykenham Martin sent forward a real good lot of twenty-four rams from his well-bred flock at Leeds Castle, and they attracted attention. Mr. E. Neve, who was entrusted with a commission from the Argentine, took eight of them for that country at 18, 16½, 16, 15½ (twice), 14½, 13, and 11 gs. each. The same buyer also gave 10 gs. for another. The top price ram of this lot, however, was 18½ gs., at which price Mr. J. B. Palmer secured him, only however, to sell him almost immediately for export to the Argentine at 25 gs., a profitable purchase. Others sold at 18, 14, 13 gs., etc., the average working out at £13 19s. 4d. Messrs. W. Skinner Brothers' consignment numbered sixteen, these were appreciated, and realised the capital average of £7 16s. 9d., with a range of prices from 11 gs. to 5 gs. Mr. M. Bursted sent six, which sold at from £8 5s. to Mr. Harrison to £5, and averaged £6 10s.

The Southdown rams and ram lambs on offer were sold out at a much lower range of prices than was the case some three or four years back, fully 30 to 40 per cent. The following summary of the sales will indicate the tenour of the demand. Major-General Goldsworthy's old rams averaged for two £7 1s. 9d., for yearling rams, six, £4 18s. Mr. W. M. Cazalet averaged for old rams £4 17s. 6d., for two, for three yearling rams £4 17s. 6d., and for nine ram lambs £2 14s. 5d. Mr. P. Cutbush averaged for eleven yearling rams £4 5s., and the Hon. R. P. Nevill averaged for fifteen ram lambs £3 7s. 10d. The Hampshire Down ram lamb demand was no better. Eight from Messrs. Moore Ruskin averaged £4 8s. 9d., ten from Messrs. Cannon and Rogers averaged £3 17s. 6d., five from Mr. H. B. Hohler averaged £3 10s., two from Mr. G. F. Hohler averaged £3, and four from Mr. W. H. Waterlow averaged £2 10s. The demand for Shropshires was a very poor one indeed, and a clearance was not effected. Two from Mr. P. Scott averaged £3 17s. 6d., and six from Sir E. M. Collett averaged £2 3s. 8d.

THE BREWERS' EXHIBITION.

This week we are able to give a full and complete list of the prizes and diplomas awarded at the Brewers' Exhibition. The results of these competitions, which may be read in conjunction with the elaborate details printed last week showing how, when, and where the crops were grown, will prove of immense interest. The scope of the information may be gathered from the fact that a reference to the tables shows that the champion barley was grown by Mr. C. G. Miles at Alburgh, Norfolk, on heavy land with a subsoil of clay. The preceding crops were mangolds and barley, while the seed was Webb's Kinver Chevalier, sown at the rate of ten pecks per acre. The manure used was supplied by Messrs. J. Fison and Co., and the seed was planted as early as January 28, and the crop cut on July 31. The quantity grown was 5 qrs., and the cleaning machinery used was Boby's.

Similar details are given for the whole of the entries, and although space will not allow us to recapitulate all these particulars for the various winners, we cannot but help thinking that readers may derive a great amount of information by referring for themselves to the districts in which they are more especially interested.

There is one point to which we should like to direct attention, and that is that insufficient attention is given to threshing. Maltsters rightly complain that much barley is damaged by having the drums set too close, and there is still a great deal of improvement to be made in this direction. In conversation with one of the judges we were pleased to hear that the effects of previous exhibitions have had good results among barley growers, and that the entries still bulk on the average as largely as they have done in the past, while the quality of the sample has certainly gone up, and the good work of the exhibition bears fruit in bringing the requirements of the maltster prominently before the British producer.

The following will be found a full list of awards:—

The "Mark Lane Express" Champion Challenge Cup.

Cat. No.
101.—C. G. Miles, Alburgh, Norfolk.

CLASS I. (Chevalier)
101.—1st, C. G. Miles, Alburgh, Norfolk.
78.—2nd, G. Powell, Navenby, Lincs.
62.—3rd, C. Wilkinson, Fenstanton, Hunts.
123.—V.H.C., G. Partridge, Kidlington, Oxon.
149.—H.C., M. E. Posford, Falkenham, Suffolk.
60.—Com., Right Hon. Lord de Ramsey, Abbott's Ripton, Hunts.

CLASS II. (Goldthorpe).
233.—1st, T. E. Powell, Hawkstone, Salop.
205.—2nd, F. Bonnor Barling, Ross-on-Wye, Hereford.
88.—3rd, T. W. Purser, Colnbrook, Midd.
239.—V.H.C., T. E. James, Minehead, Somerset.
197.—H.C., F. Gent, Pinhoe, Devon.

CLASS III. (Colonial).
264.—1st, Woodley, Watney, and Richardson, 31-32, Crutched Friars, E.C.
265.—2nd, Woodley, Watney, and Richardson, 31-32, Crutched Friars, E.C.

CLASS IV. (Foreign).
266.—1st, R. Liebmann and Co., 13, Southwark Street, S.E.
267.—2nd, R. Liebmann and Co., 13, Southwark Street, S.E.
276.—3rd, S. and J. Reif, Vienna.

CLASS V. (Foreign).
268.—1st, R. Liebmann and Co., 13, Southwark Street, S.E.
287.—2nd, Woodley, Watney, and Richardson, 31-32, Crutched Friars, E.C.
286.—3rd, Woodley, Watney, and Richardson, 31-32, Crutched Friars, E.C.

CLASS VI. (Foreign).
281.—1st, Spillers and Bakers, Ltd., Cardiff.
291.—2nd, Woodley, Watney, and Richardson, 31-32, Crutched Friars, E.C.
282.—3rd, Spillers and Bakers, Ltd., Cardiff.

CLASS VII. (No Entries).

CLASS VIII. (Foreign).
294.—1st, Woodley, Watney, and Richardson, 31-32, Crutched Friars, E.C.
293.—2nd, Woodley, Watney, and Richardson, 31-32, Crutched Friars, E.C.
283.—3rd, Spillers and Bakers, Ltd., Cardiff.

CLASS IX. (Foreign).
272.—1st, R. Liebmann and Co., 13, Southwark Street, S.E.
285.—2nd, Spillers and Bakers, Ltd., Cardiff.
[illegible]—3rd, Woodley, Watney, and Richardson, 31-32, Crutched Friars, E.C.

CLASS X. (East Riding).
252.—1st, Lord Middleton, Birdsall, Malton.
251.—2nd, G. M. Green, Firby, Kirkham Abbey.

(CLASS XI. (West Suffolk).
156.—2nd, W. Dyer, Edwardstone.
165.—3rd, T. S. Moore, Occold, Eye.

CLASS XII. (Colchester Brewing Co.'s Cups).
33.—Essex, W. Nisbet, Radwinter.
149.—Suffolk, M. E. Posford, Falkenham.
101.—Norfolk, C. G. Miles, Alburgh.

CLASS XIII (Sheppey Glue and Chemical Co.'s Prizes).
208.—1st, Hollands Bros., Shorne, Gravesend.

CLASS XIV. (Steven's Chemical Manure Co.'s Prizes).
171.—1st, C. H. Goschen, Addington.
175.—2nd, H. Jennings, Pulborough.
146.—3rd, A. E. Gray, Halesworth.

CLASS XV. (Crone and Taylor's Prizes).
123.—1st, G. Partridge, Kidlington.
80.—2nd, J. Thurlby, Market Deeping.
176.—H. Jennings, Pulborough.

CLASS XVI. (Joseph Fison and Co.'s Manure Prizes).
Group A.
149.—1st, M. E. Posford, Falkenham.
27.—2nd, C. H. Chisnall, Chichester.
99.—3rd, C. G. Miles, Alburgh.
Group B.
113.—1st, J. House, Wansford.
110.—2nd, L. Fortescue, Stanford.
128.—3rd, Earl of Ancaster, Normanton, Stamford.
Group C.
21.—1st, J. Carpenter, Alphington, Exeter.
140.—2nd, T. Rawle, Porlock, Taunton.
141.—3rd, T. Rawle, Porlock, Taunton.
Group D.
62.—1st, C. Wilkinson, Fenstanton, St. Ives, Hunts.
19.—2nd, S. Taylor, Dullingham, Newmarket.
57.—3rd, F. Christmas, Great Gransden, Sandy.
Group E.
66.—1st, Sir W. H. Dyke, Bower Farm, Eynsford.
207.—2nd, Hollands Bros., Shorne, Gravesend.
177.—3rd, H. Jennings, Park Farm, Pulborough.
Group F.
6.—1st, F. A. Horwood, Bury Court Farm, White Waltham.
7.—2nd, F. A. Horwood, Bury Court Farm, White Waltham.
122.—3rd, F. G. Castleman, Northbrook, Kirklington.
Group G.
81.—1st, J. Thurlby, Baston, Market Deeping.
84.—2nd, Whathoff Bros., Baston.
75.—3rd, L. J. Briggs, Priory Farm, Stamford.
Group H.
93.—1st, H. F. Parsons, South Bank, Chepstow.
95.—2nd, H. F. Parsons, South Bank, Chepstow.
44.—3rd, H. Butler, Pauntley Court, Newent.

CLASS XVII. (Webb and Sons' Manure Prizes).
Group A.
43.—1st, H. Butler, Pauntley Court, Newent.
205.—2nd, F. Bonnor Barling, Bollitree, Ross-on-Wye.
228.—3rd, F. Horne, Claverley, Wolverhampton.
Group B.
102.—1st, J. Sparrow, Church Farm, Bawburgh, Suffolk.
103.—2nd, W. J. Jarvis, Church Farm, Clare, Suffolk.
103.—3rd, W. Wing, Walpole, Wisbech.
Group C.
112.—1st, F. Holmes, Greatford, Stamford.
111.—2nd, L. Fortescue, Barnack.
220.—3rd, C. H. Manning, Hilton House, Northampton.
Group D. (No Entry).
Group E.
11.—1st, T. W. Purser, Tanhouse, Colnbrook, Bucks.
33.—2nd, T. W. Purser, Tanhouse, Colnbrook, Middlesex.
4.—3rd, Marquis of Downshire, Wokingham.
Group F.
183.—1st, C. Coles, Stoke, Salisbury.
245.—2nd, W. Shears, Pyrford, Woking.
178.—3rd, H. Jennings, Park Farm, Pulborough.

Class xviii. The "Mark Lane Express" Diplomas.

Chevalier Variety.
6.—Berks, F. A. Horwood, White Waltham.
7.—Berks, F. A. Horwood, White Waltham.
10.—Bucks, J. H. R. Horwood, Drayton, Beauchamp.
12.—Bucks, T. W. Purser, Colnbrook.
19.—Cambs, S. Taylor, Newmarket.
18.—Cambs, Morris and Co., Oakington.
21.—Devon, J. Carpenter, Alphington.
23.—Devon, S. Marsh, Lyme Regis.
33.—Essex, W. Nisbet, Radwinter.
34.—Essex, R. Seabrook, Tolleshunt D'Arcy.
43.—Glos., H. Butler, Newent.
44.—Glos., H. Butler, Newent.
50.—Hereford, G. E. Drinkwater, Ross-on-Wye.
52.—Herts, J. W. Cole, Baldock.
53.—Herts, R. E. Horwood, Tring.
62.—Hunts, C. Wilkinson, Fenstanton.
60.—Hunts, Lord de Ramsey, Abbott's Ripton.
63.—Kent, G. Brooker, Rochester.
66.—Kent, Sir W. H. Dyke, Evnsford.
78.—Lincs, G. Powell, Navanby.
81.—Lincs., J. Thurlby, Market Deeping.
85.—Louth, N. Mathews, Dunleer.
87.—Middlesex, T. W. Purser, Colnbrook.
86.—Middlesex, W. J. Curtis, Heathrow.
93.—Monmouth, H. F. Parsons, Chepstow.
94.—Monmouth, H. F. Parsons, Chepstow.
101.—Norfolk, C. G. Miles, Alburgh.
99.—Norfolk, C. G. Miles, Alburgh.
113.—Northampton, J. House, Wansford.
110.—Northampton, L. Fortescue, Stamford.
123.—Oxon, G. Partridge, Kidlington.
122.—Oxon, F. G. Castleman, Kirtlington.
128.—Rutland, Earl of Ancaster, Stamford.
130.—Rutland, W. C. Pridmore, Stamford.
134.—Salop, R. Preece, Crossage.
131.—Salop, W. Black, Bridgnorth.
140.—Somerset, T. Rawle, Porlock.
135.—Somerset, R. Brett, Allerford.
143.—Stafford, F. Horne, Bobbington.
149.—Suffolk (East), W. E. Posford, Falkenham.
144.—Suffolk (East), S. Dawson, Levington.
155.—Suffolk (West), W. Dyer, Edwardstone.
156.—Suffolk (West), W. Dyer, Edwardstone.
171.—Surrey, C. H. Goschen, Addington.
177.—Sussex, H. Jennings, Pulborough.
178.—Sussex, H. Jennings, Pulborough.
183.—Wilts, C. Coles, Salisbury.
184.—Wilts, R. Cock, Box.
185.—Worcester, G. Corbishley, Pershore.
186.—Worcester, W. H. Hughes, Pershore.

Goldthorpe Variety
1.—Bedford, S. Harrison, Renhold.
189.—Bedford, F. Brown, Ampthill.
14.—Bucks, W. Rance, Taplow.
11.—Bucks, T. W. Purser, Colnbrook.
197.—Devon, F. Gent, Pinhoe.
205.—Hereford, F. Bonnor Barling, Ross-on-Wye.
216.—Louth, J. Dolan, Drogheda.
215.—Louth, P. D. Caraher, Castlebellingham.
88.—Middlesex, T. W. Purser, Colnbrook.
217.—Middlesex, J. Bolton, Shepperton.
220.—Northampton, C. W. Manning, Northampton.
218.—Northampton, W. Brown, Billing Arbours.
222.—Northumberland, A. F. Nichol, Belford.
223.—Queen's County, J. Maher, Portarlington.
225.—Rutland, Earl of Ancaster, Stamford.
224.—Rutland, Earl of Ancaster, Stamford.
233.—Salop, T. E. Powell, Hawkstone.
229.—Salop, E. W. Humphreys, Oswestry.
239.—Somerset, T. E. James, Minehead.
240.—Stafford, J. Clemson, Wolverhampton.
241.—Stafford, E. White, Brewood.
245.—Surrey, W. Shears, Pyrford.
244.—Surrey, W. Lang, Leatherhead.
249.—Worcester, Mrs. Kingston, Kempsey.
247.—Worcester, J. Gill, Evesham.
253.—Yorks (E. Riding), Lord Middleton, Birdsall.
257.—Yorks (W. Riding), J. Rodsman, Burythorpe.
258.—Yorks (W. Riding), J. Rodsman, Burythorpe.
264.—Colonial, Woodley, Watney, and Richardson, 31-32, Crutched Friars, E.C.
265.—Colonial, Woodley, Watney, and Richardson, 31-32, Crutched Friars, E.C.

CLASS XIX. (Sheaf Class).
260.—1st, C. G. Miles, Alburgh, Harleston, Norfolk.
261.—2nd, C. G. Miles, Alburgh, Harleston, Norfolk.
259.—3rd, F. Horne, Bank Farm, Claverley, Wolverhampton.

CLASS XX. (Threshing Machine Prizes).
1st, Nalder and Nalder, Ltd., Wantage.
2nd, Marshall, Sons, and Co., Ltd., Gainsborough.
3rd, Clayton and Shuttleworth, Ltd., Lincoln.

SPECIAL PRIZE FOR IRELAND—SILVER MEDAL.
85.—H. Matthews, Cappog, Dunleer, Co. Louth.

The Hops.

The entries this year were much below average in number. The catalogue only included the names of twenty-six planters, who entered forty samples, the names of six others entering nine samples being received after the printing of the official list. Thus not more than thirty-two growers were found to represent our English industry, which numbers in its ranks between 2,000 and 3,000 farmers. It is very disappointing that such limited interest is taken in this exhibition by those who have therein such an excellent opportunity for demonstrating to British brewers their ability to produce hops of most excellent quality, and in sufficient quantity to provide for the whole of our home requirements. We would respectfully suggest to the managing directors of the exhibition that by better organisation of this section, and by more careful attention to the exhibits, they might materially enlarge its importance, and make it more worthy of the consideration of the industry as a whole, and more attractive to brewers, for whose special benefit the exhibition is presumably held.

Having carefully examined in detail the various samples, we venture to make the following remarks. Giving precedence to the sample shown by Mr. W. Rogers in Class II., which was selected by the judges for the honour of championship, we have no hesitation in accepting this decision as well deserved. These Bramblings are of rich colour, with a brilliant face, and a plummy side demonstrating their wholeness and their excellent management. Their flavour is fully pronounced, and of the finest character, and we heartily congratulate the grower on his present success, which, when added to his previous achievements, proves that he is progressive and persevering in his determination to attain to the highest possible pitch of excellence.

The first prize in Class I. was awarded to Mr. C. F. File, but we regret that, owing to the absence of his sample, we are unable to remark upon the good points it undoubtedly possesses. Mr. H. W. Clements gained the second prize, and Mr. W. Lillywhite the third prize in this class. Both these samples show boldness and good management, but appeared to us to be somewhat deficient in the brightness usually associated with East Kent growths. Colonel Hardy's exhibit had very good colour, and also Mr. R. M. Wakeley's, but both were apparently rather short of condition. The first prize was the only award in Class II., and was, of course, taken by Mr. W. Rogers. This position was, however, closely competed for by Mr. E. Goodwin, whose sample of Goldings, cured by Davidson's Sirocco system, was bold and silky, with a splendid side, but rather dull on the face. It seemed to us to be worthy of recognition for a second award.

Coming to Class III., we found Mr. W. Rogers again at the top with his Goldings, of most attractive appearance and quality. Bold, rich in lupulin, and bright, they gave further evidence of his intelligent cultivation and management. The same grower took the second prize, but we were disappointed with this sample, which appeared to be much below the standard hitherto associated with his produce. We were rather inclined at first sight to think that Mr. W. Lillywhite, to whom the third prize was awarded, should have changed places with Mr. Rogers, but when the test of flavour was applied, the award of the judges was confirmed.

In Class IV. Mr. E. Mannington was the only prize taker. His sample may be described as pretty, being of a very delicate, even colour, and well managed, but apparently deficient in lupulin. It was difficult to understand why the two excellent samples shown by Mr. C. A. Calcutt in this class had not been marked by an award, being of

such clear colour, with an attractive face and bold side. But judges know best, and we suppose there was some deficiency in quality we were not sufficiently skilled to discover. Mr. Calcutt, however, came to the front in Class V., wherein he gained the first and only prize. But the special claim of this sample to distinction was not evident to us, as it appeared to be wanting in several particulars. The sample shown by Mr. Geo. Neve in this class escaped recognition, and we wondered why, as it appeared to us to be well worthy of notice.

Classes VI. and VII. might be briefly dismissed if we were to be guided by the absence of any awards. Upon inquiry, we were informed that as there were but two entries in each class, there was not sufficient competition; but we venture to think that the judges might have recognised by special mention the excellence of the samples shown by Mr. Gilbert Eames. His Fuggles in Class VII. attracted the attention of all the visitors, their boldness, rich colour, and quality, good management, and fine flavour being very evident.

Those of the Worcester hops in Class VIII., that were on show, were generally poor in quality, somewhat chaffy, and short of condition. The first prize in this class was awarded to Mr. J. A. Thompson, of Woolhope, Hereford; but, by accident, his sample was not exhibited. The Midland Counties were also represented in Class IX., the first position being gained by Mr. C. Whittindale, with a sample which was whole, ripe, well conditioned, and of good colour, and whose general aspect reminded us of the productions of his skilful neighbour, Mr. W. F. Pudge. If Mr. Whittindale, who is a new exhibitor, perseveres on the same lines, we shall doubtless hear of his further successes in hop growing. Classes X. and XI., comprising Farnhams and Country Farnhams, were only marked by one first prize in each, taken by Mr. J. Bonham Carter and Messrs. P. and C. Seward. The sample shown by the first-named was bold and attractive, but we thought the hops would have been more valuable if they had been allowed to ripen further. Although Messrs. Seward's sample presented a nice, bright colour, and were therefore pretty in appearance, they seemed to be short of lupulin, and were of only moderate flavour, and hardly up to the excellent standard of general quality for which these growers have been previously noted.

Taking a general survey of the competition, we think it must be admitted that the average of quality was distinctly below that of many previous seasons. In this respect it may, perhaps, be taken as representative of the greater part of this year's crop. We have grown a record quantity, but Nature does not yield her goodness in every direction. If we gain in extension, we must lose in concentration. Our plantations have shown us what they can do in giving us excessive weight, but therein their efforts have been apparently exhausted, hence the large proportion of medium and inferior hops with which we are overladen. Therefore we can hardly be surprised if our annual national show is found to be representative of almost universal experience.

Judges for the Scottish National Fat Stock Show.

At a meeting of the council of the Scottish National Fat-Stock Club, held at Edinburgh on Wednesday, the judges for the society's annual show to be held on November 29 and 30 were appointed as follows:—

CATTLE.—Shorthorn, Aberdeen-Angus, and Cross-bred: Messrs. George Harrison, Gainford Hall, Darlington; William Wilson, Coynachie, Gartly; and Henry Milne, Haymarket, Edinburgh. Galloway, Highland, and the President's Prizes: Messrs. James Phillips Carse, Kirkcudbright; Duncan Macdiarmid, Camusericht; and Andrew Young, Kelso. Other classes: Messrs. Adam Beazman, Hermitage, Kelso; Andrew Wood, Tantallon Place, Edinburgh; and Charles Harrison, Giggleswick, Settle.

SHEEP.—Blackfaced, Cheviot, and Half-breds: Messrs. James Greenshields, West Town, Lesmahagow; George Douglas, Hindhope; and Hugh Lawrie, butcher, Leith. Cross-breds and extra classes, Messrs. James Thomson, Haddington; William Jackson, Symington; and J. C. Mitchell, Kelso.

PIGS.—Mr. Charles Robertson, Glasgow.

ROOTS.—Messrs. James Caldwell, Knockshoggle; James Newton, Queenscairn, Kelso; George Donald, Ladyhill, Grange; and J. A. W. Mein, Hunthill, Jedburgh.

MISCELLANEOUS. — Grain: Messrs. William Inglis, Bonnington Mills, Leith; and George MacLennan, Edinburgh. Buttermaking: Mr. William Smith, jun., Dairy Supply Co., Belfast.

CHAMPIONSHIP JUDGES.—Cattle: Mr. George Harrison, Mr. D. M'Diarmid, and Mr. Andrew Wood. Sheep: Mr. George Douglas, Mr. William Jackson, and Mr. John Clay, Chicago.

National Potato Society.—Mr. Walter P. Wright, hon. secretary of the National Potato Society, will deliver a lecture on potatoes at the Horticultural Hall, Vincent Square, Westminster, on Tuesday, October 24, in connection with the vegetable show of the Royal Horticultural Society. The National Potato Society's show will be held in the same building on Thursday and Friday, November 23 and 24.

THE ROYAL SHOW.

The Proposed Site at Derby.

Following upon the appointment of a deputation of the Council of the Royal Agricultural Society to visit Derby to inspect the site which would be available in case it was decided to hold the Royal Show in this Borough, certain steps preparatory to the visit have been taken locally. The Council of the Derbyshire Agricultural Show recently met at Derby, when it was resolved to endorse the action of the Mayor of Derby in sending an invitation to the Royal Agricultural Society, and to co-operate in every way likely to promote the success of the undertaking. One result of the meeting was to appoint a sub-committee to meet the representatives of the Midland Railway Company, the owners of Osmaston Park, which comprises the proposed suitable site, and confer with them upon the matter. The conference with the officials of the Midland Railway Company took place on the following day, and, after the inspection of the ground, it was agreed that a capital site of about 80 acres could be placed at the disposal of the Royal Agricultural Society. The ground required by the Royal Society is at least 60 acres, so that the available site meets every requirement in this respect. The representatives of the County Society decided to prepare a statement to submit to the deputation of the Royal Agricultural Society on their arrival at Derby.

Duke of Devonshire's Support.

The Duke of Devonshire has promised to preside at a meeting at Derby on November 10 to secure public support for next year's Royal Agricultural Show in that town.

Value of the Show to Live Stock Breeders

Mr. W. Staley Spark, writing from the Royal Colonial Institute, sends a letter to the *Yorkshire Post* anent the show of the Royal Agricultural Society, and his remarks are of such an interesting nature that we reproduce them in full. He says:—

"Much has been written and said with regard to the future and past of the Royal Agricultural Society. The past has undoubtedly proved that the annual show of the Society has done excellent work in the interests of our principal national industry—firstly, with its scientific operations, quite apart from the actual show; and, secondly, by creating the finest market in the world for the best types of live stock connected with the agricultural industry. The future will depend greatly on the administrative ability of the Council and its staff.

"I have travelled considerably in our Colonies (especially in Canada, where I was for some time connected with the Board of Agriculture of the Dominion), and have seen the immense improvement in the type and quality of live stock, traceable directly to the importation of animals purchased from exhibitors at the Royal Show. Where, I wonder, would the good meat we are getting from Canada, the United States, and the Argentine, and the New Zealand mutton, have come from had it not been for the purchases made of high-class bulls and rams bought from exhibitors of stock at the Royal Show?

"I have had the honour of judging all over Canada, and last year at the national show at Palermo, Buenos Ayres, and have heard from the lips of the largest and best breeders of stock in those great agricultural countries (also from stockmen of New Zealand) that it would be a calamity to the agricultural interests of the whole civilised world were the Royal Show to be discontinued. The nation should support this national show in order that the continuance of it shall not be a matter of doubt in future, but one of certainty. Surely the good work of the Society for the last seventy years, or nearly so, must not be allowed to drop.

"In Canada nearly all the agricultural shows are subsidised by the Government, they all pay, and are excellently managed.

"Nearly all the large banks are liberal subscribers to the shows, and the local committees have, in nine cases out of ten, some of the local bank managers as members. The general public are well catered for with amusements in the afternoons and evenings. The hotel proprietors have fixed prices all the year round, and do not increase them during the show weeks. The local committees establish an office where lodgings can be procured at reasonable prices. I suggest that some of these ideas might be carried out with success by the Royal Society.

"The following seem to be wanted:—

"1. An increase of members and subscriptions.

"2. District committees all over England to bring the Society and its work to the knowledge of the agriculturists and rural public.

"3. Better and more entertainment for the general public at the shows.

"4. The individual help of all persons interested in farming to prevent the discontinuance of our national show, and the deterioration of the finest market in the world for live stock.

"It is not too late, so let us all, who are interested in agriculture, put our shoulders to the wheel, and save the Royal Agricultural Society."

The Real Working of the Agricultural Rating Act.*

The Agricultural Rating Act, passed in 1896 as a temporary measure and twice renewed for terms of five years, has been spoken of as "an Act to alter the incidence of local taxation," "an Agricultural Relief Act," and also "an Act giving a dole to the landlord."

Bare agricultural land is now rated on 50 per cent. of its annual value. This has often led to the statement that the Agricultural Rating Act has given an advantage to owners and tenants of agricultural land not enjoyed by other ratepayers, but it will be seen that this contention is not borne out by the facts as they appear to-day in East Anglia. To illustrate this point, I have before me particulars of sale of three farms, the upset price being given at about £10 per acre. In each case the farm-houses and premises have cost more to build than the total reserve on the farm. The gross upset price of the three farms referred to is £2,100. On reference to the rate-book I find the gross assessment of these farms is £120 15s., and rateable £110 10s.—paying rates under Agricultural Rating Act on £65 10s. Now, if instead of using this £2,100 to purchase these farms the sum was expended to erect a factory or workshop the gross assessment would probably not exceed £75; then a reduction of 33⅓ per cent. would be granted from gross to rateable, with the result that this factory or workshop would probably pay rates on £50, as against £65 10s. on the same amount of capital invested in land. Take another case: £1,000 is expended in erecting workmen's cottages or other house property, the assessment of which property when completed would be somewhere between £30 and £40, probably not exceeding £30 rateable. Recently, at the Mart, Tokenhouse Yard, a small farm was sold for £1,000; reference to the rate-book shows that the gross assessment is £60 15s., rateable £56 5s.—paying rates under Rating Act on £33. It may be that it is in East Anglia only that land is assessed more out of proportion to its capital value than is the case with other classes of property, but I am writing of things as I find them.

We will now examine the total grant from the National Exchequer in relation to (a) all cultivated land; (b) to our wheat crop. The total amount of land under all crops and grass in Great Britain in 1903† was 32,323,176 acres, so that the grant amounts to nearly 1s. per acre on all agricultural land. The total arable land in Great Britain was 15,409,084 acres. Therefore, if relief were granted to arable land only, this would on the basis of the present grant amount to 2s. per acre—a substantial relief if properly apportioned. Then the total acreage of wheat in Great Britain in 1903 was 1,587,587 acres, so that the grant from the Exchequer in aid of local rates would in that year have amounted to practically £1 for every acre of wheat grown.

But perhaps the inequitable distribution of the grants will be more easily shown by comparing the three Eastern counties—Essex, Suffolk, and Norfolk—with four counties in the North-West, namely, Derby, Lancaster, Cheshire, and Stafford. These two sets of counties comprise very nearly the same area, and while the three Eastern counties contain 5,066 square miles, as against 5,114 square miles of the four North-Western counties, the former had under all crops (including grass), 2,021,016 acres in 1903, and the latter 2,445,240 acres. Had the two groups received under the Act equal grant per acre, the three Eastern counties would have had 7 per cent. more grant than the fourth North-Western. As a matter of fact, the latter receives nearly 25 per cent. more than the former. The comparison will be better seen by the Schedule below.

Comparing columns 3 and 4 in each set of counties, it will be seen that the number of acres of arable land in the Eastern counties is nearly three times that in the North-Western, and the acreage under wheat more than four times as great. Column 5 gives the amount of grant calculated at per acre of arable land in each county. It will be seen that the Eastern counties average is only 1s. 2½d. per acre, against 4s. 1½d. per acre in the North-Western. With these figures before us, it is difficult to regard this Act as anything like a just measure, for who could say that the arable land of the four North-Western counties required nearly four times the relief granted to the arable land in East Anglia? Column 7 shows that for every £1 paid in lieu of tithe in the North-Western counties, £2 14s 10d. is paid in the Eastern counties.

If the Agricultural Rating Act was passed for

* By Alfred Blomfeld, in the "World's Work."

† All through I shall quote figures referring to 1903, as these are the latest as have as yet been published in full.

SCHEDULE OF GRANTS IN TWO SETS OF COUNTIES UNDER THE AGRICULTURAL RATES ACT, 1896.

Total Area of the Three Eastern Counties, 5,066 Square Miles.

County.	1 Grant.	2 Grass Land.	3 Arable Land.	4 Wheat.	5 Grant per acre on Arable Land.	6 Estimated total grant if at 2/- per acre on arable land.	7 Commuted Tithe paid.
	£	Acres.	Acres.	Acres.	s. d.	£ s.	£
Essex	37,583	277,621	510 777	100,693	1 5	51,007 14	248,688
Norfolk	47,446	292,342	776,634	105,928	1 2	77,663 8	278,132
Suffolk	28,710	186,420	569,322	90,983	1 0	56,932 4	202,562
Total	113,739	756,383	1,856,733	297,604	Average 1/2½	185,603 6	729 382
Total Area of the Four North-Western Counties, 6,114 Square Miles.							
Derby	26,155	403,718	88,511	12,246	5 10	8,851 2	42,926
Lancaster	48,206	574,410	247,036	18,391	3 10	24,703 12	78,395
Cheshire.....	35,384	332,892	202,966	12,223	3 5	20,296 12	64,085
Stafford	33,181	435,517	160,127	17,578	4 1	16,012 14	80,658
Total	142,926	1,746,600	693,640	60,438	Average 4/1½	69,864 0	266,028

Total grant under Agricultural Rating Acts, £1,510,795.

Total wheat in Great Britain (1903), 1,581,157 acres.

Total grass land in Great Britain (1903), 16,934.495 acres.

Total arable land in Great Britain (1903), 15,409,084 acres. 2s. per acre would require £1,540,908.

Total agricultural land in Great Britain, 32,343,579 acres.

If grass land were reduced on assessment 2s. per acre gross to rateable and rates 6s. in £1. Grant of £508,034 would be required. If arable land were reduced on assessment 5s. per acre gross to rateable and rates 6s. in £1. Grant of £1,155,681 would be required.—Total, £1,663,715.

If arable land only were reduced, 7s. per acre gross to rateable and rates 6s. in £1 this would require grant of £1,617,953.

the relief of Agriculture, then the relief should be given where the depression is felt. If the main purpose of the Act was the alteration of the incidence of local rating, then every part of the country should have been treated equally. As I have already pointed out, the grant amounts to practically £1 per acre for every acre of wheat grown in 1903. Some well-known politicians advocate this bonus on wheat-growing as a remedy for the present state of agricultural depression. For my part, I think this would be wrong in principle and disastrous in effect, but one may note that had the grant been apportioned thus, the Eastern counties would have received in 1903 £297,604, and the North-Western £60,438. As already stated, the grant from the Exchequer comes to practically 2s. per acre for all arable land. If it had been distributed in that proportion the Eastern counties would have received (as per column 6) £185,672, as against £69,864 by the North-Western.

It is on arable land that labour is expended, and, as will be seen by column 7, it is the arable land that is most heavily tithed. While this may be regarded as beside the question when discussing rating, yet it is obvious that this charge has to be paid out of produce, so that land that has to bear this additional burden should be as liberally dealt with as that which is more favoured

Having shown how inequitably the relief works out under the present system, or lack of system, I make three alternative suggestions for the adjustment of the relief at present given.

First.—All agricultural land should be assessed at full value, then the tithe which pays rates under a separate heading should be deducted, and the assessment reduced 5s. 6d. per acre from gross to rateable. With rates at 6s. in the £ it would require a grant of £1,698,037 to meet the deficiency in the rates caused by this reduction in assessment.

Second.—Assess all grass land at its full value, less tithe, and reduce all arable land 7s. per acre, gross to rateable. This would require a grant of £1,617,953.

Third.—Reduce all arable land 5s. per acre from gross to rateable and grass land 2s. per acre (of course deducting the tithe). This would require a grant of £1,663,715, supposing in this case, as in the last, the rates to be 6s. in the £.

The last suggestion is the one that commends itself to my mind, and it would, I believe, be received with better favour than either of the others. If the deficiency in the rates which would be caused by this reduction in the assessment were met by a grant from the National Exchequer the amount of this grant would vary in accordance with the amount of the rates in the £. In order to calculate approximately the sum required as grant, I have supposed the rates to be 6s. in the £. In many agricultural areas they may be less, but in others, I am sorry to say, they exceed that amount; probably the average would be rather under the 6s., in which case the grant required would not be more than the amount (1½ million) given under the present Act.

Mr. James Dobbie, founder of the firm of Dobbie and Co., seed growers, died in Rothesay, on the 17th inst., at the advanced age of eighty-seven. The deceased gentleman was a well known and enthusiastic horticulturist, and wrote several treatises on such subjects.

British Woodlands and State Forestry.

An interesting lecture on British Woodlands was given by Sir Herbert E. Maxwell, M.P., at Dumfries on Tuesday, under the auspices of the Dumfries and Galloway Natural History and Antiquarian Society, of which he is a past president.

He began by reference to the reports of the Select Committee of 1885, and of the Departmental Committee, which reported in 1902. These Committees were agreed that the world is rapidly approaching a shortage, if not actual dearth, in its supply of coniferous timber, which constitutes between 80 and 90 per cent. of the total British timber imports; that there is a vast area, estimated in millions of acres, capable of growing timber of the finest quality; that the climate of the British Isles is favourable to economic forestry conducted on a proper scale (not in grudging patches, clumps, and strips); and that it requires only the exercise of timely forethought and a moderate annual expenditure to anticipate the time when scarcity of foreign timber shall have greatly enhanced the price, and to replace with British-grown timber those enormous imports upon which we depend at present. In view of these conclusions, Sir Herbert Maxwell urged that the State should make an investment—not a gift—of £10,000 a year, for the purchase and planting of suitable land.

In supporting his plea, Sir Herbert said:—"No branch of agriculture, not even wheat-growing, has suffered such a slump in the last twenty-five years as hill sheep farming. There are hundreds of thousands of acres in Scotland, once valuable sheep pasture, now rented at from sixpence to not more than two shillings an acre. From some of it a good additional return, say a shilling an acre, is obtained for the grouse on it; but a great deal of it is unsuitable for grouse, but very suitable for growing timber. Such land is constantly being offered for sale. Twenty-five years' purchase would secure 1,000 such acres for £2,500. If the ground is level, planting three feet by three will take 4,840,000 trees; the cost at £6 an acre—£6,000 for the 1,000 acres. On sloping or steep ground fewer trees will be required, and the cost proportionately less. I make no provision for houses or fences, assuming that the farm is bought all standing, but £500 must be allowed for repairs and preliminary draining, making a total initial outlay of £9,000 on the 1,000 acres. The interest on the balance of £1,000 ought to pay the annual tool bill.

"Now, the great question is, will this investment pay? Well, I am bound to say that it is not one that I could advise any private individual to make and expect good interest upon his capital; the lock-up would be more than the circumstances of most landowners would permit. But I do consider it an investment which the State, which pays no death duties, not only might make with prudence, but is bound to make as a matter of public policy. It is a difficult thing to find any woodlands in Great Britain, either Crown property or in private hands, which have been systematically managed on a working plan over a sufficiently long period to estimate the results commercially.

"Nevertheless, I have had the advantage of examining the balance sheets for five years of 3,700 acres of wood on the estate of Novar in Ross-shire. Extensive planting was done there from the beginning of last century continuously, except during thirty-two years, from 1850 to 1881. This was an unfortunate break, for it vitiated the regular rotation of the working plan; nevertheless, the results are not unsatisfactory. The average net profit upon these woodlands for the five years 1892-6 was slightly over 11s. an acre. Next I took the official returns of the German State forests covering five years, and found that the average net return was exactly the same as from the Novar Woodlands, 11s. an acre.

"Here, then, we have this result, that land which, for agricultural purposes, is not worth at the highest estimate more than 2s. an acre annually has been made to return an annual net profit of 11s. an acre. I say, then, that money so invested cannot be regarded as unprofitable. Moreover, these results were obtained upon the prices of timber current at the close of last century, whereas all indications point to a considerable rise in that price. The German official returns show that during the last thirty years the net profit per acre has been steadily increasing, owing to rise of prices and the establishment of pulping mills and chemical works.

"All I ask, then, is that the State should invest £10,000 a year in the purchase and planting of land. At the end of fifty years it would have made a progressive investment of half a million sterling—the cost of four days' campaign against the Boers. The property, which it had acquired on the rent basis of 2s. an acre, would be yielding 11s. an acre, a rise in value of 550 per cent. And this assuming, against all appearances, that the price of timber will continue stationary for half a century.

"But that is not all the advantage to be gained. The minds of politicians and sociologists are grievously exercised just now, and justly so, about the physical deterioration of our population owing to the concentration of the working classes in our large towns. No greater boon can be devised than healthy and remunerative work in the open air of the country. Suppose only fifty thousand acres to have been planted by the State. Instead of a rural population of one shepherd to 1,000 acres of pasture—fifty shepherds on the whole extent—you will have established one woodman to every 100 acres, or 500 woodmen on the whole ground. Then there are the forest industries which will spring up, each requiring a number of hands. In the whole United Kingdom there is not a single pulping mill; we import £3,000,000 worth of wood pulp and wood paper annually. The first pulping mill was established in Saxony in the year 1854, fifty years ago. There are now 600 pulping mills at work in the German Empire alone."

PUBLICATIONS RECEIVED.

The aim of "The Advertisers' Year Book," published by Messrs. H. Dawson and Co., 42, Norfolk Street, Strand, W.C. (price 2s. 6d.), is to be of practical, up-to-date service to advertisers in connection with the carrying out of their advertising projects, and it undoubtedly fulfils its object, for it gives handy working lists of newspapers, magazines, and periodicals in town and country, as well as a number of informing articles on the various aspects of the art and business of advertising. These articles include the following:—"What Advertising Can Do," "Advertising as a Commercial Asset," "The Art of Advertisement Preparation," "Where Advertising Fails," "Facts About Printing," etc. In addition, a good deal of general advertising information is given, including particulars of towns according to population, rateable values, and some practical notes concerning illustrations, special positions, "class" publications, etc.

In the "Badminton Magazine of Sports and Pastimes" for October, there is an interesting article on "Queer Tempered Horses," which is compiled by the editor from experiences and incidents contributed by Lords Durham and Ellesmere, Col. W. Hall-Walker, M.P., Majors Charles Beatty, D.S.O., and Arthur Hughes-Onslow, Messrs. Gwyn, Saunders-Davies, and E. C. Clayton, Sam Darling, Tom Cannon, Joseph Cannon, and Richard Marsh. In the same number there is a charmingly illustrated article on "Dreamwold, the Farm of Mr. Thos. W. Lawson, the American Sportsman and Financier." Major Arthur Hughes-Onslow's "Hints to Young Foxhunters" is as interesting as it is instructive. "With the Khirgizs of Khan Tengri," by Lord O. Beauclerk, is a description of sport on the Russo-Chinese frontier. The series of "Royal Homes of Sport in Germany" is continued by a description of Letzlingen in the Province of Saxony. The "Past Cricket Season" is reviewed, another "Strange Story of Sport," and the monthly notes on "Bridge," "Books," etc., are included.

At a meeting of agriculturists held at Grantham, it was decided to form a local branch of the Lincolnshire Farmers' Union.

THE NORTHERN FARMERS' CONVENTION.

A Successful Start; Many Subjects Discussed.

The long-talked-of and much-discussed convention of Northern farmers took place at Darlington on Friday, and was attended by more than 300 from all parts of the North. The object of the convention was, as previously stated in these columns, to bring into existence a great federation for the protection and promotion of the farmers' special interests, and to formulate for that federation a programme and a policy. It was essentially a farmers' meeting, in which landowners as such had no part. The great majority of those present were tenant farmers, the only notable exception being Lord Barnard, who was present in an unofficial capacity, but who took an obviously keen interest in the proceedings. The initiative in the movement was taken by the Darlington Farmers' Association, who felt that the time was ripe for the establishment of an organisation more accessible and less cumbrous than the Central Chamber of Agriculture, and yet large enough to represent effectively a great body of agricultural opinion. Even the promoters themselves were surprised at the keen interest which the scheme has aroused.

The representative character of the gathering may be gathered from the following list of associations taking part, with the names of their appointed representatives:—Darlington Farmers' Association.—Mr. G. Smurthwaite (chairman), Mr. J. H. Walker (vice-chairman), Mr. W. Parlour, Mr. G. Gibson, Mr. W. Dent, and Mr. P. B. Kent (secretary). Newcastle Farmers' Club.—Mr. J. Hurter, Mr. G. Kirkup, Mr. A. Morton, Mr. J. E. Angus, and Mr. R. C. Hedley (secretary). Northumberland and Durham Dairy and Tenant Farmers' Association.—Mr. W. Hill, Mr. R. Longlands, Mr. J. Knox Lyal, Mr. E. J. Weightman, and Mr. C. Marshall (secretary). Darlington Chamber of Agriculture.—Mr. C. H. Johnson, Mr. M. Brown, Mr. W. Horseman, and Mr. E. Wilkin. Hexham Farmers' Protection Association.—Mr. J. W. Wilkinson, Mr. A. Wood, and Mr. R. Ord. Stockton Chamber of Agriculture.—Mr. T. B. Bainbridge, Mr. J. Atkinson, and Mr. J. T. Wilson. Cleveland Chamber of Agriculture.—Mr. C. Robinson and Mr. C. Middleton (hon. secretaries). Bedale Farmers' Protection Association.—Mr. J. O. Trotter (chairman), Mr. T. J. Ord, and Mr. R. N. Richardson (secretary). Chester-le-Street Farmers' Club.—Mr. C. N. Hutton, Mr. J. B. Turnbull, and Mr. R. Brewis (secretary). Ripon Chamber of Agriculture.—Mr. G. Gothorp and Mr. J. E. Cowthorn. Northallerton and District Agricultural Club.—Mr. G. Kendrew (chairman), Colonel Godman, Mr. H. Clark, and Mr. J. Kirby (secretary). Skipton and District Tenant Farmers' Association.—Mr. R. Garnett, Mr. A. Simpson, Mr. J. Watson, Mr. J. Colling, and Mr. R. Lamb. Holderness Agricultural Club.—Mr. W. M. Stickrey and Mr. J. F. Robinson. Lincolnshire Farmers' Union.—Mr. Colin Campbell (chairman), Mr. G. Powell, and Mr. H. W. Palmer (secretary). Leicestershire Chamber of Agriculture.—Mr. W. Glover (chairman). Federation of Dairy Farmers' Associations of Scotland.—Mr. A. Sloan (secretary). Wensleydale Farmers' Association. Glasgow and West of Scotland Agricultural Discussing Society. Glamorgan Chamber of Agriculture.—Mr. W. Meyler Thomas. Central Chamber of Agriculture, London.—Mr. A. H. H. Matthews (secretary).

Mr. George Smurthwaite (Chairman of the Darlington Farmers' Association) presided, and Mr. P. B. Kent, of Darlington, acted as secretary to the Conference.

Mr. Joseph Walker, called upon to expound the aims and objects of the Federation, congratulated the chairman on the honour of presiding over that gathering—a gathering altogether without precedent in the history of Darlington, and unique, he imagined, in the history of the Northern counties: He was glad to find that the new movement had awakened such deep and widespread interest. They were not a political organisation. It would be disastrous for them to range themselves on the side of any political party. They had felt that notwithstanding the many excellent local organisations something more was desirable. When great questions closely affecting agriculture came before them, it was desirable that they should be able to act in unison. With this Federation they would bring into existence a force which politicians and others, such as the great railway and brewing monopolies, would have to reckon with in the future. They were not in rivalry or competition with any other agricultural institution in the country. There must, he added, be earnest, zealous, self-denying work put into the matter, and then they would provide a force which would be a benefit to agriculture in the future.

Captain R. Cecil Hedley (Newcastle Farmers' Club) urged every man present to become a missionary in the matter of federation. If every one did this they would be able to speak with the united voice of the whole of the farmers in the North-Eastern district of England.

Representations of Farmers on Local Councils.

Mr. William Hill (Northumberland and Durham Dairy and Tenant Farmers' Association) moved a resolution to the effect that farmers should be adequately represented on parish, district, and county councils, and that steps be taken to secure such representation. He considered local representation was not second to Parliamentary representation. Local bodies were responsible for rates, and as farmers they had practically no representation on these bodies. On the County Council of Durham there was only one tenant farmer. That, he said, was no credit to them as farmers. They should put up a farmer in every district for all local bodies.

Mr. Weightman (Sunderland), a member of the Durham County Council, in seconding the resolution, said that on that body there was only one tenant farmer, whilst there were seventeen checkweighmen. If farmers would take a share in local work, instead of contenting themselves with grumbling about the rates, it would be better. (Hear, hear.)

Lord Barnard, in supporting the motion, said the part he had taken in the business of the Durham County Council convinced him that a great amount of injury was worked to the farmers' interests by farmers not being sufficiently represented. An enormous amount of power was vested by Act of Parliament in the Executive Committee under the Diseases of Animals Act, but how was it possible to deal with that matter properly if there was only one agriculturist on the County Council? "I have not," his lordship added, "the slightest desire to exclude the miners and working men, but they have no right to monopolise the County Council. It becomes class legislation of the worst description if the interest of only one class of the population is to be considered, and the interests of all others cast to the winds."

The resolution was adopted.

Farmers in Parliament.

A resolution referring the question of direct Parliamentary representation for the farming interest to the Standing Committee for consideration and report was moved by Mr. W. Parlour, of Darlington. In times gone by, he said, it had been the custom to let agricultural representation in Parliament take care of itself, and as a consequence agricultural interests were now neglected. There were only two or three tenant farmers in the House of Commons. In the past they had been indebted to country gentlemen for representing agricultural interests, but the country gentlemen now did not occupy the same position in Parliament that they used to do, and instead of being able to look after the farmers' interests along with their own, they would be pleased for any help they could get from farmers' representatives. The first thing necessary was to provide a fighting fund.

The resolution was carried.

Mr. Richard Garnett (Gargrave) made a spirited speech in urging upon the Conference the adoption of a Parliamentary programme to be put before candidates at the coming election. He drew attention to the two significant facts that whilst unemployment in this country is becoming a very serious fact, more and more land is going out of cultivation. He did not say that Protection would be any remedy. If that was outside the range of practical politics it rested with the leaders of both parties to say what remedies they had to offer. Bound up with the prosperity of agriculture as a commercial undertaking was the question of national physique. "Is it anything to be proud of," he asked, "that as years go on we have so many fewer people employed on the land and so many more in factories? We should need no Royal Commissions on Deterioration if we could get the people back to the land, and make the land remunerative to people with energy and intelligence." Mr. Garnett's concluding exhortation was: "Assert yourselves like men; be determined to be represented in Imperial and local affairs; have a policy which you are determined to carry out, and you will frighten party politicians on both sides."

The resolution, which was seconded by Mr. A. B. Graham, of Glasgow, was unanimously adopted, and the Conference then proceeded to consider the details of its programme.

The first item in the programme was the continuation of

The Agricultural Rating Act.

until the whole system of rating was dealt with. This was proposed by Mr. J. W. Wilkinson, of Hexham, who counselled his brother farmers to secure representation on local bodies. "I am a member of the Northumberland County Council," he said, and then he added, "I never sat on a public body with less capacity to deal with public business." He went on to complain of the undue burden of local rating, and advocated the Scottish system, by which the rates are divided between landlord and tenant.

The resolution was adopted, as was also a resolution calling for the absolute prohibition of preferential rates for foreign produce.

The Motor-Car Nuisance.

"Better regulation for motor-car traffic, with a view to the safety of the public and the prevention of dust," is to find a place in the federation programme, a resolution to this effect, proposed by Mr. C. H. Johnson, of Darlington, being adopted.

Mr. Johnson, in moving his resolution, said the motor-car at present was only in its infancy. He anticipated that the tendency would be to build more powerful cars, capable of travelling faster, and then the nuisance would be increased. He alleged that motor-cars not only created a nuisance, but damaged the roads. "Is it reasonable," he asked, "that we farmers can allow this state of things to continue without taking some action in the matter? I am sure that any suggestion made by this federation will be both welcomed and accepted by the public themselves." To prevent dust, he suggested that motor-cars should have solid tyres. He would double the tax on motor-cars because the owner of a motor-car could afford to pay any tax.

Mr. Wilkinson, in seconding, said that nothing in this country needed so much regulation as motorists. He declared that motor-cars were a "gravely dangerous nuisance," and added, "I think we shall be all to blame if we do not pull motorists up a bit. If a revolution is necessary, they ought to be pulled up. I object entirely to the abuses that have been committed by motorists. Public life it not safe with them."

Secondary Education.

On the agenda was a resolution that "secondary education should be voluntary, and not charged upon the public funds." In moving it Mr. Charles Marshall, secretary of the Northumberland Dairy and Tenant Farmers' Association, said he was not fully in sympathy with it, but so great had been the abuse of education in the past that he was very nearly in sympathy with it. If things continued at the rate they were going on at present, it would be an utter impossibility that people could pay the rates that were imposed upon them. Education, he declared, was undermining parental responsibility. He could see no justice whatever in calling upon the public to educate the children of people who were perfectly able to educate their own children. Secondary education on the rates meant that the children of the middle classes would be educated at the public expense. There was also a good deal of money wasted on technical education.

Mr. Hunter seconded the resolution.

Lord Barnard said that all the cost of education and other local matters did not fall entirely on the tenant farmers, they fell on all ratepayers, and any extra burden affected him as much as any one present. He stated that since the Act came into force the Voluntary schools had cost him more than before in consequence of the large sums he was having to contribute to have the schools enlarged and improved, playgrounds added, and so on. He thought the resolution went a little too far. He did not believe that education could create a practical farmer or a practical craftsman, but it was not to be despised. He would ask that the question of public funds as distinguished from rates should be carefully considered. To put extra burdens on the public exchequer was almost as serious a thing as putting burdens on the rates. Public funds came out of the pocket of the public. "The duties I had to pay," added Lord Barnard, "on my succession to the Raby estate have hung a millstone of debt around me which will never leave me as long as I live."

Ultimately the resolution was withdrawn, and the following resolution, proposed by Mr. Walker, and seconded by Mr. Parlour, adopted in its place:—"That education, primary and secondary, in rural districts should be more adapted to the needs of agriculturists, and that the system of rating should be so arranged that agriculturists only pay their just proportion." abriculturists only pay their just proportion."

Other Items of the Programme.

The prevention of adulteration of butter and milk and a Pure Beer Bill were also adopted as items in the Federation's programme. All subjects possed will be submitted to all Parliamentary candidates within the area covered by the North-Eastern Agricultural Federation. Their replies will be tabulated and published, so that farmers generally and members of this Conference in particular may carefully consider them before recording their votes.

Newcastle was chosen as the place for the next Conference.

Winter Egg Production.

Poultry keepers are always anxious to get eggs from their birds during the winter months, but although they hatch their pullets early with this object in view, they do not always realise the best prices for their eggs, because they are not able to produce them at the time when eggs are scarce, and consequently fetch the highest prices. It is possible, by careful management of the birds, to secure eggs all the year round, and those who hatch pullets for laying will do well to learn how it is managed.

Birds which are not required to lay at the present time should be fed entirely on hard corn from the time they are three and a half months old, and this should be given to them sparingly, and they should be made to scratch for all the grain they have. This causes the birds to grow well and become strong and healthy, and when they commence to lay they will not be troubled with ovarian diseases. If the young pullets' combs grow well, and they redden up for laying before eggs are required, they can be kept back by being moved from their run to another every fortnight.

A peaceful, contented life, combined with warm soft food in the morning, and good grain, produces development, and consequently activity, of the egg organs, and assists in the growth of the birds, which are certainly stronger and hardier than those which are encouraged to lay at an early age. If pullets are first allowed to lay at an early age, as birds bred from really good laying strains will do, eggs will be produced before they are wanted, and then, when they are fetching the best prices, the birds will be resting between their batches.

Those who have not tried to arrange matters in this respect will be very surprised to see how much they can do by the regulation of the birds' diet. We have frequently kept pens of pullets back from laying for two months in this way, and then when we have required eggs we have had them in full lay, by feeding them on nourishing soft food for breakfast and boiled grain at night, with the addition of some meat two or three times a week.

It is necessary to begin feeding on soft food carefully—not to soften the condition of the birds too much after being fed on hard corn altogether. Where there are flocks of young birds, as there are now on every successful poultry-farmer's place, and on many ordinary farms, it is most essential that plenty of housing accommodation be provided.

Over-crowding should be very carefully avoided, as the young birds grow better when they are not crowded together, and they keep much healthier. Where it is not possible to build substantial houses to keep in reserve for the extra number of birds, which there must of necessity be during the autumn, before the cockerels hatched in the summer are disposed of and the young pullets sorted for laying purposes, it is well to provide the extra accommodation by the erection of padded hurdles, or sheets of galvanised iron, taking care to allow plenty of light and ventilation for the birds. We have frequently seen birds which have not been doing well improve wonderfully in their condition by thinning them out and giving them all more room, and a dose of castor-oil once a week.

A little aperient is most helpful to fowls, which frequently suffer from partial indigestion, and we believe that much illness would be avoided if more care were taken in this respect. Young cockerels and pullets should always be separated as soon as they can be distinguished from each other, as the pullets do not develop so quickly when separated thus, and this is a distinct advantage to their stamina, for although early laying proves that the laying strain of the birds is all right, and the sight of a few eggs is a pleasant one to those who have not done much rearing, the experienced poultry-keeper knows that it is not for the good of his pullets to have eggs which are worth but little produced before the birds are from six to seven months old.

We have been frequently asked as to whether it is possible for those who rear pullets for laying to get a constant supply of eggs throughout the year, and we have invariably answered in the affirmative, but we know so many who fail to accomplish their purpose that we feel it will be helpful if we give a few hints on the subject. First of all, to secure eggs all the year round, one must consider that the egg-selling season commences in October, and to produce eggs then, pullets should be hatched in February and March, and kept back from laying until the beginning of October, then pullets hatched in April and May will be laying in November and December, and these, if run on through the winter months and well fed and cared for, will lay throughout the winter, spring, and summer.

The secret of securing plenty of eggs from pullets which lay brown-shelled eggs—consequently of breeds which sit—is to allow them to waste no time in broodiness. It is always a subject for conjecture to people who get too many opinions on the best breeds for certain purposes as to which is really the best, because the opinions vary so much, and the advice offered by so-called experts is so entirely at variance with much that is written on the subject that amateur poultry-keepers who wish to make the best selection possible are more confused than helped.

Many people argue that non-sitting breeds must be the best for egg-production, because the birds do not waste any time in broodiness—and there is sound sense in the argument, but everything depends upon the selection of the strain of those non-sitting breeds as to whether they will produce as many eggs as is expected and required of them.

Minorcas are good layers, but are not hardy enough to stand the variations of the English winter, unless they have particularly well-sheltered houses and runs. Some strains of Minorcas are absolutely useless for egg production in the winter months, owing to their lack of stamina and the impossibility of their supplying the reserve needed for the activity of their egg organs, on account of their being too frail to assimilate sufficient food (1) to sustain the birds in health, and (2) to supply the necessary motive power to enable their egg organs to become operative, and especially in the winter months.

It is not possible for those who have not studied the habits of fowls to fully understand that there must be first of all sufficient nourishment for the maintenance of the birds in good health and vigour before the egg organs are affected at all, so that stamina is absolutely necessary if fowls are to be profitable egg producers. This is one of the reasons why we so strongly advocate the introduction of fresh blood into every pen of birds bred from each year, when eggs are required, as the more vigour in the birds the better it is for egg production.

We have referred to Minorcas as a non-sitting, good laying breed, and as there are several other profitable egg producers which are much written about, we specially wish to emphasise that Leghorns, Houdan-Leghorns, and pure Houdans, when bred from as good laying strains as can be obtained, and properly treated, produce as many eggs as it is possible for fowls to do; but they are not more profitable than each of the varieties of Orpingtons and Wyandottes for egg production, because these birds, if checked by being placed in the brood coop as soon as they become broody, recommence laying in about ten days.

Utility Poultry Club's Plymouth Exhibition.

Encouraged by the success of their show at the Crystal Palace last year, the Utility Poultry Club have been instrumental in arranging for a show at the Plymouth Exhibition from November 15 to December 4 upon a scale never before approached.

Classes are being given for working incubators, fowl houses, foster mothers, coops, trap nests, drinking fountains, green bone cutters, egg packages, and any other inventions. The chief feature of these classes is that, beyond a small entry fee, no exhibitor will be required to pay anything. It therefore gives the "small man," who cannot afford to rent a stall at the big exhibitions, an opportunity of showing, which has hitherto been denied him.

Table poultry (live and dead) and eggs have been provided with some 20 classes, while as an object lesson which should be of great value is a class for the best packed hamper or box containing country produce. A silver cup, value £4 4s., will be awarded the winner. Altogether over £125 will be given in prizes and specials. Entries close on November 1.

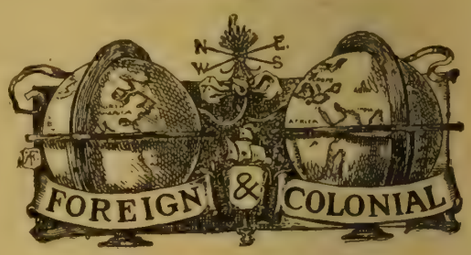
During the last week of the Exhibition a series of eight lectures on poultry keeping will be given by G. A. Palmer, T. R. Robinson, A. Newport, and C. E. J. Walkey, to which admission will be free. Demonstrations will also take place on trussing, shaping, etc., as also on cooking poultry.

Among the features to amuse and instruct the utility poultry-keeper will be "A Model Poultry Plant," including an incubator room, a working American chicken brooder containing 300 chickens, fattening pens, and an egg testing and grading machine.

Particulars of the Exhibition and of the Club can be had of the hon. secretary, E. W. Richardson, 260, Nantwich Road, Crewe.

British Possessions
beyond the Seas
AND THEIR
London Representatives.
NOVA SCOTIA.

Offers advantages to British Agriculturists with moderate capital. Improved Farms at Low Rates. Fertile Lands. Famous Fruits. Enormous mineral deposits of Coal, Gold, Silver, Iron, Copper, Lead and Tin. Climate temperate and healthy. Easily accessible to all the principal markets.—Full information supplied by the Agent-General for Nova Scotia, MR. JOHN HOWARD, 57a, Pall Mall, London, S.W.



Advances to Farmers.
The System in Victoria.

One of the most satisfactory instances of Government assistance in the opening up of new land is afforded by the system of making advances to farmers, particulars of which are given in the recently issued report of the Savings Bank Commissioners in the State of Victoria, Australia. The advances to farmers system had, at the end of June last year, been in operation for nearly eight years. Considering this fact, the Commissioners regarded with satisfaction the number of loan applications received during the year under review, which totalled 703, as compared with 1,036 in the previous twelve months. Now that these Government advances have become an accepted principle in the development of the State's resources, it is only natural that there should be a gradual diminution, down to a given point, in the number of applications. The total amount actually advanced under the Act during the year was £159,925, this making, with the amounts previously advanced, a total of £1,749,409. The total number of loans existing at the time this report was completed was 3,074, and the average balance of each loan was £436. During the year dealt with the repayments on account of principal were £88,945, making the total of such repayments since the system came into force £408,858. The net amount of advances was thus left at £1,340,550. The amounts repaid by farmers have included some repayments in full, borrowers having the option of paying off on any stipulated pay-day. In the event of a borrower desiring to pay off a portion of his loan in addition to the half-yearly instalments originally arranged for, the additional money is placed to a separate account bearing interest at 3½ per cent., until a sufficient sum is accumulated to release the property. Under this grateful arrangement sums were received during the financial year 1904 which amounted to £8,920 compared with £6,030 for the preceding year, the balance of principle remaining in the Commissioners' hands on behalf of clients being thus brought to £19,040. These advances are issued in all cases with a definite purpose—either to pay off liabilities, to pay Crown rents, or to improve and develop land. By far the greater portion, £1,558,150, has been devoted to the payment of liabilities already incurred, and has thus tided the borrowers over difficulties which would probably have been too much for them had they to depend for loans upon private individuals or companies. In the payment of Crown rents £70,083 has been utilised, and £121,174 has been borrowed for the immediate improvement and development of land. The number of repayments by farmers which became due during the year dealt with by this report was 6,037, representing interest to the amount of £57,607, and £24,848 intended for the reduction of principal. Only nine farmers were in arrears when the report was issued, the total amount of arrears being £218. Nor are the struggling farmers the only ones who benefit in Victoria under the system of Government advances, for the department controlling these loans derived a net profit for the year of £7,810.

155 SADDLE and HARNESS HORSES, SHOW COBS, and PONIES, principally out of the farmers' and breeders' hands of the celebrated Fylde district.

Judging at 10 o'clock. Sale at 11 each day, in two rings.

Catalogues, apply to E. G. HOTHERSALL, Auction Mart, Preston, Auctioneer.

13, HIGH HOLBORN. TO HOP MERCHANTS, &c. 17 POCKETS OF SUSSEX HOPS & 8 BAGS OF POPPY SEEDS.

MESSRS. H. N. NEWTON & CO. will SELL the above by AUCTION on THURSDAY, 2nd NOVEMBER, 1905, at 12 o'clock. Samples on view day prior and morning of Sale. Auction Offices, 67 and 69, Chancery Lane.

MISCELLANEOUS.

BASIC SLAG.—Highest Percentages Phosphates guaranteed. We sell thousands of tons, consequently quote lowest possible prices. Hundreds of our customers testify to its marvellous efficacy. Write us now.—Cannock Agricultural Co., Ld. (Henry R. Hart, Managing Director), Cannock, Staffs.

TRACTION ENGINES and WAGONS, Portable, Ploughing, and Fixed Engines Thrashing Machines, &c., second-hand, for Sale, cheap, or to be Let on Hire-purchase. Full list free. Inquiries for all classes of Machinery solicited. Largest stock in England to be seen at our Works as below. We are also buyers of good modern Engines at all times, for cash. Large stock of Beltings, Oils, and Engineers' Requisites of all descriptions.—HENRY LEWIS & SONS, Thames Bank Iron Works, Reading.

RATS! RATS!!—A Truro farmer writes:—"After using a 1s. 2d. Pot of HARRISON'S 'RELIABLE' RAT POISON, I picked up 150 dead rats." Equally good for Rats, Mice, or Moles. Dogs or Cats won't touch it. Price 6d., 1s., 2s. 3d., 3s. 8d. Postage 2d.—M. L. HARRISON, Chemist, X. Dept., Reading.

BARBED FENCING WIRE, New, in ½-cwt Reels, 12s. cwt. Plain Galvanised Fencing Wire, new, but slightly soiled, 9s. per cwt. Wrought Iron Standards, 1s. each.—BUTLER, Bell Works, Wolverhampton. Established 1828.

GALVANISED CORRUGATED SHEETS, all new sheets, soiled by sea water, all warranted sound. 3ft., 6d.; 4ft., 9d.; 5ft., 1s.; 6ft., 1s. 2d.; 7ft., 1s. 4d.; 8ft., 1s. 6d.; 9ft., 1s. 9d.; 10 ft., 2s. each.—BUTLER, Bell Works, Wolverhampton. Established 1828.

FOR SALE.—Fencing, Sheep Hurdles and Stakes. STURGESS, Roade.

MISCELLANEOUS.

OIL ENGINES, Fixed and Portable, up to 25 h.h.p. The cheapest motive power for farmers. Send for catalogue.—NAYLER & CO., Limited, Engineers, Hereford.

SACKS! Best twilled 4 lb. 4 bush. Corn Sacks, 25, 1s. 1d.; 50, 1s.; 100, 11½; marked, carriage paid. Sample 1s. 6d.—TARPAULIN CO., Dudley.

HOUSES, PORTABLE.—for 12 Fowls 15/-; 20 Fowls 20/-; 30 Fowls 25/-; 50 Fowls 35/-. Approval.—LONGBOTTOM, Nafferton Works, Hull.

LAITA.—The best milk substitute for calves, and best results; popular prices, 12s. 6d. per cwt., Carriage paid.—Send 12s. 6d. for a sample bag to R. J. NELL & CO., Ltd., Spiced Food Mills, Louth, Lincs. Agents wanted.

BASIC SLAG, guaranteed 42 to 50 per cent. phosphates; also 38 to 45 and 30 to 35 per cent. qualities. KAINIT, MOSS LITTER, &c.—CHAS. PICKEN, Merchant, Wolverhampton.

BASIC SLAG, 42-50, 38-45, 30-35, 26-30 per cent., phosphates. State quantities required and station, when prices, analyses, &c., will be sent by return of post.—CLEMENT SWAFFIELD, Derby.

WIRE NAILS mixed, 8s. cwt. 28 lbs. 2s. 3d., Screws (mixed), 28s. cwt., 28 lbs. 7s. 6d.; wire cut, wrought and malleable nails, &c.; wholesale prices.—MIDLAND NAIL WORKS, 25, Rea Street, Birmingham.

DAVID & CO., Taff Vale Ironworks, Cardiff.—Galvanised Sheep Netting, 3ft. wide, 4in. mesh, 6d. 3d. per 50 yd. roll, also galvanised wire netting in all widths and meshes; galvanised steel cisterns, 100 gals., 19s. 6d.; 150 gals., 31s.; 240 gals. 47s., any size supplied carriage paid; galvanised barb wire, 13s. per cwt.; steel fencing wire, 8s. 9d. per cwt.; sheep hurdles, 6ft. long, 31s. per doz.; cattle hurdles, 6ft. long, 41s. 6d.; continuous 5 bar fencing, 1s. 7d. per yard; "Unchallanged" field gate, 21s., 6 gates carriage paid; galvanised sheets; sheep racks; corn bins, etc. Send for Catalogue.—DAVID & CO., Taff Vale Ironworks, Cardiff.

JOHN PRIEST & SON, Ltd., Castle Iron Works, Bristol.

Wire Netting.—Best Galvanised, Cash prices per roll of 50 yds. 3 in. mesh, 2 ft., 3s. 4d.; 3 ft., 5s. 0d.; 4 ft., 6s. 8d.; 2 in. mesh, 2 ft., 4s. 1d.; 3 ft. 6s. 1d.; 4 ft., 8s. 2d.; 1 in. mesh, 2 ft. 7s. 6d.; 3 ft., 11s. 2d.; 4 ft., 15s. 0d. BEST GALVANISED SHEEP NETTING.—50 yard rolls, 3 ft. wide, 4 in. mesh, centre strand, 7s. 7d., 8s. 3d., and 10s. 3d. per roll. Strong Stakes, 6s. per dozen. Carriage paid on lots, netting or stakes, 70s. value.

Iron and Steel Hurdles, Fences, Gates.—Excellent quality; 6 ft. hurdles, 4 rails, 33s. per doz.; 5 bars, 36s. Steel fencing wire, 9s. per cwt.; galvanised wire strand, 15s. cwt., galvanised barbed wire, 13s. cwt., 590 yards. Challenge field gates, 9 ft. by 4 ft., 22s. each. Carriage paid on six gates. Strong sheep fencing, five steel wires and iron posts, 8d. per yard.

Splendid Galvanised Roofing.—Perfect quality; 5 ft., 1s. 3½d.; 6 ft., 1s. 6½d.; 7 ft., 1s. 10d.; 8 ft., 2s. 1d.; 9 ft., 2s. 5d.; 10 ft., 2s. 9d. Ridging, 2½d. per ft. Best Wire Nails, 11s. cwt.

Galvanised Cisterns corrugated steel, 30 gals., 9s.; 50 gals., 13s. 3d.; 100 gals., 21s. Corn Bins; Sheep, Pig, and Cattle Troughs, at very low prices. Lists free.

J. PRIEST & SON, Ltd., Castle Iron Works, Victoria Road, Bristol.

Continued on p. 499.

MISCELLANEOUS.

(continued from front page).

MY SPECIALITY. — Imperishable IRON SHEETS, as supplied for 25 years to largest Estates. Once fixed, these are everlasting. Full particulars and prices free. The old house for cheapest Iron Fencing, Gates, Wire Netting, Tanks, Felt, Iron Tubes, and General Estate Requisites. Terms cash.—JOHN ATTWOOD REEVE, Stony Stratford.

LOIN CLOTHS.—Best and strongest in the market, 46 in. long by 38 in. wide; waterproof, on stout navy canvas, and weighs 4 lbs. I will send one post free for 3s. Cash returned if not approved of.—HY. J. GASSON, Rye.

LOOK.—The best strong and warm hardwoven Wool Horse Rug, 6 ft. long, 5 ft. wide, with throat strap, and bound, carriage paid, 5s. 6d.; sizes smaller, 4s. 6d. and 3s. 6d. Cash returned if not approved of.—HY. J. GASSON, Government Contractor, Rye.

WATERPROOF COVERS, same materials and pliable as railway sheets: 12 ft. by 9 ft., 12s.; 15 ft. by 9 ft., 15s.; and so on to any size at 1s. per sq. yd., with lashes. Quantity of large pieces of Tarpaulin at 20s. per cwt.; odd pieces, suitable for roofing, at 8s. per cwt.; cash returned if not approved of.—H. J. GASSON, Government Contractor, Rye.

POWDER for DESTROYING LICE IN CATTLE and HORSES, and FLEAS and LICE in DOGS and POULTRY. Sure remedy; simply sprinkled on, no washing; quite harmless, 1/- per lb., over 3lbs. post free. E. RUMSEY & Co., Rhuddallt Fawr, Carnarvon.

WILLSON'S CANADIAN PIG POWDERS. Packets, 7 powders, 7d.; 16, 1s. 2d.; boxes, 48, 3s.; 144, 8s., all post free.—STEPHEN WILLSON, Peterborough.

VESICO SUDORIFIC (*Flying Horse* non-itching blister), for Lame and Unsound Horses, Weak Joints, Strained Sinews, Diseased Bone, Puffy Swellings, and other defects. Sold in pots, 2s. 6d. or 5s., from GREGORY & CO., Temple, Bristol, or through Chemists.

AUCTIONEERS AND LIVE STOCK AGENTS.

H. & E. M'GRATH, Hay and Provender Dealers, Live Stock Shipping Agents, Milford St., Liverpool. Cattle Sheds, Great Howard St. Telegraphic Address:—"Animals." Telephone 1963.

RAILWAY ANNOUNCEMENTS.

LONDON AND NORTH-WESTERN RAILWAY.

POULTRY AND PIGEON SHOW,
to be held at the
CRYSTAL PALACE,
November 7th to 10th, 1905.

The London and North-Western Railway Company have arranged for through vans for the conveyance of Poultry, &c., to be run to the Crystal Palace, on Monday, November 6th.

Consignments from the branch lines will be placed in these vans at the various junctions.

Conveyance rates can be obtained at the various stations on the line.

Exhibitors must write their names and addresses distinctly on the backs of the direction labels issued by the Show Committee.

The Company's representatives will be at the Show to answer all enquiries.

Information can be obtained of the Superintendent of the Line, Euston Station, London; the Company's District Superintendent, Euston Station, London; or Mr. F. H. Dent, Broad Street Station London, E.C.

FREDERICK HARRISON,
General Manager.

General Manager's Office,
Euston Station, London, N.W.,
October, 1905.

GREAT NORTHERN RAILWAY.

GREAT NATIONAL POULTRY AND PIGEON SHOW,
at the
CRYSTAL PALACE SYDENHAM,
NOVEMBER 7th, 8th, 9th, and 10th, 1905.

Intending Exhibitors at this Show are informed that the Great Northern Railway Company make every arrangement for the careful and expeditious transit of exhibits to and from the Crystal Palace.

For the convenience of exhibitors, through vans will be run to the Crystal Palace on Monday, November 6th.

Consignments from branch lines and intermediate stations at which these trains do not stop will be placed in the through vans at the various junctions, thus ensuring direct transit to the Crystal Palace.

A Great Northern representative will be in attendance at the Show, prepared to give every information to exhibitors, and to facilitate removal at the close of the Show. The removal order should be sent to the Chief Passenger Agent, King's Cross Station, at the commencement of the Show.

Any information as to arrangements for the forward or return journey, &c., may be had on application to the Chief Passenger Agent, Great Northern Railway, King's Cross, London.

OLIVER BURY, General Manager.
London, October, 1905.

GREAT NORTHERN RAILWAY.

GRAND INTERNATIONAL POULTRY, RABBIT, AND PIGEON SHOW
at the
ALEXANDRA PALACE, LONDON,
November 7th, 8th and 9th 1905.

Exhibitors are informed that the Railway Company have arranged for the transit of exhibits to and from the Alexandra Palace.

Through vans will be run to the Alexandra Palace on Monday, November 6th.

Branch line consignments will be placed in the through vans at the various junctions.

Conveyance rates can be obtained at the various stations on the line.

Exhibitors should consign and direct their exhibits "per Great Northern Railway," and be careful to insert the route on the return, as well as the outward, portion of the address label. A representative will attend the show, to give every information to exhibitors, and to facilitate removal at the close of the show. The removal order should be sent to the Chief Passenger Agent, King's Cross Station, at the commencement of the Show.

All information may be had on application to the Chief Passenger Agent, Great Northern Railway, King's Cross, London.

OLIVER BURY, General Manager.
London, October, 1905.

THE
"BIBBY" CAKE
V.
LINSEED CAKE.

In out-of-the-way districts, amongst farmers who perhaps do not often see the Agricultural papers, there are some few feeders who still fatten bullocks and other cattle on Linseed Cake.

To all such we venture to suggest that the present high price of Linseed Cake affords an opportunity for putting the "**BIBBY**" **CAKE** to a competitive test.

Consider the saving! At the relative prices the cost of "**BIBBY**" is something like 30s. per ton less than the cost of any good brand of English Linseed Cake, so that on a four-ton truck of Cake a saving of £6 is effected.

But this is not all; we maintain that cattle can be fatted more expeditiously on "**BIBBY**" **CAKE**, which effects a saving of both time and other keep.

But let us waive the latter point, for the money saving alone is well worth the feeder's attention.

We supply the whole Cakes, or in the form of Cakettes, as may be desired.

We also supply our famous **DAIRY CAKE** in Cakettes, Whole Cake or Meal, and we believe better value for Dairy Cows is not to be obtained than we are now giving in out well-known **DAIRY CAKE**, **CAKETTES**, and **MEAL.**

Bibby's Quarterly.

The new number of BIBBY'S QUARTERLY, edited by our Mr. JOSEPH BIBBY, is now out, and can be had during this month at all Smith's Bookstalls, price 1/-

There be those who say that BIBBY'S QUARTERLY is the best periodical which comes into the farmhouse, but there be also gainsayers who affirm that if it dealt more with live stock, and less with high ethics, it would be more acceptable to the average farmer; and we are rather of that opinion ourselves, but the Editor tells us that he edits BIBBY'S QUARTERLY to please himself, and we have to leave it at that; should, however, any reader of BIBBY'S QUARTERLY make a purchase at Smith's Bookstall, and is afterwards doubtful that he has got his shilling's worth, we undertake to make matters straight with him if he apprise us of his dissatisfaction within the present month.

WHEAT CULTURE, REMUNERATIVE AND OTHERWISE.

The present dry, fine autumn is turning out favourable for wheat sowing. Some of the heaviest soils, always, if possible, cropped in October, have, indeed, been almost too dry for the operation up to the present; and land-pressers and clod crushers have been necessary in a great many instances to get a compressed, suitable seed-bed. Last year the area in Great Britain cropped to wheat was 1,795,985 acres, and there is every reason to suppose that the cropping of the present season for next year's return will not fall far short of that acreage. There has been no marked permanent change in the wheat area during the past fifteen years. The quinquennial average for Great Britain, 1891-95, was 1,954,017 acres. Since then the area of 1905 was only exceeded in the years 1897, 1898, 1899, and 1900, having been less in 1896, as well as in the four years 1901 to 1904. The variations which now occur appear to be more influenced by the good or bad seed-time than anything else. No doubt there were some larger croppings in 1904 made in anticipation of better prices owing to the deficient United States crop, as there will be this autumn owing to the falling off of grain shipments from Russia. But when we take into consideration the low average market price of wheat which has been current during the whole of these fifteen years, no other conclusion can be arrived at but that there is still a large proportion of British farmers who have not discarded wheat from their regular course of cropping. At any time during the past twenty years we have been assured that British wheat-growing entailed loss instead of profit, and that its utter discardment must be regarded as only a question of time; yet we find no signs of such a result happening.

There is more than one cause for this. Not a few grow wheat chiefly for the sake of the straw. In many districts wheat straw can be sold at a good price, often about £2 per ton; and in the pottery districts, where it is wanted for packing, the rate has often been much higher. When crops yielding six quarters of grain and two tons of straw to the acre are grown, the return, the whole being marketed even at present prices, would be remunerative. But most farmers ought to be able to find a far more profitable way of disposing of their wheat grain than selling it at 28s. to 30s. per quarter. Stock, in most cases, would be on the farm which would pay handsomely for wheat consumption. Putting it into the mouths of fatting bullocks or sheep, or in those of dairy cows kept in full profit during winter to supply milk contracts, would do so. By marketing the straw. In many districts wheat straw wheat crop, the farmer would pursue a far better system—one which could scarcely fail in yielding a satisfactory return. Moreover, he would sell the portion of the crop of least value, for although landlords in olden times were accustomed to insist on straw being consumed on the farm, it was in utter ignorance of the chemical properties of the impounded article. The manurial value of straw, in fact, does not amount to much, and, although farmers prize it highly for convenience in littering their stables and stalls, the farm-yard manure is rich or poor according as the cattle, horses, or pigs are fed which make it.

Wheat is grown for the home-consumption both of grain and straw in a great many cases. Stock-keeping has become the order of the day. By growing big wheat crops such as are above indicated, and consuming them bodily as food for stock, herds, and flocks can be increased very much. We do not assert that his is done on a very large scale, but the trend of things is this way on large, well-managed farms, fully stocked with animals of a character to pay. On the other hand, it must be admitted that there is a class of farm-occupiers who have few stock of any kind on their holdings, and that the few animals they own are not at all of a character to pay for the consumption of wheat, even if what they grow were given them. This class of farmers continue to grow wheat on the old system, and usually have to make sale of it in autumn, when it is lowest in price, solely because they have no capital to adapt themselves to times and circumstances by embarking in new courses. They most likely in the generality of seasons grow wheat at a loss rather than at a profit. The supposition might reasonably be entertained that the capital required to enable them to engage in pig-breeding would be slight, so that they might convert the corn they grow into baconers. But, however, this may be, one thing is very obvious, that an exceedingly heavy crop must be grown for the grain to be sold at present prices to yield any profit.

The annual root crop competition of the Wellington (Salop) Farmers' Club proved most successful, as the following report of the judges will show:—"The season has not been a favourable one for root growing, but the skill and attention devoted to the crops by the competitors has, on the whole, resulted in a favourable return. Mangolds are especially good, and we have had considerable difficulty in determining the order of merit. We highly commend the whole class. The whole of the crops were very clean and well managed, and reflect great credit on the competitors."

One of the most disastrous rick-yard fires that has occurred for many years in Shropshire broke out on Wednesday afternoon at the farm of Mr. Richard Gough, of the Sydnal, near Market Drayton. Both the Hinstock and Market Drayton Fire Brigades attended; but so rapidly did the flames spread that the entire produce in ten huge ricks was destroyed. The damage represents some thousands of pounds, and the fire brigades at the time of telegraphing were endeavouring to save the adjoining house and buildings. The outbreak is supposed to be due to gipsies camping in the vicinity.

Seasonable Topics.

Jack Frost has made an early appearance this year, and in addition to spreading devastation in the garden by ruthlessly cutting off the dahlias and other flowers, he has established records in the way of severity for October. If reports be true such severe frosts have not been known in many places in the memory of the present generation, and farmers have had reason to feel anxious about the welfare of their wurzel crops. We have heard a good deal of coughing amongst cows that have had to pass the nights in the frosty air outdoors, and we commend those people who are not governed by hard and fast rules in this matter, but make a point of tying up their cows at nights as soon as the state of the weather renders this course necessary. Indeed, farmers should never be slaves to rule, and we have no sympathy with men who turn out their cows for the night on one particular date, and take them up the same, irrespective of weather, simply because they made it a habit to do so. The early appearance of frost has set the tongues of the weather sages wagging, and whereas one says that the sharp pinches in October indicate a severe winter, others foretell that mild conditions will rule for a spell when the weather changes. From our own experience of weather prophets, however, we think they should let their prophecies be as broad as possible, and the gazer into the future who says that we shall either have severe frost or some other kind of weather, is most likely to come out about right.

Early Frosts.

It is not likely that sportsmen will have reason to complain much this year about the leaves remaining on the trees for an unduly long time, as the sharp frosts experienced of late have put the finishing touches on the foliage, which is painted with a hundred delicate tints, and all day long the leaves come down with a mournful pitter-pat, which tells its own story of the coming winter. It is not without feelings of regret that we watch the trees denuded of their leafage, but we know that is part of Nature's programme for the dead foliage to provide food for the living, and as each leaf flickers to the ground, a little more plant food is added to the great store-house—the earth. Leaves do not form such an important item of the working programme of the farmer as they do in that of the gardener, for what the latter would do without leaf-mould in the mixing up of his potting soil, it is difficult to say. Yet dead and dying leaves have their uses in agriculture, and when taking a walk abroad on one of these bright October days one may observe the children of the cottagers gathering the dry leaves up and carrying them off in bags. With a little straw litter added to them the leaves will serve as bedding for the pig, and that accommodating animal will trample them down and mix them up till they are leaves no longer, but manure that will help to produce heavier crops on the allotment or cottage garden. Indeed, many of the latter enclosures would stand a poor chance of getting any manure at all if it were not for Nature providing the leaves, the youngsters collecting them, and the pig accommodatingly doing the rest.

Falling Leaves.

Just when a child should begin to attend school, and just when it should be allowed to leave, are matters now under general discussion. Before the cost of education became such a serious item on the rates, country people did not worry about the school doors being open to children of three years of age, but now they have to pay many are asking why teachers should be paid professional salaries for acting as nurses. The outcome of it all may be that mothers will have to look after their own babies till they are five. Old men tell us how they commenced earning their daily bread at nine years of age, and some of them added to their store of knowledge afterwards by attending the village night school. It seems likely that in its advanced stage education will again adopt the old system in a revised form in rural districts, for the farmer says that the lad at fourteen is too old for him, and the young hopeful knows too much. The farmer says that he would rather take the lad at twelve, and argues that what he learns at school after that is of little use to him if he is to follow in the footsteps of his father, and be an agricultural labourer. The proposal therefore is for parents to have the option of taking their sons from school at twelve years of age, but if this is done the lads will be under compulsion to continue their education by attending evening school classes, in which arts and crafts likely to be of service to them in after life will be taught. We admit that the suggestion strikes us favourably, and if the evening instruction provided is of the right character, we see no reason why the scheme should not work with advantage, but after all, it is only going back to the old night-school days with certain variations.

Education Again.

The casual observer might be inclined to wonder how it is that the straw of oats, wheat, and barley stands up stiff and straight in one place up to the time of reaping, while in another it lacks the strength to support itself perpendicularly. The practical man, however, knows that it is largely a question of soil and weather. On strong lands which are well charged with silica the straw stands up well, while on soils which are largely of vegetable origin, such as peaty and bog soils, it invariably falls over. Most people have learnt through observation that in a dry summer straw holds itself erect, except it be beaten down by storms, but a wet July is always conducive to the weakening of cereal straw. The question of how nature may be assisted in the keeping of straw erect is a matter that has occupied the attention of both scientific and practical minds in the past and present. It has been observed that basic slag has had the desired effect on the straw of oats and barley on peaty soils and long before basic slag came into use it was found that a dressing of salt on light land had the effect of keeping the straw erect. Soot is generally recognised as being a useful fertiliser both for farm and garden crops, and more than one corn-grower has recognised its virtues in the work of building up and giving strength to the straw of wheat and oats.

Stiffness of Cereal Straw.

While the greater part of the community is rejoicing over the gloriously fine autumn weather, and expressing hopes that it will continue, another section is crying out for rain. The latter is formed of people who are put to inconvenience through the lack of that essential commodity—water, and those who have never known the want of it can hardly realise what trouble and expense one is put to when the supply runs out. It is a long time now since we had any weight of rain, and we see ditches and watercourses as dry now as ever they were in the summer, while drinking pools are either low or entirely empty. Fortunate is the man who has a limpid stream running through his holding where he can water his cattle, for it does not require much knowledge of bacteriology to know that the slimy, evil-smelling liquid in some ponds, which is often the only water the cattle have to drink, cannot be good for them. In some dry hill districts water-hauling is now a daily task, and certainly a most unsatisfactory one, as there is no direct return for money spent on it. Still, it has to be done, and, while recognising the necessity, there is wisdom in making every possible preparation for storage when the rain does come. When ponds are empty it is a suitable time to get the mud cleaned out of them, so that they will hold more water and help to avoid a famine in the future; yet we know ponds that have never been cleaned out for years, and, through not holding half as much water as they would if the mud were removed, there is a shortage of liquid for the cattle whenever we get a spell of dry weather.

The Shortage of Water.

There is food for much serious thought in the remarks made by different speakers at the prize distribution ceremony at the Chester Dairy Show, a report of which appeared in our last issue. The High Sheriff of the county drew attention to the difficulty of getting Cheshire cheese, either in the county or out of it, and he observed that though he lived in the heart of Cheshire he had to send to Glasgow for his butter. One of the judges, Mr. John Emberton, of Crewe, remarked that it was one of the worst features of modern agriculture that people were tempted, for perhaps some advantage in the relief of labour, to cease to manufacture cheese. With these sentiments we fully agree, and, though one cannot blame a farmer for going in for milk selling if it pays better, it is a thousand pities that the milk trade should be built up at the expense of the equally important industry of cheese making. Is there not room for both? There ought to be in a country like this, but farmers are not unlike sheep in the way they follow each other, and the manner in which cheese presses have been abandoned, not only in Cheshire, but in other counties perhaps more so, for the sake of the milk churn, is very regrettable. It is only the fortunate few who can indulge in English cheese now, because the greater part of the community are unable to get it, though they would prefer a good English cheese to anything which comes from America. Some say that the day is not very far distant when history will repeat itself, and farmers will realise that milk-selling is not the only branch of dairying to be followed. When that day comes will it find cheese-making apparatus all scattered and good cheese making a lost art amongst farmers' wives and daughters? Possibly.

Cheese Making and the Milk Traffic.

Sugar Beet Growing in Lincolnshire.

Sugar beet growing in Lincolnshire was the subject of an interesting paper read by Mr. W. S. White at the Lincoln Chamber of Commerce on Thursday. He pointed out that we are sending out of this country 20 millions sterling for sugar yearly, and receive from Germany alone 800,000 tons of sugar each year. We are the largest consumers of any country in the world of that commodity, and yet we are the only country that does not make it.

The question of beet growing in Lincolnshire was exciting interest among farmers who were looking for something to grow other than wheat that would make a profit. The soil was adapted for sugar beet growing, but before the matter was taken in hand it would be necessary to petition the Government to establish a factory in the county. They reckoned the cost per acre would be £10, the yield 15 tons, and the profit £6 10s. per acre. He proposed that a deputation from that Chamber and other Chambers in Lincolnshire visit Germany, and make observations to further develop the sugar beet industry in Lincolnshire. Mr. Stein, Liverpool, gave an address on the subject, and the resolution was adopted.

What is Agricultural Work?

An interesting decision was given in the Court of Appeal on Thursday on the question of whether a farm carpenter and keeper who, while rabbiting, was accidentally shot in the foot by his employer's son, was entitled to compensation under the Workmen's Compensation (Amendment) Act, 1900, which extended the scheme of the Act of 1897 to agricultural labourers.

The county court judge at Salisbury held that the carpenter was entitled to compensation under the Act, and against this decision the employer appealed.

The only point argued on appeal was whether the Act of 1900 included a farm servant of this kind, or whether it was restricted to farm labourers.

The Master of the Rolls, in dismissing the appeal, said he declined to construe the Act as applying to farm labourers only. Any man "mainly engaged in agriculture" was, according to the county court decision, entitled to the benefits of the Act, and that decision the Court of Appeal now confirmed.

South Eastern Agricultural College

A meeting of the Governors of this college was held at the Westminster Palace Hotel on Monday, October 23, Lord Ashcombe, the Chairman of the Governors, presiding. The report of the Principal (Mr. M. J. R. Dunstan) stated that 100 students, the largest number yet recorded, were now attending the college, an increase of twelve on the number for last session. The special points in the report were the commencement of the building extension, a gymnasium and college hall being included, thanks to an anonymous donor of £1,000, the increase of the college farm to 490 acres, the lengthening of the diploma courses to three years, the appointment of a mycologist to investigate the fungus diseases of hops, fruit, and farm crops, the recently-held summer course for elementary schoolmasters, and the appointment by the Colonial Office of Mr. E. G. Chamberlaine, a college student, as agricultural normal master in British Guiana.

Agricultural Politics.

BY A LOBBYIST.

Most assuredly I had not expected the Earl of Onslow to be a second Daniel come to judgment. I had never expected that his lordship would give his benison to an organised agricultural Parliamentary group determined upon a definite policy and importunate and vigorous in the influence it brought to bear upon the Government in realising that policy. The Earl's unwonted and unexpected act is, as a fact, the most impressive evidence we have yet received of the manner in which the minds of statesmen have been moved by the new spirit of agrarian self-assertion. It may be, of course, that the Earl, with his inherited and natural associations with agrarianism, is a little wearied of the disregard of rural interests as a consequence of the arrogance of other Parliamentary influences—that he is a little tired of the spectacle of those active, vivacious, pertinacious legislators who loudly bay for the moon, having the very statesmen who treat agriculture with supercilious contempt, bowing in obsequious assurance of their desire to realise their impossible ambitions. The fact, however, remains, that a leader of one of the two great parties in the State—a man who was likely to regard fidelity to party convenience as the sacro-sanct duty of every politician, and who himself has been always obedient to the party-rein—telling agriculturists, out of the fulness of his own experience, that it is only by pressure and organisation that they can secure a sympathetic Parliamentary attention. Pressure and organisation must imply independence. Nay, without political independence there could be no effective pressure, and organisation would be useless. Be importunate, be assertive, refuse to be dragooned by whips, and you may achieve good. This is the moral of the Earl of Onslow's advice.

• • •

I do not, of course, attribute any sinister purpose to Lord Onslow. Though his methods at the Board of Agriculture, particularly in regard to the concession of State-aid, were rather tepid, he was undeniably moved by a whole-hearted sympathy with the interest. 'Twas his method, and not his heart, that permitted him to agree—and this is his own confession—to the Parliamentary supersession of agriculture by other interests. The unexpected favour, however, with which the new movement is being greeted in circles allied to party organisations half oppresses me with fear. These compliments from these quarters, these laudations of this assertive attitude, this innovation of an independent policy of men to whom Parliamentary independence must inevitably be an inconvenience, if not a frustrating influence—all these things induce me to hope that this patronage will not act as a sedative and an opiate. The agricultural interest is apparently fashioning for itself a Parliamentary back-bone; it must not be cozened into a failure to give it a proper temper. There is probably, no doubt, I repeat, about the sincerity of these compliments; but compliments too often lull even an active intelligence into a false sense of security.

• • •

To me, more inspiring than the Earl's acceptance of the independent spirit is his confession of the insincerity of Parliament (so far as agriculture is concerned), when agricultural M.P.s complacently accept every official party instruction. In 1902, 2¾ hours were devoted to agriculture; in 1903, 10 hours; in 1904, 1½ hours; and in 1905, 12 hours. This confession ought to be the accepted preface of the finally-accepted programme of the Agricultural Group. It should be an ever-present reminder to every farmer who is wisely desirous of his own weal. When compliments soothe, these sentences should nerve to renewed activity. Maybe, had we been assertive during the Onslow régime, we should have had by this time a national grant sufficient to permit of the reproduction of the Irish agrarian executive authority in England.

Mr. Henry Chaplin has rendered a great service by registering an emphatic protest against a redistribution scheme whose result would be the penalisation of rural and county areas. A policy of vigilant scouting should be adopted towards the promised Redistribution Bill. The abortive and abandoned Bill of the last session would have done much more than modify the representation of Ireland. Whether this was intended or not, it is undeniable that the Bill was calculated to foster the anxiety of the urban constituencies to aggrandise an unfair preponderance of Parliamentary influence. The definite and exaggerated population limit adopted for the counties, whilst permitting an infinitely less urban population the dignity of distinct representation, was not a menace to electoral equality; but it was a distinct degradation of and insult to the rural voter. An urban voter, say, in the city of Salisbury or the city of Winchester would have had, according to this scheme, something like four times the electoral significance of the voter in the rural areas of either Wiltshire or Hampshire. It is, of course, beyond the wit of man to fashion a scheme in which every voter, no matter under what conditions his life may be cast, shall have an exactly equal electoral value to that of his fellow. The inequality, however, which this Bill expressed and embodied was a grievous anomaly—nay, I repeat my word, it was insulting. It should be a part of the new Parliamentary movement to safeguard the adequate representation of the counties in the House of Commons. To neglect to do this would be to unfairly handicap the leaders of the propaganda, and would jeopardise its success. Heaven forfend it be deemed I desire to revive the old town and country jealousies. The best way to prevent this revival, however, is to safeguard the electoral rights of the counties. There must inevitably be, I repeat, some inequality; but it should be our duty to, as far as possible, moderate this disproportion of influence.

• • •

I have heard a good deal of approval of your criticism of the resolve to hold the next general conference of farmers at Newcastle. True, this particular effort was in its inception a northern movement; but it has evoked a sympathy which extends far beyond the north. Here was an opportunity of revealing that there are men of sufficient hardihood in agriculture to invoke a national campaign on behalf of a sanely-moderate policy of farming reform and rural reform. Most assuredly when this effort crystallises in a distinct Parliamentary movement, there will be no anxiety to confine it to the Members for northern constituencies. Such a policy would be ruinous to its very purpose, beyond which it might provoke unnecesary rivalries. It would thus have been infinitely wiser had the delegates resolved to hold the next conference, say, in the Midlands. Such conferences as these, where farmer meets farmer, and where the presentation of known grievances is couched in the language of intimacy, may not have a vivifying effect. Perhaps this is as well, for your vivifying effects are not unseldom evanescent. They must, however, induce to thought. They must be the parent of a comprehension that assertive, individual action is necessary if Parliament is to be aroused to a proper comprehension of the economic and legislative necessities of agriculture. A conference in the Midlands might have been followed by a conference in the south. A bridge of sympathy would then have been provided between the confines of the kingdom. Indifferentism has been the bane of modern agriculture. Let us not supplant it by sectionalism, or, if I may coin the word, by area-ism. This must be a national, and not merely a northern movement.

• • •

Lord Rosebery is the enigma of our modern-day politics. A great prefatory effort was, I believe, made to induce him to reveal his attitude on the land and tenure reform during his speech at Stourbridge. Of course, Stourbridge is within a few gun-shots of the Vale of Evesham. Naturally, the question was asked as to how far Lord Rosebery would apply the Evesham custom to general agriculture? This is a matter of the utmost moment to the Liberal farmers of the Midlands. Well, how did his lordship satisfy this anxiety? "Then," said the Earl, "there is that second group of questions relating to the great labouring masses of our fellow-countrymen, such as temperance and housing, relief of what I may call meritorious poverty and destitution, and the land question—a somewhat vague term, but which, speaking generally, means, I take it, an effort to put a much larger proportion of the population on the land than is at present there!" This and nothing more, not another sentence. 'Tis a fine sonorous mouthful, I confess; but who can say it is illuminative or satisfying? When the Earl uttered the words, "The land question," his audience encouraged him to revelation by a generous cheer. It was an unrequited generosity. Not a man of them can say to-day that he has the slightest idea of what Lord Rosebery's views are in regard to the land, whether he is favour of the extension of the Evesham custom, whether he is in favour of utilising the resources of the State in re-establishing the race of yeomen, whether he would support Conservatives like Sir John Kennaway and Sir John Dorrington in the voluntary dispossession of landlordism, or whether he would venture upon the disciplined cultivation of waste land. He uttered a sweltering phrase or two, which have about as much application to modern-day politics as would have had the blessed word "Mesopotamia." The land question is a serious, dramatic problem, and not an issue for the toying phrases and dilettante sympathy.

• • •

The Land Law Reform Association, or certain of its members, resents my suggestion that it is in danger of becoming a mere partisan-instrument of a mere political purpose. One of its most authoritative members, Sir Walter Foster, a man of whose sincerity in the cause of tenure-reform we have, of course, received many illustrations, assures me that I am at least mistaken in assuming that there are no Conservatives present at the Association's conferences. As a fact, at the two last conferences Conservative speakers were encouraged to freely express their views and criticisms. "I have sometimes been surprised," said Sir Walter, "to discover in my conversations with Conservative farmers how far we are, when we have got rid of our political and personal predilections and prejudices, in accord as to the chief necessities of the land. At all events, you may be assured," said Sir Walter, "that if we have not yet attracted prominent Conservatives to a position of distinction at our conferences, we welcome Conservative contributors to the debate. As a fact, this is the best means of discovering the possibility of a common platform on which all sections may unite." Sir Walter is himself proceeding at the next conference at Tunbridge, and he bids me freely invite Conservative landlords and farmers.

Agricultural Organisation in Scotland.—At a meeting of agriculturists in Edinburgh on Wednesday, under the chairmanship of Sir John Gilmour, it was decided to form a society to organise agriculture in Scotland, on much the same lines as the Agricultural Organisation Society in England. The Chairman stated that they had a guarantee for the next three years of £930 annually.

Newcastle Cow Hill Fair.—This fair was held on Wednesday, and notwithstanding the disagreeable weather, there was a large attendance. Business was anything but brisk for horses, but there was a fair exchange for cattle. Irish cattle brought from £5 to £14. Strong cattle were about 10s. a head down on last year's figure, and young cattle were £1 down. Scotch were no cheaper. There were not many good draught colts in the show, and good horses did not go cheap. The price ranged about £30 to £34, with £40 to £45 for best classes. Some capital harness horses from Ireland brought £70 to £80. Young long-tailed horses went at a lower figure than last year. Hunters were not a numerous lot, but a sale of two Irish animals was effected at £100 each. There was a lot of Shetland ponies, but nothing seemed to be doing.

Midland Notes.

When was there a better autumn than this has been for seasonable farm work? One might say "Never" with some confidence were it not for the extreme dryness of the land, which is all against wheat drilling, and discouraging, to say the least, to seed which has already germinated. On the other hand, it has prevented the surface soil from freezing hard during the bitter cold nights, and in the early morning one has sometimes seen the unusual spectacle of plough and harrow at work when pools and puddles have been coated thickly with ice, and, by the general appearance of the landscape, the ground should be frozen solid and unworkable. Mangels still in the ground, being more or less sheltered by their leaves, have come through the ordeal pretty well, but we fear some of the potatoes we have seen lying insufficiently protected will have been sadly nipped, for the amount of water they contain makes them delicate and susceptible to cold. We hear, by the way, more disappointing accounts of some of the new varieties, which seem often to have yielded very poorly, and at present market prices must prove a losing venture. Prices of 3s. to 3s. 6d. per cwt. at Wolverhampton, 45s. per ton for Up-to-Dates, and 35s. to 40s. for British Queens at Birmingham, 40s per ton at Shrewsbury, and 50s. at Worcester, do not leave much margin of profit for the grower, and where disease is rife—as it undoubtedly is in parts of Warwickshire, Stafford, Notts, and elsewhere—the season will be looked back upon with anything but pleasant feelings.

The early coming of winter for such severe and prolonged cold amounts to more than a mere seasonable "snap"—is necessitating correspondingly early inroads into fodder, and it is fortunate that there is generally no marked scarcity. There will not be much to spare, however, and, comparing the average bulk of the hay harvest with the number of stock in the country, it is hard to resist the conclusion that hay ought to be making better prices than it is.

Among the many local shows which are now being held, that at Harewood End, which gave Sir James Rankin an opportunity of holding forth yesterday upon co-operation, was interesting. Mr. J. B. Sainsbury, of Whitecross, had reason to be pleased with his success here, for he carried off the silver cup for the best cultivated farm of not less than 150 acres and the silver cups for the best and cleanest ten acres of roots, and best and cleanest three acres of mangels. It is a pity more of the larger agricultural societies cannot see their way to offering rewards like these for enterprising and efficient farming. The prizes are much coveted, and the competitions offer a welcome opportunity of winning distinction to many farmers who can hardly exhibit at the summer shows with any prospect of success.

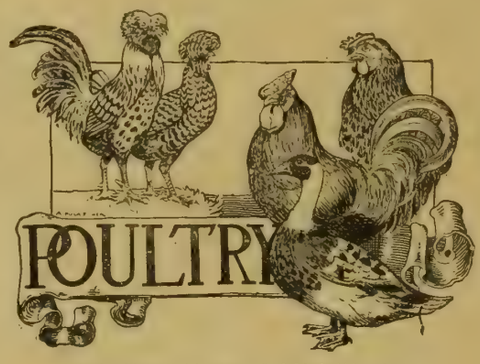
Midland agriculturists who are troubled by high and burdensome Education Rates will look with an approving eye on the action of the Gloucestershire County Council, which has done well for local farmers and set an example to similar authorities elsewhere by rejecting a scheme for rating the whole county for the purposes of higher education. Colonel Sir Nigel Kingscote was among those who most strongly opposed the proposal, but in this case little or nothing was said as to the nature of the education, emphasis being rather laid on the fact that it was intended to be given at centres which it would be impossible for those in many districts to reach. Perhaps that is the safer and stronger argument. As farmers know by sad experience to urge against the ordinary forms of technical and higher education that they do no good, and even positive harm, to rural interests, does not prevent them from being taken up by most local governing authorities. To impress upon local electors that they are asked to pay money they can ill spare to be spent in other districts, and for the benefit of other people, is in practice a much stronger card to play.

In these notes last week brief reference was made to experiments at Stoneleigh Park, the seat of the venerable Lord Leigh. To the sorrow of all who knew him, the noble owner of Stoneleigh has since passed away, and his remains have today been laid to rest in the family mausoleum. Besides the deputations from the many philanthropic institutions for which the late peer laboured so long and indefatigably, his Warwickshire tenantry and many from his Staffordshire, Cheshire, Leicestershire, and Gloucestershire estates mustered in force to pay their last tribute to one who was honoured as a man and respected as a landlord of the finest type.

This is not the place to speak of Lord Leigh's half century of work for reformatories and hospitals, in Freemasonry, and on public bodies of many kinds, but his interest in the welfare of all who lived upon his estates should not pass unrecorded. It has been recalled that in their palmiest days Mr. Joseph Arch and his National Agricultural Labourers' Union never acquired any hold upon the Stoneleigh district. There was no discontent there for them to work upon. Good cottages and gardens, good schools, almshouses—all these Lord Leigh provided—and long before the passing of any Allotments Act the labourers upon his estates were able to take up and work what land they needed. His tenants had no complaints to make of insecurity of tenure, or danger of losing the value of their improvements. They found him considerate and open-handed, and could rely on generous remissions of rent in bad seasons. His kindness to the occasional poacher was another characteristic trait. With the hardened and regular poacher he could, as a magistrate, deal sharply enough; but how often did he plead with his colleagues on the Bench for mercy on the poor fellow who had succumbed to the temptation of knocking over a stray hare or partridge which came across his path? Lord Leigh was not generally associated specially with agricultural work, but his death deprives the Warwickshire Agricultural Society of an active and generous supporter.

As these lines are written comes news of an intended farmers' union for Notts, which will perform the ordinary duties of a chamber of agriculture in keeping a vigilant eye upon legislation affecting rural interests, and helping to push forward fresh legislation where it is needed. Is it too much to hope that it will also be a trading—at any rate, a buying organisation, and will assist its members to obtain the lowest possible railway rates by helping them to make up large consignments? We hope not. In any case, the membership ought to be numerous, and as the subscription, we hear, is fixed at no more than a halfpenny per acre, it should be fully representative, comprising both large cultivators and small.

October 27, 1905.



Adulteration of Middlings.

At the last meeting of the Royal Agricultural Society, Dr. Voelcker drew attention to a very bad case of adulteration, a miller, selling under the name of "Middling" for the use of poultry a mixture of middlings with rice husk ground up so finely as to be unobservable by ordinary inspection. The miller maintained that as "middlings" was an "offal," he was justified in putting into it any "offal" he pleased. A member, residing in Essex, sent in July 17, for analysis, a sample of "middlings," 30 cwt. of which he had purchased at £5 5s. per ton, for the use of poultry, from a miller in Hertfordshire.

"From the time he began using the middlings he experienced serious losses with his poultry, and, on sending me a sample," says Dr. Voelcker, "I reported that it was an impure adulterated article. It had an excessive amount of husk, this consisting mainly of rice husk, and along with this was some oat husk, maize, and weed seeds, corn-cockle seed figuring among the latter."

Inquiries made as to whether the middlings were of the vendor's own grinding resulted in the following reply being received:—"I have made inquiries of my man, and he says the middlings you had from us are our own grinding, and, as far as I know, pure. It has occurred to me that for very young poultry they might be a little too coarse."

The purchaser was advised to draw further samples in the presence of the vendor, and this was done. The vendor maintained that middlings were offal, and therefore could be adulterated with anything, and the public had no redress. I examined the further sample, and reported: "I find this to be like the former sample adulterated with rice husk. 'Middlings' certainly are of the 'offals' of wheat, but 'middlings' has also a very definite meaning, and is applicable only to one of the 'offals' of wheat, and not of any other grain."

The purchaser was urged to bring the matter before the County Council, with a view to the taking of proceedings under the Fertilisers and Feeding Stuffs Act, but ultimately the case was compromised, the vendor paying £15 by way of compensation.

Causes of Failure in Turkey Rearing.

The chief losses in turkey rearing are caused by breeding from immature or closely related stock birds. Weakly birds are the result, and this practice, being fatal to success, should be abandoned. The general treatment required for young turkeys is very similar to that for chickens, except that for the first few days close attention must be paid to them. For twenty-four hours after hatching they require no food. During the following four days, hard boiled eggs and breadcrumbs may be given, for which, after the second day, oatmeal, barley meal, or biscuit meal mixed with sweet milk may be partly substituted. Boiled rice is a useful addition to the diet, and prevents diarrhœa.

The young turkeys must be fed very frequently during this period. At the end of a fortnight grain may be introduced into the diet. Small wheat is very suitable, but should be given in limited quantities. Mixed mash, consisting of ground oats, barley meal, wheat meal, and pollards, should, however, be the chief food until the birds are three or four months old. Skimmed or separated milk is better than water for mixing the meals. No food, especially during the first few weeks, should be given in a very wet or sloppy condition, as this causes diarrhœa in young birds.

Turkeys require more flesh as food than do chickens. Boiled fresh meat or liver, finely chopped, is most suitable. From the first week turkeys should receive an abundance of green food, such as cabbage, boiled onions, or boiled young nettles, chopped up fine and mixed with the meals. There is great danger in allowing the birds to run about amongst long, wet grass or in heavy rains until they are five or six weeks old. It is best to keep them confined in a limited grass run for the first three or four weeks, the grass being kept short, and, if the run becomes foul, to move the birds on to fresh grass.

Large, roomy coops are suitable for housing, but these should have wooden floors. The coops also give shelter on wet days. In addition to the coops one or two extra shelters should be provided. When the young turkeys are given their liberty, the mother, if a turkey hen, will take them away to the fields, and they then thrive remarkably well, chiefly because of the new ground and the abundance of insect food obtained. All through the summer and until fattening commences, the turkeys should be fed in the fields and encouraged to stay there. An airy, well-ventilated house should be provided for them.

Agricultural Imports.

The following is an account showing the quantities of certain kinds of agricultural produce imported into the United Kingdom in the week ended Oct. 21, 1905, together with the quantities imported in the corresponding week of the previous year:—

	1904.	1905.		1904.	1905.
	No.	No.		Cwt.	Cwt.
Cattle ...	11,185	11,590	Wheat ...	2,451,100	1,139,500
Sheep.....	9,859	5,966	Flour	242,500	316,400
Swine.....	—	—	Barley ...	706,400	754,500
Horses ...	271	338	Oats	254,500	285,600
			Peas	68,438	38,960
	Cwt.	Cwt.	Beans ...	11,750	7,440

NORTHERN NOTES.

The King has just paid a private visit to Lord Londesborough, one of the territorial magnates of the county of many acres. But private though the visit may have been, it was found impossible to altogether prevent the expression of the exuberant loyalty of the Northerner. As Prince of Wales, his present Majesty won the goodwill and affection of those with whom he came in contact, and he was ever a favourite with the general populace. His demeanour since his accession to the Throne has been such as to preserve and accentuate his popularity, for no one is better able than himself to combine dignity with affability—a combination which, although perhaps somewhat rare, is none the less pleasing when it occurs.

It must be nearly forty years since the King paid his first visit to Londesborough, but the surrounding district is still one of the best partridge preserves in the country. Turnip-growing is one of the staple pursuits on the wold farms, and it is only where turnips are good and abundant that good partridge shooting can be had in the end of October. The Londesborough estates are, generally speaking, very highly farmed, and the tenants have far too great a regard for their landlord to do anything that would militate against the preservation of game. A tenant on these estates knows that he practically holds under a lease for life, determinable by himself in any year, for the Londesboroughs never discharge tenants, and never attempt to raise the rent of a sitting tenant.

Partridges are abundant in the North, but considering that the end of October has only just arrived, it is surprising how wild the birds are. There is an unusual tendency to pack, and this was noticeable during the Royal visit to North Dalton, where the birds had not been previously disturbed. On one occasion about a hundred partridges came over together, just as if they formed one covey, and similar occurrences of a minor character have been constantly noted in many places. It is generally found also that hares are more numerous than in recent seasons, and so it seems that these kinds of game are not at present on the decrease.

Now that wheat sowing on the fallows and old seed lands is practically completed, stubble ploughing is put in hand. During recent years it seems that thistles have become more prevalent, and the question has been mooted whether this increasing prevalence is due to inefficient stubble ploughing. In other words, do more thistle roots escape severance through the wider furrows now turned? Is the introduction of the American digging plough, with its furrow slice cut from a width of ten or twelve inches, in any way responsible for this increase in thistle growth? The width of the furrow cut should be regulated by the depth at which the plough is set, and a twelve-inch furrow must be proportionately deep or the furrow slice will be turned completely over and lie quite flat, a result which the old-fashioned farmer, and many modern farmers too, consider most objectionable. A consideration of all the evidence, pro and con, leads to the conclusion that the ploughing of wide furrows, whether during stubble ploughing, or cross-ploughing, does tend to the increase of thistles, as the roots of these plants do, under such circumstances, sometimes escape unsevered.

The lifting and storing of the mangold crop is now being effected, but in many places the plants are still in full growth. At first but slow progress was made, but during harvest, and indeed throughout September, there was vigorous growth, which still continues. For some reasons, it would seem the wiser plan to postpone lifting until later in the season, until November is well advanced; but there is always a danger of some early severe frost setting in, which might cause serious damage, and so advantage is taken of the fine weather that prevails. The roots, when lifted out of the ground in their present state of immaturity, may well remain upon the land three or four days before clamping, and the clamps should not be covered up until a considerable time after they have been made.

Some men, while admitting that fermentation does occur in newly formed clamps, deny that any perceptible heat is given off. If any person will place upon a newly made clamp of mangolds a covering of earth nearly reaching the ridge and leave the ridge merely covered slightly with straw, and then visit the clamp early some morning after a hoar frost during the night, he will see how rapidly a hoar frost disappears from the straw on the ridge through the heat given off by the mangolds; the frost will pass off this straw much sooner than from other objects near.

A moot question has been, what is the best use to which the mangold leaves can be put? Some have always advocated the feeding of these to horned stock or to sheep, but it now seems generally admitted that the best and most profitable results are obtained from ploughing in the leaves green for manure, and if the leaves could be ploughed in the day the mangolds are lifted, it would be all the better for the land. M. Y.

October 27, 1905.

THE DAIRY.

Kilmarnock Dairy Show.

The fifty-first annual produce show under the auspices of the Ayrshire Agricultural Association was held on the 19th and 20th inst. in the Corn Exchange, Kilmarnock, and was in every way a success. Following immediately upon the jubilee show, which was naturally invested with a record interest, the exhibition made the most favourable comparison, the total entries showing but a small decrease. The cheese exhibits were, of course, the principal, and it was gratifying to note that the large entry of the jubilee year—namely, 715—only outnumbered this year's total by 27. The handsome premiums, amounting to fully £500, brought out the keenest competition, and it was estimated that the heavy weight of last year—namely, 160 tons of cheese—was slightly exceeded. There were no fewer than ninety-seven entries in the coloured deep class, and the absence of inferior parcels was notable. Disappointment was expressed by the judge, however, with the flavour, a great number of the lots being far too green. Eighty cheese were entered in the white deep class, made according to any method, and here, too, inferior lots were conspicuous by absence, and those placed well showed greater richness, mellowness, and fine keeping qualities than the exhibits of previous occasions. Sixty entries were made in the class for two flat cheese made according to the Dunlop or any other method. The competition was restricted to dairies where flat cheese were made exclusively during the season. The whole pitch, with very few exceptions, was well handled, and had a finished appearance, while many of the entries were sweet in flavour, and possessed the "meaty" qualities so largely in demand. Some, however, were open and slack in the texture.

Loaf cheese, coloured or uncoloured Cheddar, were more mixed in their character, and while some were very fine, the majority were decidedly second and third rate, being evidently made for exhibition purposes only, and showing stiff, flavourless, and over-coloured qualities. The five leading parcels, indeed, quite exhausted the fine points of the section. Both the open and limited sweepstake classes for sweet milk cheese were well contested. The cheese of any kind or make from a dairy not exceeding 25 cows were a very mixed lot, consisting as they did of Cheddars, Dunlops, loaf Cheddars, and Stiltons, and judging was accordingly rendered rather difficult. Dunlops predominated, and three of them, all of good quality, carried off premier honours. No fewer than 75 entries were placed in the ton class, and some excellent lots were forward. There were forty-eight entries in the half-ton class, limited to Ayrshire, but the majority of the parcels showed considerable irregularity and general inferiority.

In the cheese market there was a moderate business done, the ruling prices ranging from 58s. to 62s. per cwt., a shilling or two more being given for prize lots. There were several English dealers forward, but they bought very little, stating that they could buy for 2s. 6d. less in their own market. The championship butter was exposed for sale by public auction, and was sold at 16s. per lb.

Competition in the various butter classes was very keen. The powdered lots, with the exception of the prize-winners, were somewhat disappointing, there being frequent evidences of overworking, while in some cases inferior salt was used, so that a nippy flavour was unfortunately imparted. The fresh lots ran each other closely, and quality was very meritorious.

Irish Farmers and Faked Butter.

A largely attended conference was held at the Limerick Chamber of Commerce on Wednesday, Sir Thomas Cleeve presiding, for the purpose of urging on the Irish Department of Agriculture the immediate necessity of appointing representatives in English markets to look after the interests of Irish agricultural produce, which, it was complained, is seriously affected by the increased sale of what is described as "faked" butter. Letters were read from representative agriculturists and dairy societies from various parts of Ireland supporting the object of the meeting, and an influential deputation was appointed to wait on Sir Horace Plunkett, the Vice-President of the Department of Agriculture.

EAST ANGLIAN NOTES.

In the last half of the month of October we have experienced colder weather than has been known to have occurred for many years, and the ponds that is to say, those that are not dry, for many are empty for want of rain—covered every morning with a thin sheet of ice, have reminded the farmers of their danger in allowing mangel to remain longer in the field. So throughout the Eastern Counties one could see last week the mangel fields being cleared in feverish haste, the roots being housed or "clamped" this season with extra protection, as the farmers are all looking forward to a hard winter. Wheat-sowing is being carried on as fast as the swede and mangel fields are cleared, although the soil in many districts is getting almost too dry for this operation. A little rain now would be most beneficial, and by the middle of November, or third week at the latest, we ought then to see all the winter wheat it is intended to sow in the ground. For farm work this season is well forward, although there are some laggards, as is always the case, never mind what the season may be.

Roots have turned out much better than many farmers expected they would do when they first appeared above ground. A farmer at Deeping St. Nicholas, in the Fen district, has grown a crop of mangolds which yielded the uncommon weight of 65 tons to the acre.

At a meeting of agriculturists and those interested in farming in Harleston (Norfolk) and district, on Wednesday, the report of the Sub-Committee appointed at the previous meeting to ascertain what support would be forthcoming in the event of the Norfolk County Show being held at Harleston in 1906, was presented, and it showed that £172 had been promised, besides what the chairman had been promised from a gentleman interested in English farming. And the secretary further reported that the secretary to the Norfolk County Association had been over the proposed site for the exhibition, and expressed his satisfaction as to the suitability of the ground. As the result of these reports a general opinion was expressed that sufficient support was assured to warrant an invitation being given, and a deputation was then appointed to wait upon the council of the Norfolk Agricultural Association with an invitation.

It would not be considered by my yeoman friends, or, the matter of that, the East Anglian farm labourer, if no mention was made in these "notes" of Nelson's centenary. Therefore, I must place on record the fact that homage was paid to the memory of the great national hero in a large number of places in each of the counties that form East Anglia. But perhaps the proudest village of all was Burnham Thorpe, the birthplace of Nelson, and here the inhabitants egotistically declared it was one of their village sons who had won the Battle of Trafalgar. So interested is the Prince of Wales in the village with which our greatest naval hero was so intimately connected that his Royal Highness had provided a good dinner for every man, woman, and child in Burnham Thorpe to celebrate the centenary of the glorious day on which Trafalgar was fought and won.

Our old familiar friend "bounties for wheat-growers" came up at a meeting at Assington, near Sudbury, on Monday last, when Major Tippet, in the course of his speech, dwelt upon the depopulation of rural areas, and strongly advocated the 1s. registration duty on corn in order to aid English agriculture. That duty, he contended, would enable the Government, not only to give a 5s. bounty on every quarter of wheat grown in the country, but on double the number of quarters produced at the present time. If we could bring under the plough at a profit a sufficient acreage to double our supply of home-grown wheat, it would bring some millions of pounds a year more to the pockets of farmers, labourers, and tradesmen in our country towns and villages. Those who were deeply interested in agriculture, like himself, considered it a very serious thing for England that land went out of cultivation, and, in concluding his speech, Major Tippet condemned preferential railway rates for foreign produce.

In his market-day lecture on "Pigs, Past and Present," Mr. Sanders Spencer, of St. Ives, Huntingdon, said Essex had produced some of the most successful raisers and feeders of pigs in the country. There had existed in the United States for years now a breed of pigs called the Essex, which owed their origin to breeders who farmed in Essex and Suffolk in years gone by. He had not heard of the famous so-called sheeted sows in the past so prolific for some time, but

that day he had noticed a couple of this variety in their Chelmsford Market. They must nowadays do all they could to produce such a pig as their customers required. The old-fashioned 400 to 600 pound pig was a thing of the past. What was now required was a nice compact young pig of about 70 lb. live weight which was converted into "London porkers" or fat pig of 200 lb. to 300 lb. A carcase of 220 lb. could be obtained, with the aid of well bred pigs, in about seven months. The most successful breeder was one who bred his pigs from well-selected parents and kept them in a progressive state from birth until they were turned out fat at four or seven months old. The cost of manufacturing each pound of pork, it should be borne in mind, increased with the age of the pig.

Lord Onslow on the Need of Farmers' Organisation.

The Earl of Onslow, who it will be remembered was at one time President of the Board of Agriculture, has written to Mr. H. Pike Pease, president of Darlington, Durham, and North Riding Chamber of Agriculture, with reference to the action of that body in appointing a committee to consider questions of interest to farmers as they arise.

Lord Onslow says the reason why in recent years the House of Commons has given so little attention to agricultural matters is that there is so little organisation among farmers, and so little is done by them to impress those who represent them in Parliament with their needs and desires. All classes interested in the cultivation of the soil (his lordship continues) should make clear to their representatives the conditions upon which they will continue to support them, and pertinaciously to press their needs on Parliament. The Government yielded where the pressure was greatest, and it was only those who made their wants known in the most importunate manner who were heeded. It was the practice in Scotland for the Minister to confer annually with the Chamber of Agriculture, and he was in touch with the London Chamber. He was sure the Minister of Agriculture would gladly confer with representatives of agriculture in the north-east and west of England similarly.

PUBLICATIONS RECEIVED.

The Russian Government have forwarded us a detailed report of the first census taken in 1897 of the entire population of the Russian Empire, comprising the fifty governments of European Russia, ten Governments of the Vistula, nine governments of Siberia, eleven of the Caucasus, and nine of Central Asia. The total for the empire is given as 62,512,698 men, 63,167,984 women; both sexes, 125,680,682. This assessment of the population is made according to the mother tongue, religion, degree of instruction, civil position, health, profession, and, in particular, that of agriculture, cattle rearing, fishery, hunting, and auxiliary professions. The total number of men employed in agriculture in the empire is 381,350, women, 15,916. The culture of flax, hemp, etc., occupies 1,697 people; beetroot, 5,859, this includes melons and other special cultures; herbs, 986; cotton, 7,442; tobacco, gardening, and fruit growing, 88,229; cultivation of the vine, 26,859. Cattle rearing occupies 203,510 men and 5,308 women. Of these, 203,083 people are engaged in stock-breeding and rearing, 1,021 in that of thoroughbred horses, 1,001 in rearing horses in troops, and 2,713 in other branches. Statistics are also given of forestry, fisheries, and the chase, with many branches of commerce and industries.

The latest numbers to hand of the Harmsworth Encyclopædia are parts 16 and 17, and these carry to references down as far as "genius." As we have had occasion to previously remark, the volumes are well printed, and the reasonable figure at which they are published (7d. per part) put a useful work within the reach of all.

Bourne October Fair.—The last of the two autumn fairs at Bourne was held on Thursday, and was largely attended. The show of cattle was an average one, but business was no better than it was at the fair a month ago. The slowness of trade is attributed to the shortage of keeping. Many lots of cattle were consequently taken away unsold. Those which changed hands made about the following prices:—Yearling beasts from £6 to £8, two year olds £10 to £14, and three years-old up to £16. In-calving cows up to £20 and heifers up to £16 were about the average quotations. There was reason for the general complaint that prices were not remunerative to the grazier. Sheep maintained a satisfactory price but there was very little doing either for horses or foals.

The Farmers' Club and New Members.

SIR,—With reference to the present determined attempt on the part of the farmers in the North of England and in Lincolnshire to make their voices heard, may I take up a small space in your columns to bring to the notice of agriculturists a somewhat new departure by the old Farmers' Club, which has its headquarters in Whitehall Court, London?

The committee have felt for some time that while there are innumerable societies and associations in connection with agriculture, there is no known social central meeting place for farmers, and consequently much of the good work which is done in general meeting or committee by these societies stops short of the ideal when members disperse in different directions after the meetings.

It is the aim of the committee to make the Farmer's Club a well known meeting place for farmers and others who are connected with agriculture, and, to that end, the club premises have been more than doubled recently, and now consist of some four private club rooms and five semi-public rooms suitably furnished as a comfortable and quiet club.

The membership was under 300 three years ago, but since the move to Whitehall Court, it has increased to 900—necessitating the enlargement of the club premises.

The committee are anxious to largely increase the membership and with the right sort of member, viz.: the true agriculturist, and to that end they have recently decided, for a time to admit, without entrance fee, those agriculturists who are members of a National Agricultural Society or Association such as the Royal Agricultural Society, the Breed Societies, the Central Chamber of Agriculture (including secretaries and delegates), and the Royal Agricultural Benevolent Institution, etc.

The committee consider that much good work is done where agriculturists meet in an informal and conversational way as opposed to the formal meetings, and they want to see members of these societies drifting to Whitehall Court after the meetings, where interchange of opinion can take place.

It may be said that these are not times to ask farmers for club subscriptions, but there is no doubt that farmers do not use the advantage of the nearness of large towns in England to their farms, and an occasional visit to London would, I am sure, be no loss in the long run, for its inhabitants are anxious to buy English produce, if they only knew how to obtain it, and the few smart farmers who are in close touch with the London market are the men who are disposing of their produce to the best advantage.

The annual subscription to the Farmers' Club is, and always has been, one guinea, and, considering the advantages in Whitehall Court, it is by far the cheapest club in London.

Some seven meetings are held during the year, when papers are read and discussed by members, the proceedings being printed in the Club journal, which is sent out free of charge.

Proposal forms can be obtained on application to the secretary of the Farmers' Club, Mr. Trustram Eve, 2, Whitehall Court, S.W., who will be pleased to give any further information.

Thanking you for your courtesy in inserting this letter.—I am etc.,

October 27, 1905. W. H. PROUT,
Chairman Farmers' Club.

The Warble Fly.

SIR,—I think if farmers realised the fact more that the Warble Fly is a source of loss to stock-breeder, butcher, and carrier alike they would adopt better preventive measures. When a beast is suffering from the effects of the fly striking, it cannot fail to suffer in condition and appearance, the irritating effects of the Warble Fly being evidenced in a good many instances at the stock sales. I repeat it is to the best interests of the farmer as well as the butcher and leather factor that preventive measures be taken, and each beast dressed all over with one of the several specifics now on the market at least once every three months.

When once the Warble Fly strikes the mischief is done, and for a few shillings sufficient dressing can be purchased to treat a fair-sized herd, and the saving to the farmer would be represented by as many pounds.—Yours faithfully,

October 27, 1905. PREVENTION.

Dr. Schwappach and the Systematic Study of Sylviculture.

SIR,—Men who are great specialists—at the same time gifted with imagination—expressing themselves with an admired terseness in a way that prevents the subject they treat of from becoming monotonous, are, it must be admitted, somewhat rare! Belonging pre-eminently to this category is my friend Professor Dr. Schwappach, the well-known doyen of German "Agronomes." I have quoted him before in the hospitable columns of your valued journal. As Montesquieu remarks of a great ancient writer, so I may say of this foreign expert: *Il abrège tout, parce qu'il sait tout!* And I think the letter I have just received from this littérateur, who has devoted a lifelong study to agriculture, and forestry in particular, may be of interest to your readers. I beg to give it in an English dress! These Lintzel experiences are specially interesting, apart from the ethical side, because here we have before us not a forest "in full swing," but one in process of formation, and that, be it remembered, in a district—like many of our own, alas! under present conditions—thinly populated.

Writing under date October 19, from Eberswalde, where, as is well known, there is to be found the alma mater par excellence to which the best forest students of Europe are wont to resort, Dr. Schwappach observes: "I thank you most heartily for your letter of the 1st inst. and the MARK LANE EXPRESS accompanying same.

"My reply has been delayed owing to the fact that I only returned a few days ago from a six weeks' journey to France for purposes of study.

"The employment of the 'unemployed' in the provincial forests of Hanover is only taking place on the provincial moor at Fullen. But, in this case, it is not so much afforestation as a pure agricultural dealing with the land that is in question.

"The actual afforestations near Oerrel-Lintzel are not being carried out by the 'unemployed' in your sense of the term, but by loafers, beggars—'tramps,' rather, I might call them—who after having served their terms of imprisonment, are handed over to the police for compulsory employment for a period not exceeding two years.

"These people are not in possession of as much liberty as the unemployed would be, but occupy a position midway between convicts and free labourers. But we hope, gradually, to train them by a little gentle pressure to habits of remunerative work.

"The area belonging to the province of Hanover under forest is 4,834 hectares. With the aid of loans granted by the province, about 11,831 hectares have hitherto been put under afforestation.

"I send you herewith an article from my pen on the important bearing of the new Chambers of Agriculture under the new law upon private sylviculture, which may probably interest you.

"At the meeting of the German Sylvicultural Society (Forstverein), held at Darmstadt in September, I read a paper on the 'Promotion of Private Sylviculture.' As soon as I have received printed copies of it I shall take the liberty of sending you one."

Major Craigie, of the Board of Agriculture—I am quoting from his recent evidence (British Forestry Blue Book) is right! "They go into these things (forestry matters) with more detail in foreign countries."

Passing away from the wider subject (treatment of this question by the State directly), perhaps I may be allowed, in a subsequent issue, to say a few words on the working of the new German law as detailed by Dr. Schwappach, in respect of its operation *vis-à-vis* of the owners of private woods and forests. The object these "forstliche sachverständige" seem to have is to bring about *dans la mesure du possible*, some approach to the continuity of method so devoutly to be wished, as well as that order which, indeed, is "Heaven's first law."—Yours obediently,

CHARLES HANCOCK, B.L.,
Member of Scottish Arboricultural Society.
London, October 24, 1905.

Selling off Hay and Straw.

SIR, Would you kindly give your opinion or allow others to give theirs in your valuable paper as to the above? If you would kindly do so you would confer a great favour upon several.

Personally, I see no objection to allowing a tenant to sell off hay and straw, provided that he expends a fair and reasonable proportion of the amount which it realises in approved artificial manures, which must be applied to the land from which he has sold the produce.—Yours faithfully,

R. H. R.

October 26, 1905.

The Milking Qualities of Hereford Cattle.

SIR,—Owing to the various reports on the above question emanating from authoritative sources and otherwise that have been recently going the round of the agricultural papers, especially those published in Ireland, I think it only right that you should give publicity hereto.

It has been stated that a draft of Hereford cows in Ireland failed to produce enough milk to rear their own calves. There must be some untoward circumstances connected with this case which have not been made public, because one of the chief reasons that Hereford cows are not more to the fore in the dairy world is that they are allowed to run with and to totally sustain their calves, especially in the home county, where this is the prevailing practice, and the calves themselves will bear striking testimony as to whether they are in any way insufficiently nurtured, also the first claim of the breed, *i.e.*, early maturity, necessitates that the calf must not be neglected.

The majority of Hereford breeders do not want milk, they breed solely for beef, and this is an advantage to exporters, as the greater demand from countries such as the Argentine is for cows whose supply of milk is consumed by their calves; thus obviating the necessity of stripping them daily on the ranch, which would be practically an impossibility.

It seems hard to locate the reason for the alleged failure of this particular draft of cows, and I can only surmise that they were an exception to the general rule; for the climatic conditions cannot be urged in excuse, there being at the present moment numerous very successful herds of Herefords in Ireland; and the export returns of the Hereford Herd Book Society, together with the whole history of the breed, goes to prove that there are few countries in the world in which Hereford cattle will not do and thrive.

The whole question of milking as affecting the Hereford, or in fact any breed, is simply a matter of training, and the practice of letting the calves run with the cows is very injurious from a dairyman's point of view.

The practice followed by a very successful breeder of Herefords is to take the calves from the cows when about a week old and rear them by hand, keeping the calves simply in a growing state and in order to develop their milking qualities, not allowing them to become overloaded with superfluous fat when young.

This same breeder (Mr. W. J. S. White, of Zeals, Wilts) is at present milking eighty cows, and sends his milk to a factory. In the months of May and June last, part of his milk (5,400 gallons) made 5,444 lb. of cheese, which was sold at the end of September. This is a record which few, if any, dairy herds can beat. While referring to this breeder, I may state that he has time after time won prizes at dairy shows with his Herefords, and I quote from the judges' report of this year's show of the Royal Counties Agricultural Society, in awarding the third prize, in Class 123, for large dairy herds:—"Mr. White exhibited seventy-four of the best Hereford cows your judges had ever seen. The cows are of uniform type, large, and in high condition (though only moderately kept), and lastly, and of most consequence, they are evidently good milkers and have very well shaped udders. Amongst the herd was a grand old cow, sixteen years old, from which many have sprung; she is, or rather was, an enormous milker, and no doubt has greatly influenced the herd in this direction."

Mr. White in this class met some of the leading dairy cattle breeders of the country.

Mr. W. Tudge, of Summer Court, Kington, a breeder of show Herefords, has also bred cows who have won prizes at dairy shows. This is all the more striking when it is remembered that the accusation of being non-milkers is made chiefly against show Herefords.

I think that the foregoing ought to prove that the Hereford breed can be trained to make first-class dairy cattle; but, as previously stated, the primary aim of the majority of Hereford breeders is the production of beef.—Yours, etc.,

W. G. C. BRITTEN.
Secretary to the Hereford Herd Book Society.
20, East Street, Hereford, October 25, 1905.

A Quiet Time in Gloucestershire.

SIR,—On the farm at present there is not much to write about, the weather continues dry, and all work is well forward. Here and there an early planted field of winter oats and rye is up nicely; but just now many are waiting for rain to begin drilling wheat. Some of the clover leys are even too hard to plough. Mangolds are being hurriedly got up for fear of more frost. We have had some very sharp ones lately. Many heavy crops are seen, but most of the large roots cut hollow, which will be against their keeping well, and the swedes are badly mildewed. Water and grass are running short, and the cold nights make dry food necessary for cattle, and so hay may be worth more before spring.

The threshing machines (which are very busy) reveal that the wheat crop was over-estimated for quantity, but it is of excellent quality. Barley quited as good as expected. The prices of both stock and produce are quite disheartening. Sheep trade is the only thing with any life about it, and that is falling off. J. H. W.
October 25, 1905.

Weather for November: Mr. Clements' Forecast.

SIR, At London the tidal influence will be most efficacious in the causation of rain and wind when the latitude of the disturbances varies from 5 deg. to 11 deg. north and south of the equator. I have indicated these latitudes by thick perpendicular lines opposite the given dates. Upon an examination of these lines in columns A, B, C, and D, and more particularly by column E, giving the absolute longitude and latitude of the disturbances caused by the conjoint action of the moon and sun, it will be found that there will be very few days free from tidal disturbances, and the result will be as follows at London—viz.: (a) Rain will fall on 22 days of the month; (b) 8 days without rain, on 4th, 10th, 12th, 19th, 20th, 24th, 25th, and 26th; (c) heavy rain on 5th, 13th, 14th, and 27th, and not so heavy on 3rd, 7th, 25th, and 30th; (d) it will be unsettled and rainy, particularly round the 2nd, 8th, 14th to 18th, round the 22nd and after the 27th—November will prove to be a very wet month, with at times great rains and floods (e) it will be windy also approximately on the 6th, 18th, 23rd, and 27th; (f) it will be a month of low barometer and of cyclonic conditions.

My recent predictions for July, August, September, and October to date have proved correct: with regard to September, I predicted there would be rain on 14 days; at Greenwich there was recorded rain on 13 days, and rain not sufficient to record on other two days.

The most notable of past predictions was one made for April, 1884, which correctly forecasted the wet and dry periods for 18 years in advance, and another which correctly predicted the rainfall for 153 consecutive days from August 1 to December 31, 1897. As the weather problem has been solved, it now rests with the public, and especially with the Government, to put my method of forecasting in operation at home, in India, and the Colonies. HUGH CLEMENTS.
Newton House, Barry Road, Dulwich, S.E.,
October 21, 1905.

Hampshire Prospects.

SIR,—Agricultural prospects are none too rosy in this county. Owing to the dry weather good progress has been made in threshing wheat and barley. The yield has not come up to expectations, though the quality of much of the wheat is first rate, weighing 64 to 65 lb. per bushel; top price in our local markets about 30s. per qr.—very cheap considering the weight and quality. Barley comes to market in good condition, and samples of malting quality make from 28s. to 32s. per qr. Oats are very poor, about half a crop, and selling at 15s. to 16s. per qr.

Mangolds are being stored in some districts; they are not to be compared with last-year's crop over most of this county. Turnips and swedes have become mildewed owing to the long spell of dry weather and frosty nights. Very little demand for hay and straw, and prices very low.

Our flocks of Hampshire Down sheep are doing well, they represent the backbone of farming. With a good demand for mutton and lamb throughout the year, prices have been remunerative. The same cannot be said of horned stock. Beef has been too cheap for the producers, who have had to go without profits; while store cattle are a drug on the market and purchasers difficult to find at the low prices prevailing.

The early sowings of rye, winter barley, tares, etc., are doing well, but the land has remained too dry for wheat sowing. Up to the time of writing this, very little wheat has been planted, and unless rain comes in sufficient quantity very soon a short acreage will result.

This has been a grand time for cleaning the land which had become foul owing to showery weather during seed time last March.
October 26, 1905. G. J.

Farming Outlook in Montgomeryshire.

SIR,—The harvest has now been finished some weeks, and turnip-drawing and carrying have commenced. Wheat sowing is in full swing, and we are having a grand time for getting it in.

Beef is selling at a rather unremunerative price, and I fear the graziers in this county have made very little out of their fat cattle this year.

The sale of Shire horses on the 19th was generally thought satisfactory, considering that the Shire trade is not so good now as it was some time ago.

There are several changes of tenancy this year, but good farms elicit strong competition still.—Yours, etc. R.
October 26, 1905.

Seasonable Notes from Hampshire

SIR, The season now drawing to a close has been a good one on the whole. Among cereals wheat is the crop of the year. The quality, especially red, is distinctly of a high rate of average, weighing 65 lb. per bushel. The yield is from 40 to 48 bushels per acre.

Oats, owing to a spell of drought in the spring and again preceding harvest time, coupled with late sowing, are but a moderate crop. Barley yields well, but the continuous rain and wind for several days immediately before harvest damaged the colour somewhat.

Hay was a thin crop, but well got up. Roots on the whole are good. Mangolds rather patchy. Swedes a good plant, but present dry weather has caused mildew to appear rather too freely.

Turnips are a capital crop, the roots swelling evenly and well. Kale is most promising as sheep food. Much land is ready for wheat, the sowing of which is deferred on account of present drought. The acreage promises to be rather more than last season.

Sheep have done remarkably well. Keep is abundant. The ewes have taken season well; prices have ruled high for all good flocks. Tegs are now becoming scarce.

Steers are at the present time cheap; good milch cows and promising heifers are dear, as usually is the case at this season.—Yours, etc.,
October 27, 1905. E. M.

Cambridgshire Prospects.
When to Plant Wheat and Barley.

SIR,—The corn crop is a good average one, although the very hot weather in July caused the corn on some lands to ripen too fast, and consequently reduced the yield, and prices are not good.

The worst part of farming this year was grazing cattle, many not making more money than they cost last spring, and so losing all the keep, etc. Sheep have done well.

The wurzle crop is very fine, indeed. Turnips looked at one time very promising, but in many places mildew has taken them and spoilt them. Potatoes, too, looked very promising, but unfortunately there are a very great many bad ones.

The harvest being early has given the farmers time to get the land ready for wheat sowing. It comes up well, and has a fine seed bed.

The wheat going in well—and many farmers have nearly finished—I consider the best time to sow wheat is the last fortnight in October and the first fortnight in November. If sown before the middle of October it is likely to get winter-proud, and if after the second week in November and rough weather sets in, the plant is likely to suffer. When I was a boy there was an old saying: "You should see all your wheat in rows and all your barley land set up before you had your Christmas dinner," and it holds good now. If your wheat is up before Christmas it will stand the rough weather, and if the barley land is set up before Christmas the frosts in January and February will do it as much good as a coat of manure, and as soon as the spring opens you can get the barley in early and so grow malting barley. A. W. R.
October 27, 1905.

Prospects in Hunts.

SIR.—Wheat sowing has been progressing as fast as the dry weather would permit; a good proportion of the seed wheat has already been consigned to the earth in a good bed, if rather a dry one. The weather has been all that could be desired for carting off the mangolds, which are a heavy crop of splendid quality. The increase in the weight of the crop during the last month has been very great; now we have an over average crop. The barley markets are quite demoralised; farmers have been pouring in the samples at something like twice the average speed, with the result that the buyers are completely masters of the situation. The short acreage of barley should have given the farmers the whip hand had they reduced instead of enormously increased the supply of barley; but money must be had from somewhere. S. S.
October 27, 1905.

Whitchurch Cheese Fair.

The pitch at this fair on Wednesday was 45 tons, being below the average. This was accounted for by the fact that Chester Dairy Show was held in the previous week, and also by the improved demand for Cheshires, causing more buying in the country. There was a brisk trade for all classes, and a clearance was quickly effected at prices well maintaining previous quotations. Highest qualities realised 65s. to 70s. per cwt., and medium and lower grades 55s. to 64s.

CORN MARKETS.

LONDON.

Mark Lane, Wednesday.—Firm tone in all branches, but actual business was on a small scale. English wheat was in limited supply at full prices; white quoted at 28s 6d to 32s, and red at 28s to 31s. Foreign grades firm, and held for 3d to 6d advance; No. 1 Northern Manitoba quoted at 34s 3d to 34s 6d, No. 2 Club Calcutta at 32s 6d, Australian at 33s 6d to 34s, and New Zealand at 29s 6d to 31s. Maize firm and dearer; La Plata landed offered at 24s 6d and ex ship at 24s and mixed American landed at 25s 3d and ex ship at 24s 6d to 24s 9d. Flour quiet at 21s 6d for Iron Duke. Barley tends against the buyer; Odessa-Nicolaieff landed is quoted at 19s 9d to 20s, American at 19s 3d to 19s 6d, and Persian at 18s 6d. Oats quiet and unchanged; 38lb Russian obtainable at 15s 9d to 16s.

Mark Lane, Friday.—There was a fairly large attendance, and prices generally were advanced 6d to 9d, with a good trade passing. English wheat ruled firm and 6d dearer; white held for 29s to 32s 6d, and red for 28s 6d to 31s 6d. Foreign grades were in active demand at 6d to 9d advance; No. 1 Northern Manitoba ex ship held for 35s to 35s 3d; No. 2 Club Calcutta quoted at 33s, New Zealand at 30s to 33s, and Australian at 34s to 35s. Maize had a fair trade at 6d to 9d over last day; mixed American landed is quoted at 25s 6d to 25s 9d, ex ship at 25s 3d to 25s 6d, and La Plata ex quay at 24 6d to 24s 9d, and ex ship at 24s to 24s 3d. Flour in good demand and 6d higher; Iron Duke 22s and Hungarian 31s 6d. Barley: Amoderat business at 6d advance; Odessa Nicolaieff ex ship held for 19s 6d to 19s 9d, landed for 20s 3d to 20s 6d, and Persian for 18s 9d to 19s. Oats: Americans 9d dearer and Russians 6d; 38lb Russian offered at 16s to 16s 3d and mixed American No. 2 at 16s 9d to 17s.

COUNTRY.

Ashford, Tuesday.—Better tone was manifest in regard to wheat, oats, and barley, while maize also held its own; best wheat for milling, however, did not exceed 30s per quarter, though more was paid for lots for sowing. Malting barley made 26s to 28s, and feeding barley 20s to 21s. Oats ranged from 16s to a guinea. Mazagan beans fetched 28s to 29s; tick beans, 31s to 33s. Maize, 27s to 28s per quarter. Flour unchanged.

Banbury, Thursday.—Wheat, red (new), 27s 6d to 28s per quarter; barley, 24s to 30s; beans (new), 29s to 30s; (old), 32s to 34s; oats, 17s to 21s; (old), 20s to 24s; peas, 27s to 30s.

Berwick, Saturday. — Good attendance, with similar supplies of barley to last week. All qualities made fully late rates. Wheat small show. Oats scarce and tending dearer. Wheat, 27s 6d to 30s; barley, 24s to 29s; oats, 18s 6d to 21s.

Birmingham, Thursday.—All descriptions of grain were again dearer, which caused trade to remain quiet. Foreign wheats have advanced fully 6d per quarter on the week, English ditto making up to 11s 4½d per bag (top price). Both flat and Plate maize have advanced 6d per quarter, and grinding barley 9d, sellers now asking 20s 9d per 400lb. at Sharpness for the latter. English oats a good trade, and make from 18s 6d to 19s 6d per quarter (312lb.), delivered at Birmingham.

Brighton, Thursday. — Small attendance and firm trade. Oats 6d dearer. Wheat in good supply, 6d per quarter dearer, and flour at 6d per sack advance. Barley, 28s to 33s; grinding ditto, 22s to 23s; oats, English, 17s to 19s; peas, 28s to 29s; beans, 30s to 31s.

Bristol, Thursday.—During the past week trade has been fairly active, and all articles have displayed great firmness. English wheat in moderate supply to-day, 6d more money being asked. Foreign very firm at 6d advance. Maize from 3d to 6d dearer. Barley 9d advance. Oats 6d higher. Flour firmer, bakers not buying freely yet.—GRAYCE BROTHERS.

Bury St. Edmund's, Wednesday. — Wheat was in shorter supply, and with a good steady demand, both from millers and shippers; the trade was firm at 6d per quarter advance, reds or whites making 29s to 29s 6d per quarter. Barley with a fair supply, the trade was hardly so good as last week. Some buyers, who have lately lifted a good bit off the market, seem to be temporarily full, and the local malsters' demand is not yet as active as it should be. There was, however, no great change in values; medium malting runs at 27s to 32s per quarter, and fine Burton qualities the turn against sellers. Feeding corns were all firm, with maize and lentils 6d per quarter dearer, and oats scarce. Feeding stuffs also very firm.

Cambridge, Saturday.—During the week the wheat trade has been animated, and prices have advanced 1s per quarter. Farmers are not free sellers, and supplies are restricted. Fair supply of medium barley, but good qualities are scarce, and wanted. There was a moderate supply of wheat, which were quickly taken at 1s advance; red wheat, 28s to 31s; and white up to 31s per 504lbs. Barley in fair supply, and fully maintained late rates. Oats 1s dearer. Beans 6d dearer.

Canterbury, Saturday. — An improved trade and prices are hardening. Barley ranges from 27s to 34s, and wheat of 64lb. and 65lb weight is worth from 31s to 32s; seed qualities up to 36s. Oats are firm, from 18s 6d to 20s for spring corn.

Carlisle, Saturday.—Larger supply of oats in our market to-day. Good demand for good quality at full prices, 18s to 19s 6d per 336lbs. Inferior oats made 16s 6d to 17s. THOMAS ROBINSON.

Chester, Saturday.—An advance has taken place in the price of American mixed maize of 6d per sack, and other feeding stuffs are on the rise. English grain firm, and prime samples harder to buy at late rates. Quotations: Wheat, white, 4s 7d to 4s 8d; red, 4s 7d to 4s 8d per 75lb.; barley, grinding, 3s to 3s 2d per 64lb; beans, old, 5s 9d to 6s per 20 b.; oats, new, 2s 2d to 2s 5d; ditto, old, 3s 2d to 3s 4d per 46lb.; Indian corn, new, 13s 4d to 14s per 240lb.

Chichester, Wednesday. There was a good attendance, and prices showed a general upward tendency, wheat being from 6d to 1s, and oats 6d dearer. New white wheat, 29s 6d to 31s; new red ditto, 29s 6d to 30s 6d; barley, 26s to 33s; grinding ditto, 19s 9d to 20s; oats, English, 17s to 20s; peas, 34s to 35s; beans, 32s to 33s; tares, 6s to 7s 6d; maize, 24s 6d to 25s; flour, 27s.

Colchester, Saturday. There was only a very moderate supply of wheat here to-day, and farmers found ready buyers at fully 1s per quarter advance on last week's prices. Malting barley sold quickly at current rates. Trade very firm. Oats 1s per quarter dearer. JOSEPH WILLS AND SON, LTD.

Coventry, Friday. A moderate attendance. Wheat in small supply, and last week's prices obtainable. Spring corn a firm trade. Oats about 6d per quarter dearer, but barley rather neglected. Quotations: Old wheat, 11s to 11s 6d per 496lb.; new wheat, 10s 3d to 10s 9d per 496lb.; barley, 29s to 34s per 448lb.; peas, 11s 6d to 12s per 496lb., old beans, 14s 6d to 15s per 496lb., new beans, 11s 6d to 12s per 496lb.; old oats, 23s to 25s per 352lb.; new oats, 19s to 21s 6d per 352lb.

Derby, Friday.—Wheat firm, and prices demanded were 6d to 1s advance. Spring corn 6d dearer. Quotations:—Wheat, new white, 30s to 31s; new red, 29s to 30s; malting barley, 26s to 28s; beans, old, 33s to 34s; new, 30s to 31s; oats, old, 23s to 24s; new, 18s to 19s.

Devizes, Thursday. There was a fair supply of corn and the condition of the samples was generally good. Wheat was the turn in favour of sellers, but otherwise prices showed no alteration in value. The following were the quotations: Best old wheat, 16s to 17s 6d; secondary ditto, 15s to 14s; new wheat, 14s to 16s; secondary, 12s 6d to 15s 6d; best barley, 26s to 32s; secondary, 20s to 24s; rye, 22s to 24s; old black oats, 20s to 23s; new ditto, 16s 6d to 19s; malting barley, 25s to 32s; beans, 16s to 18s; fine flour, 24s to 26s; extra fine, 27s to 30s.

Doncaster, Saturday.—Small supply of English wheat, and trade firm at an advance of 6d to 1s per quarter. Foreign was also very firm, and advanced 1s to 1s 6d per quarter. Steady trade for malting barley; grinding barley 1s per quarter dearer. Oats 6d, and maize 1s 6d per quarter higher. Other things steady and unchanged.

Dorchester, Saturday. — At to-day's corn market there was a fair attendance, in spite of the fair earlier in the week, with a moderately good offer of grain. Wheat was very firmly held, and prices may be given as 6d higher than of late, both for English and foreign. Barley for malting quite held its own for good and suitable parcels; and feeding sorts sold at an advance of 3d to 6d per quarter. Maize was also 6d against buyers, as were oats, which were very firm at the advance. Beans and peas were 6d on the turn dearer. Flour may be quoted 6d higher than at late markets.

Dublin, Friday.—Wheat, 17s to 18s 6d; malting barley, 14s 6d to 15s 3d; grinding ditto, 12s 9d to 14s; malt, 18s 6d to 20s; oats, 10s 6d to 13s 3d; oatmeal, extra pinhead, 12s 6d to 14s 6d; flour, 11s to 12s 6d; pollard and bran, 6s to 6s 6d.

Exeter, Friday.—Trade fairly brisk, though prices show an upward tendency. Foreign wheat 6d dearer, grinding barley 9d to 1s, maize 6d to 9d, oats 3d to 6d, flour 6d. English wheat, 3s 6d to 3s 9d; English barley, 3s 6d to 4s; superfine flour, 25s to 28s; fine, 23s to 25s

Glasgow, Wednesday. There was the usual attendance at our corn exchange to-day. Wheat and flour a quiet trade passing at last week's firm prices. Maize firm, and 3d to 6d per boll dearer on the week. Barley in sellers' favour, and 6d per boll dearer. Oats, foreign 3d per boll dearer, and home oats firmer. Beans firmer, but not quotably changed. Pease 3d per boll dearer on the week. Scotch oatmeal 6d per sack dearer since Wednesday. Bran 2s 6d per ton dearer, but thirds unchanged. —GIBSON AND CLARK.

Glasgow, Friday.—Market generally firm, American advices having been strengthened by Russian strikes. Wheat held for 3d to 6d advance over Wednesday, but the advance precludes a chance of free business. Flour likewise firm, and moves with more freedom. Mixed American maize scarce and firm at 14s 7½d; Plate 14½d to 14s3d. Feeding stuffs, with the single exception of beans, held for more money, with a fair business.

Gloucester, Saturday. There was a fair attendance. Prices are difficult to quote. English wheat may be called fully 1s per qr. dearer, and foreign made 6d advance. Grinding barley 6d to 9d dearer. Maize and oats 6d more money.—WAIT, JAMES AND CO.

Grantham, Saturday. — An average attendance. Wheat was in fair supply, and sales were effected at fully 1s per quarter more money on the week. Barley was a large show, best qualities maintaining last week's rates. Common sorts a slow trade. Oats showed an upward tendency to the extent of 6d per quarter. Beans and peas firm.

Hereford, Wednesday.—Moderate attendance, but the general tone was somewhat less favourable, English wheats moved off slowly at last week's figures. English barleys were dull, with a tendency to lower prices. Oats remained firm, but beans were less active. Vetches nothing doing. Quotations: Wheat, 3s 4d to 3s 6d per bushel; barley, 2s 9d to 3s 9d; oats, old, 2s 6d to 3s; new, 2s to 2s 6d; beans, old, 4s to 4s 6d; new, 3s 8d to 3s 10d; vetches, 5s 6d to 6s 6d.

Ipswich, Tuesday.—Wheat in only moderate supply, with a fair demand, at 6d per quarter advance. Useful reds made about 30s per quarter. Barley in good average supply. Trade not so brisk as last week; prices the turn lower, partly owing to the fact that the average of quality was not so good; ordinary to medium malting runs 27s to 30s. Burton qualities quieter, at 31s to 35s per quarter. Maize 6d per quarter dearer, at 25s per quarte. Maize germ steady at £5 15s to £6 per ton. Oats firm at 18s 6d to 21s per quarter. Other feeding corns met a fair inquiry, and were steady all round. Linseed cakes firm at £8 to £8 10s, and cotton cakes at £5 5s per ton. Milling stuffs: Millers short of stock, and prices consequently firm.

Leeds, Tuesday.—With an improved consumptive demand, there has been a fairly large trade in wheat during the past week at gradually hardening prices. Shipments, though liberal, continue below requirements for the United Kingdom, continental wants proving far larger than was generally anticipated, and with the Black Sea ports and America practically the only sources of supply at present. Shippers have daily and successfully raised limits. Both English and foreign wheats must be quoted 6d to 9d dearer. Malting barley irregular. Maize 3d to 6d dearer. Beans and oats steady. DUNNS AND CO

Leeds, Friday.—Both English and foreign wheats fully maintained Tuesday's prices, with a slight advance for the best descriptions. Flour was the turn dearer, but beans, peas, oats, barley, maize, and all other feeding stuffs firmly held at last quotations.

Leicester, Saturday.—Good attendance of buyers and dealers, with moderate supplies of home grown wheats. Trade steady at firm prices. Red wheats, 28s to 30s 6d; white wheats, 30s to 31s 6d per 35 stones; barley, 25s to 28s per 5½ stones; oats, 19s to 21s per 26 stones; beans, 3s 6d to 3s 4½ per 38 stones.

Lincoln, Friday.—English wheats in moderate supply, and selling readily at an advance of 1s to 1s 6d per quarter on the week. A large show of barley, which met with a dragging trade at about last week's prices. Oats and beans in limited supply, and prices firm.

Liverpool, Friday. Wheat: There has been a good attendance of millers at the market, and wheat is very firmly held for 1d to 2d advance, a moderate trade being put through at the higher prices. Flour very firm, with a better trade doing. Foreign brands close 6d and English-made 1s per sack dearer than last Tuesday. Maize: Mixed is very firm at 1s3d advance, with a moderate business doing. Plate is also firm, with a fair trade at 1d over last Tuesday. European sorts are unchanged, but are getting into smaller compass. Barley: Malting quiet, unchanged. Feeding firm, with a good trade at 1d to 1½d dearer. Beans steady, but quiet at about late rates. Peas very scarce, and held in strong hands at 1d to 2d advance. Oats very firm, with a better demand for foreign of good quality at fully 1d advance. English firm, the turn dearer. Oatmeal very firmly held, but inactive. Oatcake in good demand, but firmly held at an occasional advance of 2s 6d per ton for American cakes; other sorts unchanged, firm.—SEGAR AND TUNNICLIFFE.

Maidstone, Thursday. Not only wheat, but each other description of grain was on the advance at the market to-day. Millers had to pay 6d to 1s per quarter more for wheat than last week, and oats, consequent on the state of affairs in Russia, have increased in cost. Barley, beans, and peas also firm, but not such a proportionate rise. Maize realises high prices at present, but consumers do not purchase very freely, expecting less change shortly.

Manchester, Thursday.—Both English and foreign wheat are dearer on the week, the former 6d per quarter and the latter 2d per cental. Flour, 6d per sack higher. Indian corn, mixed American, 5s 5d; Plate, 5s 1d to 5s 2d per 10lb.. Beans unchanged. Peas firmer. Oats scarce and dearer. Foreign barley on easy side. Bran offals 6d per load dearer.

Newark, Wednesday. — Wheat a firm trade, at 6d advance on the week. Barley, a small show at unchanged values. Oats and beans firm. Quotations: Wheat, 28s to 30s; barley, 24s to 30s; oats, 18s to 19s; beans, 30s to 31s per quarter.

Newcastle-on-Tyne, Saturday. — Wheat at our market to-day was very firm at 1s per 504lbs. over last Saturday's quotation; buyers, however, only supplied their immediate wants. Maize 6d dearer. A fair demand for oats, and 9d per quarter over last Saturday's quotation were readily made. Barley irregular in price. Demand slow. Beans and peas steady at late rates.—JOSEPH POLLARD AND CO

Nottingham, Saturday.—Wheat in small supply, and advanced 6d to 1s per quarter. Barley more offering. Slow sale at previous values. Oats scarce, and 6d higher. Beans firm.—ROBERT HUBBLE.

Norwich, Saturday. Wheat was only in small supply at our market to-day, at an advance of 1s to 1s 6d per quarter on the week. There was a fair supply of barley on offer, with a firm trade, at late rates. Wheat, red, 30s to 31s per quarter, weight 63lbs. per imperial bushel. Corn inspector's return for the week ending October 14, 1905:—Wheat, 1,933—27s. 5d. Barley, 19,321—, 24s 5d.—J. A. MILLS.

Northampton, Saturday. Better attendance, but very little wheat on offer, which sold at 6d per qr. dearer; oats and beans firm; barley slow sale. New wheat, 27s 6d to 29s; malting barley, 25s to 32s; barley, 26s to 30s; new white oats, 17s 6d to 19s; new black oats, 16s to 18s; new beans, 28s to 30s; peas, 27s to 28s; flour, 24s 6d to 28s 6d.

Peterborough, Saturday.—Wheat was a small supply; trade firm at 1s more money. Barley very slow, and rather lower where sales were pressed. Oats 6d dearer, with few offering.—THOMAS HILL AND SON.

Plymouth, Thursday.—There was a fair attendance on our market here to-day; prices higher all round. Barley 9d, oats 3d, maize 3d, wheat 6d.—ORLANDO DAVIS AND CO.

Reading, Saturday.—Average attendance, with fairly brisk trade, at appended prices:—Wheat, 29s to 32s; barley, 25s to 34s; oats, 17s to 23s; peas, 28s to 30s; beans, 30s to 34s.

Retford, Saturday.—Rather an improved supply in the quantity of malting barley. A fair amount of business was transacted at 25s to 28s; grinding, 23s 6d to 24s 6d per quarter. Samples of locally grown wheat were moderately numerous and in good condition. Trade was firm, and prices kept well up at 28s to 29s per quarter. There was no quotable alteration in the currencies of grain for feeding purposes. Maize, 26s; English beans, 30s; and black and white oats, 16s to 18s per quarter.

Ripon, Thursday. — A firm all-round tone, grinding barley and oats in most instances making 6d per quarter more money. A good attendance, with a brisk business. New wheat, 27s to 29s; foreign wheat, 32s to 36s; grinding barley, 23s to 24s; malting barley, 24s to 28s; new oats, 17s 6d to 18s 6d; round maize, 26s to 26s 6d; flat maize, 25s 6d to 26s 6d.

Shrewsbury, Saturday.—Wheat, 12s to 12s 6d per 225lb.; old white oats, 15s to 16s; new oats, 11s 6d to 12s 6d; peas, 11s 6d to 12s 6d per 240lb.; beans, 13s 6d to 14s per 240lb; barley, 14s to 19s per 280lb.

Stamford, Friday.—A very good market, and an exceptionally good business tone prevailed, prices in advance of last week being readily conceded in many instances. Wheats were enhanced 1s per quarter on the week, making 28s 6d to 30s; malting barley of good quality, 30s to 33s; trade for common parcels was sluggish; grinding barley, 23s to 24s 6d; oats, 16s 6d to 17s 6d. Beans advanced 6d on the week, 30s to 31s being the ruling quotation. Peas were a fair trade at late rates. Maize and feeding stuffs firm.

Sunderland, Saturday.—Good supply of grain. Wheat sold at 1s per quarter advance. Spring corn rather dearer. Arrivals coastwise: Wheat, 230 quarters; barley, 460 quarters; oats, 295 quarters. Foreign: Wheat, 4,875 quarters; barley, 4,000 quarters.—E. AND F. RICHARDSON.

Tunbridge Wells, Friday.—New white wheat, 28s to 29s; new red ditto, 27s to 28s; barley, 27s to 32s; grinding ditto, 18s to 23s; oats, English, 16s to 19s; rye, 23s to 24s; peas, 31s to 36s; beans, 32s to 36s; tares, 48s to 56s; maize, 24s to 28s.

Warwick, Saturday. Very small supply of wheat, for which farmers are asking considerably more money. Business done at about 3d per bag advance. Poor demand for barley, except for best samples. Feeding stuffs dearer all round; good demand.

Wisbech, Saturday. — A small supply of grain at market. Wheat advanced 1s per quarter. Reds, 30s to 31s; oats, 18s to 19s; barley, 25s to 27s.—JAMES FLETCHER.

Winchester, Saturday. - English wheat about 1s. dearer. A fair supply. Foreign 6d advance. Barley, maize, and oats 6d higher. Flour a steady trade at fully late rates.—FEAR, COLEBROOK, AND CO., LTD.

Wolverhampton, Wednesday.—There was a good attendance, and a fair amount of business was transacted. Quotations: New wheat, 11s to 12s per 216lb.; flat corn, 27s to 28s per 480lb.; English beans, old, 15s; new, 13s; oats, new, 11s; old, 15s per 196lb.

Worksop, Wednesday. — Good attendance and fair show of grain. White wheat made last week's full prices. There was a good inquiry for best barleys, and oats were scarce. White wheat, 27s 6d to 29s 6d; red wheat, 26s to 27s 6d; best malting barley, 28s to 30s; secondary qualities, 26s 6d to 28s; grinding barley, 22s to 24s; white oats, 17s to 18s 6d; black ditto, 16s to 17s; maize, 25s to 27s per quarter.

Yeovil, Friday.—Wheat sold at from 3d to 6d per quarter advance. Barley, oats, and maize likewise made 6d per quarter more money. Home grown wheat of best quality, 31s 9d to 32s; secondary, 29s to 30s 3d; foreign, 33s 6d to 36s; malted barley, 30s 6d to 35s 6d; feeding, 24s 3d to 25s 6d; foreign, 20s 9d to 21s; oats, black, 18s to 20s; Irish black, 17s to 18s; white, 16s to 20s 9d; beans, 32s 6d to 38s 6d; maize, 24s 6d to 26s; rye, 21s 3d to 22s 6d; vetches, 6s to 7s per bushel. Good inquiry for flour, which sold at an advance of 6d per sack, fine realising from 25s to 25s 6d, and extra fine 27s to 27s 6d. Milling offals and meals in request at slight advance all round.

York. Saturday.—The Russian domestic troubles have caused a sharp rise in the price of wheat in the local market. Fine wheat, 30s to 31s; red and mixed, 29s to 30s per quarter of 36 stones; malting barley steady; fine, 27s to 29s; good, 25s to 27s; other sorts, 23s to 25s per quarter of 32 stones. Oats are about 6d per quarter dearer; white Tartary, 16s 6d to 17s 6d; black, 17s 6d to 18s 6d; white Garton, 18s to 19s per quarter of 24 stones; rye, 21s to 23s; beans, 30s to 33s per quarter of 36 stones.

FOREIGN

Hamburg. Saturday.—Market rules decidedly firmer, and prices must be quoted higher, as our local malsters and brewers have bought rather freely—in fact, they are laying in large stocks before the new duties come in force on March 1 next year, so they will have an ample stock next autumn to commence the season with, as a duty of 8s per quarter of 448lb will reduce the importation of foreign barleys a good deal, and principal attention will be drawn to home-grown.—FRANCIS M. TH. DUHNE.

Hamburg. Saturday.—The weather continues cold and rainy. The soil is not in a fit state for sowing operations, which are much retarded. There is a brisk trade in all descriptions of grain at rapidly rising prices. The impression is gaining ground that this year's harvest in Germany turned out more deficient than hitherto believed. Holders of German wheat have mostly withdrawn from the market; we quote red Holstein and Mecklenburg 33s 6d to 34s per 504lb f.o.b., American hard winter No. 2 32s, 80 ko. River Plate 31s 9d per 504lb ex ship here. Offers of rye are very scarce; 9 15 20 South Russian December shipment is held at 28s 3d per 480lb c.i.f. Hamburg. Malting barley is getting dearer. Dutch is selling at 28s 3d to 31s 6d, Bohemian at 33s to 31s 6d, Prussian at 29s to 32s, Holstein at 30s. Chilian at 29s 6d to 30s 6d per 448lb. A considerable amount of business is doing in grinding barley; for South Russian 19s 9d per 400lb is paid, and for American 19s 3d ex steamer here. Maize continues improving in value; mixed American December shipment 22s 9d, River Plate October November 23s 9d per 480lb c.i.f. Hamburg. White clipped American oats are held at 17s 3d per 320lb c.i.f. Hamburg. JOHN TATLOCK

Paris. Wednesday.—The provincial markets continue quiet; offers are more or less scanty according to district; but, taken altogether, they are not as large as they usually are at this time of year. However, this state of affairs is prevented from exerting any adverse influence by the paucity of inquiries. At the Bourse de Commerce current parcels of flour are pursuing their upward tendency, and have to-day advanced 70c; other positions are steady, and are quoted at practically late prices. Business in wheat is quiet, with no changes of importance in prices. Rye: Nothing doing, prices steady. Oats: Offers are easier; the tone of the market is quieter, and prices have again drooped. At the weekly spot market both buyers and sellers of home-grown wheat were reserved, and the tone of the market quiet. In foreign wheat the firmness has become accentuated in all grades, but more especially as regards Russian sorts. In consumption marks flour business is quiet, but prices remained unaltered. The rise in the price of beans is becoming more accentuated, so that manufacturers of bean flour have again had to increase their prices. Rye flour is lifeless and prices are weaker, despite the firmness of the raw material. Barley prices continue firm, and show a marked rise, notably in the West, on those ruling a month ago. The dearness of oats is causing a lot of barley to be consumed; in addition to this, threshings are also restricted.—*Dornbusch.*

THE BALTIC.

Wheat cargoes are 6d. dearer on the week. Transactions have included finest Russian at 36s. 6d. per 496 lb., good new winter Russian at 34s. 6d. per 492 lb., South Australian at 34s. 6d. per 480 lb., Walla Walla at 33s. 3d. per 500 lb., Bahia Blanca at 32s. per 504 lb., Rosario at 30s. 6d. per 480 lb. The last two quotations are not "onpassage, but for February shipment of the new Argentine crop, for which they constitute the opening prices.

Maize is fully 3d. dearer for all cargoes. Transactions include Argentine at 24s. 6d., per 480 lb. on passage, American at 24s. 6d. arrived, and 22s. 6d. for December shipment.

Oats have been firmly held since the 17th, and the last few days have seen the market further hardening under the influence of the Russian strikes. Sales have included American at 16s. 9d. per 320 lb., Chilian Tawny at 16s. 6d. per 320 lb., Argentine at 16s. per 312 lb.; Black Irish at 16s. 9d. per 304 lb, and Russian (Southern ports only) at 17s per 304 lb. There are no offers for November shipment from any Baltic port.

A cargo of white Calcutta peas sold on Saturday for 28s. 6d. per 504 lb., and one of Kustendje barley for 21s. per 416 lb.

The arrivals of grain and seed-laden vessels at ports-of-call for the week were 1 wheat (Adelaide), 1 maize (Rosario), 1 linseed (Buenos Ayres). Total 3.

The sailings of grain and seed-laden vessels from ports-of-call for the week were 2 wheat (1 Cardiff, 1 Dublin), 1 maize (Plymouth), 1 linseed (Sharpness). Total 4.

Since January 1 1905, the total arrivals have been 295 wheat, 2 flour, 2 wheat and oats, 1 wheat and linseed, 1 flour and wheat, 13 barley and wheat, 10 barley, 9 maize, 1 beans, 4 locust beans and 51 linseed. Total 389.

Last year during the same time the arrivals were 264 wheat, 1 wheat and maize, 36 barley and wheat, 17 barley, 9 maize, 5 beans, 4 locust beans, 1 rye, 39 linseed, and 1 canaryseed. Total 377.

The secretary of the London Corn Trade Association announces that the following standards will be available for inspection and comparison from November 1, and that small samples of the standard can be purchased. The standards are:—Wheat.—F.a.q. Plate of the Province of Santa Fe, ditto 58 lb. at time of discharge, ditto 59 lb., ditto 60 lb., ditto. 61 lb., F.a.q. Barletta from Buenos Ayres, Russo from Buenos Ayres 63½ lb., at time of discharge, Southern Plate (June-July) 64½ lb. ditto., Bahia Blanca/Barletta and/or Russia 64½ lb. ditto., ditto. 65½ lb., ditto 62½ lb., Russo from Bahia Blanca 64 lb. ditto., ditto. 62½ lb., Barletta from Bahia Blanca 64 lb. ditto., ditto. 63 lb. ditto. F.a.q. Entre Rios, F.a.q. Hongrois, F.a.q. Frances. Maize.—Yellow and Red La Plata.

East Indian wheat rejections are as follows:—Crop 1904-5.—No. 2 Club Calcutta 33s. 6d.; Choice White Karachi, 35s. By rejections is meant the price to be paid if on arrival the grain is not actually taken

WET GRAINS.

London. Monday.—The trade is without any particular feature, and 18s 6d to 20s for ale, and 16s 3d to 17s per ton for porter grains are being paid. Wet distillers' grains still remain at 30s to 32s 6d per ton. Pressed white distillery meal, 32s 6d per ton. Dried grains: A better consumptive inquiry; prices are 2s 6d per ton more, at 97s 6d ale, 92s 6d mixed, 90s porter, 110s distillers. Dried distillery meal, containing 45 per cent. of starch and albuminoids, 115s per ton. All above free on rails London. HAMLEN AND CO., 37 38, Mark Lane, E.C.

WOOL.

Canterbury. Saturday.—Rather more inquiry for Kent fleeces, which have advanced 1 per lb. on last sale.

Canterbury. Saturday.—Prices are firm for the best descriptions. Good second-class samples are being gradually taken at from 45s to 56s per cwt.

Halifax. Saturday.—Merino wools maintain recent quotations steadily, but there is a slight easing off in some descriptions of cross breds, especially the lower numbers. Home-grown wools, for the leading kinds, are unchanged.

HAY AND STRAW.

Whitechapel. Saturday.—Although supplies were of rather smaller extent, a quiet demand prevailed, but quotations remained unchanged. Best clover, 75s to 80s; inferior ditto, 60s to 70s; specially picked hay, 75s; good ditto, 65s to 73s; inferior ditto, 45s to 60s; mixture and sainfoin, 67s to 72s 6d; straw, 27s to 36s per load.

Review of the British Corn Trade

DURING THE PAST WEEK

Written exclusively for the Mark Lane Express.

The exceedingly dry weather has been of no small benefit at a time when farmers have been at their busiest with the flail and its more modern substitutes. The cold winds have also been exactly what the thresher has required. The lifting of roots has proceeded apace, and the night frosts have not done any material injury. The drought, however, has told upon meadow land, suddenly cutting off the feeding value thereof and compelling farmers to an unusually early use of dry feeding stuffs. Ploughing has become laborious, the sowing of wheat in a very dry seed bed is never wholly advisable, and the entire situation points to the desirability of November showers. The catch crops have been severely checked by the early morning frosts, especially mustard, and the kitchen garden side of farming has a good many losses to deplore. The month of October has not had so low an average temperature as that of this year for a very long period, but the sunshine has been a great mitigation of the cold, and live stock have been in exceptionally good health.

The event of the week has been the great strike movement in Russia, for the dependence of the United Kingdom on Russian grain has seldom been greater than it is in October, 1905. The strong Russian wheat is needed by our millers when America is failing to respond to expectation, while cheap feeding barley from Russia and light 504 lb. oats from Russia are in constant demand. Russian flour, Russian linseed, Russian rye, and Russian maize all have buyers who would be greatly inconvenienced if supplies from the Czar's dominions are to be dried up. The vast empire east of the Vistula also sends us from time to time no inconsiderable quantities of hempseed, millet, sunflower seed, and the like, while the kindred markets for food derived from vegetation through the intermediate stage of the animal world are always urgent, for Russian hares and rabbits, chickens and geese, turkeys and game birds. Now, if the purely political press were to be followed implicitly we should have to believe that Russian commerce was at a standstill, "instead of which," as the judge said, very considerabls exports of wheat, rye, barley, and oats have taken place within the last six days, and from ports which are said to be in a state of anarchy and under mob law. The market, so far, believes the political press as to be 1s. dearer for Russian produce from a week ago; but it so far fails to believe it as to be only that degree dearer. This is illogical, but the best that can be made of a situation which seems to call for something authoritative at the hands of the Foreign Office. What our Consuls in Russia draw their salaries for if they fail to give the commercial world a word of counsel in crises like the present would be hard to say, and we hope that agricultural, no less than commericial, M.P.'s will ask the question in the ensuing Session.

America was holding grain with firmness before the Russian affairs became serious. It is not likely that this tendency will be diminished by the recent events. Argentina and India are but feeble shippers just now, and Australasia is not likely to have any shipments for Europe before New Year's Day. The situation favours higher prices, and farmers will do well to hold their produce with firmness. The small supplies of foreign grain on passage argue a very moderate rate of imports between now and the end of 1905.

Of wheat our expectations are as follows:—

	Quarters.
Californian	95,000
American	200,000
Indian	100,000
Russian	300,000
Australasian	90,000
Argentine	110,000
Various	40,000
Total	935,000
A week ago	1,010,000

When supplies of wheat on passage are below a million quarters it is always safe to hold grain. Of flour, too, only 285,000 sacks are on passage, or 215,000 sacks below the average.

Of barley, 590,000 qr. are on passage, which is a full average, but of oats, the quantity which stood at 440,000 qr. on October 14 was only 290,000 on the 28th. Expectations of maize are very moderate:—

	Quarters.
Russian	15,000
American	115,000
Argentine	310,000
Total	440,000

Of linseed 137,000 qr., of cottonseed 21,000 tons, and of rice 54,000 tons are now on passage.

The sales of English wheat last week were estimated at 225,000 qr. for all markets, and were 25 to 30 per cent. above the average for an ordinary season. As the yield is at most 10 per cent. above an average, and in many counties is not 5 per cent. over the mean, this rate of supply argues an immoderate and deplorable pressure of grain on sale. Imports of foreign wheat have fallen from 445,000 qr. in the week before last to 265,000 qr. last week, and pressure is not coming from abroad, but rather strength. Of flour, 131,000 sacks were imported. This is an increase, but is still less than an average weekly importation. Maize imports last week were 190,000 qr., against 265,000 qr. in the week preceding. The good supplies of maize in September are not being repeated, and the maize arrivals of November are not likely to equal those of October. It is therefore little wonder that spot holders of Indian corn show very real confidence in the situation, and are not at all disturbed by a big business being done for January and February shipment at 21s. per qr. The imports of barley last week were 211,000 qr., a good deal more than we need in a single week, but not more than with barley stocks much below average, we can take without any weakening of spot values. The imports of oats were 105,000 qr., and a little below the average.

A very large business has been done in 448 lb types of barley since the 16th inst. Not only have sales at the statute markets risen from a total below the average to a total above it, but the foreign sorts which the Government does not include in its returns have moved off with a business similar to that of the home-grown. The prices have reached 38s. in exceptional instances both for English and for foreign, but the greater proportion of business has been put through at 30s. to 33s. per qr. This price has commanded perhaps a half of the new English offered, the bulk of Chilian on offer, and also fine screened Ouchak.

When we pass from the sorts of barley which interest the maltster to those which fail to do so, we come, of course, to a lower price level. We have North African barley at 26s. for best, Syrian at 24s., English chicken barley at the same price, the commonest American at 19s. ex quay, and Russian at 19s. 6d. paid and 20s. asked. The rise in light Russian sorts is due to the state of affairs in that country, and to apprehended interruption of shipments. The trade in oats shows a general advance of 6d. on the week, and is more active than it was a week ago. A good many holders of fine new English 336 lb. oats have recently stood out for a clear sovereign per qr.

Maize on spot is up to 25s. for all varieties, while beans and peas have an equal tendency to favour sellers. Split Egyptian beans realise 24s. per 320 lb., and Mazagan split are firm at 23s. per 320 lb. Blue peas are 1s. dearer at most markets.

Oatmeal made on Friday £10 7s. 6d. cash for Aberdeen, and the tendency of the market is in an improved direction. Scotland is decreasing her offers for the South, and £14 per ton is the lowest taken for fine Midlothian.

The seed trade in its widest sense is a very large one. Linseed is making 41s. for good Russian, 47s. for the best Morocco, 40s. for Persian, 40s. for (98 per cent. pure) La Phata, and 45s. for finest Dutch. No English linseed is obtainable. Rape seed makes 52s. for fine English, and 48s. to 52s. per qr. for Dutch. Indian and Roumanian are as usual obtainable at more modest prices. For fine red cloverseed 80s. is paid where the sample is English, 70s. where it is Canadian, and 65s. where it is German. In the case of white cloverseed 80s. is paid for yearling English, 70s. for good German, and 55s. for American. Some Canadian Alsyke is offered at 72s., with buyers at a florin less. German Timothy seed proves a finer sample than American, and averages about 24s., against 20s. The buyers of mawseed can get fine Dutch at 26s. per cwt., ordinary Indian at 17s. 6d. per cwt. The price of safflower seed is 9s. per cwt.

Shipments from Russia for the week ended 28th inst. were 487,000 qr. of wheat, 83,000 qr. of rye, 274,000 qr. of barley, 176,000 qr. of oats, and 2,000 qr. of maize, an amount of export business which would be surprising even in a period of unimpeded inland transit and of industrial calm. Shipments from Roumania were 330,000 qr. of wheat and 106,000 of barley.

America last week sent off 178,000 qr. of wheat, 47,000 qr. of barley, 140,000 qr. of oats, 97,000 qr. of maize, and 139,000 sacks of flour. These shipments, although they show increasing exports, do not indicate any rapid development thereof. Other shipments of the week were 60,000 qr. of wheat, 194,000 qr. of maize, and 19,000 qr. of linseed from La Plata, and 44,000 qr. of wheat and 17,000 qr. of linseed from India.

TO-DAY'S MARKETS.

MARK LANE, MONDAY, October 30.

[FIRST REPORT.]

The market to-day was firm, with a good inquiry for English, Russian, Indian, Argentine, and Australian produce. American staples, if on hand and nearly due, were also in good request; but there was very little sale for remoter futures. English wheat was 6d. dearer for both red and white kinds. Russian was 1s. to 1s. 6d. up, and for Indian, Argentine, and Australian 6d. more money was made, with 1s. advance often asked and also stood out for. There were buyers of maize at fully 6d. advance on the week. Barley a good sale of English at 28s. to 30s. for sound brewing and 31s. to 38s. for the better malting sorts. Russian was held for 20s. per 400 lb. Oats were firm and 6d. dearer all round. Some Russian sorts were 1s. up. Peas were 6d. dearer, with an improved inquiry. Beans, rye, linseed, and rapeseed were firm. Cottonseed was quiet. The prices given for Russian produce are the nearest ascertainable on a capricous and fluctuating market for that type. There are several firms holding Russian grain who decline to sell at present rates at all.

CLOSE OF THE MARKET.

ALTHOUGH THE MUCH MILDER WEATHER CHECKED THE SALE OF FEEDING STUFFS THE MARKET CLOSED WITH VERY CONFIDENT HOLDING OF ALL STAPLES. PRICES WERE FULLY AS MUCH ADVANCED AS IN THE EARLIER HOURS OF BUSINESS ABOVE REPORTED.

THE FLOUR TRADE.

MARK LANE, MONDAY, October 30.

The market to-day was decidedly strong for flour, and the prices of London makes were 6d. up from the 23rd. Country sorts were not quotably dearer, but if the present tendency continues they will be put up on Friday. American patents were rather irregular. For delivery within a month 27s. 6d. was accepted for the best, but of the fine sorts the spot supply is very small, and each holder has his own ideas. The price of Hungarian was no higher from the 23rd, and Australian, though 3d. up, as a rule, was not in brisk request. Bran, pollard, and middlings were 2s. 6d. per ton dearer in the majority of cases.

LONDON TERM MARKET.

This market is open to elected members only and is held at the Baltic Club, St. Mary Axe. No business except for future delivery is done, and the smallest quantity that can be purchased is 1,000 quarters, or 4,800 cental.

Prices quoted on Saturday at the close of the week's trade were as follows:—

WHEAT (per cental).

No. 2 American Red	7s. 1d.	Nov.	delivery.
,, ,,	7s. 0d.	Dec.	,,
,, ,,	6s. 9d.	Jan.	,,
,, ,,	6s. 11d.	Mar.	,,
,, ,,	6s. 11d.	May	,,

MAIZE (per cental).

American	4s. 3d.	Dec.	delivery.
,,	4s. 0d.	Jan.	,,
,,	4s 5d.	Mar.	,,
,,	4s. 4d.	May	,,

The market in futures was rather excited to-day. 7s. 3d. being the price for which wheat was held; with buyers at 7s. 2d. per cental, maize made 4s. 6d. for January delivery, but there were no buyers at the fancy prices asked for nearer dates.

POTATOES.

Borough, Saturday.—Good supplies to hand except for seed; steady demand. Best silts, 60s to 70s; BlackLands, 55s; Scottish, 65s to 70s per ton.

Manchester, Saturday.—Cheshire, 4s 6d to 5s 6d per cwt.

Southwark (Waterside), Saturday.—During the past week the supplies on offer have been heavy, and buyers, being pressed by sellers, prices have again had a downward tendency. The following are this day's quotations:—Scotch Up-to Dates, 55s to 65s; ditto British Queens, 55s to 65s; Lincoln Evergoods, 55s to 60s; ditto Up-to-Dates, 55s to 65s; Blackland Up-to Dates, 50s to 55s; ditto British Queens, 50s to 55s—per ton.

York, Saturday.—A fair supply and a steady trade, without change from last week's market. Sands make up to 40s per ton; warps, 45s to 50s.

GRAIN AND FLOUR FACTORS REPORT.

Flour.—Demand moderate; buyers only disposed to operate for immediate requirements. No further change to report in prices.—GREENHILL BROTHERS (Belfast).

Offals.—The demand for bran continues steady; prices firm without further change.—GREENHILL BROTHERS (Belfast).

Flour.—The wheat and flour markets are strong with more business doing at 6d. per sack advance. Grain.—Indian corn is now held for 14s. 9d. per 280 lb. Plate maize is 4½d. dearer at 14s. 3d. per 280 lb. Scotch and foreign oats are in good demand at advancing prices. Barley held for 15s. per 320 lb. Calcutta white pease are 6d. dearer, being held at 16s. 6d. per 280 lb. Feeding beans are quiet. Oilcakes, 2s. 6d. per ton up. Oatmeal steady. Mill Stuffs.—Bran is 2s. 6d. per ton better. Common and fine thirds, and in fact all mill stuffs are in good demand.—MCKINNON AND MCDONALD (Glasgow).

Flour has ruled firm to-day, and with a continued good demand prices are 1s. to 1s. 6d. dearer on the week.—T. S. MEDILL AND SONS, LIMITED.

Milling offals are in good demand at 2s. 6d. to 5s. per ton advance from last week.—JOHN BAWCOMB AND CO.

Arrivals of wheat and flour are moderate, and sales are made at an improvement of 1s. 6d. to 2s. per qr., and 1s. per sack. Maize and oats are 1s. per qr. and grinding barley 1s. to 1s. 6d. per qr. dearer.—COVENTRY AND SHEPPARD.

FEEDING STUFFS.

London, Monday.—Linseed cake: There is a considerable improvement in the demand, and prices have begun to harden again for Russians and Americans. Undecorticated cotton cake: Enquiry is also better at last week's values. Decorticated cotton cake and meal: Owing to continued scarcity the market has advanced 1s 3d to 2s 6d for spot. No change in forward. Linseed: Market strong and advancing at 1s per quarter more money.

ROBERT AND JOHN HEWETSON.

THE BALTIC, 1 p.m.

STATE OF TRADE.

Holders of grain on passage are inclined to stand out for a further advance, while for futures the business in most cases is uneasy, views differing widely. Russia continues a free grain shipper despite her internal troubles. Linseed is advancing, but cottonseed, with increased offers from Egypt, is in buyers' favour.

BUSINESS DONE.

WHEAT.—No. 1 Manitoba, 33s 6d per 480lb., on passage; No. 2 Manitoba, 32s 9d per 480lb., on passage; White Kurrachee, 6s 9d per 100lb., on passage. Blue Stem, 34s per 500lb., November shipment; Theodosian, 33s. 3d per 492lb., November shipment (Black Sea); Roumanian, 31s 3d per 480lb., November shipment; White Canadian, 31s per 480lb., November shipment; Bahia Blanca, 31s 9d per 504lb., March shipment (New Crop).

MAIZE.—Argentine, 24s 6d per 480lb., on passage; American, 24s 6d per 480lb., on passage; ditto, 24s per 480lb., January shipment; ditto, 20s 9d per 480lb., February shipment.

BARLEY.—Odessa, 20s per 400lb., prompt shipment; Kustendje, 21s per 400lb., prompt shipment.

OATS.—American, 17s per 320lb., prompt shipment; Petersburg, 17s 9d per 304lb., on passage.

BEANS.—Smyrna, 34s per 480lb., November shipment.

PEAS.—Green Indian, 25s 3d per 504lb., November shipment; White Indian, 28s 9d per 504lb., April shipment (New Crop).

LINSEED.—Calcutta, 38s 3d per 410lb., on passage; Argentine, 37s 9d per 416lb., on passage.

RAPESEED.—Ferozepore, 37s 6d per 416lb., March shipment.

COTTONSEED.—Bombay, £4 17s 6d per 2,240lb., December shipment.

HOPS.

London, Monday.—W. H. and H. Le May, 67, Borough, London, report: The market is hardening for choice hops, and a considerable clearance has been made of the good brown English hops for copper purposes, for which they are the best value of any hops in the world.

CATTLE.

Metropolitan Market, Islington.

	British. Monday, Oct. 30, 1905.	Total. Monday, Oct. 31, 1904.
Beasts	990	290 1,370
Sheep and Lambs	6,000	6,000 6,420
Calves	10	10 5
Pigs	—	20
Milch Cows	60	60 50

Quotations per 8 lb. (sinking the offal):—

ENGLISH.

	Inferior.	Second.	First.
Beasts	3s 10d	3s 6d	4s 0d
Sheep	3s 10d	4s 8d	5s 10d

Milch cows, per head, £16 to £22.

British arrivals included as follows: Scotland, nil; Eastern Counties, 17; Midland, Home and Western Counties, 956; Devon, 30; Ireland, 47.

We note to-day a decrease of 290 head in the number of beasts offered for sale compared with Monday last. Trade, owing to the inclement weather, was a very disappointing one; consequently a downward tendency in value was inevitable, but not sufficient to enable us to quote any lower rates. Irish were in smaller numbers and consisted of 9 Dublin Shorthorns, 10 choice black polled ditto, and 28 Waterfords; trade for this class of beasts ruled very slow; nevertheless late currencies were maintained. There was less demand by both town and country buyers for fat butchering cows and bulls; consequently fat values were difficult to maintain. A clearance is not expected to be made.

The following are top quotations per 8 lb. (sinking the offal):—

	To-day.	Monday, Oct. 31, 1904.
Devons	4s 4d to 4s 6d	4s 4d to 4s 6d
Herefords	4s 4d to 4s 6d	4s 4d to 4s 6d
Runts	4s 0d to 4s 4d	4s 2d to 4s 4d
Lincolns	3s 8d to 3s 10d	3s 10d to 4s 0d
Irish	3s 10d to 4s 4d	4s 0d to 4s 2d
Fat Cows	3s 4d to 3s 6d	3s 4d to 3s 6d

There was a decrease of 350 in the number penned in the sheep market compared with Monday last. The heavy rain, combined with a slack demand, made sales difficult to effect; late values, however, were in most cases both asked and obtained, ewes selling best. Scotch descriptions met with a decline of 2d. per 8 lb. in value, whilst Irish, though slow of sale, maintained late currencies. It is feared that a further decline will have to be made if a clearance is to effected. The supply included 400 Scotch, 1,900 Irish, and 355 from the Eastern Counties.

Undermentioned quotations are at per 8 lb. (sinking the offal), and are for the best of each class penned;—

	To-day.	Monday, Oct. 31, 1904.
7½ to 8 st Downs	5s 8d to 5s 10d	5s 10d to 6s 0d
9 st Downs	5s 6d to 5s 8d	5s 8d to 5s 10d
10 st Half-breds	5s 4d to 5s 6d	5s 6d to 5s 8d
10 st Irish	5s 0d to 5s 2d	5s 0d to 5s 2d
10 st Down Ewes	4s 0d to 4s 2d	4s 0d to 4s 2d
11 st Half-bred ditto	3s 10d to 4s 0d	3s 10d to 4s 0d

Calf trade not worth noting or quoting.

No pigs on the market.

London (Central), Monday.—Fair supply, trade steady. Beef, Scotch, 3s 10d to 4s 4d; English, 3s 3d to 3s 5d; American, 3s to 3s 4d. Mutton, Scotch wethers, 4s 4d to 4s 8d; ewes, 3s 4d to 3s 8d; English wethers, 4s to 4s 6d; ewes, 3s to 3s 4d. Lamb, New Zealand, 2s 8d to 3s. Veal, 2s 8d to 4s 2d. Pork, 3s 10d to 4s 8d per 8lb.

St. Ives (Hunts), Monday.—Beasts 731, sheep 355, pigs 288. Beef, 7s to 7s 6d; mutton, 8s 2d to 10s 6d; pork, 6s 6d to 7s 6d. Fat cattle, fair demand; stores, better trade; fat sheep, good demand; stores, fair; fat and store pigs, good demand; milch cows, fair show, trade prices, £14 to £23.

FOREIGN

Deptford, Monday.—Beasts, 1,391. To-day's supply of beasts compared with Monday last showed an increase of 109 head, and consisted of 1,050 from the United States and 341 Canadians. Trade was of a slow nature, with a downward tendency in value; besides the above, 200 more Canadian ranchers were left unsold. States were quoted at from 3s 8d to 3s 10d; Canadians, 3s 4d to 3s 6d per 8lb. Sheep numbered 202 from Canada, and were quoted at from 4s 4d to 4s 6d per 8lb. (offal given in). On Saturday 2,046 beasts from the United States and 180 from Canada were offered for sale, and, with a slow trade were quoted at from 3s 9d to 3s 11d for the former, seconds 3s 6d to 3s 8d; and Canadian ranchers, 3s to 3s 2d; seconds, 2s 10d per 8lb. (sinking the offal).

Liverpool, Monday.—Supply of cattle was practically unaltered, demand slow, and late rates not maintained. There was a slightly smaller supply of sheep in market; notwithstanding this, there was no appreciable improvement on last Monday's trade; finished handyweights made the top quotation, but strong and rough sorts were hardly so good to sell. Beef, 5d to 4d; mutton, 2½d to 6d. At market, 1,455 cattle and 4,500 sheep.

SEEDS

London, Monday.—The Russian crisis is making considerable impression on our market. Seed wheats are dearer. Winter tares firmer. There is more inquiry for spring sowing seeds, red clovers attracting most attention.—JOHN PICARD AND CO.

OIL SEEDS.

LIVE STOCK AND MEAT TRADE REVIEW

(WRITTEN SPECIALLY FOR THE "MARK LANE EXPRESS.")

Trade in London.

Throughout the week the market for fat beasts of both prime and second quality at Islington was of a slow and dragging nature, nevertheless salesmen were able in most cases to maintain late currencies on the first market day of the week. On Thursday, as usual, trade was practically confined to rough cattle. The majority of the supplies were drawn as usual from the Midland, Home and Western Counties, and Ireland, the latter consisting of thirty-four Dublin Shorthorns and forty-four Waterfords. This class of beast met with a very limited inquiry, with a downward tendency in value, though barely sufficient to quote any lower rates. Fat butchering cows and bulls met with a fairly steady demand by both town and country buyers, sellers both asking and obtaining late values.

At the Foreign Cattle Market, Deptford, trade throughout the week was of a slow nature, rates favouring the buyer, though not sufficiently so to warrant our quoting them lower. The total number on offer at both markets was 5,756, as against 4,337 during the preceding week. The supply consisted of 1,370 British (increase 240) and 4,586 foreign (increase 1,179)—the latter comprised 3,684 from the United States and 702 from Canada. The following were the top rates paid per 8 lb. (sinking the offal):—80 to 90 stone Devons, 4s. 4d. to 4s. 6d.; 90 to 95 stone Herefords, 4s. 4d. to 4s. 6d.; 95 stone Runts, 4s. to 4s. 4d.; 100 stone Shorthorns, 3s. 8d. to 3s. 10d.; 95 stone Irish, 3s. 10d. to 4s. 2d.; 90 stone States, 3s. 8d. to 4s.; 95 stone Canadians, 3s. 4d. to 3s. 9d.; 90 stone fat cows, 3s. 4d. to 3s. 6d.

In the sheep market trade on Monday was of a slow nature, and continued so throughout the week; however, on the first day of the week salesmen both asked and obtained late currencies; but on Thursday there was practically no inquiry, consequently quotations were not worth recording. We note this week the first consignment of Longwool Scotch sheep, these sold at about late values; whilst Irish descriptions, being greatly in excess of the demand ruled lower. No sheep were offered for sale at Deptford. The total number on offer was 6,590, as against 8,026 during the previous week, consisting entirely of British consignments. The following were the top rates paid per 8 lb. (sinking the offal):—7½ to 8 stone Downs, 5s. 8d. to 5s. 10d.; 8 stone Scotch (Longwools), 5s. 8d. to 5s. 10d.; 9 stone Downs, 5s. 6d. to 5s. 8d..; 10 stone Irish, 5s. to 5s. 2d.; 10 stone Halfbreds, 5s. 4d. to 5s. 6d; 10 stone Down ewes, 3s. 10d. to 4.

Calves numbered ten, trade for which was nominal.

No pigs were offered for sale.

Trade in the West.

The phenomenally cold weather which set in so early has played serious havoc with the pastures, which, under the influence of a 12 to 15 deg. of frost, have been terribly "nipped," vast tracts in some districts having been burnt up as if seared by a hot iron. With milch beasts things are fair, as milk is still very badly wanted in many places. This, of course, helps the sale, without, however, benefiting the price very materially, as it is seldom just now that over £20 or £21 is made, though one or two exceptional milchers occasionally reach to £22; but they must be very good indeed to do this. Yearlings are finding some little inquiry, but prices remain practically unchanged from what they were in the spring, and, with the poor keep prospects now threatening, we can hardly hope for any great improvement just at present. Keeping sheep about continue to hold their own for ewes, etc., at from about 28s. to 55s. for draft or grazing purposes, but small lambs, which are in much request, are dearer than they were, ranging from as low as 20s. for small mixed lambs to 35s. for good wethers, and the prospect is that they are likely to keep so. Wether sheep are rather dear, some of the best selling up to 50s. As regards the trade generally, there seems to be more stock on the market than buyers can deal with.

Coming to butchers' stock, things have undergone no very great change, but what alteration there has been tends rather to lower values than to any improvement, this being undoubtedly the case with fat beef, except for the very best type of heifers and steers, which are with difficulty has been experienced and satisfactory prices obtained, but secondary kinds still meet a sluggish trade at disappointing prices. Sheep in full supply, and the quality also better. Trade was good throughout, without change in value. There was a larger supply of lambs, and those of good quality met a very satisfactory market. Calves in short supply, and very dear, while pigs also maintained previous prices. There was a smaller supply of store sheep, and generally of a very secondary description. Trade rather quieter, and a part of the secondary sheep left unsold. A good supply of store cattle met a very slow demand at moderate prices. For the smaller descriptions lower prices have to be taken than for some years back. Milch cows met a very dull market at rather less money. Quotations:—Top price of best cattle per live cwt., 40s.; current, 34s. to 36s.; Irish, 30s. to 34s. 6d. Mutton, 7d. to 9¼d. per lb.—JOHN SWAN AND SONS, LIMITED.

Trade in Scotland.

The number of fat cattle on offer this week has been large, and the general quality much improved. For the best descriptions a good demand

Trade in Ireland.

There was a better attendance of exporters at Dublin Market last Thursday, while home dealers and victuallers were in about the usual number; all, however, were in a very apathetic mood, and business all round was decidedly slow and discouraging, particularly for coarse, unfinished cattle. Really tip-top bullocks and heifers were looked for, and sold readily enough at late rates, but coarse, thin animals made no recovery from the bottom level at which they were last day. Best ox and heifer beef sold at from 48s. to 52s. per cwt, with extra choice going as high as 55s.; good second-class beef, 45s. to 47s.; and inferior beef from 42s. to 44s. The live weight for best beef averaged for ordinary cattle from 28s. 6d. to 29s. 6d., but choice Shorthorn and Polled beasts sold at from 30s. to 31s. 6d. per cwt. Sheep were in shorter supply, and, except for prime Cheviot and other choice mutton, prices were very unsteady, there being a downward tendency for ordinary sheep. There was a very limited export trade done, making it difficult to dispose of hoggets. Prime wether mutton sold at 6¾d. to 7¼d. per lb.; ewe, 6d. to 6½d.; and inferior sheep from about 5d. per lb. Prime heavy hoggets were worth from 44s. to 55s. each; small to middling from 32s. to 42s. A few lambs were sold, and averaged from 32s. to 38s. each for large fat; while others sold at an average of about 25s. each. There was no quotable change in the price of prime veal, which made from 7½d. to 8½d. per lb., but other sorts sold cheaply. Milch cows in slow demand at very irregular prices, only the very best springers and newly calved cows meeting with a satisfactory sale. The store cattle trade shows no improvement, the discouraging state of the beef market seriously handicapping any business in stores.

LONDON.

Islington, Thursday.—Beast supply consisted entirely of fat butchering cows and bulls, middling quality predominating. Trade ruled very slow; nevertheless, last Monday's values were well maintained for the best. Top prices per 8lb: Fat cows, 3s 6d; fat bulls, 2s 10d to 3s 2d per 8lb. Decrease of 70 in number penned in sheep market, supply being one of the smallest this year. There was practically no inquiry for either wethers or ewes, the few sales effected being all more or less forced, and tendency in value ruling in favour of buyers, though barely sufficient to quote it so. Best pens made per 8lb as follows:—8st Downs, 5s 10d; 9st ditto, 5s 8d; 10st ditto, 5s 6d; 10st half-breds, 5s 4d to 5s 6d; 10st Down ewes, 4s. No calves or pigs offered. Quotations per 8lb, sinking the offal: Beasts, 2s 10d to 3s 6d; sheep, 3s 10d to 5s 10d. Total supply: Beasts, 90; sheep, 150; milch cows, 5.

London (Central), Friday.—Heavy supplies were forthcoming, but, with no improvement in the inquiry, trade all round again made very slow headway, prices in some cases ruling lower. Beef arrivals included 80 tons Scotch, 112 Liverpool sides, 2,100 hindquarters, and 1,400 forequarters American refrigerated, also 1,350 Argentine chilled hindquarters. Quotations:—Beef: Scotch short sides, 4s 2d to 4s 4d; long sides, 3s 10d to 4s 2d; English, 3s 3d to 3s 5d; American Deptford-killed, 3s to 3s 4d; Liverpool sides, 2s 10d to 3s 1d; American refrigerated hindquarters (best), 3s 6d to 3s 8d; forequarters, 2s 4d to 2s 5d; New Zealand hindquarters, 2s 3d to 2s 4d; forequarters, 1s 8d to 1s 9d; Rancher hindquarters, 2s to 2s 4d; forequarters, 1s 10d to 2s; River Plate hindquarters, 1s 11d to 2s; forequarters, 1s 8d to 1s 9d; Argentine chilled hindquarters, 2s 2d to 2s 6d. Mutton: Scotch tegs, 4s 4d to 4s 8d; wethers, 4s 6d to 4s 8d; ewes, 3s 4d to 3s 8d; English wethers, 4s to 4s 8d; ewes, 3s to 3s 4d; New Zealand, 2s 4d to 2s 8d; River Plate, 2s to 2s 2d; Dutch wethers, 4s; ewes, 3s. Lamb: New Zealand, 2s 8d to 3s; Dutch, 4s 4d. Veal: English and Dutch, 3s to 4s 2d; Irish, 2s 6d to 2s 8d. Pork: Town-killed, 3s 10d to 4s 8d; country, 3s 10d to 4s 6d; Dutch, 3s 10d to 4s 4d per 8lb.

London, Saturday.—English—per pk. of 240 lb.—Fleece S. Dn. liggs, £14 to £14 10s; halfbred hoggs, £12 10s to £13 10s; wethers, £12 10s to £13; Kent fleeces, £12 10s to £13; South Down ewes and wethers, £13 10s to £14 10s; Leicester ditto, £12 to £12 10s. Colonial—per lb.: Vic.—Fleece super, 1s 11d to 2s 1d; scoured good, 2s 1d to 2s 2d; scoured average, 1s 11d to 2s; greasy avr. to fair, 1½d to 1s 2½d; N.S.W., Second. avr., greasy avr. to fair, 1s 1½d to 1s 2½d; N.S.W., Second. avr., greasy average, 9d to 9½d; N.Z.—Scoured avr., 1s 9d to 1s 10d; greasy average, 10½d to 11½d; Cape, scoured super, 1s 10d to 1s 11d; fleece average, 10d to 10½d; greasy average, 7½d to 8½d; Natal Scoured, 1s 5d to 1s 6d; greasy average, 8½d to 9½d. Crossbreds—Grs.: Vic. good to super, 1s 2d to 1s 3d; New Zealand fine, 1s 2d to 1s 3½d; medium, 1s 0½d to 1s 1½d; coarse, 11d to 1s.

COUNTRY.

Ashford, Tuesday.—Very poor trade for beef, best steers and heifers making 4s to 4s 4d per stone, and inferior 3s 8d to 4s. Mutton sold very slowly, but no reduction. Downs making up to 5s 10d and Kent wethers up to 5s 4d. Veal unchanged. Pork very dear, roasters making highest prices known for years, from 4s 4d to 4s 10d per stone.

Basingstoke, Wednesday.—At Raynbird and Sons' Sale Yard there was a good attendance of buyers to meet a supply of 35 fat beasts, 54 calves, 373 fat sheep and lambs, 266 pigs, and 179 head of dairy and store cattle, for which the following prices were realised: Fat Devon steers, £19; Devon cows, £15 10s; shorthorn cows, up up to £15 10s; best Highland cows, £9 to £10 10s; fat calves, 70s to £5 10s; small, 18s to 50s; fat hogs, 78s to 93s; porkers, 43s to 58s; small, 28s to 39s; store pigs, 12s 6d to 20s; dairy cows, 3s to 24s; young Hants Down ewes and wethers, 58s to 63s; smaller, 46s to 52s; ten months old ditto, 48s to 52s; smaller, 38s to 46s; old Down ewes, 36s to 42s; Down rams and lambs, 50s to 57s; small and inferior, 35s to 45s; small Southdown wethers, 41s; three months old sucking lambs, Downs, 28s to 33s 6d; crossbreds, 25s to 28s. A slow trade for fat beasts of all kinds, with a reduction in prices, the exception being for choice lots of moderate weights, which are wanted. A good inquiry for fat sheep and fat lambs, and prices well maintained. Good class milch cows and heifers met a brisk trade with high prices; secondary sorts were difficult to sell at late rates. Store cattle continues a slow business. Fat calves, with a short supply, met a good trade. Fat hogs and porkers sold readily, and last week's satisfactory prices were maintained. Store pigs sold well, with a good inquiry. Ruling values: Prime Devon beasts, 6¼d to 6¾d; Shorthorn ditto, 5¾d to 6d; bulls, cows, and inferior, 4¾d to 5d per lb.; best quality fat sheep, 8¼d to 8¾d; second ditto, 7d to 7¾d; old ewes, rams, and inferior, 5¼d to 6d per lb.; fat calves, 6½d to 8d per lb.; fat porkers, 9s to 11s per score; fat hogs up to 9s 6d per score.

Berwick, Saturday.—The cattle numbered 607, 112 less than the previous week. Attendance of farmers and buyers was fair, and trade good. Calves, £6 10s; stirks, £8 to £10 15s; two-year-olds, £11 10s to £13; three-year-olds, £13 10s to £14 15s; Shorthorn bulls, £12 10s.

Birmingham, Thursday.—Small supply of beasts, sheep, and pigs. Trade good for pigs but slow for beasts and sheep. Prices: Beef, 5¾d to 6¾d per lb; mutton, 6¾d to 8¾d per lb; lamb, 8d to 8¾d per lb; bacon pigs, 9s 10d to 10s per score; cutting pigs, 10s per score; sows, 8s 4d to 8s 6d per score; porkets, 11s to 11s 8d per score.

Bristol, Thursday.—Market was of an average character. There was a limited demand for fat cattle, which were in plentiful supply, and best qualities were only quoted at 56s, rather less than lately. Fair number of sheep, and trade quiet at late rates. Pigs not numerous, and porkers declined to 10s 6d per score, baconers remaining at 8s 9d.

Canterbury, Saturday.—Sheep in large supply, trade rather slower. Eighteen months old horned stock were selling at from £8 15s to £12.

Calne Friday.—Present prices for prime pigs, in lots of not less than ten, on rail within 100 miles of Calne.

Prime Stores.	Thickness of fat in any part of Back.	Price per Sc. s.	d.
6sc. 10 lb. to 9 sc. 10 lb.	2½ in. and under ...	9	0
Under 10 sc.	Not exceeding 2¾ in.	9	0
Under 11 sc. 10 lb.	2¾ in.	8	6
Under 12 sc.	3 in.	8	0

C. AND T. HARRIS AND CO., LTD.

Carlisle, Saturday.—The supply of Irish cattle at the Sands Public Market showed a big falling off compared with late weeks, there being only between 200 and 300 penned. Buyers were also scarce, and trade dragging. Wintering heifers, £7 10s to £11 10s; stall-feeding beasts, £12 10s up to £15 for a few exceptionally good ones.

Chester, Thursday.—An excellent supply of store and dairy cattle, with a fair attendance of buyers. Trade was disappointing, the demand being slow, and last week's prices difficult to obtain. A smaller show of sheep, with quotations much the same as last week. Welsh cows, £17 to £23; calves, £15 to £20; barrens, £9 to £13; heifers, £9 to £15; stirks, £5 to £10; and sheep, 18s to 32s.

Chichester, Wednesday.—Messrs. Stride and Son held special sales of about 2,000 Southdown and other sheep and about 400 cattle of all classes. A good selling trade prevailed for sheep at about recent prices. Fat cattle met a firmer trade at about late prices. There was a large show of dairy cattle, and a brisk selling trade prevailed at higher prices. A large entry of store cattle met rather a dull trade, but very few remained unsold at the end of the day. Quotations:—Devon steers, 4s 4d to 4s 8d; Southdown sheep, 6s 4d to 6s 8d; West Country sheep, 5s 8d to 6s; fat ewes, 4s 4d to 4s 8d; veal, 4s 6d to 5s; porkers, 4s 4d to 4s 8d.

Doncaster, Saturday.—Very large supply of cattle, especially of Irish stock, and trade a shade better, though prices were practically unchanged. Milch beasts, £16 to £23; bullocks, £12 to £16; heifers and drapes, £11 to £16; stirks, £7 to £9; young stores, £4 to £6. Small supply of sheep and lambs, and no improvement in trade or prices. Drape ewes, 33s to 40s; lambs, 36s to 44s each.

Dorchester, Saturday.—The fair on Wednesday exercised but little appreciable effect on either the attendance or supplies at to-day's market, at which there were good deliveries of most kinds of stock, especially of fat beasts. Trade was slow for most things, the chief exception to this being milch beasts, which were in active request at from £16 10s to £22 each, and from £12 to £15 15s for plainer and smaller beasts. Barrenes are still very depressed, even the best not exceeding £23 per pair to-day, the poor keep prospects no doubt deterring speculation; plainer grades only made £16 to £19. Fat beasts, from an excessive offer, heifers ranging from £14 to £21 each, and cows and bulls from £9 to £18 each. Scarcely any reached £11 per score to-day. Mutton also a limited offer, a slow trade at from 43s to 48s 6d for ewes and wethers (or 6¼d to 7¼d per lb.).

Dublin, Thursday. Numbers in market: Beasts, 4,497, increase 36; sheep, 6,574, decrease 470; calves, 40, increase 3. The few choice cattle exposed for sale were bought up early at about last week's full rates; rough and inferior sorts were again in excess of requirements, and met a slow, dragging trade, with prices rather in favour of buyers. Sheep not so easily placed, even the choicest, at last week's prices, and a clearance could not be effected. Cattle, live weight (best), 28s to 31s per cwt; secondary and inferior sorts, 25s to 27s 6d per cwt. Mutton, dead weight, 53d to 7¼d per lb.—GANLY, SONS AND CO.

Edinburgh, Wednesday.—Small supplies of sheep and cattle; more milch cows on offer. Horned bullocks sold at £12 10s to £14, polled bullocks £11 to £14, stirks £8 8s to £10 10s, half-bred lambs 22s to 36s, Cheviot lambs 17s, Cheviot ewes 24s to 26s, Cheviot sheep 32s to 37s 6d, shorthorned cows to £24 15s, and Ayrshires to £16 10s.

Exeter, Friday. Large supply of beasts, but dragging trade. Best quality maiden heifers and steers, 11s; cows, 9s 6d to 10s; some of the latter unsold. Not quite so many sheep on offer, and only best quality big lambs and hoggs in demand at 8¾d; wethers, 8d; ewes, 6d to 6¾d; small lambs, 9d to 10d. Calves, 7¼d.

Glasgow, Wednesday.—A moderate show of cattle and sheep, and demand slow, with values unchanged. Top Scotch cattle 64s, extreme 60s to 62s, current secondary 56s to 57s, Irish 56s per cwt.; top hoggs 9d, secondary 8½d to 8¾d, top wether 8d to 8¼d per lb. Dead meat quiet, but values steady; best Scotch beef 6d, best States 5¼d to 5¾d, best Canadian 5d to 5¼d per lb.

Gloucester, Saturday.—Messrs. Bruton, Knowles and Co report their sales as follows:—Cows and calves and in-calves a large supply (85), with good trade, the best prices being £22 10s, £21, £20 15s. A fair supply of store cattle, with slightly improved trade.

Hereford, Wednesday.—A smaller supply, following the October fair, but there being more customers trade was slightly firmer. Fat bullocks and heifers a small supply, sold quicker than last week at 6d to 6½d, and 6¾d per lb for the primest; cows at 5½d per lb. Store cattle slow. Fat calves few at about 7d per lb. Store calves a little dearer. Sheep very moderate supply. Fat wethers and yearlings up to 8d per lb, fat ewes 6¾d per lb. Fat lambs were scarce, and met with a ready sale at 8d. Pigs numbered a few more than last week. Porks and bacons met with a prompt clearance at 6d per lb all round. Store pigs were dear.

Ipswich, Tuesday.—Messrs. Robert Bond and Sons report a shorter supply of fat cattle, which sold freely, the local demand being strong. Choice yard-fed animals made from 9s 3d to 8s 6d per stone; grass cattle, 8s to 7s 6d per stone. Grazing cattle were well represented, including large consignments from Cumberland, Westmoreland, and Ireland. There was a fair demand for strong steers at recent values, but young growing cattle were dull, and lower prices had to be accepted. Two-year-olds, £12 15s to £11 7s 6d; eighteen months, £9 10s to £8 10s; sixteen to twelve months, £8 to £5 10s; red polled steers, eighteen months, in good condition, £11 15s; Cumberland heifers, eighteen months, £10 12s 6d; Irish calves, £6 15s to £3 10s. Fat sheep were in good demand, and recent rates were fully maintained. Early hoggets to 62s, shearlings to 65s. Grazing sheep and ewes were in fair demand, but the trade was not brisk. Fat swine dear and prices higher. Stores in strong request from 35s to 18s.

Leicester, Saturday.—Large consignments of home-bred bullocks. Buyers and dealers were well represented, but trade ruled slow, and prices generally declined fully 10s per head. Choice milch cows, £20 to £24; good lots, £17 to £19; inferior, £14 to £16; cross-bred Polled cattle, £14 to £15; Shorthorns, £11 to £13 10s; Welsh cattle, £10 to £13; Irish stock, £12 to £14; young stock, £5 to £8; calves, 15s to 35s. Sheep were a small supply, and sold slowly at irregular rates.

Lincoln, Friday.—Cattle were penned in small numbers, but trade was brisk. Yearlings made £8 to £10, two-year-olds £13 10s to £15. Sheep were also a small show, and trade was good. Drape ewes 35s to 40s, lambs 35s to 43s.

Lynn, Tuesday.—Average show of fat beasts, trade slow, 7s to 7s 9d per stone. Large show of store beasts, trade slow, £16 to £17 each. Average show of fat sheep made late rates, 9s to 10s per stone. Store pigs, 42s to 48s. Lambs, a small show, sold up to 40s each.

Manchester, Friday.—Beef: First-class, 4¾d; second-class, 3¾d to 4d; third-class, 2¾d to 3d. Mutton: First-class, 7¼d; second-class, 6¼d to 6¾d; third-class, 5¼d to 5¾d. Veal: First-class, 6¼d; second-class, 5¾d to 6d; third-class, 4¾d to 5d. Bacon pigs: First-class, 5¼d; second-class, 4¾d to 5d; third-class, 3¾d to 4d. Porket pigs: First-class, 7¼d; second-class, 6¾d to 7d; third-class, 6¼d to 6¾d.

Nottingham, Saturday.—Small supply of stock all round. In-calf cows, £18 to £20; in-calf heifers, £13 to £16 10s, and two and-a-half-years-old steers and heifers, £12; yearling steers and heifers, £7. A small show of calves, and a very slow trade, making 18s to 35s each.

Norwich, Saturday. — Trade easier for fat beasts, which were in good supply; prices averaged 7s to 8s per stone. Store animals in decreased numbers and trade very quiet, values ranging from £6 to £18 per head. The small supply of lambs was quite sufficient to meet a dull demand at 28s to 40s per head; fat sheep included a number of hoggets, and prices were about the same, viz., 10s to 10s 6d per stone. Firm demand for pigs, fat animals making 6s 9d to 7s per stone.

Preston, Wednesday.—There was a plentiful supply of cattle, and a good supply of sheep, but in both departments a rather slow trade was experienced. Heifers made 5¾d to 6d, bullocks 5¾d to 5¾d, cows and bulls 5d to 5¼d, hoggs 8¾d to 8¼d; tups 5¼d to 6d, ewes 6d to 6¾d, lambs 8d to 8¼d per lb.

Retford, Saturday. — Good milch cows, £18 to £20; medium kinds, £14 to £17; steers and heifers, £8 to £12; yearling, £5 to £7; and calves, 35s to 45s.

Colchester, Saturday.—There was a good supply, and also a good trade. Grass beef sold at from 4s 4d to 4s 6d per stone of 8lb.; mutton, 5s 6d to 6s; and pork at 9s per score.

Romford, Wednesday.—Average supply of fat beasts, trade unchanged; best, 4s 2d to 4s 4d; middlings, 3s 10d to 4s per stone. Calves scarce; fair trade at 5s 2d to 5s 4d per stone. Sheep plentiful, trade worse; best, 5s 6d to 5s 8d; middlings, 5s 2d to 5s 4d; ewes, 3s 10d to 4s per stone. Slow demand for store beasts. Average supply of pigs, trade about the same.

Shrewsbury, Tuesday.—There was about the usual supply of cattle, etc. Buyers met a large number, but trade was good. Quotations:—Beef, 5¼d to 6¼d per lb; mutton, 7¼d to 8¾d per lb; veal, 8d to 8¼d per lb; porket pigs, 10s to 10s 3d per score; bacon pigs, 9s to 9s 6d per score. Numbers offered as follows:—859 cattle, sheep and lambs 1,013, calves 77, pigs 598.

Thame, Tuesday.—With a larger attendance of buyers trade ruled brisk throughout the sales, beef selling at an advance upon previous week's prices. Mutton in request. Bacon, pork, and veal at much higher figures, weaning calves and store pigs quickly changing hands. Messrs. Beard and Burrows sale comprised 83 fat beasts, 159 fat sheep, and 117 fat and weaning calves, and 90 fat and store pigs. Fat oxen made from £16 10s to £20 17s 6d; fat heifers, £15 10s to £19 10s; fat wethers, 50s to 60s 6d; fat ewes, 40s to 48s; fat calves, £3 15s to £5 3s; weaning cow calves, 30s to 60s; bull calves, 10s to 45s; bacon hogs, £3 10s to £6; porkets, 32s to 48s; store pigs, 15s to 45s.

Truro, Wednesday. — Business fairly brisk; attendance very good. Fat bullocks, 54s to 58s cwt.; barreners and store bullocks, 40s to 45s; cows and calves, £10 to £16; rearing calves, 25s to 30s each; wethers, 7¼d per lb; ewes, 5¼d; lambs, 7¼d; pigs, 3s 6d to 45s each; beef, 6d to 8d per lb; mutton, 6d to 8d; lamb, 6d to 8d; veal, 6d to 8d; pork, 6d to 8d; bacon, uncured, 6d to 7¼d; cured, 7d to 9d; pork carcases, 4¼d to 5¼d. Number in cattle market: Bullocks, 311; calves, 75; sheep, 335; pigs, 227; horses, 2.

Wolverhampton, Wednesday.—A shorter supply, with fair demand. Quotations:—Beef: 5d to 6¼d per lb; wether mutton, 7d to 7¾d per lb; lamb, 8d to 9¼d per lb; ewes, 6¾d to 7d per lb; calves, 6d to 7¼d per lb; bacon pigs, 9s to 10s per score; porkets, 10s to 11s per score; sows, 7s to 8s 3d per score.

Worksop, Wednesday.—Small supply of stock, with trade fairly good. Best beef made 6s 9d to 7s 3d, secondary qualities 6s 3d to 6s 9d per stone, best Southdown wethers and cross-bred shearlings 8d to 9d, ewes 6d to 7d, lamb 9d to 9¼d per lb, store lambs up to 35s each.

Yeovil, Friday.—Good demand for milking animals. Heifers with calves made from £14 10s to £19 15s; cows and calves, from £13 to £13 10s; in calvers, from £12 10s to £15 10s; barreners, £9 10s to £12 5s; store steers, £9 5s to £10 10s; wether sheep, from 48s to 53s; ewes, 45s to 51s; store lambs, 28s 6d to 35s.

York, Thursday.—A very large show of both Irish and English store cattle, about 3,100 being penned. The Irish cattle are for the most part strong, but the English are chiefly west and south country small steers. A few south country buyers were present, but they were cautious in their purchases, as trade is not good in the south. There were more customers generally than last week, and plenty of the stronger cattle sold, though in favour of the buyers, trade being poor, especially for the smaller steers. Some good three-year-olds made up to £15 10s, useful sorts making £13 to £13 10s. The price of stirks varies with size and quality, from £8 to £9 10s. A good show of calving and milch cows, which met with a fair demand at last fortnight's rates. Exceptional animals made up to £22 10s, the general run being £16 to £18 10s. This was the last of the large sheep fairs, but the supply was smaller, rather less than 12,000 being penned. Best north country ewes made up to 50s, others 40s to 45s; north country lambs, 26s to 32s; best twice-crossed wethers, up to 48s; Masham shearlings, 40s to 44s; twice-crossed lambs, 28s to 34s; Masham lambs, 21s to 26s; and Cheviot ewes, 23s to 28s. A lot of smaller sorts of all kinds were left unsold, and trade ruled very slow throughout.

FOREIGN.

Yorkhill, Monday. At the usual weekly sales of Canadian cattle held to-day only moderate supplies were on offer, 548 head being penned in the lairages. The animals were mostly bullocks, a large range of light, medium, and heavy weights being shown at the stances, but the majority were of secondary, middling, and inferior qualities, and for these a very poor selling trade was experienced at prices considerably lower than those ruling last week. Bullocks of first-class quality were in request, but the small number on offer were cashed at values slightly under last Thursday's top quotation, and the bull trade showed no improvement. Bullocks of useful sizes and weights made up to 55s per cwt dead weight, while secondary, middling, and inferior sorts were cashed from 51s to 53s per cwt, and bulls from 45s to 46s per cwt

EGGS.

(Number per 1s., except where otherwise stated.)

Saturday.—Appleby: 6 and 7. Berwick: 1s 3d to 1s 4d per dozen. Bridgnorth: 8. Carlisle: 5 and 6. Doncaster: 8 and 9. Grantham: 7 and 8. Howden: 7 to 9. Lancaster: 6 and 7. Malton: 6 and 7. Pontefract: 8. Retford: 2s 8d to 2s 10d per score. Richmond (Yorks): 6 and 7. Shrewsbury: 6 and 7. Stokesley: 8 and 9. Whitby: 7 and 8. Worcester: 7. York: 6.

BUTTER

(Prices per lb., except where otherwise stated.)

Saturday.—Appleby: 1s to 1s 2d. Berwick: 9d to 10d. Bridgnorth: 1s 1d to 1s 3d. Carlisle: 1s 2d to 1s 3d. Doncaster: 1s 1d to 1s 2d. Grantham: 1s 2d to 1s 3d. Howden: 1s 1d to 1s 2d. Lancaster: 1s 1½d to 1s 3d. Malton: 1s 2d to 1s 3d. Pontefract: 1s 2d to 1s 3d. Retford: 1s 3d to 1s 4d. Richmond (Yorks): 1s to 1s 2d. Shrewsbury: 1s 2d to 1s 3d. Stokesley: 1s 1d to 1s 2d. Whitby: 1s 1d. Worcester: 10d to 1s 3d. York: 1s 2d to 1s 3d.

CHEESE.

Newport, Wednesday.—A good supply, and business was slow. Quotations:—Caerphillies, 52s to 56s per cwt; fancy dairies, 59s to 60s; truckles, 53s to 60s; Derbys, 68s to 70s; and Cheddars, 60s to 56s.

Glasgow, Wednesday.—Arrivals of cheese were heavy. The demand was slow, as the bulk of the buyers had got their requirements at Kilmarnock. Holders were not disposed to concede anything. Cheddars were quoted from 56s to 71s per cwt., and Dunlops from 54s to 59s.

GAME AND POULTRY.

Sheffield, Saturday.—Fair supply; demand slow. Prices: Pheasants, 4s 6d to 5s 6d; young grouse, 4s 6d to 5s; old, 3s; young partridges, 2s 6d to 3s; old, 1s 4d to 1s 6d per brace; geese, 5s to 7s; ducks, 2s to 2s 9d; Surrey fowls, 2s 6d to 4s; Essex fowls, 2s to 2s 6d; Lincolnshire fowls, 2s to 2s 6d; Irish fowls, 1s 6d to 2s; Russian fowls, 1s 3d; black game, 1s 2d; wild ducks, 1s 4d to 1s 6d; snipe, 6d to 9d; quails, 1s to 1s 6d; feathered pigeons, 7d to 9d; Bordeaux pigeons, 9d to 1s 1d; English hares, 2s 6d to 3s; leverets, 1s 9d; Scottish hares, 1s 6d; tame rabbits, 1s 3d; wild rabbits, 6d to 10d; live hens, 1s 4d to 1s 9d each; Australian rabbits, 6s to 8s per dozen. Venison haunches, 12s 6d to 15s each; forequarters, 3d per lb.

FRUIT AND VEGETABLES.

Covent Garden, Saturday. — A brisk demand prevailed for a good supply of fruit and vegetables. Quotations for British produce:—Apples, 4s 6d to 12s per bushel; melons, 9d to 2s; peaches, 5s to 15s; green figs, 6d to 1s 6d per dozen; grapes, 4d to 3s; cobnuts, 5s to 6s; filberts, 4s 6d to 5s 6d per 12lb.; walnuts (Grenoble), 7s to 8s 6d; chestnuts (Redon), 7s to 10s 6d per bag; tomatoes, 2s to 3s 6d; Jerusalem artichokes, 1s 6d to 2s; Brussels sprouts, 1s 3d to 1s 6d per half sieve; mushrooms, 7s 6d to 12s per 12lb.; cucumbers, 1s 6d to 4s; endive, 9d to 1s 3d per dozen; cos lettuce, 9d to 1s 6d per score; beetroots, 2s to 2s 6d per bushel; onions, 5s to 5s 6d; celery, 7s 6d to 12s per dozen rolls; parsnips, 2s 6d to 3s; turnips, 2s to 2s 6d; carrots, 2s 3d to 3s per bag; leeks, 1s 3d to 1s 6d; radishes, 6d to 9d; parsley, 1s 6d to 2s per dozen bunches; cauliflowers, 3s 6d to 5s; cabbages, 3s to 3s 6d per tally; horseradish, 8s 6d to 12s 6d per dozen bundles; potatoes, 55s to 70s per ton.

HOPS

Worcester, Saturday.—The smaller quantity of hops now offering meets a steady demand; good samples are wanted, and sell readily, also any lower priced lots. Medium samples are more plentiful, and offer best value. Yearlings sell at low rates. 2,027 pockets have been weighed this week, making 22,313 to date.—CHARLES FARAM AND CO.

FEEDING STUFFS.

Hull, Tuesday.—**Linseed**: Under pressure to sell arrived seed the market early in the week was flat, and 35s to 35s 1½d accepted for spot Plata. The close, however, is firmer, with a better demand. 35s 3d having again been paid for seed in lighter. October-November is nominally 35s 9d, and new crop January-February 35s 3d. Petersburg has sold at 35s 6d to 35s 9d prompt shipment. **Cottonseed**: During the past week there has been an easier tone in Egyptian seed, but a fair business done at £5 13s 9d to £5 14s 6d per steamers on the way and October B/L, also on November-January at £5 12s 6d to £5 11s 3d, the market being steadier to-day at £5 14s 9d October, £5 14s 6d November and November-January. Bombay done at £4 15s to £4 15s 6d, November-December, shippers scarcely offering this position to-day. A fair £4 14s. **Oilseed cakes**: Linseed cakes: Demand moderate; prices very firm. Cotton cakes: A firmer tone with better demand. Feed cakes are 4s 9d to 5s per ton dearer.

KEIGHLEY, MANSTED AND CO.

London, Thursday.—Linseed continues firm in absence of offers by importers, but except for all-at parcels the demand is poor. Calcutta London, spot 28s 6d, and all-at 38s 3d, October-November 38s, April-June 35s 6d. Rapeseed has maintained its position, importers continue to show increased firmness. Brown Cawnpore November-December 38s, Brawn Calcutta 37s, April-June 35s 6d, Ferozepore 38s. Cottonseed: A good demand in Hull has stimulated prices, and Egypt has advanced considerably. London: Passage, new £5 12s 9d, old £5 15s., prompt new £5 17s 6d asked, October £5 17s 6d, November-January £5 17s 6d wanted. Hull: Spot and passage is selling at £5 16s 3d, October £5 17s 6d paid, November-January £5 16s 3d. **Oil cakes.**—Linseed cakes: Firm. London made £7 15s to £7 17s 6d. Cotton cakes quiet; London made £4 12s 6d.—THE PRODUCE BROKERS CO., LTD.

Mark Lane, Monday.—Linseed cakes: Values continue to harden in spite of only a moderate demand, and, with dearer seed, there is every indication of still higher rates in the near future. Russian are getting scarce on spot and landed lots make full prices. American remain best value at a slight advance on last week's prices. Round Austrian in bags offer at £7 17s 6d to £8 London-made command rather more money and are 2s 6d dearer. Cotton cakes: A fair quantity of Egyptian is available in warehouse, and for these last week's prices are asked, which are also the nominal quotations for forward shipments. English meet a slow sale and are unchanged. Decorticated: In consequence of a heavy demand for London-made the manufacturers have raised their prices to £7 for cake and meal, and £5 5s for special digestive meal, while American "Open Hand" brand offers at £7 2s 6d, and meal at £6 12s 6d. Rape cakes do not offer. Maize germ meal: Some business is reported in steamer parcels of White American for December-January shipment at £5 7s 6d, which is about present value. English are again the turn dearer. Maize gluten meal is nominally quoted at £5 15s per ton. Rice meal: A steamer cargo of Rangoon just arrived has found buyers at £4 16s 3d ex ship terms, which is also the price asked for November-December shipments. Broken Rangoon rice is cheaply offered at £4 15s per ton ex docks. Locust beans sell steadily at £5 10s for whole and £5 15s for kibbled. Nitrate of soda is without change at £10 15s per ton ex quay.

MOLASSINE FEEDING MEAL, packed in bags of 1 cwt. each. Price per ton, £6 15s., in ton lots and upwards. £7 10s. per ton in less than ton lots. Free on rail, Liverpool or London. Uniform delivered price for small quantities, 10s. per bag of 1 cwt.

COLONIAL DAIRY PRODUCE.

London, Friday.—Butter: Australian meets a good demand, with more business passing, doubtless due to the falling off in the home make and the colder weather. Choicest brands of salted are making 112s per cwt, with an occasional 114s. Unsalted of choicest quality makes 2s per cwt more. The market in Copenhagen is reported better, but the official quotation is left untouched at 100 kroner. The arrivals from Denmark this week were 1,740 cwt below those of the previous week. Siberian is selling freely, especially the best quality, at 102s to 106s, and for extra quality 108. The railway strike in Russia, which has stopped all Siberian butter in transit at Moscow and beyond, will undoubtedly cause much inconvenience to the trade owing to the delay en route, and should the delay last for a fortnight or more the shortage of Siberian butter will stiffen the butter market, even if it does not increase the prices of butter generally. Cheese: The demand for Canadian this week has been quiet, but prices on the spot have shown no appreciable change. Choicest September white is bringing 57s per cwt, and coloured 58s; other qualities are making 55s to 56s.—W. WEDDEL AND CO.

POTATOES.

Spitalfields, Saturday.—Arrivals were on a fair scale, but the demand was only moderate. Royal Kidney, 60s to 95s; British Queen, 60s to 65s; Blackland, 55s to 60s; Up-to-date, 60s to 70s; Scottish dates, 60s to 65s; Queens, 55s to 60s per ton.

MR. FELLOWES AT PERTH.

Conference with Scottish Agriculturists.

The annual conference of the Scottish Chamber of Agriculture and affiliated societies with the President of the Board of Agriculture took place on Friday, Perth having been selected as the place of meeting this year. The meetings were held in the hall of the West United Free Church, Watergate, which was placed at the disposal of the Chamber by the kirk session, and was largely attended, about two hundred members being present. The Right Hon. Ailwyn E. Fellowes, M.P., was present for the first time in his official capacity as Minister for Agriculture, and he was accompanied by Sir Thomas H. Elliott, K.C.B., Secretary to the Board of Agriculture, and Major Craigie, of the Statistical Department.

The Forenoon Conference.

At the forenoon conference the chair was occupied by Mr. John Drysdale, Arngibbon, Port of Menteith, president of the Chamber, who, in welcoming the delegates, said he was pleased to report that they had now sixty-seven affiliated societies from practically every county in Scotland. Whatever little prejudice had formerly existed against the Chamber was now dying out, and it was increasing in usefulness year by year, and becoming the channel through which the wants of agriculture in a legislative and administrative sense might be submitted to the proper quarter. As a corporate organised body they could do much, but acting as individuals or units they might be as a voice crying in the wilderness.

Resolutions on various subjects were subsequently moved and discussed.

Subsequently the office bearers for the following year were elected, Mr. James Biggar, Chapelton, Dalbeattie, was appointed president of the Chamber, and Mr. John A. Dewar, M.P., honorary president for the current year.

The Luncheon.

At the close of the forenoon conference the delegates were entertained to luncheon in the Salutation Hotel by the local committee. Mr. John Stroyan, M.P., occupied the chair, and, in proposing the toast of "The President of the Board of Agriculture and Fisheries," said the Department had a wide range of duties, and had done much excellent work and much for agriculture since it was established. The success of all Departments must depend largely on the personnel, and in the case of the Board of Agriculture they had been extremely fortunate in that respect from first to last, not only as regarded the political and responsible head, but also in the devoted body of permanent officials.

Mr. Fellowes, in responding, said he had now been for three years connected with the Board, and for many years he knew the work of the permanent officials, and he wished to say publicly that the words used by Mr. Stroyan were not one whit too generous. Presidents of Board came and presidents went, under their party system, but the permanent staff stayed on for ever. Agriculturists had to thank the permanent officials of the Board for the action they had always taken to prevent disease from coming into the country. Critics of the Board hardly realised that it was no wish on their part that they should pass unnecessary regulations, or to take action which would bring loss to any one or be detrimental to farmers. They had to think, not of one particular district; they had to think of the country as a whole. Although some of their regulations might be irksome and might cause dissatisfaction, let them give the Board credit for this, that during the last few years the regulations which they had been compelled to make had nearly rid the country of all disease. Other toasts were duly proposed and honoured.

The Afternoon Conference.

The conference was resumed at two o'clock, with Mr. Stroyan, M.P., as honorary president of the Chamber, in the chair. He was supported by a large company on the platform, and there was a big attendance of members. The Chairman thanked the Chamber for the honour conferred upon him in electing him their president, and welcomed Mr. Fellowes to the conference, dealt with some of the questions now receiving the attention of agriculturists, more particularly in Scotland, and he concluded by stating that he was not one of those who despair of the future of agriculture in this country, the less so when he saw so many prosperous agriculturists around him. Why had they so many farmers still doing fairly well in Scotland? It was not because their land was specially good or specially cheap. With the competition of to-day the old style of farmers could not make a living if they got the land rent free. They succeeded simply because they combined energy with high intelligence and scientific principles, and in that way and in that way only they would continue to succeed.

Members of the Chamber then introduced various subjects for discussion, and some resolutions were passed, but as these were dealt with by Mr Fellowes in his reply, we need not set them out here.

Mr. Fellowes' Speech.

Mr. Fellowes, on rising to address the conference, was received with loud applause. At the outset he expressed his pleasure to him a real one of being able to meet such a large body of Scottish agriculturists and then reviewed the action which had been taken with regard to the different subjects which were brought before the conference last year, and he said he thought the Board could fairly claim that a very considerable measure of success had attended their efforts to carry into effect the wishes which were expressed by the Chamber at the Glasgow meeting. Passing on to the various subjects brought before him that day, Mr. Fellowes said: First of all, there was the resolution in favour of

The Compulsory Dipping of Sheep

twice a year. This subject had naturally engaged a very large amount of his time and attention this year. It was practically the first question with which he had to deal when he succeeded Lord Onslow, and it was not long before he found himself in the thick of a discussion which was, to say the least of it, somewhat animated. As they knew, the indignation against the action the Board proposed to take was both wide and deep. It was in these circumstances that he suggested a conference between the Board and representatives of the Scottish flockmasters, to see if they could come to some amicable arrangement, and it was largely due to the valuable assistance of those who came to that meeting that they were able to devise a scheme which was practicable and sufficient to mee the object they had in view. However, this was all ancient history now, and he hoped that in any future action they might take they would carry with them the approval of all those who, equally with them, desired to see the eradication of this troublesome disease. He understood that some complaint had been made as to the considerable cost which had fallen upon the county funds in carrying out the Order, but he would ask them to regard this as an insurance which would be well repaid in the increased freedom from disease which they hope to see.

Well, he added, the resolution to-day indicates that you are in favour of compulsory dipping of all sheep twice a year, and I suppose there is general agreement that periodical dipping is only part of the ordinary practice of all large flockmasters. It is not with them that the difficulty mainly rests, but with the crofters and smaller men, who, sometimes from neglect and sometimes from lack of the necessary facilities, allow their sheep to go undipped. It was considerations such as these which made them hesitate to suggest a large measure of compulsory dipping, but he was bound to say that after their experience of the recent Order in Scotland they would be able to take a more rosy view, and it was very gratifying to him to know that he could count on the support of the Scottish Chamber in this direction. At the same time, as soon as one came to close quarters with the question, the practical difficulties that arose were undoubtedly serious, and he was not sure that the framers of the resolution had kept them sufficiently in view. It could not be too often remembered that the real difficulty was that, if the value of the dippings was not to be altogether destroyed, it was essential that sheep that had been dipped must be kept separate from sheep which had not. It was this consideration that made it so important that the dipping period should be as short as possible, in order that the necessary restrictions on movement should not continue for longer than is absolutely necessary, and, of course, it was this point which had caused all the difficulties about the markets. He was afraid, therefore, that it was not possible to allow each flockmaster to choose his own time for dipping, but he would do all he could to arrange that the dipping period should be fixed for as convenient a time of the year as was possible. But he would warn them that it was impossible to please everybody in this way, and he would therefore ask that they would look upon his decision, whatever it might be, with as favourable an eye as they could.

The Motor Car Act.

Coming next to the question of motor cars, Mr. Fellowes said he shared the Chamber's satisfaction at the appointment of a Royal Commission. He had no patience with what were called road hogs; but they had to make the best of motors. They must realise that they were the future traction of their country districts, and they might be of enormous benefit to agriculturists. He could not agree with the general view of the conference as to lights on slow-going vehicles. Two or three years ago the Norfolk County Council passed a resolution that all such vehicles should carry one lamp except in June, July, and August. The first few months there was a great feeling among agriculturists. Other counties, however, took the matter up, and from that day he had never heard a word against the regulation. He would, however, bring the view of the Chamber before the proper authority.

Departmental Committee.

Referring to the resolution dealing with the Departmental Committees on contagious cattle, abortion, and small holdings, Mr. Fellowes said that the former were now making scientific experiments, and he hoped that in the course of a year or two they would have the results of their labours. He was very much struck by what was said at Glasgow last year by Mr. Speir and others on this question, and he was glad that the Board had been able to meet their wishes by appointing a committee of experts to inquire into the whole matter. He took that opportunity of thanking the Highland Society for so magnificently giving them £500 towards the expenses of this committee. It had been said that this was to save the Treasury. He did not think that was the case, because the Treasury had already agreed to give them £4,000 for this purpose. At the same time he was grateful to the Society for their contribution, and he hoped the result would be satisfactory.

With regard to the veterinary profession, he thought that agriculturists owed them a deep debt of gratitude. They have done grand work for the agriculturists. As regarded disease, the condition of the country was on the whole most satisfactory at the present moment. Cattle plague, pleuro-pneumonia, rabies, and foot and mouth disease had disappeared, and he hoped that none of those present would ever see them again. The number of outbreaks of swine fever during the first three quarters of this year had decreased 39½ per cent. Last year also showed a very large decrease. The number for corresponding period last year was 1,068, while for this year up till last Saturday the number was 665. Sheep scab showed a large reduction of 34½ per cent., and glanders a reduction of 21 per cent., and only in the case of anthrax had there been a very small reduction.

With regard to the Small Holdings Committee, he would only say that the presence of Sir Ralph Anstruther and Mr. William Brown on the Committee, as representing Scottish Agriculture, would be a guarantee of the practical nature of any recommendations they may arrive at, and he added that the appointment of the Committee was, of course, in no sense any reflection on the efforts of past presidents of the Board to promote the extended acquisition of small holdings.

Agricultural Legislation, &c.

Dealing with this matter, Mr. Fellowes said there was no subject which deserved the serious attention of the country more than the increasing difficulty of passing legislation through the House of Commons. It was sometimes said that during recent years the House of Commons had fallen from the high position of respect which it was accustomed to hold in the minds of the British people. If this was so, the cause, more than anything else, was the growing feeling that a legislative assembly which could not legislate was in a condition which inspired feelings far removed from respect. The question was one far above party, and should be considered with a single eye to the interests of the nation as a whole, and with a view to see in what way the urgent needs of the country for legislation in many directions could be most practically carried out.

What the remedies were for this state of things he could not undertake to say. It was a question which could only be finally settled by agreement between men of all parties, and its thorough consideration could not be much longer delayed; but there were one or two suggestions which he would throw out, which might do something to mitigate the evils of the present position. In the first place, he believed that private members might do a great deal to help the passage of more or less uncontroversial Bills promoted in the interests of agriculture. He was sure that the example of the Irish party was one that the agricultural members might well imitate in this respect. With carefully arranged organisation and concentration of forces, the agricultural members might agree to unite to ballot for two or three Bills, and if this were done there was no reason why they should not be successful.

Coming to the last two resolutions, which related to milk prosecutions and fertilisers and feeding stuffs, Mr. Fellowes said they both required legislation, and both of them seemed to him eminently suitable subjects to be taken up by the agricultural members. He feared, however, that there was not much possibility of the Government being able to deal with the questions next session, but he thought they might be undertaken by a private member with a reasonable prospect of success if he were fortunate in the ballot.

In conclusion, Mr. Fellowes thanked the members for their patient hearing, and said that while he may not have been able to meet their wishes on all points so far as they could have wished, it had not been from any want of sympathy, but rather on account of circumstances over which he personally had no control. On the whole, however, he was glad to think that they were in substantial agreement upon all the subjects which had been discussed, and he assured them that he and the officials of the Department would give their best attention during the coming year to the matters brought before them, with a view to doing all that was in their power to help forward the great industry in which they were all engaged.

Live Stock Record.

NOVEMBER TREATMENT OF GRAZING BULLOCKS.

When November comes, however abundant grass-keep may be, the fatting bullocks ought to be in their stalls or feeding-houses, where they are to have winter feeding. Besides the natural deterioration of grass at the latter part of autumn, the nights are liable to be either cold, wet, or stormy. Animals to thrive and lay on flesh well should be in comfort. The very elements of animal physiology teach that when a considerable proportion of the food taken into the stomach goes to supply heat to the skin and keep the blood at its right temperature, secretion for flesh-forming becomes impaired or stopped altogether. Farmers, when busy with field labours, often delay housing their beasts a little too long, unmindful of the fact that if they should take cold, or get a serious check, owing to a sudden night tempest, it might take some time and cost to repair the mischief. The exact period of putting beasts into their winter quarters, had needs, of course, to be much earlier in some parts of the country than others, and ought to depend very much on climate, soils, situations and circumstances. Sometimes the change has to be made quite early in October; in other cases, experienced feeders having an abundance of grass have taken in their cattle at the close of every day as soon as the nights get inclement, to turn them out every morning, which course has often been pursued far into November.

When bullocks are housed for good, there should never be too great a change from succulent to dry diet. Cabbages form the most suitable substitute for grass in autumn, and if there should be any arable connected with the holding, one of the principal crops to grow should be autumn cabbages, so valuable are they to serve this object. Some may fancy that yellow turnips, which cost less than cabbages, might do as well, but they are more watery and less nutritious. There are many grazing farms in alluvial lowlands and rich marshes which have no arable, however, in which cases silage ought to have been made and to be in readiness to be supplied to the grazing beasts, in the proportion of about 20 lb. per head per day, after being taken in from grass. That is about the quantity of roots judicious feeders prefer to give their cattle either early or late in the season. In all cases, the best hay is usually kept fully supplied in the racks, that the animals might partake of it ad lib. Frequently they are found to eat considerable quantities, even in the earliest housings.

As to the quantity of cake or corn allowed, that ought very much also to depend on circumstances. Some bullocks may have been grazing more or less during the summer and be half or three-parts fat; in other cases they may not have had auxiliary feeding stuffs but slightly as yet, and it would be anything but right to put all alike on the same rations. Far more rational would it be to assimilate the quantity of the auxiliary food, as well as its character, to what it had been previously; if the nearly ripe ones had been used to 7 or 8 lb. of oil cake, this should not be lessened, and it would be riskful to substitute meal lest the flesh got flabby and soft. On the other hand, cattle taken in fresh to graze may economically be fed on one-half corn or meal, instead of all cake at first, and, according to very good testimony, 5 lb. per day of auxiliary food need seldom be exceeded.

STOCK AND SHOW NOTES.

By Herdsman.

An interesting innovation has been made at the famous saleyard in St. Martin's Lane. I, of course, refer to Aldridge's Repository. On Saturday week, for the first time, the hunters entered for sale were made to jump artificial fences, and, whilst the performances gave the company present some cheap entertainment, it gave buyers a better opportunity of estimating the value of the hunters, and so successful was the experiment that it is likely to be continued. The idea is not a new one for the Messrs. Withers, at their open-air sales in the Wembley Paddocks, run the horses over a miniature steeplechase course, but the experiment was a bold one and deserved the success which attended it.

This year some of the Northern agricultural societies in Scotland held a combined show at Inverness, and the financial result was as satisfactory as the show itself, for at a meeting of the Joint Show Committee held last week, at which representatives were present from Easter and Wester Ross Farmers' Society, and the Black Isle, Inverness, and Nairnshire Clubs, it was stated that there was a surplus of over £100, after the expenses had been met. The members expressed the hope that the success of the show would be the means of doing away with local shows, and promoting joint shows in the Northern district. It was agreed to give an honorarium of forty guineas to Mr. D. Gray for the excellent manner in which he had performed the secretarial duties.

Messrs. Alfred Mansell and Co., Live Stock Exporters, Shrewsbury, have recently shipped for Freemantle, from the Port of London, per ss. "Port Victoria," two high-class Shropshire stud rams on account of Mr. H. F. Harvey, who owns a flock of Shropshires in that State. In selecting, size combined with nice character and a close dense fleece was the object in view. One ram came from the old-established prize-winning flock of Mr. Peter Everall, and was sired by Bank Manager 10964, bred by Mr. W. F. Inge, by the 120-guinea Banker, reserve No. at Maidstone R.A.S.E., from a ewe by Cornish Giant 9861, bred by Mr. J. Bowen-Jones, and a winner at Birmingham R.A.S.E. Mr. J. W. Dee, of Woollas, also supplied a good ram in a son of Woollashill 11940, by Dunsmore Commander 10318, winner S. and W.M., bred by Mrs. Barrs, by the 180-guinea Ensdon Four B.'s 9005 from a ewe by Rejected Star 10497, bred by Mr. A. E. Mansell, by Dream Star 8977 (a son of the 175-guinea Montford Dreamer).

It is to be noted that the champion ram at the recent Royal Show at Melbourne exhibited by Mr. Harry Williams and Nephew, was practically a Whiston-bred sheep, being sired by Whiston Beau 11324, bred by Mr. Matthew Williams, by Bonny Dreamful 9362, the dam being a very choice in-lamb ewe which Mr. M. Williams gave to his son Bertie when he emigrated to Tasmania with his uncle about two years ago.

Messrs. Alfred Mansell and Co., Shrewsbury, have received advice from Melbourne from Mr. Hart, for whom they purchased His Majesty the King's champion shearling Southdown ram at the recent Royal Show, Mr. Adeane's 1st prize ram at the Bath and West of England, and Mr. Ellis's 2nd prize pen of shearling ewes at the Royal Show, and one of his commended pen, have arrived safely at the quarantine station there, and that they have been greatly admired by all breeders out there who have seen them. Mr. Hart also expresses his complete satisfaction with them.

The Welsh National Agricultural Society have decided to hold their next show at Aberystwyth on August 8 and 9, 1906.

At a meeting held at Harleston, on Wednesday, to receive the report of the sub-committee appointed to ascertain what support would be forthcoming in the event of the Norfolk County Show being held at Harleston in 1906, Mr. C. Devereux, the secretary, reported that upwards of £172 had been promised, and the chairman stated that he had the authority of a gentleman to promise another £10. The secretary further reported that Mr. Barker, the county secretary, had been over the proposed ground, and was satisfied with it. The opinion was expressed that sufficient support was assured to warrant an invitation being given, and a deputation was appointed to wait upon the Council of the Norfolk Agricultural Association with an invitation.

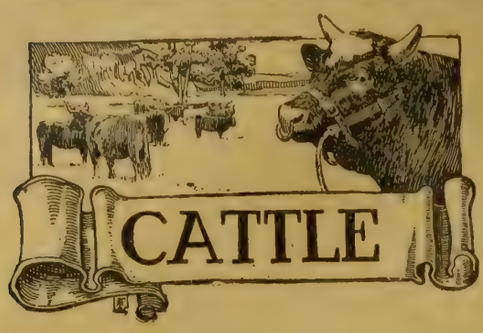
I would remind intending exhibitors at the forthcoming Smithfield Club Show that the entries of live stock and table poultry close on Wednesday next, November 1, at ordinary fees, and on November 6, at post entry fees. The secretary is Mr. E. J. Powell, 12, Hanover Square, W.

By an order of the Victorian Government, the introduction of certain animals into the State of Victoria from any place outside of the Commonwealth of Australia, New Zealand, or the United Kingdom of Great Britain and Ireland will be prohibited on and after January 1 next, save and except such as may be introduced for the Zoological Gardens. The animals scheduled are as follows:—Bull, cow, ox, calf, bison, buffalo, mare, gelding, foal, stallion, ass, mule, ram, ewe, wether, lamb, pig, camel, deer, antelope, and goat.

I learn that still another shipment from the world-famous piggery has been recently made by Messrs. Sanders Spencer and Son, of Holywell Manor, near St. Ives, Hunts. This was of a splendid Large White boar and of an equally choice sow, which left Hull last week on board Messrs. Thos. Wilson, Sons' and Co.'s steamer for Libau, Russia, to the order of Countess Kapnist, in whose fine herd is to be found much of the blood of the Holywell Manor pigs.

The Farmers' Club.—The first meeting of this club after the summer recess will be held to-day (Monday), and not as stated in our last issue, the mistake arising from the confusing of dates. The paper set down for reading is "Pate Aided Education," by Mr. J. Crouch, Ridgmont, Beds., extracts from an advanced copy of which were given in last week's issue.

Marshfield Fair, considered to be the most important sheep fair held near Bristol, took place on Tuesday, when Messrs. George Nicholls, Howes, and Co. had nearly 1,500 sheep and lambs to offer by auction, and the whole were sold at good prices, with the exception of twenty only. The trade for sheep and lambs has recently been much firmer, and this was very noticeable at Marshfield. The highest price reached for lambs was 57s. 6d., others ranging down to 30s. There were only a few cows and calves offered, but what there were sold at good prices, whilst the store cattle trade also showed signs of improvement as nearly the whole of the seventy-five cattle offered found buyers.



Notes and Jottings.

Up to the time of writing these notes most unusual weather prevails over the greater part of England and Wales. It is simply a time of excessive drought. Wells are dry, reservoirs are low, ditches that usually at this time of the year are giving quite a little stream are also so dry as to be almost past cleaning out. It is, however, a capital time for the mangold harvest, and good crops of this great mainstay in the root line are quite the rule, bad ones the exception. It is quite reasonable to suppose that these roots will be less watery than usual, and therefore able to be used with advantage a little earlier than usual. Cattle that are out in the fields have, owing to fine weather and dry lying, done remarkably well.

The tuberculosis restrictions or regulations are at the present time causing considerable discussion amongst all our breed societies, especially those whose breeds are most in demand for export. A suggestion that one examination, or rather one test, made in Great Britain before the animal is removed should be considered as decisive, without a second test taking place on the other side. Many vagaries have been known with regard to these tests and the after results. At one time quite sceptical as to any benefit accruing from these tests, recent experience has proved to the writer that too much care cannot be taken over the testing, and that cases that fail to pass are much best to be slaughtered.

With regard to a second test on the other side, from circumstances that have come under the writer's notice, it seems quite possible for an animal to pass safely on this side and to be sound entirely, whilst the long voyage and quarantine appear to give ample time for the disease to be contracted, and therefore the second test would, upon this theory, be quite necessary. Animals have been known to pass the test here without the slightest suspicion, and yet die of the disease within a very comparatively brief period, the thriving and healthy appearance of such animals at the time of testing giving as it were a guarantee that the beasts were quite sound. There does not appear to be any experience (veterinary) bearing upon the time a severe case may contract the disease and die.

There is no doubt that, though many herds have been tested, and all suspicious members weeded out, that there is still a good deal of disease of this kind in our cattle generally. There must be a great difference in the type of disease—some cattle waste away very rapidly and become a bag of bones; others that are undoubtedly affected will live on for years without being very seriously affected in any way beyond just the cough that so frequently accompanies this disease. Again, yet other beasts will fatten up to the very highest possible condition even whilst very badly affected, and will carry this flesh, until some day they die quite suddenly.

The general experience of extensive carcase butchers, whose business naturally gives them great opportunities of learning the state of things, and any reasons that may cause the disease, appear to be quite unanimous that by far the majority of affected animals are found to be from herds where excessively warm and continuous housing is practised, and the healthiest stock from those breeds and herds that almost perpetually lead an out-door life. Heavy milking cows and aged bulls, as a rule, are said by these people to be most frequently affected of any classes. Very heavy losses have fallen upon some of our butchers through the disease. That seems rather hard lines, as a wellfattened, healthy beast would seldom be suspected, yet such have proved to be unreliable.

Some butchers report also having found quite young calves (veal calves) badly affected; this again seems to prove that a very short time is required for the disease to develop, unless the trouble occurs from the dam whilst carrying the young. Altogether the question is a very vexed one, and will require very level heads to discuss and decide as to the best steps to take in dealing with it, not only in regard to animals for export, but also with our home herds. Probably something may be heard shortly from the Government experiments that have been or were to be carried out, that might throw a little light upon things.

The *Breeders' Gazette* (Chicago) of October 11, in speaking of feeding cattle, says the profitable class of these have never been so scarce and dear in the States or Canada as at the present time. Prices being quite beyond hope of a very high profit being realised by fattening. In the Toronto Market the question was put direct to a dealer there, "Where are all the feeders for which Canada has been so frantically clamouring for admission to British feeders?" The reply came, "To be candid, they exist only in imagination." As a matter of fact, we cannot supply the home demand." Surely such information as this direct from headquarters on the other side should convince our agitators of the uselessness of their scheme.

From January to December hundreds and thousands of beautiful calves are fattened and killed in this country realising but a very small price, and hundreds and thousands of others equally good are killed at two or three days' old without fattening at all. Many of these calves are sired by first-rate bulls, and the produce of equally good dams. Surely there never could be a greater waste of fattening material than this. So many of our feeding farmers are afraid of the trouble of rearing and weaning calves, but a little organising of matters and a careful man and his wife would attend to a few milking cows, and, with the assistance of other food, a splendid lot of young stock could be obtained at small cost.

On large tillage farms this sort of business could be easily carried on. Young calves grow, it may be said, night and day in a fold yard during the summer season when well supplied with vetches or other green food, which can always be obtained at a minimum of cost upon such farms, and manure is being made at the same time that will come in equally useful. Well-bred Shorthorn or cross-bred calves are purchasable at the present time at very little money, and grow very rapidly. Twenty good bullocks for fattening cannot be purchased now of good class and in forward condition at less than £300 to £340. Twenty young ones could have been brought up at home at very much less cost than this, and the cost would have been spread over a longer period. Also of benefit.

The Hereford breed of cattle would seem from appearances to have displayed a good number of herds of commoner kinds of cattle throughout a vast extent of vale or meadow land in Wales and on the borders of the Principality and England, and some remarkably well-bred and well-shaped herds are to be seen in that district. The uniformity that prevails in Hereford herds is a wonderfully strong feature. This is seen most readily and plainly in the lots of steers that come from the Hereford-breeding districts into the feeding pastures of the Midlands and other parts. It is no uncommon thing to find a herd of twenty of these steers form a herd as level in size and weight, and improve in other respects as could be imagined.

Uniformity ought to enter much more strongly into a breeder's scale of whatever cattle he is breeding. To see a herd of cows, it may be of dairy breeds, of beef breeds, possessing similarity of character, as well as condition, shape, and udders has a wonderful effect, and can only be accomplished by truest and the greatest possible care in the selection of the sires used, but there is no doubt it is the greatest possible mark of a breeder's skill, and nothing pays better. As tending to show the quality of the Hereford steer in the store market, at the recent great Hereford October fair a batch of pedigree-bred yearlings brought no less a figure than £16 per head. Yearlings, however, that have been so well cared for take a good deal of moving on. This price strongly supports the theory of home-rearing mentioned in another note.

Your letter, published in last issue re the value of our pedigree stock in other countries and in connection with the Royal Show, comes at a very appropriate time, and it is to be hoped that some measures will be taken that will lead to a continuance of Park Royal. It has proved itself to be the best possible place in England for the sale of stock to the foreigner, and, seeing that, as stated in your admirable article, our live stock are so superior to any other in the world, it would or will be the more regrettable if the "Royal" should have to take up some ignominious position on bad ground for the sake of the implement section, a part of the show that is very frequently excelled by foreign manufactured implements.

At a meeting of the West Riding Chamber of Agriculture, held at Wakefield on Friday, Mr. E. Spurr, who presided, drew attention to the allegations of cruelty in the transit of calves contained in several letters which recently appeared in the *Yorkshire Post*. He said he had seen hundreds of calves in sacks on railway station platforms in his time, and, in his opinion, there was no more humane way of sending them than nicely packed in sacks and per passenger train. A discussion took place on birds useful and inimical to agriculture, in the course of which the lark and the sparrow were condemned as the greatest offenders. A resolution was adopted in favour of the consolidation of the Agricultural Holdings Acts and other Acts relating thereto.

Sale of Mr. Jolliffe's Shorthorns.

The first-class herd of Shorthorn cattle belonging to Mr. C. H. Jolliffe, in consequence of the estate having been sold, was dispersed by auction on the 20th inst. at Coldicote, Stratford-on-Avon, and was a most successful sale, an average of £120 5s. 2d. being secured for sixty head. The herd was a remarkably fine one, it having been carefully selected at considerable cost from the most leading breeders and was in an excellent breeding state, as the young cows and heifers, and an extraordinarily good lot of bull and heifer calves testified. Mr. Jolliffe does not care for showing; but has supported the county shows of Warwickshire and Worcestershire and invariably won, whilst his five young bulls at Birmingham this spring realised 1,097 gs., an average of over £230.

At the sale on the 20th inst. there was a large attendance, and some spirited bidding. The highest price was 370 gs. for the bull Primrose Pride, bred by Mr. Duthie, the purchasers being Messrs. Denny. The cow Rose of Lynedoch made 355 gs. to Mr. Duthie, and Broadhooks 15th 340 gs. to Mr. Mitchell. Jessica went to Mr. C. H. Sanford at 320 gs., whilst several others made well over the £100, as the following sale list will show:—

COWS AND HEIFERS.

	Gs.
Laura Jane, roan, c. May 12, 1895; s. Windsor 60209 ..... Earl Manvers	40
Jessica, red, c. March 20, 1896; s. Corporal 66868 ..... Mr. H. Dudding	76
Dalmeny Fragrance 4th, red and little white, c. May 10, 1896; s. Lord Provost 65846 ..... Mr. G. L. Reid	32
Her C.C., red, c. Sept. 4, 1905; s. Primrose Pride 79605 ..... Mr. C. W. Tindall	36

Sale of Red-Polled Cattle at Bury St. Edmunds.

The Ditchingham herd of Red Polled cattle, belonging to Mr. H. Rider Haggard, of Ditchingham House, Bungay, was included in a sale held on Wednesday, at Bury St. Edmunds, Messrs. Simpson and Sons, being the auctioneers. This choice small herd was established in 1860 by the purchase of heifers from the Shouldham herd of the late Dr Allen, and tracing back to the old Norfolk Duke blood. Subsequently, animals were purchased from Marham, as well as cows from the late Mr. H. Spurling's herd at Shotley. Of twenty-nine lots, the best Red Polled cow fetched £27 10s. Others fetched from £19 to £18, and from £17 10s. to £16, and from £15 10s. to £15, and some from £14 10s. to £14. A very few sold at prices below these quotations. A Red Polled bull made £18 10s. Mr. F. J. Methold, of Thorne Court, Shimpling, consigned Red Polled cows, one of which fetched £13 10s. Amongst his Red Polled heifers, £6 10s. was the top price. Mr. C. S. Ewer sent a Polled cow, which made £20. Mrs. M. Tharp's consignment from Chippenham included a Red Polled cow, which made £13 5s., and a Red Shorthorn bull, which fetched £11 15s. Mrs. Maul, of Market Weston, had consigned several well-bred Shorthorn heifers, each with a calf at foot. These lots realised from £19 10s. to £19; two made £17 10s. each, one £17, another £15.

The Frenze Hall Red Polled.

The Frenze Hall herd of pedigree Red Polled dairy cattle was dispersed by Messrs. T. W. Gaze and Son, at the repository sale grounds, Diss, on Friday. The herd was founded in 1885, by the late Mr. Thomas William Gaze, by the purchase of five specially selected heifers from the herd of the late Sir Edward Kerrison, four being of the Oakley group, and one of Mileham blood, and bulls from the Thornham herd were then used. Fresh blood was introduced by the purchase of bulls from the well-known herd of Mr. Alfred Taylor, of Starston Place, and a grand bull, Woodstock, bred by the late Sir Baldwin W. Walker, was purchased in 1897; his dam, 4817, Charm, won, when ten years old, second prize in the milking trials and second in the inspection class at the London Dairy Show, 1896. Bulls were also purchased from Mr. Garrett Taylor's herd, and the blood of the foundation cows and the above-mentioned sires are maintained to the present day. The herd was never exhibited, being kept exclusively for dairy purposes.

Considering the condition of the market for pedigree milking cattle, good prices were realised, a good company assembling from far and near. Among the cows and heifers, Kinross, calved in 1901, sire Bogey Man, fetched 21½ gs.; Kissing Cup, c. January, 1898, s. Woodstock, 26 gs.; Kirkcaldy, c. June, 1902, s. Ensign, 20 gs.; Northern Light, c. March, 1903, s. Ensign, 21½ gs.; Nocturne, c. March, 1902, 20 gs.; New Broom, c. July, 1902, s. Ensign, 21 gs. The highest-priced bull was Starston Plunger, c. May, 1903, which made 18 gs. Kissing Cup was purchased by Mr. Cowdry for Lord Rothschild. Other buyers included Mr. Bascombe, Grimsby; Mr. W. Taylor, Upper Norwood; Mr. Youngman, Walsham; Mr. C. Simpson, Old Buckenham, Mr. G. Symonds, Thelveton; Mr. Edgar, Cockfield; Messrs. Woilard, Goodwin, How, Lait, Jeffries, F. R. Rout, Brame, R. Baldwin, P. Palmer, and Tibbenham.

The Showle Court Herefords and Sheep.

There was a large attendance of farmers and dealers at the sale of Mr. H. W. Taylor's stock on The Farm, Tarrington, on Thursday, when Messrs. A. and D. Edwards sold a portion of the well-known Showle Court pedigree Herefords, together with a flock of 400 Shropshire and Ryeland sheep, horses, implements, etc. The sheep consisted of the whole of Mr. Taylor's flock of Shropshires and about forty Ryelands. The Shropshires were started from ewes bred by Mr. Coxon and Mr. Nott and others, and good selections were made in the choice of rams. The Ryelands were as old a flock as could be found in the county. No big prices were obtained, the highest for three-year-old Shropshires being 51s. and for two shear 51s. The highest figure for Ryeland rams was 65s. Three-year-old Shropshire ewes averaged 49s.; two-year-old ewes averaged 47s. 6d. apiece; and yearling ewes worked out at 45s. apiece. Shropshire ewe lambs made on the average nearly 30s. Shropshire wether lambs made 29s.

The pedigree Herefords formed part of the well-known Showle Court Herd, which has been in existence for over half a century and which was founded by Mr. Taylor's father, whose name is to be found in the early volumes of the Herd Book. The cattle having not been shown for several years were only in store condition. The highest figure obtained was 23 gs. for the bull calf of Rosabella, which was bought by Mr. Smith, of Ledbury. Rosabella was bought by Mr. Bradstock, who was a big purchaser. The best prices for cows (calves sold separately), was Coriander, 17½ gs.; Perfection, 19½ gs.; Nell Gwynne, 17 gs.; Madame Rachel, 21 gs.; Queen Catherine, 16 gs.; Tarrington Queen, 15½ gs.; and for the heifer calf of Coriander, 13½ gs. The best prices for three-year-old heifers were Sweet Marian, 23 gs.; Christina, 15½ gs.; and Glass Jug, 15½ gs. The highest figures for two-year-old heifers were secured with Aline, 22 gs.; Cecilia, 21 gs.; and Royal Gem, 15½ gs.; whilst 16 gs. for Pansy was the best price for yearling heifers. Steers made in the best instances £28 10s. and £26 the pair.

Exporting Irish Live Stock to France.

Last Wednesday the Committee of the Irish Cattle Traders' Association, under the presidency of Mr. William Field, M.P., met in Dublin to consider the possibility of starting a direct export trade in live stock between Dublin and France. The great decrease in Irish live stock exports lately makes it imperative that something of this sort should be done, and the secretary of the association was directed to see the French Consul in Dublin, and ascertain particulars as to freights, railway rates, etc. The figures, showing the decrease in the export of stock from the Port of Dublin from January 1 to October 21 of the present year are given as follows:—Cattle 27,196; sheep 43,911; pigs 102,903; horses 2,907; asses 539; and goats 381; in comparison with the same period of last year. A total export decrease of 177,842 in live stock, represents a tremendous falling off in national capital, and a much smaller turn-over of money in the country.

Sale of Irish Shorthorns.

Messrs. John Thornton and Co. held a large sale at Derry, Moneygall, Roscrea, last Wednesday, when the herd of Shorthorns, the property of Major R. W. Cradock, was dispersed. The herd was originally founded in 1858, from the stock of Mr. R. Welsted, of Ballywalter, County Cork, and Major Cradock had been very successful since. A large number of breeders were in attendance, and very good prices were realised, the sixty-seven head offered for sale averaging nearly 20 gs. The highest price was paid by Mr. R. G. Carden for the bull Derryc Grandmaster (85753), a nice roan by Yeoman (80303), which fetched 110 gs. The cows, heifers, and calves also sold well.

Sale at Aberdeen.

The annual autumn joint-sale of pure-bred Aberdeen-Angus and Shorthorn cattle in connection with the Agricultural Hall Company, Aberdeen, took place on Thursday, when the entries included 66 Aberdeen-Angus and 27 Shorthorns. In each case the quality was very mixed, comparatively few animals having either popular pedigrees or merit sufficient to commend them to a judicious breeder. Trade was consequently very stiff, the demand being practically entirely local. Aberdeen-Angus were first disposed of, and business dragged so badly at the outset that a considerable number were withdrawn unsold. The top price for bulls was 23 guineas, paid by Mr. Simpson, Slioch, for Prince Toby, an Emma of Montbletton calf by the Mulban-bred bull Postscript, belonging to Mr. Wattie, Milton, Glenbucket. For another of the same draft, Mr. Reith, Aberdeen, paid 22 guineas. This was Prince Sam, an Alexandra of Montbletton, also by Postscript. For females, the highest price was 28 guineas, paid by Colonel Gordon, of Culdrain, for a Pride of Aberdeen cow belonging to Mr. Forbes, Greystone. Dainty Darling, a cow from Cullen House, and sired by the Ballindalloch-bred bull Emerson, made 23 guineas. Twenty-seven bulls made an average of £17 18s. 9d., compared with an average of £18 5s. 8d. last year, and a total of 53 head, both males and females, averaged £16 16s., compared with £17 12s. 9d. for sixty head last year. There was a slightly firmer trade for Shorthorns, but the gross average for 21 head was only £20 16s., representing a drop of twenty shillings per head on last year. Gross average for sixteen bulls sold was £20 1s. 7d., compared with £22 13s. last year. Top price for bulls was 54 guineas, paid by Mr. Robert Duncan, Aberdeen, for Silver Prince, a Cruickshank Butterfly three-year-old bull belonging to A. Irving Fortescue, of Kingcausie, whilst the highest price for females was 30 guineas, paid by Mr. Campbell, Kinellar, for Hilda, a six-year-old cow of Cruickshank Countess strain, belonging to Mr. Florence Knowley, Warthill. A Cruickshank Flora two-year-old heifer, belonging to Mrs. Smith, Bogside, made 22 guineas, the purchaser being Mr. Walker, Tillygreig; and a Red Lady five-year-old cow, belonging to Mr. Florence Knowley, made the same price, the purchaser being Mr. J. G. Stephen, Conglass. The following is a summary of the sale:—

ABERDEEN ANGUS.

	Average. £ s. d.		Total. £ s. d.
27 Bulls	17 8 9	....	470 18 6

Horse Notes.

"He doth nothing but talk of his horse."
—Merchant of Venice.

Animal surgery has progressed by leaps and bounds during the last few years, and some marvellous things have been done. More than one valuable cow has passed the last years of her life with a wooden leg, and broken limbs of dogs have been set successfully. Nor has the broken leg of a horse always defied veterinary skill, though the horse, from his extreme nervousness and irritability, is a difficult animal to treat surgically, and incidentally it may be mentioned that there has been considerable trouble with Sansovino, who broke his leg at exercise a short time ago, and who has a rooted objection to the slings. But by far the most remarkable case of dealing with a broken-legged horse is that of Morris Dancer. On June 2 that horse, the property of Major Vance, broke a leg at Epsom. On Tuesday last he ran again at Gosforth Park, and managed to run into third place. The exact extent of his injuries I do not know, but it was generally stated at the time that he had broken his leg. Neither do I know the veterinary surgeon. But the fact is one which deserves to be chronicled.

Of all the curious suggestions that have been made respecting the future management of the Royal Agricultural Society is that which appeared in last Thursday's *Times* over the signature of Sir Charles Thomas Dyke Acland. Sir Thomas begins by begging the question. He says that everyone who has the welfare of agriculture at heart rejoices that the council has returned to a policy of country shows. I fancy there are many advocates of the permanent showyard who have shown and are showing their devotion to agriculture and the Royal Agricultural Society in quite as marked a manner as those who are of opposite opinions. This, however, is not the point at issue. Opinions are sure to be divided on this question, and time alone will try whose opinions have most reason on their side.

But when Sir Thomas Dyke Acland suggests that at the Royal prizes should not be given, and that medals of comparatively small value or certificates should be substituted, he strikes at the whole system of showing, and especially affects the interests of horse-owners and breeders. In the first place, he asserts that not more than a third of the exhibitors receive any prize money at all, and then he says that these money prizes—"a very large proportion, probably as much as three-fourths goes to the wealthiest fourth of winning exhibitors, who probably, if they ever see the cheque at all, it is handed at once to the steward or herd." Taking this last statement first, I think it will be generally admitted that it is beside the question, and that what a man does with the money he wins has nothing to do with the principle at stake. I know of some establishments where the prize money won is handed over to the manager of the stud as his own. It is, in fact, a part of his salary, and was bargained for when he entered on the situation. In others the prizes won are divided between the owner of the stud and his manager, and in others, again, every item goes to the credit side of the stud account.

The expenses of a large stud are necessarily very heavy, and showing expenses are no small item in a year's expenditure. It is only fair, therefore, that the manager should have the credit of every win, and that there should be some substantial amount to win at the large shows where the outlay involved by exhibiting is necessarily heavy. But Sir Thomas Acland would have the other big shows all follow the example which he hopes the Royal will set, though he does not object to the small county shows (how does he class the Royal Lancashire, the Yorkshire, the Nottinghamshire, and others like them?) giving money prizes. He cannot have really thought out the matter, or what a serious upheaval in the show system an adoption of his advice would entail.

Let us go no further than the last Royal Show at Park Royal, and take the prize money won in the horse classes. I purposely leave out the Suffolk classes, because I know but little of the owners of Suffolk horses. I have also left out the harness classes and all those for which overnight entries were taken. This, however, leaves a sufficiently wide ground upon which to base an argument, for all the more important sections are under consideration, viz., Hunters, Hackneys, Cleveland Bays, Yorkshire Coach Horses, Polo and Riding Ponies, Shetland Ponies, Ponies, Mountain and Moorland Ponies, Shires, and Clydesdales. Dividing exhibitors into two classes, professionals (by whom I mean tenant farmers, and men who derive a considerable portion of their livelihood by breeding or buying and selling horses), and amateurs (by whom I mean men who spend immense sums on princely establishments, intending, doubtless, to show a profit, but to whom a profit on this particular portion of their enterprise is a secondary consideration), we find that professionals took £726 in prizes, against £639 taken by amateurs. It may, perhaps, be objected that amongst the professionals I have included some men who are well to do. Undoubtedly I have, but they are well to do on account of the skill with which they have conducted their business.

Sir Thomas Acland would, further, not allow any animal to enter for the Royal that had not taken first or second prize at certain shows to be specified. This, of course, means that the shows would have to be of good standing—something a long way in front of the ordinary district show. Whether it may be desirable to restrict the entries in some sections is a matter with which I have nothing to do in this column. It may or may not be. But one thing is certain that anything at all likely to restrict the entries in the horse sections would entirely do away with the national character of the show. The weak feature of the horse section at the Royal has been for many years small classes. One reason exhibitors give for not showing is that the prizes are out of proportion to the expenses; and, assuredly, if Sir Thomas Acland's advice were followed, there would soon be an end of the Royal as a horse show.

It has been announced in the newspapers that the world's record for a high jump has been made, and that a rail 7 ft. 10 in. in height has been jumped. Is it necessary to add that this remarkable feat was done in America? Mind, I am not disputing the accuracy of the statement, and I do not see why an exceptional jumper should not have made such a record. I have once seen 7 ft. jumped. This was when Bailey and Barnum's circus was held on Knavesmire. It was certainly a wonderful performance, and the circumstances were not especially favourable, so that where they were favourable it is, I think, quite within the range of probability that the other 10 in. could be jumped. But this is trick jumping, and, though clever enough, is by no means good for getting a man over a country. I asked Messrs. Bailey and Barnum's manager what would happen if he were ridden to the tail of hounds from Knavesmire Wood and over the rails which fence off the racecourse. His answer was brief and to the point, "I guess he'd fall," said he. Horses that jump these great heights do not seem to jump at all in our sense of the word. They apparently lift themselves over the rail. What good purpose is served by the trick it is difficult to see. To begin with, the style in which the horse jumps makes it especially dangerous for his rider, who has only the remotest chance of getting clear of him; and, as before intimated, a horse that jumps in this style cannot spread himself sufficiently to jump water. The biggest jump I have ever seen is the stone wall in the Duke of Beaufort's country, which was jumped for a wager many years ago. This wall is 6 ft. high, and is a sufficiently formidable obstacle. Some forty-five years ago there was a bet made about a horse jumping a big wall in Ireland—I think the wall was two or three inches over the six feet, but cannot be sure. One stipulation was that the huntsman was to have hounds at the far side of the wall, and to blow his horn and gallop away to encourage the horse, who was to have three trials. He jumped the wall right enough, but not till the third attempt, if memory serves me rightly. It certainly seems needless to train horses to jump 6 ft. or more of timber when not one man in fifty will tackle 4 ft. if it is very strong, no matter how big a hurry he may be in.

THE LOOKER-ON.

Essex Horse Show Awards in Dispute.

At the Chelmsford County Court, on Wednesday, before His Honour Judge Tindal Atkinson, the Essex Agricultural Society (through Mr. Fred Taylor, the secretary, and Mr. David Christy, one of the Council) were sued by Mr. Walter Burnell Tubbs, of Harley Street, London, for the sum of £30. At the last Essex Show, held at Southend, Mr. Tubbs was awarded by the judges three first prizes, of the value of £10 each, in the horse classes, but a protest was lodged on the ground that at the time the entries were made the plaintiff was not the bona fide owner of the horses (which were awarded the first prizes) and on this ground the Council of the Society withheld the money.

For the plaintiff it was stated that the case turned upon the meaning of the Society's bye-law, which said that entries should be the "bona fide property of the exhibitor at the date fixed for the time of entries." Learned counsel's contention was that this meant at the time the exhibitor was allowed to enter. These horses were bought by the plaintiff, at a public auction, on May 25, and the following day they were entered for the Essex Show. The time announced for the close of entries was advertised to be May 16, but that late-entries would be accepted, by payment of extra fees, on May 23. The plaintiff, however, knowing the practice of secretaries to frequently accept entries on a later date than that fixed, tendered his entry on May 26, and it was accepted. It was incidentally mentioned that the protest was lodged by Sir Walter Gilbey.

His Honour said it was an important question, and he would reserve judgment until November 8.

Sir R. Wilmot's Large Blacks.

On Wednesday, the herd of pedigree Large Black pigs, belonging to Sir Robert Wilmot, Bart., was sold by Messrs. Buckland and Sons, in conjunction with Mr. Ernest Prentice (secretary to the Large Black Pig Society), at the Grove Farm, Binfield, Berks, and with a good attendance of buyers from a distance and the neighbourhood, satisfactory prices were realised. An average of £8 14s. per head was obtained for sows, the top price being 10 gs., and a pair of six months old gilts brought 9 gs., the average for twenty-one being £3 4s. per head. Boars averaged £7 13s. 3d. each, the stock boar Binfield Cæsar making 12½ gs., and young boars from 5 to 8 gs. The purchasers of the principal lots were Lord Moreton of Sarsden, and Mr. E. C. Voysey (Oxfordshire), Mr. Hy. David (South Wales), Mr. Howard Palmer (Berks), Mr. W. Huntriss (Notts), Mr. L. Stevenson (Lincs), Mr. H. W. Langley (Shropshire), Mr. Harold Wardlaw (Dorset), and Mr. Ernest Prentice.

Fareham Farmers' Club.

The members of the Farcham and Hants Farmers' Club met at Fareham on Thursday, when the Secretary presented the accounts of the last annual horse show at Petersfield, these showed donations to have been £268 1s. 6d., gate money £188 1s. 2d., entry fees £92 6s. 6d., programmes £19 9s. 3d., right of supplying refreshments £12, sale of timber, hurdles, etc., £51 1s., the total being £635 5s. 5d. Last year the total receipts were £540, exactly the same amount as was received at Petersfield four years ago. The total receipts had therefore gone up nearly £100 over the previous year. The expenditure, however, was £50 more than last year, prizes taking £268 4s. 6d., and a balance was left in hand of £100 3s. 10d.

The club considered the question of the amendment and consolidation of the Agricultural Holdings Act, and Mr. Christian said this was required. With regard to the law as to compensation, it was based upon two or three Acts of Parliament, which all had to be consulted so as to know what was the law. What they wanted was a comprehensive Act covering the whole of the law. They wanted the Act simplified also. The important point was that they wanted security of tenure. As far as possible the tenant should be protected, so that the tenant's rent should not be raised on his own improvements. He moved, and it was agreed to, that in the opinion of the club the Agricultural Holdings Act should be consolidated and so amended, that greater security should be given to the tenant, in order to encourage good farming, and also protection should be secured for the landlord against negligence and deterioration on the part of the tenant. A discussion also took place on the bird question, and a resolution was passed as follows:

"This club considers that the Wild Birds Protection Act requires amendment, and birds which do damage to farm crops and fruit should be withdrawn from its provision."

SHEEP.

Notes and Jottings.

It will have been evident from the many reports of shipments given in connection with the Kent or Romney Marsh breeder, that there has been experienced during the past year a large demand for these sheep. The figures, however, given by the secretary at the last Council meeting in connection with this export demand, were much larger than generally anticipated. From January 1 last to the present date 475 head of these sheep have been exported. This total is by far the largest on record for the time, and fully confirms the belief that the results which have followed the introduction of these sheep into South America have been entirely satisfactory.

Six new members were added to the members' list at the last meeting of the Council, each of them being flock owners, and one life-member was also elected—*i.e.*, Dr. W. Walker, an Argentine breeder of Kent or Romney Marsh sheep, who thus becomes the first foreign member of this society.

Amongst the sales of imported sheep in the Argentine that have been reported by the last mail is one of particular significance, namely that of five imported Oxford Down yearling rams, as it is presumed these were for an average of £98 17s. 6d. per head, the individual prices of which were £236 5s., £87 10s., £70, £65 12s. 6d., and £43 15s. The executors of N. Vivot were the purchasers of the top-priced ram.

Messrs. Dean and Son, of Dowsby, has also had a very satisfactory sale of Lincoln rams at Buenos Ayres, twenty head making an average of £50 each, the range of prices being from £91 17s. 6d. to £26 5s.

Twenty other rams of the same breed also sold at the Argentine, realised a slightly better average—*i.e.*, £52 12s., the range of prices being from £96 5s. to £21 17s. 6d.

The high prices that have been for many years paid by the importers of Lincoln sheep in the Argentine make any sale returns of rams sold in that country of interest to English breeders, because unless those who import the high-priced stud rams are able to realise adequate profit, it follows that the demand will not continue. However, from the summary of prices given below it will be evident that the investment made by purchasing leading and typical stud rams is one that has well paid for the outlay incurred. Mr. M. J. Cobo's average for ten Lincoln rams works out at £96 17s. 3d.; Mr. J. M. Malbran's for thirteen at £49 5s.; Mr. C. Lopez's for fifteen at £42 19s. 3d.; Mr. J. Macdonald for five at £42 18s. 6d.; the Espartillar Estancia Co. for ten at £40 8s. 6d.; Mr. C. Pereda for fourteen £38 17s.; Mr. R. Walker for five at £37 2s.

For yearling Lincoln rams the following are amongst the best averages realised at the Palermo sales:—Mr. G. Villafane for seven £61 17s. 3d.; Mr. T. E. de Anchorena for five £42 17s. 6d.; Mr. M. J. Cobo for seventeen £40 8s. 6d.; and Mr. R. Walker for five £32 4s.

The Argentine-bred Oxford Downs, from the executors of Mr. Vivot's flock, averaged £26 10s. 3d., and Mr. R. Taurel's Shropshire ram lambs averaged £23 5s.; another lot of this breed from Mr. M. J. Cobo's making £14, and a lot of ten Hampshire Down ram lambs realised £10 4s. 9d. per head.

The Council of the Southdown Society at its last meeting elected no less than seventeen new members. The increase in the membership of this Society is most gratifying, but there is room for more energetic action on the part of the Society in the advancement of the interests of the breed in importing countries, particularly South America. Southdown mutton is famous all over the world for its fine flavour and high quality. These merits must make the breed a valuable one for the production of first-class mutton, and consequently the breed is one that should be largely used in breeding up sheep and lambs to be slaughtered and sent here as mutton.

The value of the Southdown for crossing purposes is not so fully appreciated as it should be. The cross-bred classes at Smithfield have many times had some really grand specimens of cross-bred sheep sired by Southdowns included, but as a rule those who adjudicate in these classes give preference to the crosses of the larger breeds.

It would be an excellent object lesson were the Smithfield Society to offer prizes for cross-bred sheep with a limit of live weight. This weight limit was formerly one of the conditions in some of the pure-bred classes, but for some reason or other it was given up. Probably the larger increase in weight possible under present-day management had something to do with this being done, but in view of the higher prices obtained for the neat, small joints at the present time it would appear advisable for such a class to be again added to the schedule, particularly for cross-breds, for the object of exhibiting such sheep is to demonstrate the value for the butcher of the result of crossing the breeds of pure-bred sheep. The Shropshire sheep are evidently becoming very popular in Australia. Some notable prices have been made for rams of this breed at Melbourne. Mr. A. E. Mansell, who, before he emigrated to Tasmania, was one of the leading breeders at home, has evidently been able to continue his successful career in his new home. Amongst the prices secured for yearling rams by this breeder were 205, 175, 160, 120, and 105 gs., ten making the excellent average of 102 gs.

Mr. Harry Williams, another of the Shropshire breeders that have left England for Tasmania, in recent years was first for yearling rams, and first and champion for two-shear rams, which, when sold, made 130 and 105 gs. each, and this breeder also averaged £31 10s. for seventeen yearling ewes.

The Australasian breeders are waking up to the fact if their mutton is to keep pace in respect to quality, etc., with the Argentine they must use more of the English strains of blood. The adoption of this suggestion means a much larger demand for English mutton breeds, and emphasises the need there is that success should attend the efforts of the National Sheep Breeders' Association to secure a reduction in the period of quarantine enforced on all imported sheep into the whole of the Australasian Colonies.

Dorset Horn Sheep Breeders Association.

A meeting of the Council of the Dorset Horn Sheep Breeders' Association was held at Yeovil on the 20th inst., when, under the chairmanship of Mr. F. J. Merson (Bridgwater), the Secretary reported that the Finance Committee had gone through the accounts, and the balance at the bank was satisfactory. They had £200 on deposit and £80 10s. 10d. on the current account. The Committee had sanctioned the signing of cheques for £44 2s. 3d. The report was adopted. A letter was received from the Secretary of the Bath and West and Southern Counties Society, stating that the Society's Stock Prize Sheet Committee had resolved to recommend to the Council that the usual prizes for shearling ram, pair of ram lambs, and pair of three shearling ewes be offered in the Somerset and Dorset horned classes at the Swindon meeting next year. The Committee were informed that there was a desire on the part of some of the breed associations to add prizes for two shear rams in the various sheep classes. He (Mr. T. F. Plowman) did not know what the views of the Dorset Association might be as to this, but he was authorised to say that should their Association desire to offer such prizes they would be pleased to afford facilities for their doing so.

It was resolved, on the the proposition of Mr. Creed, seconded by Mr. Hawkins, to write to the Bath and West Society suggesting that it would be desirable in the interests of the breed to offer prizes for a pen of three chilver lambs. They were of opinion that it was not desirable to offer prizes for two shearling lambs. They regretted to notice that the Society at their show last year cut out the Dorset Horn classes altogether.

On the motion of Mr. Hawkins, seconded by Mr. H. Elworthy, it was agreed that the delegates to the meeting of the National Sheep Breeders' Association be asked to support the following resolutions on the agenda:—(1) "That the Council of the Royal Agricultural Society be asked to pass a resolution that, in the opinion of this Council, the time has arrived when it should be a condition of entry at the Royal Agricultural Societys Show that all sheep entered for competition in the pure-bred classes should be either entered, or eligible for entry, in their respective flock books, and that the judges appointed to award the prizes in all pure-bred sheep classes should be selected by the Council of the Royal Agricultural Society from gentlemen nominated by the respective Sheep Societies"; and (2) "To consider whether or not it is desirable that an effort should be made to secure a reduction of the period of quarantine enforced against stud sheep exported by this country to Australia."

The Secretary reported that the result of the Association advertising in the foreign papers was very satisfactory. This year they exported more sheep to foreign countries than in any year during the existence of the Association. He had signed certificates for seven rams to America, two to New Zealand, and two to Australia, fifty-one ewes to America, and eight to Australia, making a grand total of seventy-one. In addition to these sheep had been sent to Ireland, Scotland, Wales, and the Isle of Man. He thought there was more demand for the breed, which seemed to be appreciated.

Mr. Ensor announced that he should like to offer for competition in May a 20-guinea challenge cup for ram lambs. The prize would be for the best pen of ram lambs of not less than four, nor more than eight, to be taken in the proportion of two ram lambs to every 100 ewes, the lambs to be dropped on or after November 1.

On the motion of the Chairman it was resolved unanimously that Mr. Ensor's offer be accepted.

Suffolk Sheep Society's Flock Competition.

The thirteen Suffolk flocks and six lots of ewe lambs entered in competition for the various challenge cups offered in the annual flock competitions of the Suffolk Sheep Society, have, during the past few weeks, been visited by the judges, and the premier award—the Bristol Champion Challenge Cup, for the best flock of Suffolk breeding ewes—has been awarded to the flock of three hundred ewes belonging to Mr. Percy Eagle, of Risby Hall, near Bury St. Edmund's, the reserve number being bestowed upon the flock of 169 ewes owned by Mr. C. S. Wentworth Reeve, of Livermere Park. The full list of awards is as follows:—

Division 1A (previous cup-winners, flocks of over 240 ewes): The Baird Challenge Cup, Mr. Percy Eagle, of Risby.

Division 1B (previous cup-winners, flocks not exceeding 240 ewes): The Davis Challenge Cup: Withheld in consequence of lack of entries.

Division 2A (flocks of over 240 ewes): The Wentworth Reeve Challenge Cup, Mr. Leopold Davies, of Herringswel; r. and v.h.c., Right Hon. Earl Cadogan, K.G., Culford; v.h.c., Mr. Robert Barclay, Higham; h.c., Mr. Spencer Dawson, Stratton Hall; and c., Mr. S. W. Slater's Exors., Balsham.

Division 2B (flocks not exceeding 240 ewes): Adair Challenge Cup, Mr. C. S. Wentworth Reeve, Livermere Park; r. and v.h.c., Mr. W. G. Fairhead, Peldon; v.h.c., Mr. Clement C. Smith, Trimley; h.c., Mr. A. W. Ruggles-Brise, Spains Hall, and Mr. J. T. Stockburn, Clare.

Pretyman Challenge Cup (for ewe lambs): Mr. Thos. Keeble, Bentley Hall; r. and v.h.c., Mr. Herbert Smith, Walton Grange; v.h.c., Mr. Spencer Dawson, Stratton Hall; h.c., Mr. Robert Barclay, Higham, and Mr. Robert E. Smith, Otley; c., Mr. C. S. Wentworth Reeve, Livermere Park.

Bristol Champion Challenge Cup: Mr. Percy Eagle, Risby Hall; r., Mr. C. S. Wentworth Reeve, Livermere Park.

Dorchester Sheep Fair.

The last of the sheep fairs for the present season was held on Wednesday. Buyers were well represented, in spite of its being now recognised as a "cull" fair, although by no means entirely so, a good proportion of the sheep being of a very serviceable character, both horns and Downs. About 600 were penned altogether by Messrs. Ensor and Son and Messrs. Duke and Son, a smaller sale being conducted by Messrs. Symonds and Sampson. Considering the shortness of keep in many places, and that roots are on some holdings none too plentiful, there was a very good trade for the more useful grades, and most of the sheep found buyers, though in some prices fell below sellers' anticipations for very plain things.

As a general run ewes sold from 46s. to 52s. for best drafts, and from 36s. to 44s. for others; horn couples, 53s. to 72s. 6d.; horn wethers, 33s. to 45s. 6d.; horn Chilver lambs, 36s. to 43s. (Mr. W. R. Flower, Weal, and Stafford); horn wether lambs, 26s. 6d. to 37s.; cross-bred lambs, 26s. to 36s. In Downs the best draft of ewes made 38s. 6d. to 46s. 6d.; and seconds, 32s. to 37s.; Down wethers, 34s. to 50s.; Down Chilver lambs, 28s. to 35s. 6d.; Down wether lambs, 28s. to 35s. 6d.; mixed lambs, 26s. to 34s. 6d.; South Down ewes, 28s. to 36s.; South Down lambs, 23s. 6d. to 31s. On the whole it was considered a very satisfactory fair for sellers.

Winchester Fair.

Winchester Sheep and Lamb fair was held on Monday at Bar End. The weather was fine as compared with previous years, hence the stock was seen to advantage. This fair, like many others throughout England, has lost its importance when contrasted with those of fifty years ago. Then 12,000 or 13,000 were penned, but on Monday only 7,000. The prizes offered for ewe and wether lambs by the citizens and the Hursley Hunt are great aids to the maintenance of the fair.

Trade was brisk, and prices ruled quite a shilling a head above the recent Weyhill Fair. Messrs. Harris sold some of the pens which entered for the fat wether lambs, and they realised the following prices:—Mr. Phillips, 62s. to 65s.; Lord Ashburton, 61s. to 67s.; Mr. D. Nicol, 62s. to 63s.; Colonel Le Roy Lewis, D.S.O., 59s. to 60s.; Mr. James Stratton, 48s. to 53s.; Mr. B. M. Martin, 50s. 6d.; Mr. Eames, 56s.; Mr. F. Bostock, 54s. 6d. to 56s. 6d.; Messrs. Harris sold over 5,000 sheep, and they fetched good prices, for example, Mr. J. T. Best, 51s.

THE ROYAL SHOW CRISIS.

No Prize Money—Medals Only.

Sir Thomas Dyke Acland, Bart., writes to the *Morning Post* with reference to recent correspondence in the Press and various announcements which have been made as to the future of the Royal Agricultural Society. Sir Thomas says:—"I am sure that those who are interested in the progress of agriculture and the maintenance of an efficient Royal Agricultural Society for the whole kingdom must rejoice at the decision of their Council to return to the practice of local meetings, and will wish all success to the meeting at Derby. But what I wish specially to urge upon the consideration of the public, and especially of the supporters of the larger agricultural societies, is the utter needlessness and, as it seems to me, the extravagance of continuing the practice of giving money prizes for stock or implements. Anyone who will take the trouble to analyse the prize lists of the larger exhibitions, that is to say, the exhibitions not confined to one county, will find that as a rule not much more than one-third of the exhibitors receive anything at all in the shape of a prize, and yet many of them exhibit year after year in the hope of winning one. The money subscribed for prizes is, as a rule, distributed among not much more than a third of the total number of exhibitors, and among that number it will be found that very much the larger proportion, almost, it might be said, three-fourths, is distributed amongst the wealthiest fourth of those who receive prizes at all.

"Without giving any names, I am sure that it will be admitted at once that the money received by those persons is not the main inducement to them to exhibit. Probably if they ever see the cheque at all it is handed at once to their steward or hind.

"The object which they have in exhibiting is not the acquisition of money by means of prizes; it is solely the advertisement of their herd or flock, and no one knows better than the successful exhibitors themselves how great is the increase in the value of the produce of a prize-winner. I know of a case (probably not at all out of the common) in which the price of a calf which before the cow had been exhibited was about £3, jumped in a week or two to £16 upon her winning a good prize. By far the larger number of the prize-winning exhibitors in the Royal Agricultural Society, the Highland Agricultural Society, the Bath and West of England and Southern Counties Association, the Royal Counties Society, and at the Islington Shows, are moved by an intelligent, far-sighted public spirit, and they and the other exhibitors, I am firmly convinced, would continue to exhibit just the same if they received medals or some other more permanent testimonial than a cheque, which has no lasting value and is to them utterly unnecessary.

"It appears to me insulting to the owners of herds of world-wide reputation to suggest that they require the chance of winning £15 to induce them to exhibit. If the "Royal" would set the example of giving up the practice of money prizes and award medals or certificates it would save from £5,000 to £6,000 a year, and I cannot doubt that such a wise economy would very soon be adopted by other similar societies. I do not for a moment deprecate the giving of money prizes in small county shows, because the winners at these shows include a very large proportion of tenant farmers, and the addition of the money to the advertisement is to them of very great value, while the addition of money to the advertisement in the case of the larger shows cannot be said to be of any value at all.

"I have discussed this point with many people and generally found the truth of the opinion admitted, though I have met with some instances of persons prejudiced in favour of the old system. But it seems to me that the recent misfortunes of the Royal Agricultural Society afford at the present moment an ample justification for a revision of their old line. Another useful reform would be the exclusion from exhibition in the "Royal" showyard of any animal that has not previously won a first or second prize in some other approved show.

"We should then have quality rather than quantity. The area required would be diminished, and with it sundry other difficulties with which the 'Royal' has had to contend."

Farming Burdens Cause of Royal Show Troubles.

The peculiar situation in which the Royal Agricultural Society of England is placed to day makes me ask myself, Why should this be? writes Mr. A. J. Macdonald to the *Standard*. He answers himself, of course, there is the usual reply that the public do not patronise the annual show as they used to do, etc., but again I ask, Why should this be? May I venture to tell you? My father was one of the oldest members of the council of the R.A.S.E. when he died, and was a large landowner farming his own land. Year after year the loss on the agricultural account became heavier, until three years after his death I was compelled to abandon the hopeless struggle against foreign imports of agricultural produce imported into this country free of duty and sold at a price with which it was beyond the possibilities, at cost price, for home-grown produce to compete.

I dropped out of the ranks of English agriculturists, and let my farms. The new tenants would naturally not be bound down to any "four-course" or other system of farming, and now I view the fields which once were well cared for and farmed soundly turned into pasture or rather rough grass, with an occasional patch of something (?) which the tenant hopes may help to pay the rent. In the past twenty-five years, to my personal knowledge, my average rent per acre has fallen from 35s. to 18s., while rates and taxes have increased in proportion! Under these circumstances I have no further interest in agricultural shows, and do not attend them. I have now no bailiffs or head cowmen to send to attend these shows for their observation and instruction, and I personally avoid these shows, as they only too forcibly remind and prove to me that England is not prospering, and that something is wrong.

I do not wish to appear egotistical, but I emphatically state that my case does not stand alone, and that hundreds of similar cases collectively are partly the cause of the semi-collapse of the R.A.S.E.

We have now to face this fact, and to find the actual cause of it. The fact we face is the semi-collapse of the leading society of one, if not the principal, of our national industries; ousted from its proud position, compelled to retire to some humble kind of combined office and council chamber, forced to sell its exhibition grounds, and last, but not least, to probably sacrifice its efficiency, in having to part with a staff of experts, whose past services have deservedly been recognised and honoured by their Sovereign.

I daresay I shall be attacked for saying that England is not prospering, but I would ask my critics to account for the benefit obtained from the huge debt incurred by the London County Council since its creation, and also to satisfactorily demonstrate any benefit arising from an increase in rates in an agricultural district from 2s. 3d. to 7s. in the £.

I am only a humble individual with a sense of duty to my country, and when I see what I do see, with no one coming forward to remedy matters, I say deliberately that partial and qualified "Protection" is the only policy which will save the situation. Will others help and support me in my protest?"

Blackpool and the Royal Show.

Mr. James Pearson, chairman of the Blackpool Winter Gardens Company, on Saturday week presided at the thirty-first annual meeting of the shareholders, when he made an emphatic protest against what he described as "Corporation shows" being held at the busy times of the year. He wished, he said, to sound a note of warning to the Town Council with regard to their invitation to the Royal Agricultural Society to bring their show to Blackpool. If the society could not come at a quiet time of the year it would be a stupendous failure, like the motor races of this year, and the Corporation should not go on with it.

Suffolk Horse Society.

A meeting of the Council of the Suffolk Horse Society was held at the Town Hall, Ipswich, on Tuesday, Mr. R. Eaton White presiding, in the unavoidable absence of the president (Sir Cuthbert Quilter, Bart., M.P.).

On the reading of the minutes of the last meeting, reference was made to the question of granting duplicate export certificates for Suffolks. The secretary stated the result of his communications with the Shire Horse Society, in respect of the course they pursued, and it was resolved, on the motion of Mr. E. A. Cook, that a duplicate certificate should not be granted after an animal had left the country.

A suggestion was made by Mr. Cordy that the society should in future Stud Books have portraits of some of the best Suffolk men, to vary the practice of having illustrations of Suffolk horses. After some discussion it was resolved, on the motion of Mr. Robert Edgar, to refer the matter to the Committee.

The Breeding Scheme Committee reported that at the Society's sale held in July, Society mares were purchased by Mr. C. B. Clowes, of Sutton; Mr. Freeman of Henley; and Mr. J. Cordle, of Holbrook, averaging 40 guineas apiece, on which the Society advanced £92 10s. The foals from four Society mares were disposed of, realising £73 10s. Crediting the four breeders £16 10s. each for their foals, and Mr. Pipe, of Framlingham, a further £6 10s., being half of price realised over 20 guineas in his case a total credit was passed to the breeders' account of £72 10s., leaving a balance of £1 in favour of the Society. In the season 1905 twenty nominations were granted to small holders. On the other hand, the sale of the nomination foals, for which the Society paid to the breeders £15 each, resulted in a loss of £4 to the Society. The report was adopted.

The Secretary stated that up to the present there had been 353 entries for the next Stud Book. The last volume contained 478 entries, but there was another month in which to make further entries, and it was expected that in that period there would be 200 more entries, which would thus exceed those of the last volume.

Hunters' Improvement Society.

Col. Victor Van de Weyer (president) occupied the chair at a meeting of the Council of this Society, held at 12, Hanover Square, London, W., on Thursday.

Finance.

Col. G. C. Ricardo (chairman) reported that the balance at the bankers on the current account was £199 12s. 10d.; receipts since the last meeting, £160 12s. 6d.; arrears of subscription, £36 15s.; accounts for payment, £104 12s. 3d.

In accordance with the Council minute of February 9, 1905, the committee had carefully considered the amount of prizes which the Horse Show Committee had that morning suggested should be voted to the 1906 Spring Show, viz., £1,140, and the Finance Committee recommended that the Council approve the grant. Report adopted.

Special Committee on Horse Breeding.

Mr. Algernon Turnor, C.B. (chairman), reported that the committee had met on Monday, October 16, when the letter from the Brood Mare Society, referred to the committee by the Council at their last meeting, was discussed and ordered to stand over. The committee had further resolved to suggest to the Brood Mare Society that they should communicate with their local committees to ascertain what could be done in obtaining reports as to the class and character of existing thoroughbred and halfbred sires in their districts. The first report and accounts of the Brood Mare Society had been handed in to the committee. This report having been presented, Mr. Algernon Turnor stated that it would be interesting to the Council to know that the Brood Mare Society had got four districts established, with the fifth and sixth in preparation. There were three things strongly in evidence, firstly, that the farmers would take the mares that the Brood Mare Society provided; secondly, they could find plenty of gentlemen to form local committees; and, thirdly, that suitable mares could be obtained with a little trouble. What they wanted was encouragement in mares and funds.

Editing Committee.

Mr. Romer Williams (chairman) reported that the number of entries received for Volume II. of the Stud Book was 533, as compared with 525 in Volume 1. Though practically identical in the sum total, the three sections showed marked differences in their respective returns, an increase of seven stallions and forty-four mares in the more important section of the Stud Book being very satisfactory. That portion of the volume devoted to the record of honours gained by the produce of premium and registered hunter stallions continued to increase, as in the forth coming volume they would be able to show returns from over 365 stallions and their 1,370 produce. Many awards had of necessity to be omitted owing to the honours being restricted to those gained at National, County and Associated shows. Exhibitors and members could greatly extend the range of information given in these returns if they would use their best endeavours to obtain the co-operation of all shows offering prizes for hunters, whose returns would then be available for registration. Nineteen entries had been specially put before the committee for their consideration; three stallions were referred to members of the Council for inspection. The reproductions of the four champion hunters in the next volume of the Stud Book were duly approved. This report was adopted.

The 1906 Show.

Col. G. C. Ricardo (vice-chairman) presented the report of the meeting. The dates of the 1906 show would be Tuesday, March 13, to Thursday, March 15, inclusive. The prize list had been carefully considered, together with references to the committee from the Council. Comparative entries in each class for the last two years had also been prepared, and the committee recommended:—

(a) The retention for another year of the four-year old class for mares bred by the exhibitor and on Stud Book lines.

(b) The three weight classes for the last Show to be replaced by the following:—

Class 6. Five-year-old mares or geldings, not exceeding 14 stone.

Class 7. Five year-old mares or geldings, over 14 stone.

Class 8. Mares or geldings, four years old and upwards.

(c) The elimination of the special prizes offered for the best gelding in each section, and also the restriction of the yearling colts to the one class open to yearling colts or geldings.

The committee therefore recommended the

adoption of the proposed schedule of prizes amounting to £1,140, while they strongly urged upon the Council that in the riding classes no entry shall be accepted without the name and address of the breeder, or that of the individual (not being the agent of the exhibitor) from whom the entry was purchased. In the latter case, the exact markings of the horse should be given on the entry form, and failing the provision of these details, the entry should not be accepted. The markings would be duly communicated to the judges. The committee presented their recommendations in respect of judges and veterinary surgeons for their 1906 show.

The report of this committee having been adopted, Mr. Carden moved that it be referred to the committee to draw up a list of judges suitable for both the riding and breeding classes; such a list would be invaluable to some of the smaller shows, who could apply direct to the Hunters' Improvement Society for the names. After a short discussion, it was resolved that the desirability of drawing up such a list should be referred to the Horse Show Committee for consideration and report by them at their next meeting.

Country Shows, 1905 and 1906.

The Secretary presented his annual statement of the awards of the Society's gold and silver medals at affiliated shows in 1905. From this it appears that the following medals had been awarded:—

	Gold.	Silver.
Scheme A and B (Brood Mares)	40	
Scheme C (Fillies)		51
Scheme D (Geldings and Fillies		5
Scheme E (Mares and Geldings)		47
Scheme F (Yearling Entire Colts)		11
	40	114

The committee had dealt with several questions arising out of the awards. It was agreed to again renew the offer of the Society's medals under the above schemes, though for the brood mares it was felt necessary to amend the conditions as to foaling, viz.:—To require the brood mare taking the Society's gold medal to have either produced a living foal in 1906, have her foal at foot, or foal in 1906; in the first instance, a certificate to that effect to be furnished before the medal was sent.

National Shows.

It was decided to offer gold medals, value ten guineas each, at the following 1906 shows:—

Royal Agricultural Society of England.—One gold medal, for the best hunter filly not exceeding three years old, and one for the best hunter mare four years old and upwards, registered in the Hunter Stud Book.

Royal Dublin Society.—Two gold medals, for the best hunter bred stallion, foaled in 1904 and foaled prior to 1904 respectively, exhibited at the Spring Show, and one gold medal for the best hunter brood mare, registered in the Hunter Stud Book, exhibited at the Summer Show.

Highland and Agricultural Society of Scotland.—One gold medal for the best hunter filly, not exceeding three years old, registered in the Hunter Stud Book.

Judges Selection Committee.

Pursuant to notice, Hon. Alex. Parker moved:—

1. That a Special Committee be appointed to select the judges for the London Show.
2. That it shall consist of seven members, who shall be annually appointed at the Council Meeting in Derby week.
3. The Committee shall meet before each October meeting of the Council, at which it shall present its selection of judges for the next Spring Show.
4. Nominations of suitable judges to be invited from the Council.

In moving the appointment of this new Standing Committee, Hon. Alex Parker emphasised the importance of a Breed Society carefully selecting its judges. The Society's invitation to gentlemen to act at their Spring Show was the precursor of invitations to act all over the country, and their selection of the judges should be therefore most carefully made. He proposed that nominations should be sent in two or three weeks before the committee met, so that their qualifications might be very carefully investigated.

Mr. Carden cordially supported the views put forward, and it was unanimously resolved to appoint this Standing Committee.

The Council then adjourned till their meeting in Smithfield week.

Sturminster Fair.—This celebrated Dorsetshire fair took place on Monday. Sheep consisted largely of those intended more for the butcher than for grazing, and trade was not particularly fast, except for the choicest drafts, ewes ranging from about 40s. to 51s.; wethers, 45s. to 53s. 6d.; lambs, 30s. to 39s. Anything fresh in barreners met a fair inquiry, at from £22 to £26 for the best, and others, £16 to £20 5s.; yearling and two-year-old heifers, £6 to £11 10s.; fat steers and heifers, best, £17 10s. to £22; second, £14 to £17; fat calves, 40s. to £6 5s.; rearers, 15s. to 38s.; porkers, 40s. to 63s.; baconers, 65s. to 95s.; stores, 16s. to 30s.

NOTES AND NEWS OF AGRICULTURAL SOCIETIES.

Darlington Chamber.

The item of interest at Monday's meeting of the Darlington Chamber of Agriculture was an address by Professor Gilchrist on "The Manuring of Pastures," with special reference to the experiments at Broomhaugh Farm and the Cockle Park Experimental Farm. At Broomhaugh, the Professor said, which was sandy soil, nitrate of soda did not pay for putting on in producing grass, nor did basic slag pay. Kainit had given no increase, but when slag and kainit combined was applied, there was a resulting gain of 12s. per acre. On this sandy soil slag showed much better results than superphosphate. There was also more than double the amount of clover from slag and kainit. Continuous dressing of slag and kainit had a good effect, and not for a few years only, as was sometimes supposed to be the case. At Cockle Park the soil was a stiff clay lying on boulder clay. Lime there practically gave no return. Basic slag, without the assistance of potash manure, had given marked results, but the addition of a potash to a phosphatic manure had not been profitable. When about three-quarters of a hundredweight of sulphate of ammonia had been added about every second year to a phosphate manure the annual gain had been decreased by 5s. 6d. per acre. In the old land hay experiment the annual application of phosphatic manure (slag and supers), combined with a potash manure, had developed clovers and the allied plants to the greatest extent, and had produced the most nutritious hay and considerably the most profitable result when the feeding value of the hay was taken into account. Phosphates only (slag and supers) had also maintained and developed clover throughout the nine years' experiment. Feeding on cotton cake was one of the best means of enriching a pasture. Some little discussion ensued, and Professor Gilchrist was thanked for his address.

Durham.

The Durham County Agricultural Society, in recognition of valuable services rendered during the past quarter of a century, have presented the Mayor of Durham (Mr. G. H. Procter) with a roller top desk and an address. Colonel Darwin, in making the presentation, said that Mr. Procter for twenty-five years had had charge of the dog and poultry department, and the increases in this department were very gratifying.

Gloucestershire Chamber.

Some interesting details of what the Worcestershire County Council had done in the way of producing small holdings were given at the last meeting of the Gloucestershire Chamber of Agriculture by Mr. W. Wadderburn, who urged that similar lines should be followed in Gloucestershire. Under the powers conferred upon them by the Small Holdings Act, the Worcestershire County Council, he said, had purchased a farm of 146 acres, paying an average of £3 an acre. To get it into condition they spent something under £300, and then divided it into thirty-two holdings. Houses, with stable and pigsty, were erected on each, at an average cost of £256, and families established on each. The money was borrowed from the Public Works Loan Commissioners at 3½ per cent., and it had been arranged that the whole should be repaid with 4 per cent. interest in forty years. The holders of the lots had each paid one-fifth of the purchase money down, and the balance would be extinguished by instalments, and at the end of forty years the County Council would be left with a small balance to cover any unforeseen expenditure. Every holder seemed to be comfortable, and he had been informed by the clerk to the Worcestershire County Council that none were in arrear with their instalments. As the subject was not on the agenda, discussion was deferred. Mr. J. C. Mead opened a discussion on Mr. Lambert's Continuation Schools Bill, and a resolution was passed supporting the principle of Mr. Lambert's Bill in reference to agricultural education, but expressing the opinion that the whole of the expenditure on continuation schools should be defrayed by the central authority.

Lancaster Farmers'.

At a meeting of the Lancaster branch of the Lancaster Farmers' Association on the 21st inst., a discussion took place on the assessment of occupiers of land for local rating purposes where tithe is paid by the landlord, which revealed the fact that in many cases the farmers were paying rates on tithes and also the tithe owner. The farmers present were recommended to inquire into their assessments and to appeal if necessary. A discussion took place also on the question of the increase in local taxation on land, and a resolution was passed asking that the incidence of the education rate especially should be considered at an early date. Another resolution was passed against fraudulent practices in the butter trade, asking for the intervention of Parliament to compel the introduction of some innocuous substance into margarine, as in Germany, Belgium, and Austria, which will reveal itself when used in the adulteration of butter. It was stated that firms in this country were now buying colonial butter and increasing its weight by moisture, selling the butter as "milk blended."

Lincolnshire Chamber.

The various subjects before the Central Chamber came under discussion at the last meeting of the Lincolnshire Chamber of Agriculture, and the following resolutions were passed: "1. That it is desirable some scheme should be devised whereby a system could be adopted for reducing the number of rooks, wood pigeons, sparrows, and other birds harmful to agriculture. 2. That it would be an advantage to the agricultural interest if the Agricultural Holdings Act could be consolidated and amended by giving proper protection to the good tenant and drawing a distinction between good and bad farming, and so putting an end to the existing state of things, which gives an unfair advantage to the farmer who does not do justice to the land and leaves the same in a condition which puts an unfair burden on the landlord; and that to make an Act useful the local requirements of every district must be separately considered and should be referred to local committees composed of farmers, agents, and valuers for consideration and report. 3. That a weighbridge should be provided at every railway station; and (4) That in the Redistribution Bill every endeavour should be made to retain the agricultural constituencies as at present, and that the representation of agriculture should not be reduced."

West Riding Chamber.

Mr. E. Spurr, who presided at the last meeting of the West Riding Chamber, drew attention to the allegations of cruelty in the transit of calves contained in several letters which recently appeared in the *Yorkshire Post*. He said he had seen hundreds of calves in sacks on railway station platforms in his time, and, in his opinion there was no more humane way of sending them than nicely packed in sacks and per passenger train. A discussion took place on birds useful and inimical to agriculture, in the course of which the lark and the sparrow were condemned as the greatest offenders. A resolution was adopted in favour of the consolidation of the Agricultural Holdings Acts and other Acts relating thereto.

Woodbridge Horse.

The Committee's report, presented at the annual meeting of the Woodbridge Horse Show Society, stated that this year's show was a great success. The gate money realised the record sum of £80—an increase of £15. The entry fees realised £44 (an increase of £14), and the catalogues, which were raised in price from 2d. to 3d., realised an increase of £2, but this was balanced by a loss of £2 on the advertisements. Thus far, a gain of £29 was shown. This satisfactory result, however, was counterbalanced by a substantial increase in the prize list, and a falling off in subscriptions. The prize list was increased by £15, £11 of which was allotted to the Shire classes, and the remainder to the Hackney classes. The subscriptions, which totalled in 1904 £122, dropped in 1905 to £110—a falling off of £12. These two items of loss amounted together to £27, and, when other expenses were added, the Committee was left with a balance of only £21 10s. 9d., against £38 6s. 10d. in 1894. Last year the general meeting voted the Secretary an honorarium of £20. Should this be repeated, the Society would have in hand only £1 10s. 9d., against £18 6s. 10d., which was the net balance of last year. The Committee were naturally disappointed in the loss of subscribers, especially in the small measure of support given by the town of Woodbridge to its own show, and they remarked that the Society should at once take practical steps to increase the number of subscribers, and consider the question of forming a guarantee against loss.

Some discussion ensued upon the framing of a resolution dealing with the subject, and ultimately the following resolution was carried:—"That the meeting notes the Committee's remarks as to the insufficient support given to some of the classes, and it was resolved that the Committee for 1906 should consider whether the number of classes might not be reduced, and whether bye-law 9 should be modified." The bye-law (9) referred to reads as follows:—"The judges will be instructed not to award any prizes in classes in which the animals exhibited do no possess sufficient merit, and no second prize will be awarded in any class unless there are three exhibits, except on the special recommendation of the judges."

The Secretary was granted an honorarium of £20 for his services; Mr. E. G. Pretyman, M.P., was re-elected president for the ensuing year, Mr. A. J. Smith vice-president, and the other officers were re elected.

CIDER AT THE BREWERS' EXHIBITION.

The general exhibition of cider, perry, and cider apples at the Brewers' Exhibition made the finest display of the kind yet brought together in this country, and thereby attracted attention. The exhibits sent for judging alone comprised 156 samples of cider and 31 exhibits of cider apples comprising over 500 varieties of cider apples, in addition to which the governors and directors of the National Fruit and Cider Institute, Long Ashton, Bristol, sent a sample of each of their experimental ciders, blends, and pure yeast cultivations made in the autumn of 1904 at the Institute under the superindendence of the assistant director, Mr. B. T. P. Barker, M.A., the samples totalling 72. These ciders had to be placed in their order of merit by the judges, who were unaware of how they were made or blended before giving their verdict. The farmers' classes, which have been generally pretty good, were even much better than usual, and showed a great advance both in blending as well as in the careful manner in which the bottles and casks had been prepared.

Devonshire Ciders.

The Devonshire ciders made the most noteworthy advance in this respect, the judges being enabled to make the full award of prizes without withholding any, as has previously been the case. In the class for bottles exhibited by farmers in the counties of Devon, Dorset, or Cornwall the first prize went to Mr. F. G. Evans, Littlehampton, Totnes, for a very pleasant tipple, a trifle perhaps too much on the sweet side. Mr. W. Turner, Pinhoe, Exeter, was second with cider that was bright in the glass but lacking smack, the third going to a clear drink sent by Messrs. Mann, Broadhempston, Totnes.

Class II. was for cask cider from the same counties; here, again, Mr. Evans was to the fore with a pleasant cider slightly drier than his bottled exhibit, the second going to Messrs. Mann for an exhibit that had not quite got over the fatigues of its journey, whilst, as the other exhibit had been prepared on the Devonshire match system, the judges passed it over, there being other and far better methods of arresting fermentation. The next two classes were open only to farmers in the counties of Gloucester, Hereford, Monmouth, and Worcester. The bottle class constituted the finest that has yet been sent from these counties to London, the competition being so keen that the judges had to go into the minutest details in order to determine which was the best; this was found to be Mr. Geo. Ballard's exhibit from Stockton, Worcester. It was fine, it was of a brilliant amber hue, and it glassed to perfection; it was a trifle lacking in aroma, but otherwise there was no disputing its right to the first prize in the class and the silver medal of the farmers' classes, and subsequently the reserve for the champion gold medal of the whole show; and it might even have secured this had a warm instead of a bitterly cold night succeeded the first day's judging and that of the second day, when the champion award was made, the heavier cider having the best chance. Second prize went to Mr. Fred. Ballard, Colwall, Malvern, for a very bright, nice cider possessing very similar characteristics to the first. Mr. John Bazeley was third with a superb cider of a nice degree of dryness, and it much resembled his champion cider at the Bath and West at Nottingham. The ciders of these three makers were so even that either might have been placed in first position; and it speaks well for the county of Hereford that such perfection has been reached. The reserve went to Mr. D. Phelps for a very brilliant cider and body, but which did not linger on the palate, it being of a heavier character and lacking the pleasant briskness that gave the others monetary honours. Mr. A. D. Willcox sent a very strong cider up from Gloucestershire for a very highly commended mention, and it was very pleasant to the taste, but of bad appearance. Mr. Rogers, Monatity Farm, Abergavenny, for the first time introduced the county of Monmouth into the running by securing a highly commended mention with a rather thin, dry cider, well made, however. The cask class from the same counties was small indeed, there being only three entrants. Here Mr. Willcox was an easy first with a strong cider, Mr. John Bazeley being second with cider of quite a different character—a nice luncheon cider.

Somerset Classes.

From the first the county of Somerset has been a strong and consistent supporter of the show, and this year was no exception, all the best makers being represented, especially in the bottle class. Here those well known exhibitors Messrs. Croft, Sutton Montis, were placed first with a very nice cider that had not yet turned all its sweets into alcohol. It was bright, clear, and fine, and this placed it as reserve for the silver medal of the farmers' classes. Messrs. Tilley were very close runners for the position; their cider was also excellent, but could not advance beyond second; it was very brisk and rather dry for Somerset cider. The third went to Mr. Herbert for a very heavy, rich cider that, however, had an excess of tannin in it. Messrs. Tilley Bros. were reserved with a very brilliant cider, and they also received some minor mentions.

The cask class did not find so many entries, and the quality was not up to that of the bottles, and, on the whole, inferior to some other shows. The first prize went to Messrs. Croft for a very similar cider to their bottled exhibit, a trifle brisker on the palate perhaps, Messrs Tilley taking second with a clear, rather thin cider for Somerset make; the third went to Mr. Herbert Davis for cider that had a decided smack of the filter. No minor mentions were made.

Merchants' Classes.

For the first time the ciders made in other counties than those mentioned dropped out, and then came the variation classes, as the Merchants' classes might be aptly termed. Here ciders may be made from home-grown or purchased apples, and the ciders may be purchased or blended. The bottle class was indeed a strong one as regards numbers, but very variable as to quality. However, this year it contained the champion cider of the show, which was sent by Mr. D. Phelps. It had a nice head, was brisk on the tongue, and yet had plenty of body; it was a grand cider, though it might have been a bit more brilliant, the sole thing that made its fate tremble in the balance when compared with Mr. Ballard's. Second prize went to Messrs. Tilley Bros. for a real fruity Somerset cider, the reserve going to Messrs Yeomans Bros., Canon Pyn, Hereford, for an extremely nice, pleasant cider, somewhat lacking in aroma, else it might have been second. Very highly commended went to Mr. W. T. Allen, Glastonbury, for a very rich aromatic cider, and to the Quantock Vale Cider Company for a very clean cider with a good aroma. Messrs. Pilley Brothers also were very highly commended with a very clean cider.

The merchants' casks were only represented by half a score. Here Mr. W. T. Allen was placed on top with a rather sweet cider of the right kind for a city trade, the second going to cider made in Ireland by Messrs. Power, Dungarvan. It was very brilliant and of a fairly dry character. The reserve went to Mr. Thomas Stone, Axminster, for a very pleasant cider that would have stood at the top of the class had it not possessed such a decided flavour of the chestnut wood cask in which it had been stored. Messrs. Tilley Brothers were very highly commended with a very pleasant cider that showed well in the glass. A highly commended mention went to Messrs. Meek, Shirley Birmingham, for a useful cider that did not look at all attractive as regards colour in the glass, being of a greenish hue. The addition of a few coloured apples would have obviated this.

Then came the battle between the farmers and the merchants, both sides turning up in strong force. The prize, however, fell to Messrs. Tilley Brothers for a very pleasant cider, not overmuch pronounced as to fruity flavour; the second going to Messrs. Leamans with one of their nice, kindly, brisk Hereford ciders. The reserve went to undoubtedly the best cider in the show, but it was badly muddled with its sediment. This was sent by Mr. A. D. Willson, Gloucesterhire. Mr. W. T. Allen was very highly commended with a dry, clean cider, as was also Mr. Thomas Stone with a brilliant semi-dry cider, and he was also highly commended with another slightly more astringent, Mr. Turner being commended with a very rich, fruity cider from Devon.

The class for sweet ciders did not bring such a large competition, though it was obvious that sugar candy had been used to make the cider come under the designation sweet. In the dry class there were ciders that would have been noticed in the sweet class; and the sweet class contained the best dry cider in the competition. The first prize went to Mr. D. Phelps for a very characteristic sweet cider. Messrs. Slatter were second with a sweet in which the alcoholic condition was more advanced. The reserve went to Messrs. Tilley Brothers for cider that had scarcely advanced sufficiently to give it character, and they were very highly commended with a pleasant apple wine. Mr. Chippers, Glastonbury, was highly commended with a very nice sample of Somerset produce, quite sweet enough for the most fastidious.

Perry.

Then came the perry classes, which this year, by the division of the dry and sweet perrys by the provision of a class for each, there were some superb English champagnes in the dry perry class. The first prize went to Mr. F. Woodward, Pershore, for a superb perry sparkling like hock and grand on the tongue, and calculated to make the consumer of it friendly with all. The second prize went to another excellent perry sent from the Berkeley Vale by Mr. Thos. Shipp. The reserve went to a fine old crusted perry that had been shaken up in transit; it was evidently the same perry with which Mr. Meek took high honours a couple or three years ago.

The sweet perry class was also good here; Mr. D. Phelps again drew to the fore with a nice perry not quite nauseatingly luscious, but a very pleasant drink, second prize going to another beautiful perry that looked lovely in the glass, sent by Mr. Fred. Ballard. Messrs. Slatter were reserved with another nice perry a trifle dry for the sweet class; these three perrys were very even, and very few points indeed between the prize winners.

There was but one solitary cask of draught perry, sent by Mr. Saul Savage, Berkeley; it was of such excellent quality that the judges had not the slightest hesitation in awarding it chief honour, a position that it could have held in the face of strong competition.

The under 3 per cent. of alcohol class as usual brought out ciders that were well above it. The first prize went to a very pleasant ladies' drink, sent by the Quantock Vale Cider Co.; second, to a tipple of a drier character, sent by Messrs. Slatter. A third prize was recommended Mr. W. T. Allen for his apple juice, whilst Messrs. Tilley's reserve was very fruity.

Apples.

The exhibits in this class were very fine. In the class open to the world for exhibit of cider apples the medal was won by Messrs. C. Osborn and Sons, North Cadbury, with a case of 30 varieties of Somerset cider apples, equal bronze medals being awarded Messrs. R. C. Scott, Martock, Somerset, for 16 varieties of the choicest-named Somerset apples, and Mr. R. Brown, Court Farm, Failand, Somerset, for a collection of 18 varieties of French cider apples grown in England, the reserve going to Mr. A. D. Willcox, Gloucester, with 28 varieties that were not so well exhibited either as to packing or naming.

The farmers' class made a superb show, nearly 200 ft. of staging being required to stage the same. Messrs. Crofts were first with a very fine exhibit well named and containing few duplicates. Messrs. Osborn and D. Phelps were bracketed equal seconds for Somerset and Gloucestershire apples; and Mr. Bayley was third with a superb selection of Herefordshire fruit, well graded, rightly named, but as there were only thirty-two varieties, he had to be content with third. The reserve, Mr. Herbert Davis, had forty-four varieties, but these were not all named or so well packed. Messrs. A. D. Willcox, Gloucester, and Messrs. Power, Ireland, were very highly commended. A diploma of merit was awarded Mr. D. Phelps for his exhibit of perry pears, and a silver medal and diploma of honour to the Kingsacre Nursery Co. for their exhibit of cider apples and cider apple trees and perry pears. The show, as a whole was remarkable for the general purity of the exhibits and the comparative absence of faking, which has done so much to check the advance of the cider movement in this country.

The German Barley and Hop Show.

The German Barley and Hop Show took place on October 5 and 6. The number of prizes awarded for brewers' barley was 8 first prizes of 100 marks (£5), 20 second prizes of 50 marks (£2 10s.), 26 third prizes of 25 marks (£1 5s.), and 21 testimonials; 16 prizes and diplomas were awarded to producers from the province of Saxony for samples of barley, 46 of which were entered, and 13 prizes and diplomas to Hesse and Plausitz out of 23 samples entered. A first, second, and third prize was awarded for winter barley. The silver medal of state was won by Mrs. Cramer, of Emblen, and first, second, and third prizes, also a testimonial, were awarded for brewers' wheat to Count von Bothmer.

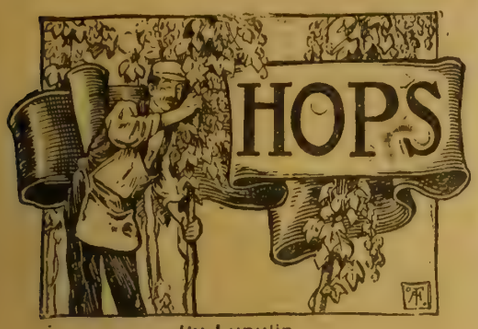
The prizes awarded in the hop section were:—1st prize 150 marks (£7 10s.), second prize 75 marks (£3 15s.), and third prize 40 marks (£2), of which there were 6 first prizes, 15 second prizes, 12 third prizes, and 4 diplomas. First prizes were awarded to Herr Bebelein, of Absberg, Spalt, Herr Hürzer, of Au, Herr. Bauer, of Geisenfeld, Up. Bavaria, Wurtemberg, and Alsace.

The sum of 6,000 marks (£300) was awarded in money prizes. Particulars of the victor's prize will follow shortly.

The Barley Prizes.

In addition to gaining the champion prize at this show, Mr. C. G. Miles took the Burton Challenge Cup, Boby's Champion Screen Prize, Messrs. J. Fison and Co.'s Challenge Prize, and Messrs. Webb and Son's Seed Prize. These awards were omitted from the official list given in our last issue.

Mr. Perry's lease of his Hardy Plant Farm at Winchmore Hill has expired, and being unable to renew it owing to the ground being wanted for building purposes, he has removed to more extensive grounds at Enfield, where he will have far better facilities for growing plants than hitherto. Owing to the great cost of removing stock, he has decided to offer all his surplus at a sacrifice to ensure a rapid clearance. Something like a million plants of all sorts are to be cleared and catalogues can be had on application to Mr. Perry.



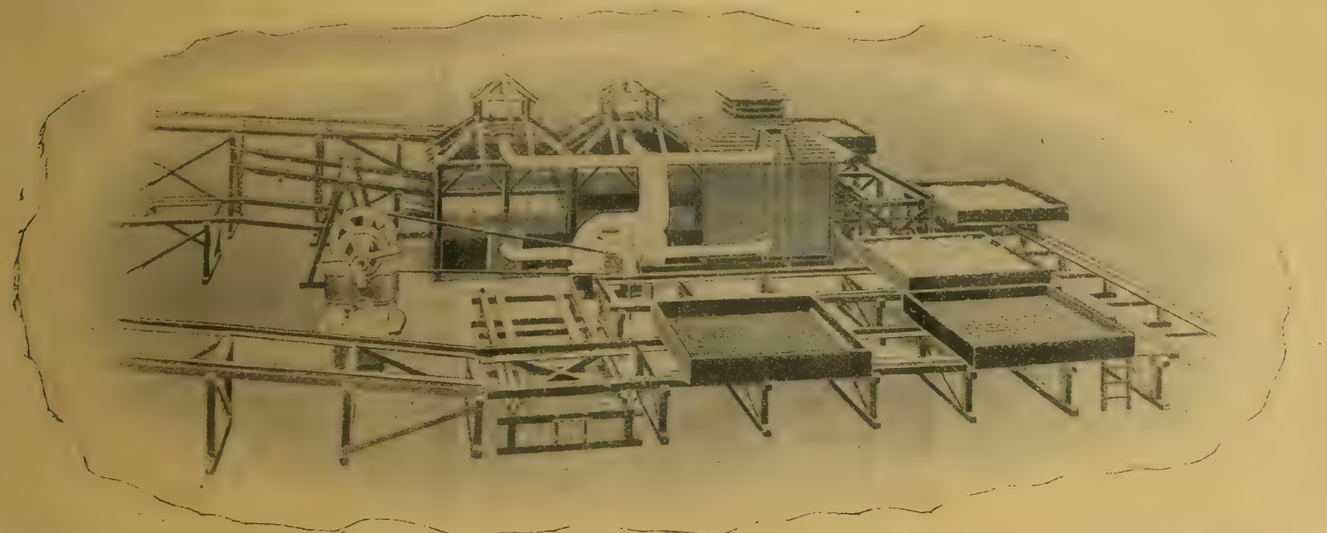
By Lupulin.

Drying and Curing of Hops.

It is a self-evident truth that the manufacture of hops for their use in brewing beer really commences with the drying process, and is included in the period which is found by experience to be necessary for this purpose. During the growth of the plant and the development of the fruit, Nature, assisted by the skill and attention of the farmer, is the chief element in the success of the crop, but immediately the cones are gathered, artificial means are needed, and a problem is presented to every grower that is of so complex a character as to demand the most careful consideration, if he desires to attain perfection. He must dispel all superfluous moisture contained in the green cones to the extent of 75 to 85 per cent. of their weight, but he must have regard to the important fact that the valuable constituents, the essential oils and the resins, are volatile and changeable. An eminent authority has declared, and his statement is undeniable, that the substances that impart their real value to hops are "most sensitive to injury by excessive heat, and that hundreds of tons are damaged annually, and in many cases their brewing value almost totally destroyed by the careless or ignorant manner in which they are dried. A change takes place in the appearance of the lupulin, which becomes more apparent as the heat is increased, until at about 100 degrees the globules begin to disappear and run together, presenting a dull brown or red colour." Mr. C. Whitehead, writing in 1897, concerning the treatment of hops then usual in England, confirms the above observations, and condemns the stewing or baking at high temperatures on the kiln, as causing "an absolute, visible loss of lupulin, besides the loss of ethereal essences." The dispersion of sufficient of the natural moisture to avoid any subsequent deterioration, and the retention of the whole of the essential properties provided by Nature in the cones, are therefore the main, and to an extent, the antagonistic points to which attention must be given in this delicate and critical operation.

The climatic conditions of the various countries in which hops are produced must, of course, materially influence the methods adopted. In England, open fires with natural draught have been universal for many years. But there are so many uncertainties and disadvantageous risks connected with this system, that we are almost compelled to recognise the truth of a competitor's criticism when he says that, "It is regarded by progressive growers as a long way behind the times, and affords few, if any, tests of value, except of 'how not to do it.'" As, however, we have amongst us many intelligent planters with desire to improve, it is gratifying to know that progress has been, and is being made, many kilns having been reconstructed or modified; the introduction of fans for increasing the draught, and installations of pure hot air apparatus, being marked features during the past ten years. Continental growers still abide by their long-established custom of drying partially by exposure to the natural air, whereby the cones are closed and withered, being subsequently finished on kilns at low temperature. By this means the whole of the essential oils and soft resins are preserved, the brewing value of the hops being thus absolutely maintained. This system is, however, only applicable to small plantations, and therefore cannot be adopted under the conditions in which hops are grown in England or America.

It is with the object of directing the attention of English growers to the advanced ideas of their competitors on the other side of the Atlantic that I briefly attempt to describe the system of drying hops in use in the extensive plantations of the E. Clemens Horst Co. of California, and illustrated by a perfect working model exhibited by this company at the recent Brewers' Exhibition at Islington. By reference to the accompanying engraving, it will be seen that three kilns are erected in series. Each kiln contains two drying floors, so that six loads of hops are operated upon at the same time. The green hops are dumped into the cars shown, which are propelled in succession over tramways leading to the first drying chamber. Having been there partially dried, this car-load is succeeded by another, and so on in turn until the six chambers are occupied, an ingenious switch arrangement being provided at the end of the lower three to transfer the cars to the upper storey, from which they are drawn for removal by tram-line to the cooling and packing warehouses. As the atmosphere of California averages 100 degrees Fahrenheit during the picking season, and is therefore practically devoid of moisture, the natural air, propelled through the hops by an electrically-driven fan, is generally found sufficient to completely cure each car-load of hops in ten hours from the time of its first entry into the kiln. But in case of necessity the air current can be warmed by suitable arrangement. The cars on which the hops are laid are each 30 ft. square, and are loaded about 18 inches deep. The floors are constructed of perforated sections, easily removable for the release of the contents on to the cooling floors, the result being that from the moment when the hops are picked into baskets, until they are baled and ready for shipment they are not disturbed or touched by hand. The cost of labour is, therefore, reduced to the lowest possible point, and the wholeness and perfect condition of the produce is secured. The process presents a special, and, from an English point of view, a curious one. The air current, instead of rising upward through the load of hops, is forced downwards. Issuing from the directing pipes, it strikes against the top of the kilns, and being thus distributed is reversed, until it escapes, bearing with it the moisture extracted from the hops, by a flue or tube opening at the lower section of the building. The air-conducting tubes are provided with valves, whereby the current can be diverted, when it is found necessary for the extension of the drying time to any single car-load that may contain extra moisture.



The system can hardly be called experimental, as the company have constructed and are operating thirty sets of the apparatus on their various plantations in America. They claim for it the following advantages:—

1. The process of drying begins immediately after the hops are picked, and there is no loss or damage from sweating.
2. The drying is accomplished evenly and without heat, no hops can be high dried or slack dried.
3. The hops are not handled, and no cones are broken, the resins are left in their natural state, that is soft and soluble, the aroma is uninjured.
4. The hops present a uniform clean appearance, bleaching with sulphur is unnecessary.
5. Being perfectly cured, the hops will keep better in the bale, as there will be no disturbing chemical changes.
6. The system is applicable, and can be used for the curing of hops in any country, no matter what the climatic conditions may be.

The Harper Adam's College.

The half-yearly meeting of the Governors of the Harper-Adams Agricultural College was held at Newport on October 25. Sir Thomas Boughey, Bart., presided, and the meeting included representatives of the Shropshire and Staffordshire County Councils, Mr. W. H Lander, Mr. Perry Jones, Mr. R. P. Cooper, Colonel Twemlow, etc.

The report of the Principal showed that the new session has commenced with a very satisfactory number of students, and that the annual examinations which were held for the awarding of the college diploma and certificate testified to the satisfactory work that had been done by the college staff during the past year.

The students of the college have also done well at the public examinations, including the National Diploma in Agriculture, and at the examination for the Professional Associateship of the Surveyors' Institute. The college staff are also engaged in delivering county lectures in both Shropshire and Staffordshire.

The arrangements made to enable farmers in Shropshire and Staffordshire to have their milk tested at the nominal fee of 6d. per sample has been much appreciated, and a large number of samples have been sent in.

The college is continuing to co-operate in the carrying out of field experiments in both Shropshire and Staffordshire, and in the former experiments upon trials of varieties and manurial experiments upon potatoes have been conducted at ten centres; other experiments upon the manuring of various crops and grassland have also been carried out at a number of centres in both counties.

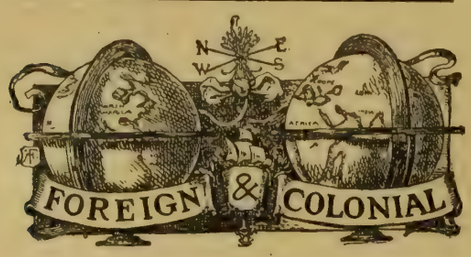
The college farm, which has been recently increased, has been largely devoted to experimental work, and during the past season about 500 farmers from various parts of Shropshire and Staffordshire have visited the College for the purpose of seeing the experimental work. Parties were organised by the Staffordshire County Council, Staffordshire Farmers' Association, Shropshire Chamber of Agriculture, Newport Agricultural Trading Society, Shifnal Agricultural Society, and by land owners and private individuals interested in the work. There has been a good demand for seed wheat and oats from these experimental plots, and it is very satisfactory to note the growing interest in the county in this work.

Mr. Ailwyn Fellowes, President of the Board of Agriculture, has consented to attend the annual dinner of the Yorkshire Union of Agricultural Clubs, at York, on Thursday, February 1.

Crystal Palace Poultry and Pigeon Show.—For the convenience of exhibitors at this show, to be held on November 7 to 10, the London and North-Western Railway Company will make arrangements for through vans for the conveyance of poultry, etc., to be run to the Crystal Palace on Monday, November 6, by special trains from certain stations, in addition to the vans running regularly on the through trains to London. Arrangements will also be made for the return of the traffic in through vans at the close of the show. Full details can be obtained of Mr. Robert Turnbull, Superintendent of the Line, Euston Station.

British Possessions
beyond the Seas
AND THEIR
London Representatives.
NOVA SCOTIA.

Offers advantages to British Agriculturists with moderate capital. Improved Farms at Low Rates. Fertile Lands. Famous Fruits. Enormous mineral deposits of Coal, Gold, Silver, Iron, Copper, Lead and Tin. Climate temperate and healthy. Easily accessible to all the principal markets.—Full information supplied by the Agent-General for Nova Scotia, MR. JOHN HOWARD, 57a, Pall Mall, London, S.W.



Agricultural Education at the Antipodes.

It has been truthfully observed that "The typical Australian agriculturist, relying largely on a bountiful Nature, does not exercise upon his crops anything approaching the same patience, care, and labour that are bestowed by the European cultivator, nor as a rule does he avail himself of the benefits of scientific farming and improved implements to the extent that prevails in America and Europe." But it must be remembered that until within the last few years the means for conveying his surplus produce to over-sea markets were too slow, uncertain, and expensive to enable him to successfully dispose of it at remunerative rates. Of late the increase of cold-storage accommodation and the means of cheap and rapid transit has completely altered the situation, and the Australian farmer is beginning to cultivate for export as well as for local consumption. But to be enabled to build up an extensive export trade, considerably in advance of that at present enjoyed by him, improved methods of agriculture are necessary, as in older countries. This is fully recognised by the various State Governments, each of which makes the spread of agricultural education a portion of its policy. In many portions of the rural districts, according to an official publication, agricultural colleges and model farms have been established, and travelling lecturers are sent to agricultural centres.

In New South Wales the Hawkesbury Agricultural College provides accommodation for 120 resident students. The farm attached to the Institution comprises 3,430 acres, of which 597 acres were under crop in 1903. Instruction in dairying is made a speciality, and the butter and cheese factory is one of the most completely equipped in the State. Experimental farms are also established in various districts of the State, and the instruction is adapted to local climatic conditions. At several accommodation is provided for students, who receive instruction in the practical farming work suited to the respective districts. The fees are small, amounting, as a rule, to about £25 per annum, which sum covers tuition and board, while at the Hawkesbury College and the farms several bursaries are awarded to specially deserving students. In Victoria, the Dookie College has accommodation for 66 resident students. It is situated in a healthy and picturesque part of the north-east portion of the State, on the outskirts of a rich agricultural district. Attached to the college is a farm.

About eight years ago the Queensland Government established an agricultural college and experimental farm at Gatton, about 58 miles west of Brisbane. Accommodation is provided for 60 residential students, and of the 1,692 acres of land attached to the college a considerable portion is under crop. State experimental farms are also in operation in four selected districts, and there is a State nursery at Kamerunga, near Cairns, and a Government tobacco farm at Texas. Extensive experiments are also carried on in connection with the sugar-growing industry, and at the central Government station at Mackay special modes of cultivation are tested, and experiments carried on in manuring, irrigation, etc. In order that the actual work of the central station may be brought before the cane-growers, 14 sub-stations conducted by farmers' associations have been established, where the most successful experiments conducted at the central station are repeated upon a small scale. In this way farmers become co-operators, and are brought into actual touch with the scientific work carried on by the Government experts.

Again quoting from the work previously referred to, it may be mentioned that South Australia has an agricultural college and experimental farm at Roseworthy; and a central agricultural bureau in Adelaide, with about one hundred branch bureaus in the country, which assist the farmers by disseminating valuable information, publishing papers, introducing new economic plants, and improving the breed of dairy cattle. A State school has also been established in Adelaide for the purpose of affording instruction to "secondary agricultural pupils." The fees paid by the scholars, who must be over 13 years of age and have passed the compulsory examination, are at the same rate as those paid in the ordinary State schools.

In Tasmania the Council of Agriculture gives valuable advice to farmers concerning improved methods of agriculture, extermination of insect pests, etc. Western Australia, one of the most enterprising of the Australian States, possesses four experimental farms, at the first two of which students are admitted at nominal fees, the instruction being confined to practical work on the farm, with the exception of occasional lectures by the scientific staff of the State Agricultural Department. There are also 65 "Agricultural Halls," erected by settlers, with State assistance, in which lectures are given by officers of the Department, and, in addition, 75 Agricultural Societies in receipt of Government subsidies, and which are utilised for the distribution of agricultural literature. It may be said that Australian agriculture generally has shown greater improvement during the last ten years than during the previous half century.

Contagious Diseases of Animals.

Summary of Returns issued by the Board of Agriculture for the week ending Oct. 21, 1905 :—

Total for 42 weeks in 1905			
Corresponding period in	1904	1903	1902

NOTE.—The figures for the current year are approximate only.

Morpeth Fair.—The half-yearly fair for the sale of cattle and horses at Morpeth was held on Monday, when the supply was not large, and the attendance of dealers was small. The big horses, fit for heavy trolley work in towns, were few, and while £60 was in cases the price asked, it was not got, £50 being the commission figure for the best. One and a half year old and two and a half year old colts made from £23 to £32; cobs and harness horses up to £30; small ponies to £8; and second-hand horses anything from £10 to £26.

Death of Mr. J. Peecock.—We regret to announce the sudden death of Mr. John Edward Peecock, in his eighty-first year, at his residence in Ipswich, on Sunday morning. Mr. Peecock was born at Great Blakenham, and was engaged in farming until, in October, 1865, he entered the service of Messrs. Ransomes, Sims, and Jefferies, Limited, of Ipswich, as traveller and general representative in the Eastern Counties. His practical knowledge of farming stood both him and his firm in good stead, as, in addition to his travelling, he was able at once to take part in the great ploughing contests in which at that time Messrs. Ransomes were engaged, competing almost daily at matches in all parts of the country. From that time to the present, Mr. Peecock has thoroughly worked the Eastern Counties, and secured for himself and his firm a large number of friends in the agricultural world.

Yorkshire Chamber.

A general meeting of the Yorkshire Chamber of Agriculture was held at York on Thursday—Major J. W. Dent presiding. A letter was read from the Liverpool and District Farmers' Club asking the Union to join them in making representations to the proper authorities as to the urgent necessity for relieving agricultural land of all rates in connection with the Education Act. The Chairman said he could not agree with that proposal, as he thought it was going too far. He thought agriculturists were paying more than their fair share, but he believed himself that the agriculturists required educating quite as much as any other member of the community, and it was only fair and just he should bear his proper share of the expenses of that education. He moved that no steps be taken on the letter.

Mr. J. B. Simpson (Bridlington), however, challenged the Chairman's view, and moved as an amendment that the subject be fully discussed at the next meeting of the club, and this amendment was agreed to.

A long report was presented by the Railway Rates Committee upon the hire and return of railway sacks, in which they expressed regret that the North-Eastern Railway had been unable to accede to the request of the union that sacks hired at one station should be returned to another without extra charge. It was decided that the complaint of the Bridlington Chamber should be submitted to the Board of Agriculture, with a request for their assistance. The question of the amendment and consolidation of the Agricultural Holdings Act was also considered and a resolution moved: "That in the opinion of this Union the amendment and consolidation of the Agricultural Holdings Act is desirable," but ultimately the discussion was adjourned to the next meeting.

Southdown Sheep Society.

A meeting of the Council of the Southdown Sheep Society was held at 12, Hanover Square, on Thursday, Mr. Herbert Padwick (president-elect) in the chair. The minutes of the last meeting having been read and confirmed, the General Purposes Committee submitted a report of their proceedings on May 25 last, which was duly adopted. The representatives of the Southdown Sheep Society on the Council of the National Sheep Breeders' Association were unanimously re-elected for 1906 as follows:—Mr. Newton Clayton (vice-president), Sir Thomas Barrett-Lennard, Bart., Mr. Allan Cooper, and Mr. Henry Webb.

The Council then took into consideration the matter of the prizes for Southdowns to be offered by the Society in the year 1906, and it was resolved unanimously that similar prizes be offered in 1906 as in 1905, with the addition, in the case of the Bath and West Society, of prizes of £10, £5, and £2, for a class for two-shear rams. The complete list of prizes to be offered by the Southdown Sheep Society in the year 1906 is therefore as follows:—

Royal Agricultural Society.—Champion Gold Medal, value £10 10s., or £10 10s. in cash, for the best two-shear or shearling ram. Silver Medal for the best pen of ewes or ewe lambs. Prizes of £10, £6, £4, for two-shear rams. Prizes of £10, £6, £4 for pens of three shearling rams.

Royal Counties.—Champion Gold Medal, value £10 10s., or £10 10s. in cash, for the best ram or ram lamb. Silver Medal for the best pen of ewes or ewe lambs.

Sussex County.—Champion Gold Medal, value £10 10s., or £10 10s. in cash, for the best ram or ram lamb. Silver Medal for the best pen of ewes or ewe lambs.

Bath and West.—Silver Medal for the best ram or ram lamb. Silver Medal for the best pen of ewes or ewe lambs. Prizes of £10, £5, £2 for two-shear rams.

East Kent, Essex, Gloucestershire, Norfolk, Oxfordshire, Suffolk, Tunbridge Wells.—Silver Medal for the best ram or ram lamb. Silver Medal for the best pen of ewes or ewe lambs.

The Flock Book.

Arrangements having been made for the necessary inspection of the new flocks, Mr. Allan Cooper gave notice that at the next general meeting of members he would move a resolution to the effect that after December 31, 1906, the Southdown Flock Book should be definitely closed to all unregistered sheep. The Council then adjourned until February.

Grantham October Fair.—The annual October Stock Fair was held in the streets at Grantham on Thursday, and though a fair number of cattle were offered yet there was not nearly as large a representation as last year. There was also a very small show of sheep and horses, and trade generally was slow. The quotations were:—Bullocks, three-year-olds, £15 to £17 10s.; bullocks, 2½-year-old, £12 to £12 15s.; heifers, £12 to £14; milk cows, £15 to £21; drapes, £10 to £13; yearlings, £5; lambs, 17s. to 37s.; nag horses, £12 to £20; ponies, £8 to £10 each.

BASIC SLAG.—Highest Percentages Phosphates guaranteed. We sell thousands of tons, consequently quote lowest possible prices. Hundreds of our customers testify to its marvellous efficacy. Write us now.—Cannock Agricultural Co., Ld. (Henry R. Hart, Managing Director), Cannock, Staffs.

TRACTION ENGINES and WAGONS, Portable, Ploughing, and Fixed Engines Thrashing Machines, &c., second-hand, for Sale, cheap, or to be Let on Hire-purchase Full list free. Inquiries for all classes of Machinery solicited. Largest stock in England to be seen at our Works as below. We are also buyers of good modern Engines at all times, for cash Large stock of Beltings, Oils, and Engineers' Requisites of all descriptions. HENRY LEWIS & SONS, Thames Bank Iron Works, Reading.

RATS! RATS!!—A Truro farmer writes:—"After using a 1s. 2d. Pot of HARRISON'S 'RELIABLE' RAT POISON, I picked up 150 dead rats." Equally good for Rats, Mice, or Moles. Dogs or Cats won't touch it. Price 6d., 1s., 2s. 3d., 3s. 8d. Postage 2d.—M. L. HARRISON, Chemist, X. Dept., Reading.

BARBED FENCING WIRE, in ½-cwt Reels, 224 yards, 6s. 6d. per Reel. Plain Galvanised Wire, in 1 cw. Bundles, 700 yards, 10s. per cwt. Wrought Iron Standards, 1s. each.—BUTLER, Bell Works, Wolverhampton. Established 1828.

GALVANISED CORRUGATED SHEETS, all warranted sound. 3ft., 8d.; 4ft., 11d.; 5ft., 1s. 2d; 6ft., 1s. 4d.; 7ft., 1s. 6d.; 8ft., 1s. 9d.; 9ft. 2s.; 10 ft., 2s. 3d. each. Ridging, 3d. per ft. Spouting, 3½d. per ft.—BUTLER, Bell Works, Wolverhampton. Established 1828.

FOR SALE.—Fencing, Sheep Hurdles and Stakes.—STURGESS, Roade.

MISCELLANEOUS.

MY SPECIALITY — Imperishable IRON SHEETS, as supplied for 25 years to largest Estates. Once fixed, these are everlasting. Full particulars and prices free. The old house for cheapest Iron Fencing, Gates Wire Netting, Tanks, Felt, Iron Tubes, and General Estate Requisites. Terms cash.—JOHN ATTWOOD REEVE, Stony Stratford.

LOIN CLOTHS.—Best and strongest in the market, 46 in. long by 38 in. wide; waterproof, on stout navy canvas, and weighs 4 lbs. I will send one post free for 3s. Cash returned if not approved of.—HY. J. GASSON, Rye.

LOOK.—The best strong and warm hardwoven Wool Horse Rug, 6 ft. long. 5 ft. wide, with throat strap, and bound, carriage paid, 5s. 6d.; sizes smaller, 4s. 6d. and 3s. 6d. Cash returned if not approved of.—HY. J. GASSON, Government Contractor, Rye.

WATERPROOF COVERS, same materials and pliable as railway sheets: 12 ft. by 9 ft., 12s.; 15 ft. by 9 ft., 15s.; and so on to any size at 1s. per sq. yd., with lashes. Quantity of large pieces of Tarpaulin at 20s. per cwt.; odd pieces, suitable for roofing at 8s. per cwt.; cash returned if not approved of.—H. J. GASSON, Government Contractor, Rye.

POWDER for DESTROYING LICE IN CATTLE and HORSES, and FLEAS and LICE in DOGS and POULTRY. Sure remedy; simply sprinkled on, no washing; quite harmless, 1/- per lb., over 3lbs. post free. E. RUMSEY & Co., Rhuddallt Fawr, Carnarvon.

WIRE NAILS mixed, 8s. cwt. 28 lbs. 2s. 3d., Screws (mixed), 28s. cwt., 28 lbs. 7s. 6d.; wire cut, wrought and malleable nails, &c.; wholesale prices.—MIDLAND NAIL WORKS, 25, Rea Street, Birmingham.

MISCELLANEOUS.

OIL ENGINES, Fixed and Portable, up to 25 b.h.p. The cheapest motive power for farmers. Send for catalogue —NAYLER & CO., Ltd., Engineers, Hereford

SACKS! Best twilled 4 lb. 4 bush. Corn Sacks, 25, 1s. 1d.; 50, 1s.; 100, 1s 3d marked, carriage paid. Sample 1s. 6d.—TARPAULIN CO., Dudley.

HOUSES, PORTABLE.—for 12 Fowls 15/-; 20 Fowls 20/-; 30 Fowls 25/-; 50 Fowls 35/-. Approval.—LONGBOTTOM, Nafferton Works, Hull.

LAITA.—The best milk substitute for calves, and best results; popular prices, 12s. 6d. per cwt., Carriage paid.—Send 12s. 6d. for a sample bag to R. J. NELL & CO., Ltd., Spiced Food Mills, Louth, Lincs Agents wanted.

BASIC SLAG, guaranteed 42 to 50 per cent. phosphates; also 38 to 45 and 30 to 35 per cent. qualities. KAINIT, MOSS LITTER, &c.—CHAS. PICKEN, Merchant, Wolverhampton.

BASIC SLAG, 42-50, 38-45, 30-35, 26-30 per cent., phosphates. State quantities required and station, when prices, analyses, &c., will be sent by return of post.—CLEMENT SWAFFIELD, Derby.

PEDICURA for HORSES' FEET, cures thrush, seedy, brittle, shelly hoof, foul smell of feet. Prevents and helps cure sandcrack and corns. Good for greasy heels, itchy mane, tail, or legs. Produces a sound, healthy growth of hoof. Tins 2s. 6d. or 10s. 6d. through Chemists, or post free.—GREGORY & CO., Temple, Bristol.

DAVID & CO., Taff Vale Ironworks, Cardiff.—Galvanised Sheep Netting, 3ft. wide, 4in. mesh, 6s. 3d. per 50 yd. roll; also galvanised wire netting in all widths and meshes: galvanised steel cisterns, 100 gals., 19s. 6d.; 150 gals., 31s.; 240 gals. 47s., any size supplied carriage paid; galvanised barb wire, 13s. per cwt.; steel fencing wire, 8s. 9d. per cwt.; sheep hurdles, 6ft. long, 3ls. per doz.; cattle hurdles, 6ft. long, 41s. 6d.; continuous 5 bar fencing, 1s. 7d. per yard; "Unchallanged" field gate, 21s., 6 gates carriage paid; galvanised sheets sheep racks; corn bins, etc. Send for Catalogue.—DAVID & CO., Taff Vale Ironworks, Cardiff.

JOHN PRIEST & SON, Ltd., Cast Iron Works, Bristol.

Wire Netting.—Best Galvanised, Cash prices per roll of 50 yds. 3 in. mesh, 2 ft., 3s. 4d.; 3 ft., 5s. 0d.; 4 ft., 6s. 8d.; 2 in. mesh, 2 ft., 4s. 1d.; 3 ft. 6s. 1d.; 4 ft., 8s. 2d.; 1 in. mesh, 2 ft. 7s. 6d.; 3 ft., 11s. 2d.; 4 ft., 15s. 0d. BEST GALVANISED SHEEP NETTING. —50 yard rolls, 3 ft. wide, 4 in. mesh, centre strand, 7s. 7d., 8s. 3d., and 10s. 3d. per roll. Strong Stakes, 6s. per dozen. Carriage paid on lots, netting or stakes, 70s. value.

Iron and Steel Hurdles, Fences Gates.—Excellent quality: 6 ft. hurdles, 4 rails, 33s. per doz.; 5 bars, 36s. Steel fencing wire, 9s. per cwt.; galvanised wire strand, 15s. cwt., galvanised barbed wire, 13s. cwt., 590 yards. Challenge field gates, 9 ft. by 4 ft., 22s. each. Carriage paid on six gates. Strong sheep fencing, five steel wires and iron posts, 8d. per yard

Splendid Galvanised Roofing.—Perfect quality; 5 ft., 1s. 3½d.; 6 ft., 1s. 6½d.; 7 ft., 1s. 10d.; 8 ft., 2s. 1d.; 9 ft., 2s. 5d.; 10 ft., 2s. 9d. Ridging, 2½d. per ft. Best Wire Nails, 11s. cwt.

Galvanised Cisterns corrugated steel, 30 gals., 9s.; 50 gals., 13s. 3d.; 100 gals., 21s. Corn Bins; Sheep, Pig, and Cattle Troughs at very low prices. Lists free.

J. PRIEST & SON, Ltd., Castle Iron Works, Victoria Road, Bristol.

THE

"BIBBY" CAKE

V.

LINSEED CAKE.

In out-of-the-way districts, amongst farmers who perhaps do not often see the Agricultural papers, there are some few feeders who still fatten bullocks and other cattle on Linseed Cake.

To all such we venture to suggest that the present high price of Linseed Cake affords an opportunity for putting the "**BIBBY**" **CAKE** to a competitive test.

Consider the saving! At the relative prices the cost of "**BIBBY**" is something like 30s. per ton less than the cost of any good brand of English Linseed Cake, so that on a four-ton truck of Cake a saving of £6 is effected.

But this is not all; we maintain that cattle can be fatted more expeditiously on "**BIBBY**" **CAKE**, which effects a saving of both time and other keep.

But let us waive the latter point, for the money saving alone is well worth the feeder's attention.

We supply the whole Cakes, or in the form of Cakettes, as may be desired.

We also supply our famous **DAIRY CAKE** in Cakettes. Whole Cake or Meal, and we believe better value for Dairy Cows is not to be obtained than we are now giving in out well-known **DAIRY CAKE**, **CAKETTES**, and **MEAL.**

Bibby's Quarterly.

The new number of BIBBY'S QUARTERLY, edited by our Mr. JOSEPH BIBBY, is now out, and can be had during this month at all Smith's Bookstalls, price 1/-.

There be those who say that BIBBY'S QUARTERLY is the best periodical which comes into the farmhouse, but there be also gainsayers who affirm that if it dealt more with live stock, and less with high ethics, it would be more acceptable to the average farmer; and we are rather of that opinion ourselves, but the Editor tells us that he edits BIBBY'S QUARTERLY to please himself, and we have to leave it at that; should, however, any reader of BIBBY'S QUARTERLY make a purchase at Smith's Bookstall, and is afterwards doubtful that he has got his shilling's worth, we undertake to make matters straight with him if he apprise us of his dis satisfaction within the present month.

FOR HEALTHY CALVES USE

VESTA CREAM MEAL

This, our latest Calf Meal, has been specially made for use with either Skim or Separated Milk, and after the first few days can be used alone.

It is very nutritious, easily digested, prevents scour, and imparts a beautiful sleek skin.

It is one of the richest milk substitutes obtainable, and fine healthy thriving calves are reared on it by the leading breeders of cattle.

It is therefore a *perfect milk substitute.*

T. GITTINS, Esq., Wrentnall Farm, Shrewsbury, says

"I am more than pleased with your Calf Meal, I consider it excellent in every way"

15s. per cwt. Carriage Paid to Nearest Station.

THE ROYAL SHOW AT DERBY.

The Council meeting of the Royal Agricultural Society last week was mainly devoted to a discussion concerning arrangements for the 1906 exhibition at Derby. We are pleased to see that the Society intend to co-operate most heartily with local bodies of all sorts and descriptions. It is pleasant to think that the local institutions and associations as well as the large firms in the locality are prepared to work hand-in-hand and unitedly to make the Royal Show of 1906 a success. If there is one item more than another which we welcome, it is the decision of the Derbyshire Agricultural and Horticultural Society to lend their willing aid, and the privileges which are to be extended to members of the County society in return for their support, are of such a nature as to leave the Royal Agricultural Society at the termination of the 1906 show with a large number of friends and well-wishers in the county of Derby.

By no means the last word has been said as to how the Royal Show may aid and assist the local societies whose districts they visit from year to year. Classes are to be provided at the Derby Show for farmers and others who reside in the county of Derby or within the area of the Derbyshire Agricultural Society; there is nothing particularly novel in this, but we do think it is a move in the right direction to increase the local interest in the show. The huge size of previous Royal Shows has tended to kill individual interest. "What is everybody's business is nobody's business," and in the past few years local enthusiasm has been more or less missing. Possibly here lies the reason of the diminution in the powers of attraction of the show, and we welcome any and every step which will restore to the Royal Show that position which it had attained in the past, of being the "red-letter week" of the year in that particular locality.

A liberal prize list has been arranged for the Derby meeting, and the sum of £4,000 has been voted by the Society as a prize fund. There is but little doubt that, given fine weather, the Royal Show of 1906 will be a brilliant success, if the Council and permanent officials of the Society will work hand in glove with the local authorities, and see that the latter's views are treated with every consideration.

Last month we had occasion to refer to the muddle into which the Society had floundered financially. We are glad to think that very shortly the members will have placed before them a balance-sheet showing as simply as possible the exact position in which they stand. The realisation of Harewood House and Park Royal will enable all mortgages to be paid off, and then we shall know definitely whether the Royal Agricultural Society is in debt, or whether the balance, be it ever so small, is on the credit side of the accounts. The facts disclosed may be unpleasant, but at all events they will clear the situation and put an end to a great amount of rumour and gossip.

BIRDS: THE FARMERS' ENEMIES?

The Central and Associated Chambers of Agriculture agreed at their meeting on Tuesday last that a vigorous campaign should be initiated against birds whose existence is a terror to farmers, and a resolution was adopted expressing the opinion of the Council that the depredations of birds are a cause of serious loss to growers of various products of the soil, and that an official enquiry should be made as to the means to adopt to prevent such losses.

With the last part of the resolution we are in entire accord, for in England the study of the food of birds and the part which they play in the economy of nature has unfortunately been much neglected, and, as a rule, the only information which can be gleaned from English writers on the subject is, with but few exceptions, of an unsatisfactory nature. And, in this connection, we would remark that it takes a close observer to see the good which is done, while any damage to a crop is at once noticed, and too often put down to "them pesky birds," with the penalty of indiscriminate slaughter. For this reason we are quite unable to agree with one of the earlier speakers in the discussion on this subject last Tuesday, who, in a list of birds which should be kept under control, had rooks, larks, and starlings, as well as the sparrows, for the latter of which his remedy was "the simple one of extermination, and that at the earliest possible moment."

Now, although the food of a sparrow in our agricultural districts consists of quite sixty per cent. of corn, in the breeding season, which is a long one, and extends over some months, the food of the nestling is nearly all insect in character; in fact, five-sevenths of the whole diet is made up of insects, so that this bold little "companion of man" does a certain amount of good. In fact, it has been estimated that a couple of sparrows will consume in food for their young about 3,000 insects weekly, each parent bringing a beakful thirty times an hour to satisfy the very good appetites of their young. In connection, however, with the sparrows' love for corn, we must bear in mind that the smaller area under cereals at the present time makes the armies of birds that descend upon it greater than ever, which causes a great deal more destruction than formerly, so that the number of sparrows should be proportionately reduced, *but not exterminated*, for the reason given above, sparrows may be included amongst useful birds, as the historical fact related of them proves. Frederick the Great, King of Prussia, being very fond of cherries, one day ordered

a crusade against the sparrow tribe, some of them having ventured to pick at his favourite fruit. A price of six pfennings a brace was set on them; consequently, throughout Prussia the sparrow-war was briskly carried on, and so successfully that at the end of two years *not only were cherries waxing but most other fruits.* The trees were covered with caterpillars and completely stripped of leaves, and insects had increased to a most alarming extent, for not only were the useful sparrows exterminated, but other birds had been frightened away by the extraordinary measures taken against the sparrows. The King was obliged to confess to himself that he had not the power to alter that which had been ordained in the balance of nature by a greater King than he, and so Frederick had to retract his decree, and at considerable expense import sparrows from afar, for these, being birds of obstinately sedentary habits, would never have returned of their own accord.

Now, as regards the field lark, it should be most strictly protected, on account of its use to agriculture, for its food consists of slugs, worms, spiders, small beetles, wireworms, small moths, and other insects taken both on the wing and *on the ground.* As regards starlings, it is generally acknowledged that they should be looked upon as among the best friends of agriculturists, but rooks are both harmful and useful, so that they should be kept within narrow limits. Thus we see the utmost care must be exercised *as to the extent* of the destruction of birds, as a little observation as to their organisation and mode of life in England will at once show that the orders of birds whose daily and principal food is drawn chiefly, if not entirely, from the animal world are those that exist both in the greatest number and the greatest variety, and anyone who makes any pretension to know anything of entomology in relation to farming must admit that it is by no means an unimportant work which has been allocated to our feathered friends in agriculture.

Royal Agricultural College, Cirencester.

Interesting extensions of the curriculum at this college have recently been arranged in two important particulars. In the first place there is now open to all students a two years' course of lectures and demonstrations in poultry and poultry-farming, Mr. Cecil S. Byrne being appointed to the post of lecturer and practical demonstrator. The classes, which will cover the whole field of scientific poultry-farming, will be held once a week, and students, when qualified and approved, will in turn be appointed to take charge of fowls, or of incubators and foster-mothers, under supervision. There will be an examination for certificates at the end of the course. The other new departure is the establishment of "post-graduate dairy classes." With the opening of the new year students who have taken the college diploma will have the option of attending, without the payment of any fee, vacation dairy classes, viz., during three weeks in the spring vacation, and during four weeks in the summer vacation. Students attending these classes will be expected to undertake all manual operations of butter and cheese-making, under supervision, and to qualify by examination for the special certificate of the college in dairying.

Mr. Isaac Allen Goodwin, of Nantwich, a well-known Cheshire farmer, died on the 21st ult. at the age of seventy. When Henhull Farm on the Dorfold estate became vacant in 1863, Mr. Goodwin was selected as the tenant, and he occupied the holding until five years ago, when he was succeeded by his son, Mr. T. C. Goodwin. He was closely interested in the various agricultural organisations in the county. He was one of the earliest members of the Cheshire Chamber of Agriculture, the Nantwich Farmers' Club, and the Milk Producers' Association, and was a director of the Cheshire Farmers' Supply Association. Of the last-named body, with the exception of Mr. Hollinshead, of Sandbach, he was the oldest member, and, with the late Mr. Fitton, the first manager, he was largely instrumental in the formation of that association.

Seasonable Topics.

A Disease-Resisting Potato at Last.

At a recent meeting of the Royal Horticultural Society, Mr. T. A. Scarlett, the well-known specialist of Edinburgh, exhibited tubers of what is said to be a disease-proof potato. This potato, by the way, is not a new variety, but a very old one—a black Scotch kidney, called Trochie Grant—and was supposed to be lost to cultivation, but it has been discovered and brought to light. It is said, in connection with this potato, that there is documentary evidence to show that, though grown since 1745, it has never shown the least sign of disease. Probably we shall hear more about Trochie Grant later on, as regards its cropping powers and edible qualities. The colour, of course, is not quite what is wanted in these days, but it is something to hear of a variety that has never been known to take the disease, and, with this potato to work on, hope is given that a disease-resisting variety of modern type may yet be raised. What a boon it would be to farmers and others who suffer more or less every year with the disease in this important crop.

A New Vegetable.

When we consider what has been done in the development of farm and garden crops, it makes us wonder what may be done in the future, and by way of progress we have now a cross-bred brassica, derived from a cabbage and a Brussels sprout, and showing the chief characters of both parents. This novelty was exhibited at a recent meeting of the Royal Horticultural Society by Mr. Ridgewell, of Histon, Cambridge, who attached the following statement to his exhibit:—"The result of a cross between Winningstadt cabbage and Cambridge Champion Brussels sprout. The plants produce fine large cabbage, and at the base of every leaf large buttons are formed, so that after cutting the cabbage a good crop of firm, large buttons may be gathered. As the plants were raised in the autumn, a good many suffered through the hot weather, but if sown in the spring fine heads of cabbage may be cut in the autumn, to be followed by large buttons." Such is the raiser's description of the new vegetable, which, we understand, is to be tried at the society's garden at Wisley, and, if it can be kept true, it will doubtless prove an acquisition, as it would be distinctly economical to be able to get autumn cabbage and Brussels sprouts from the same plants. At the present time this is all that can be said about the new cabbage-cum-Brussels-sprout, but if it fulfils all that is said about it we shall doubtless see and hear more of it in the future.

Storing the Mangolds.

Farmers often find themselves in a bit of a quandary over the harvesting of the mangold crop. Sharp pinches of frost, like we had in October, naturally make them anxious, and, with the possibilities of getting further spells, even a little more keen, there is a natural desire to see the roots safe in the clamp. On the other hand, in many places it may be observed that mangolds are still growing, and while they are putting on size and weight it is only natural that the farmer should want to leave them in the ground. The growth of root crops, by the way, has been very spasmodic this year. Early in the summer they looked very sickly, but the rain came in the nick of time, and in August the progress became very perceptible. Since then the roots have continued to put on weight, and returns are heavier than was at one time anticipated. On the whole, we are inclined to think that now November is in, with possibilities of wintry weather any time, it is well to forego any further chances of size and take advantage of dry days to get in the crop. Though opinions naturally differ on this point, we agree with the old-fashioned method of leaving the roots in heaps on the land for three or four days before clamping, merely covering them with leaves; and, with regard to the latter, we think the advice given by "M. Y." in our last issue, namely, to plough them in green for manure, is the best that could be given in the matter of their disposal.

Market day Lectures.

Agricultural education is a matter that has received more attention in Essex than it has in many other counties, and quite a novel line was struck when the County Council authorities conceived the idea of arranging lectures at Chelmsford on market days. We understand that this departure has been attended with success, and that the market day lectures have aroused a good deal of interest. There is still, of course, a considerable amount of prejudice to be overcome amongst farmers in regard to lectures, speaking generally, and the farmer looks upon a lecturer with a certain amount of suspicion. There may be some excuse for this, because in the past purely theoretical men, who knew little or nothing about the practical work-a-day side of the farmer's life, have set out to teach the latter his business and very often in language quite above his head. Teaching of this kind is not only useless, but harmful, as it arouses an antagonistic spirit against education and lecturers in general. On the other hand, if the lecturer is sound in his theory and has acquired his practical knowledge in the school of experience, he can impart a good deal of useful information to farmers by means of his discourses. Market-day lectures of the right kind strike us as being distinctly useful, because it is part of the routine of the average farmer to attend his local market, and, after the business of the morning is over, he frequently finds himself with an hour or two to spare before he need return home. How that time is spent largely depends on the disposition of the man, but none of us are too old or too highly educated to learn, and useful information may be often acquired through listening to a lecture on some agricultural topic. Again, we find that a good deal of knowledge may be obtained through interchange of opinion amongst practical men, and the usefulness of lectures are considerably enhanced when followed by spirited and friendly discussion.

Prizes or Medals at the Royal Show.

Since the failure of the last show at Park Royal, and it became obvious that retrenchments of a drastic character must be made in the management of the society, various suggestions have been made how this could best be done The reduction of establishment and the lowering of the working staff are matters which have come in for a good deal of comment, and the whole matter has been referred to in Press correspondence as "Agriculture in the Gutter." No matter how one argues, however, the position remains unaltered, and the fact has to be faced that something must be done. One suggestion is embodied in a letter written by Sir Thomas Dyke Acland, Bart., to the *Morning Post*, which appeared in our last issue, namely, that medals or certificates be awarded at the Royal Show as prizes instead of money. It is argued that the majority of persons who exhibit do it, not for the sake of the prize-money, so much as the honour and the advertisement of the herd or flock, and, consequently a certificate or medal would be valued equally as much or more than the money prize, and the cost of these trophies would be trifling in comparison. The idea, by the way, is by no means new, for the Royal Horticultural Society, which is at present enjoying a reign of unexampled prosperity, holds a highly successful show in the Temple Gardens, London, at which no money prizes are given, but the awards take the form of pieces of plate and medals. It may be urged that this is largely a trade show, and the nurserymen who exhibit depend on the advertisement as a reward for their labour and outlay. Just so, but according to the arguments of Sir Thomas Dyke Acland the Royal Agricultural Show is somewhat similar, as the chief object in competing for a prize is not so much to acquire the money offered as it is to advertise the herd and enhance the market value of the animal which wins honours. As Sir Thomas Dyke Acland points out, the case is entirely different to a small county show, where the exhibitors are mostly tenant farmers, and the prize-money to them is a consideration.

Ploughing Matches in North Kent.

The twenty-eighth annual ploughing match of the North Kent Agricultural Association, the largest of its kind in the world, was held at Chimham's Farm, Farningham, near Dartford, on Thursday, in the presence of a large company. One hundred and nine teams took part, as against 130 last year. The special prize for the best piece of work with the iron plough was won by George Colville, employed by Mr. E. Vinson, of Sidcup; and Arthur Turner, in the employ of Mr. V. Earle, Farningham, was the winner of the principal award for the best work with the turnrise plough.

Mr. Peter Palmer, of Houton Kirby, secured the silver cup competed for by farmers and farmers' sons, and Thomas Chapman, aged sixty-five, of Southfleet, and Ernest Godfrey, aged thirty-one, of Darenth, received silver watches, being the oldest and youngest winning ploughmen. The special prize offered by Mr. John Russell, father of the association, was awarded to Frederick Letchford, aged twenty-five, of Bexley, and the long service prize was gained by George Pratt, who had been in the employ of Mr. R. Rogers, Ash, for thirty-one years.

Agricultural Politics.

BY A LOBBYIST.

The spirit of organisation is in the air. The Darlington resolution has now, I learn, been followed by the determination of the Warwickshire Chamber of Commerce not merely to formulate a Parliamentary programme, but to exact loyalty to that programme from every one of its members. I am not aware of the actual terms of the resolution, but a member of the Chamber has assured me that it indicated a very definite determination on the part of the members to consider their own weal rather than partisan convenience. "I can assure you," said he, "that, speaking generally, we Warwickshire farmers will refuse to support any candidate who will not emphatically promise to withhold his support from a Government which continues the old game of agrarian neglect." "Of course," he added, "there are men among us who are partisans first and agricultural policy men afterwards. They have, however, for the moment, at least, subordinated their predilections to the anxiety to exact necessary reforms and a more generous executive scheme of agricultural administration from Parliament." Most excellent information, in all sooth. I pray, however, that the Warwickshire agricultural reformers will not restrict their vision—will not let the be-all and end-all of their purpose be the concession of the Butter Act, a Dogs Act, the throwing of the cost of secondary education on the Imperial Exchequer, and the increase of the grant to the Board of Agriculture by a score of thousand pounds. There should be other things in this philosophy than these.

• • •

I see that Liberal candidates for rural constituencies are making much of the Earl of Onslow's frank confession of the sedulous and unvarying Parliamentary neglect of the interests of agriculture during the lifetime of the present Ministry. Well, I suppose we cannot wonder at this. The confession places a pretty flail in their hands with which to belabour their antagonists. The Conservative party is traditionally the rural party, and when a Conservative Minister confesses that he and his fellows have only yielded six hours of Parliamentary time during each of the last five years for the organised consideration of agricultural necessities and agricultural problems, we are provided with an example of almost brutal recreancy. However, the farmer's plain duty is to ask these Liberal candidates if they will insist on a Liberal Ministry doing better than this. Of course, they could not, under any possible combination of circumstances and conditions, do worse. The reply will be inevitably in the affirmative; but, then, the interrogative farmers should ask that the Liberal candidate should indicate whether he means by this that the Liberal Parliament shall—that is, as far as his personal influence can secure this—give a practical heed to workaday matters of moment to the rural interest. Does he mean that that Parliament shall give weeks of consideration to feather-head schemes of land reform probably impossible of realisation, or that it shall give attention to questions like adulteration, tenure reform, housing reform, rating reform, and taxation reform, the establishment of experimental farms and the dissemination of the results by a State-established machinery, and the practicalising of education in harmony with rural needs? The Conservative Government of the last four years has been barren. The urban centres may be the siren influence with the promised Liberal Government. Will these Liberal candidates promise to seek to deflect that Government into the path of rural reform? Denunciation of the official apathy of the past is not of necessity a promise of official Ministerial sympathy in the future.

• • •

The fact that Mr. Chaplin is persevering with his objections to the redistribution scheme embodied in the abortive Bill of the Government is excellent. It means, if I read portents aright, that that scheme, or, rather, the population basis, which would so sorely penalise rural areas, will never be expressed in an Act. Even if this Parliament be extended unto another session, and even if the Ministry have sufficient virility (which, by the way, faithful supporters like the *Daily Telegraph* and the *Pall Mall Gazette* frankly doubt) to conduct so momentous a legislative business, this particular proposal would be defeated. The Liberals might not be possessed by the same relentless objection to it which possesses Mr. Chaplin; but, like the Irish Nationalists, they hold that the Government is without any mandate to deal with the question, and that the parent of the whole business is the anxiety to jerrymander the constituencies in the interests of party. Mr. Chaplin would by no means be an isolated Conservative malcontent. With him would be associated all that considerable Conservative section who look upon the population basis adopted for urban centres in the abandoned Bill as calculated to vest a disproportionate and unfair Parliamentary interest in urban centres. On the whole, therefore, I think we can regard the prospect, so far as this matter is concerned, with serenity. The rural representation in the House of Commons is not yet likely to be depleted.

• • •

Well, Mr. Akers-Douglas, the Home Secretary, did something more than chew the dry remainder biscuit of obsolete Parliamentary platitudes in declaring that the rating question, which in its present incidence so unfairly penalises the farmers, must come up for settlement very shortly, no matter which party is in power. This must be remembered as an explicit pledge from an authoritative influence in Conservative leadership. I doubt that the Liberals will deal with this question —and I am assuming that the next Liberal Government will deal with it—in a manner satisfactory to the rural interest. The Liberal hierarchy will be compelled to consult the party economists. Those men are not exuberantly anxious to relieve farmers. Henry Georgeism has long since been exploded; but most of them believe in another form of land nationalisation. If they do not suggest the dispossession of landlordism by the simple, scientific process of taxing land to the extent of twenty shillings in the pound, they are not by any means exuberantly anxious to relieve the land of its rating burdens. I have occasionally heard Liberal candidates—I recently instanced Major A. W. Biggs, who is fighting the Evesham division —characterise with frank denunciatory enthusiasm the fact that a farmer, in order to secure an income as large as that of a town tradesman, has to pay many times as much in taxes as the latter estimable person. These candidates are, however, few and far between. Thus it is that the question will still in a measure, even though the Liberals deal with it, remain open for that Conservative Government which is inevitable in the cycle of political change. Mr. Akers-Douglas and his fellows must be reminded, then, of his declaration and of the fact that he has permitted it to be accepted as an indication of what Conservatism intends to accomplish. Official Conservatism has to rehabilitate itself in rural esteem. The neglect of the past few years has to be atoned for and expiated

• • •

Again are the rumours revived of the prospect of an early dissolution. These are, I ween, due to the confession of even the Government organs that this Ministry is moribund, and that another session would be foredoomed to abortiveness. Why, ask the advocates of an early appeal, should the Government await a new register? It has been pointed out that if the Government went to the polls in the early months of the new year—and this has been suggested—the Liberals would receive that advantage to the full which a new register invariably gives them. Under these circumstances, if the fight is to be fought on the 1906 register the Government would postpone seeking the popular suffrage until the year is far advanced. But surely, if the best period for Conservatives is when the register is almost exhausted, no better period than the present can present itself. I know Conservatives who declare that to go to the country now would mean the retention of a dozen constituencies, the majority in which would be really Liberal under the new register. I have even heard astute politicians men whose judgment has been confessedly influenced by the nervous preparative haste which now marks the life of the Conservative headquarters—fix the third week of the present month for the dissolution. Against this anticipation is the fact that Mr. Balfour might prefer to resign rather than to dissolve. Resignation would throw on the Liberals the responsibility of administration for a brief period.

British Dairy Farmers.

A meeting of the Council was held at 12, Hanover Square, on Wednesday, Sir Edward Strachey, Bart., M.P., vice-president, in the chair.

On behalf of the Finance and General Purposes Committee, Mr. Page reported that the available balance on current account on October 31 was £5,829 14s., against which the committee recommended payments amounting to £4,859 12s., including £4,765 for prizes and other expenditure connected with the recent dairy show. The committee submitted a return showing that in the eight weeks ended October 28, 53 cwt. of fresh milk were imported into the United Kingdom, there being none in the corresponding weeks of last year. In the same period the imports of cream amounted to 888 cwt., compared with 575 cwt. last year; of preserved milk 550 compared with 504 cwt., and of condensed milk 159,462 against 135,231 cwt.

A letter was read from the Board of Agriculture having regard to the Council's resolution as to a proposed amendment of the Sale of Milk Regulations, 1901, and asking for a statement as to the nature of the facilities which the association desired should be given to vendors under new regulations. The communication was discussed at some length, and eventually a small committee was formed with instructions to draft suggestions to be laid before the Board after approval by the Council.

On the motion of Captain Smith-Neill, seconded by Mr. Ashcroft, it was resolved: "That this Council is prepared to join in a deputation to the Prime Minister in January or February next to urge upon him the necessity of passing the Sale of Butter Bill before Easter."

The next meeting of the Council was fixed to be held on Wednesday, December 6.

Preston Cheese Fair.

In consequence of extensive country buying during the previous fortnight and the fact that many farmers were holding over their produce for the Christmas show fair, the pitch at Preston Fair on Tuesday was smaller than usual. It consisted of 63 lots and 804 cheese, as against 85 lots and 1,450 cheeses at the corresponding fair last year. There was a large attendance of buyers, and a clearance was speedily effected at prices slightly in advance of those of a year ago. Medium made from 55s. to 57s. 6d., best from 60s. to 62s. 6d., while a few exceptionally choice dairies ranged up to 69s.

Lancashire Cheese.

It was stated at a conference of agriculturists, held at Preston on Tuesday, that there are 12,000 farms in Lancashire, and as a means of popularising and advertising the cheese made in the county, it was decided to form a Dairy Farmers' Show Society. The Mayor of Preston, who presided, affirmed that Lancashire cheese is as good as Cheddar, and the Mayor of Lancaster, who said he prided himself on being an expert in cheese-tasting, expressed the opinion that no cheese has so rich a flavour as Lancashire cheese. It would command a good price all over the country if its qualities were better known.

At a well-attended meeting of North Notts farmers, held at Retford, it was unanimously decided to form a branch of the Lincolnshire Farmers' Union until such time as the county is able to form a union of its own.

Local Taxation. Referring at an agricultural dinner in Kent to the renewal of the Agricultural Rates Act, Mr. Akers-Douglas said the Government had dealt only with the fringe of the question of local taxation. Agriculturists were paying too much towards roads, lunatics, and similar institutions, the charges for which ought to fall upon Imperial rather than local resources.

NORTHERN NOTES.

The position of affairs in the East is affecting the wheat markets, and prices are moving upwards. But the upward trend is not solely attributable to the disturbances in Russia, for farmers' deliveries are but small compared with what might have been anticipated. Growers threshed wheat freely a month ago, but the opposition of the milling trade has caused the farmer to hold his wheat and thresh barley. So, for the time being, the barley market is almost glutted. Really good samples are scarce, but are not highly appraised when they do appear—the maltsters prefer foreign grain.

The problem of the unemployed will soon present very serious difficulties, and the measure placed on the Statute Book last Session will not go far in the direction of the solution of this problem. Where the Act is put in operation, workers may be introduced to work, but what about the places where there is no work? It is true that public bodies may provide work, but having regard to the necessity for keeping the rates within reasonable limits, will they provide work that must often be unremunerative? In the towns, where the burden of a temporary increase in rates does not press upon the employed because they live in houses for which the owners pay the rates - great pressure will be brought to bear on the local authorities to provide work; but in the rural districts the rating situation is reversed. And everywhere, both in town and country, but especially in the country, there is a very numerous class, just removed from pauperism and struggling hard to keep clear of it, upon whom any increase in the rates will tell very severely. The interests of this great law-abiding class, whose voice is seldom distinctly heard in times of social or political turmoil, are often gravely neglected by the powers that be.

Whatever the situation may prove to be in the towns, it will be serious enough in many rural districts. It seems generally anticipated that the winter will prove a hard one, and as farm work is forward and farmers' finances are depleted, the labour staff on the farms, generally, will be cut down to the minimum, and there will be great distress. It will be well for the farmer to consider whether this cutting down of his staff is really desirable, and to consider whether it will not be advisable to have some work executed in these short winter days which would otherwise be postponed until work can be done during longer hours The question of increased cost can, in some cases, be met by task or piece-work, but, beyond this there is another greater question—the duty of every member of the community to assist his weaker neighbour. If farmers, as a whole, will endeavour, each in his own way, to find work for those who honestly seek it, the problem of the unemployed will be nearly solved in most rural districts. The financial difficulty stands in the way, for it is well known that at the present moment many farmers do not know which way to turn for money, and are absolutely compelled to cut down all their expenditure to the lowest possible point.

The improper feeding of farm horses is a subject upon which a good deal has been written, and even more said, and legislation has been invoked to prevent the continuance of injurious practices. Somehow or other, farm servants are impressed with the idea that wheat must be a good food for horses, and, in spite of all warnings to the contrary, some will on every opportunity give wheat to the horses in their charge. So long ago as 1863, the Misappropriation by Servants Act was passed, the effect of which is to render any servant who, contrary to the orders of his master, takes that master's corn or roots or other food for the purpose of giving that food to his master's horses, liable to a penalty of £5, or to three months' imprisonment with hard labour. Under this statute a good many offenders have been punished, but farmers complain that only the minimum punishment is inflicted, and that the justices deal far too leniently with the cases brought before them. The administration of wheat often causes the death of a horse, but when given in smaller quantities fever in the feet ensues, and the value of the animal is greatly depreciated, and the remainder of its working life is extremely painful; yet the penalty imposed upon a farm servant who wilfully gives wheat to horses in his charge rarely exceeds the penalty imposed upon a man who kills a pheasant on land where he is a trespasser!

Recently, a farm servant stole some wheat from a neighbouring farmer to give to the horses in his charge, and his master wished to proceed against his servant under the Act of 1863, but the justices refused to grant a summons against the servant, or to entertain the information, because, as the stolen corn was not his master's property, no offence had been committed against that Act. The servant was, however, convicted for larceny. The justices were undoubtedly right in their refusal, but the result seems somewhat anomalous. It should not, however, be forgotten that, previous to 1863, the giving of the master's corn to his horses, etc., by his servants, contrary to his orders, could only be punished as larceny or theft, and this Act was passed to provide a remedy less harsh in its nature, and to meet the grave doubts that were felt as to whether the giving of such corn, etc., did really amount to larceny.

This question of the wrongful feeding of farm horses has been forcibly brought to the notice of the Northern agriculturist by a most unfortunate occurrence, which has just taken place. A farmer in East Yorkshire dressed his seed wheat with arsenic, and one of his servants, who had charge of five horses, took some of the arsenically dressed wheat and gave it to the horses under his charge. The same night one of the animals died, and the other four died the next day. In each case the agony of the animals was very great. As proceedings may shortly be taken before the local justices, it is better for the present to make no comment upon the peculiar features of the case, except that, as it is fully admitted that the servant in question did not intend to cause any harm to these horses, it is evident that farm servants are grossly ignorant in these matters, and that they must be possessed by a strange perversity or they would not, in defiance of express instructions to the contrary, persist in giving such foods as wheat to horses in their charge.

November 3, 1905. M. Y.

THE DAIRY.

Nantwich Dairy Show.

Following their usual custom, the Cheshire Dairy Farmers' Association held a two days' show of cheese and butter at Nantwich last week, and it proved one of the, if not the most successful of the series. Nantwich, being in the heart of a fine pasture country, and, therefore, in the heart of the cheese making industry, is an excellent centre for the holding of a dairy show, and it almost goes without saying that the best cheese made in Cheshire, and in Shropshire, and on the Staffordshire borders of Cheshire where cheese is made on the Cheshire principle, finds its way to the association's annual show. Last week there were no fewer than 278 entries, or 76 more than last year, and it is interesting to recall that in 1890 there were only two classes and twenty-five entries. Thus the show has increased wonderfully, and so, we might add, has the cheese making industry. The changeable temperature of the weather during the last few weeks had affected the quality of some portion of the cheese, but generally the quality of the cheese was first class, and whether crumbly or close-made had that rich flavour which has made Cheshire cheese a highly palatable and saleable article. The seven classes comprising the show were well filled, and nearly all the best makers were entered. In Class 1 there were forty-one dairies exhibited, and the majority won prizes and cards. The class generally showed a uniform quality, and it contained the names of many famous makers. It had the greater honour of furnishing the championship dairy—a well-known maker, Mr. H. Denson, of Poulton, a tenant on the Duke of Westminster's estate, being awarded that highly-coveted distinction for a dairy of ten cheeses, which had not a single defect. Mr. Denson is a son-in-law of that famous Nantwich maker, Mr. John Dutton, of Swanley Hall, who last year won the association's silver cup, and who this year at the Chester Show carried off the association's silver medal. The choice of the judges lay between Mr. Denson's dairy, and the four cheeses made by Mr. J. H. Bourne, of Nantwich, who was awarded the second championship prize, the larger dairy eventually carrying the vote of the judges. The second prize winner in the championship was Mr. J. Noden, of Wettenhall, who showed a good sound dairy. In the uncoloured class Mr. H. Jones, of Aldersey, Chester, won with a handsome and perfectly made dairy, and the second prize went to a nice lot of cheeses from the dairy of Mr. W. R. Huntbach, of Dod's Green, Nantwich. In the class in which colour was optional Mr. F. Dutton took premier place with a splendid lot of cheeses, and Mr. W. Lee, of Tattenhall, who had also a capital dairy, the second prize.

Although there was not a large entry in the class in which farmers with holdings less than 100 acres competed there were a number of dairies of fine quality, the best being those of Mr. J. Dilworth, of Manley, and Mr. Joseph Jones, of Manley, who were the first and second prize winners. In a similar class of cheese (farmers with holdings of 50 acres competing), the best dairies were those of Mr. Pennington, of Spurstow, and Mr. W. Huntbach, of Stoke. The open class, coloured cheese, brought together no fewer than sixty-eight entries. Mr. John Dutton, of Swanley, whose recent triumphs have been already recorded, won with a superb dairy from Mr. C. Parton, of Haughton Hall, another notable maker of the best cheese, who had again showed a grand lot of cheeses. In the uncoloured class, Mr. J. H. Bourne, of Hack Green, the youngest son of the late Mr. Samuel Bourne, who was himself a frequent winner of prizes at all the principal shows, signalised his entry in the lists by carrying off both the first prize and the substantial prize given for the second best dairy in the show. The class was a good one, the judges distributing a considerable number of cards, and Mr. Bourne's success was therefore all the more creditable.

There was an excellent display of butter, which was presented for inspection in the most artistic style, and the quality generally, especially in the cottagers' section, where with one exception all the samples obtained prizes and cards, was simply perfect. The judge was so impressed by it that he unhesitatingly declared the exhibition of butter to be the best he had even seen at the show.

The Cheese Fair.

The usual cheese fair was held on the second day, at which buyers representing large wholesale houses keenly competed for the prize cheese. Mr. Denson's championship cheese sold at 120s. per cwt., first and second prize cheese from 80s. to 90s., and commended lots from 70s. to 75s. At the ordinary fair fine Cheshire made 68s. to 73s., medium qualities 62s. to 66s., and common 56s. per cwt. Altogether in the show and the fair 120 tons were rapidly sold.

Deficiency of Fat in Milk: Interesting Case.

At the Brighton Borough Court last week was heard an interesting case to dairy farmers. W. Aylwin, of Bevendean Farm, Brighton, was summoned for being the consignor of certain milk which was adulterated. For the prosecution it was mentioned that the analyst's certificate was to the effect that a sample of the milk contained 2.8 per cent. of fat, indicating a deficiency of 6.6 per cent. of fat, whilst a sample was sent to Somerset House, and the Government analyst certified that it contained 2.78 per cent. of fat, showing deficiency of 7 per cent. according to the standard.

The defending lawyer urged that, although slightly below the standard set up by the Board of Agriculture, it was good and genuine milk.

The defendant's cowman, Henry Hillman, stated that his master had 400 acres of land and 150 animals. The cows were milked at four o'clock in the morning and two in the afternoon. The milk was sent from the farm exactly as it came from the cows, being taken to customers by his son, who had 23 gallons. Under cross-examination, Hillman said that the pasture land was not rich. The cows were also given grains and cabbages. A separator was used occasionally for milk left at night, but the separated milk was always given to the pigs.

Frederick James Lloyd, consulting chemist, and agricultural analyst for several authorities, said he analysed a sample of the milk, which contained 2.97 per cent. of fat. There was no evidence of adulteration or abstraction, and it might have been genuine milk. Frequently he had found similar figures in respect of genuine milk. The percentage of fat in milk fluctuated largely from various causes, including diet, change of temperature, or unequal time of milking; the longer a cow was left the poorer was the milk, so that the morning milk would be poorer than the afternoon milk.

The Bench came to the conclusion that, notwithstanding the certificate from the Public Analyst, and that from the Somerset House authorities, the defendant had proved that what was sold was genuine milk. They accordingly dismissed the case with costs, including a sum of 10s. 6d. paid to Somerset House authorities and £1 1s. advocate's fee.

National Dairy Show at Chicago.

The Board of Agriculture and Fisheries are informed, through the Board of Trade, that a national dairy show will be held in Chicago from February 15 to 24 next. It is believed that this exhibition affords a good opportunity for makers of dairy appliances in this country to bring their goods before the American public, and intending exhibitors should make immediate application for space to the National Dairy Show Association, 154, Lake Street, Chicago.

A copy of the printed form of application, with a plan of the building and other particulars, can be seen on application to the Intelligence Branch, Board of Agriculture and Fisheries, 4, Whitehall Place, London, S.W.

OBITUARY.

Mr. F. C. Southwell.

We much regret to announce the death of Mr. F. C. Southwell, which took place on Thursday last at his residence at Sutton, Surrey. Frederick Charles Southwell was born September 26, 1845, at Wisbech, Cambs. The son of a solicitor, he studied law four years, and then, on account of poor health, went into business life, first at Liverpool and later at Albion Ironworks, Rugeley, Staffs, as Southwell and Co., manufacturing agricultural implements, etc. In 1874 he went to Grantham to the firm now so well known under the style of R. Hornsby and Sons, Ltd., and was their general manager for the last 17 years he was with them.

Mr. Southwell left to found the present firm of F. C. Southwell and Co., 75, Southwark Street S.E., in 1895. This business has been successfully carried on since that date, being associated with the Deering Harvester Company as their general agents for England until September, 1903, when their amalgamation with other American Harvester Companies to form the International Harvester Company put an end to the agency. Other very successful lines in the way of machinery, implement, and agricultural accessories are handled by this firm, which, we understand, will shortly be converted into a private limited liability company. Having several sons in the business it was the late Mr. Southwell's intention to take the step for family reasons, and the necessary document for carrying out this purpose were in active preparation at the time of his death. The wishes of the deceased gentleman will be complied with in this respect with as little delay as possible.

Mr. Peter Stubs

A notable Shire horse breeder passed away last week in the person of Mr. Peter Stubs, J.P., of Blaisdon Hall, Newnham-on-Severn, who succumbed from heart failure on Sunday morning. The deceased gentleman, who was in his 76th year, wrs a Justice of the Peace for Gloucestershire, Cheshire, and Lancashire, and was highly esteemed and well known, more particularly in the last-named county; but he was better and more widely known for the attention he paid to improving the breed of Shire horses, of which he was an extensive and successful exhibitor, the Blaisdon Hall stud having produced a large number of winners at shows in various parts of the country. Blaisdon Conqueror, it will be recalled—to mention only one of Mr. Stubs's famous stud—was one of the very best Shire horses of his day, and has left many worthy descendants. Deceased took a great pride in his animals at New House Stud Farm, adjoining Blaisdgn Hall, and nothing gave him greater pleasure than to show visitors round his splendid stables. Mr. Stubs was a member of the Gloucester Root, Fruit, and Grain Society. On the Society's first Field Day the members paid a vislt to Blaisdon Hall, and those present will not forget the kindness with which Mr. and Mrs. Stubs attended to their guests in every way.

Mr. Tyson.

The death occurred at Winsted Hall, Derbyshire, on Friday week, of Mr. John Marshall Tyson, of East Plain, Cark, North Lancashire. Mr. Tyson, who was 51 years of age, was one of the most prominent authorities on agricultural matters in North Lonsdale. Besides being a director of the Ulverston and North Lonsdale Auction Mart Company (Limited), he was a member for very many years of the Management Committee of the Royal Lancashire Agricultural Society, and was a well-known judge of horses.

The Earl of Cathcart.

We regret to announce the death of Earl Cathcart, which took place on Monday at his London residence, 31, Grosvenor Place. His lordship, who, had he lived till the 14th inst., would have completed his seventy-seventh year, lived in Yorkshire for over forty years, and by his death the North Riding has lost one of its most popular and respected residents. He was an ideal country gentleman, and was a recognised authority on agricultural matters, his experience being practical as well as theoretical. He not only owned a fairly large estate, but for many years himself farmed over 500 acres at Manor House. Horse-breeding was his special fancy, and few men did more than he in the cultivation of Clydesdales. He did not, it is true, breed extensively, but the horses that belonged to his stables were splendid specimens of their type. At one time he took to Shorthorn breeding, and for this purpose imported a number of heifers from the South of England. Whatever his success may have been in this direction, however, he eventually reverted to the breeding of Irish cattle. Of live stock, and particularly of horses, he was a capital judge, and outside the ring at the principal shows there were few keener, and certainly no more intelligent critics.

Earl Cathcart, however, will be best remembered for his work in connection with the Royal Agricultural Society of England. He was President of the society for the year 1872-3, and was for some years the Chairman of the Journal Committee, many contributions on agricultural subjects from his pen appearing in the Journal, of which he was practically the Editor. He retired from the Council of the society some years ago. His lordship was also an honorary member of the Société des Agriculteurs de France, a compliment which is the more valuable because of its rarity. As was only to be expected, the deceased Earl took an interest in the agricultural societies of his district, and was, we may mention, President of the Yorkshire Agricultural Society in 1856—he had not then succeeded to the peerage. As a landlord the late Earl was popular with his tenants, and many of his old servants have been able to pass the closing days of their lives in comfort by means of substantial pensions; whilst finally we may say that in the House of Lords he always, when opportunity offered, put in a word for our greatest industry, which by his death has lost a great supporter.

The late Mr. F. C. Southwell.

RECENTLY PROVED WILLS.

Colonel Webb's.

Colonel William George Webb, J.P., M.P., of Woodfield, Wordsley, Staffordshire, 4, De Vere Gardens, W., and the Carlton and St. Stephen's Clubs, chairman of J. W. Cameron and Co., Ltd., and the North Worcestershire Breweries, Ltd., and senior partner in the firms of Messrs. Edward Webb and Sons and Messrs. Proctor and Ryland, merchants, who died on June 14, left property which has been returned by the widow, Mrs. Ada Blanche Webb, his sons, Mr. William Harcourt Webb and Mr. Frank Broughton Webb, seed merchants, and his brother, Mr. Edward Webb, J.P., of Studley Court, Stourbridge, at £592,800 gross and £559,984 net. The testator, by his will, dated September 26, 1904, with three codicils, bequeathed to his wife £500, the use of his house and furniture, his horses, carriages, and £3,000 per annum during her widowhood, or £500 per annum should she remarry; to his son, Victor Pryce, £50,000 upon trust; his daughter, Flora, £30,000 upon trust; his daughter, Ada Eugenie, £20,000 upon trust; Edith Jane Girdlestone and her issue, £1,000 upon trust; Annette and Edith Pryce, £100 each; and his brother-in-law, Harold Pryce, £1,000. He gave £100 to his old servant, Mrs. Lansdale; £50 each to his personal servants, Duce and Joyner; £100 to his timekeeper, Sheppard; £100 each to the heads of departments, travellers, or persons in the office of Webb and Son, who have been there for twenty continuous years, and £50 to each servant in the warehouse on a like condition. The residuary estate, including his interest and share in all partnerships carried on by him, his son, his brother, and nephew, he leaves to his two sons, who prove, William Harcourt and Frank Broughton Webb.

Mr. Clare Sewell Read's.

Mr. Clare Sewell Read, who had two addresses, viz., 91, Kensington Gardens Square, W., and Honingham Thorpe, Norfolk, has left estate of the gross value of £21,757 16s. 5d., of which the net personality has been sworn at £17,762 3s. 7d. The testator bequeathed to his wife £250, all consumable stores absolutely, the use of his household effects, and the income of his residuary estate for life (she thereout providing a home for his unmarried daughters), and on her decease, he left his estate to his trustees to pay £1,000 each to his daughters Margaret and Clare Sybil, if unmarried, and to distribute the balance between his children in equal shares.

Sir Jacob Wilson's.

The will has been proved of the late Sir Jacob Wilson, of Chillingham Barns, Belford, Northumberland, who was honorary director of the Royal Agricultural Society, Fellow of the Highland and Agricultural Society of Scotland, director of the Land Department of the Board of Agriculture, and, since 1891, agricultural adviser to the Board.

The gross value of the estate is placed at £6328 6s. 6d, of which the net personalty has been sworn at £23 3s. 4d. Probate of his will, a short document of seventy-six words, dated October 17, 1895, has been granted to his widow, Dame Margaret Wilson, of Chillingham Barns, to whom he left the whole of his estate absolutely.

Stockton Chamber.

The first monthly meeting of the present session of the Stockton Chamber of Agriculture was held this week—Captain J. Lilley presiding. Mr. A. C. Forbes, F.H.A.S., of the Armstrong College, Newcastle, gave an interesting lecture upon "Hedges and their management. Mr. T. J. Wilson introduced the question of the amendment of the Agricultural Holdings Act. He said that as agriculturists they did not approach the matter in any antagonistic spirit to landowners, but upon the boad basis that if the Acts were amended in various directions not only would tenant farmers be free to cultivate the land better, but there would be more capital drawn to the land, and there would be better returns, from which the whole of the people in the country would benefit. They wanted the law to give the tenant a statutory right to carry out all the improvements to his holding necessary to its proper working upon the principle already adopted in the Market Gardeners' Compensation Act, that if the landlord declined to carry them out then the tenant should be allowed to do so, and take the chance of having them considered as improvements to the holding when he left and claimed compensation, and that no man should be rented upon his own improvement. He moved that the Chamber support the Bill introduced last year by Mr. Price and backed by Mr. Lambert in the House of Commons, and this was, after discussion, agreed to.

THE FARMERS' CLUB.

A Discussion on Rate Aided Education.

The first meeting of the Farmers' Club after the summer recess was held at 5, Whitehall Court, Charing Cross, W.C., on Monday evening.

Mr. W. A. PROUT, Chairman of the Club, presided, and, in opening the meeting, said: I am very sorry to have to begin the proceedings to-day in a sad note. During the vacation we have lost several very good and worthy members of the Club, amongst others, Mr. John Hamstead, a very good man and a useful farmer in East Anglia, who was Chairman of the Club in 1891. But the foremost and greatest of our losses is that of our much esteemed friend, Mr. Clare Sewell Read, who passed away in August last in his seventy-eighth year. Our good friend, Mr. Pell, has come up from the country to-day in order to pay a last tribute of respect to our old friend, and I will now ask Mr. Pell to propose a vote of condolence.

The Late Mr. Clare Sewell Read.

Mr. A. PELL (Northampton): As the Chairman has said, I have come up especially to-day to move a vote of condolence with the widow and family of our old and dear friend Mr. Read. Over and over again have I sat and listened with the utmost pleasure to his narrative of his life, the people who taught him and worked with him in his own family. His father was not brought up to farming, but travelled for a mercantile house; but with a brother he took farming in hand and was as able a man as his son became. We are to-day to have a paper read by Mr. Crouch upon education. Mr. Read often told me about his education. He used to sit round the kitchen fire of a winter's evening with his father in the chair with a pipe, and the boys all round him. His father would say: "Now, boys, what shall we do on the farm to-morrow if it is a fine day?" and after getting their answers he would turn round and said, "Now, Clare, what if it pours with rain?" and then he used to describe to me how it puzzled him, and how he had to get his senses right before he answered; but to my mind that was the way to teach.

There was a curious feature in his character which I do not think you all know. He was such a singularly modest man that he never published before the world the fruits of his wonderful ability. When I first went to stay with him at Hollingham Court, in the sixties, I same down from my bedroom in the morning and said to him, "You are an extremely extravagant man. What made you buy those beautiful oil paintings in my bedroom? They are beautiful landscapes, and must have cost a good deal of money." He said, "Oh, I did a little of that sort of work myself," and I replied, "Read, you ought never to have been a farmer; you ought to have been a painter." He had a most beautiful command of the brush. There was no more delightful thing than to meet Mr. Read on the Norfolk hills at market time, to see the way people came round him and asked his advice and consulted him, not always, I am sure, on the merits of cattle, but in connection with their little domestic affairs and difficulties. He was always ready to meet them in the kindest possible way. He was the most faithful advocate of the tenant farmers' interests that ever entered the House of Commons. To my mind there was nobody who was so faithful an advocate of their cause, because he was one himself, and in many instances he pushed their cause to extremes. Nothing would take him away from the interest of the tenant farmers in England, and he was a splendid, upright, and admirable advocate of our cause. I move this vote of condolence with his widow and family in their great bereavement:

"That the Chairman should convey to Mrs. Read and her family, in a vote of condolence, the heartfelt sympathy of the Farmers' Club, of which the late Mr. Clare Sewell Read was for many years so distinguished and energetic a member."

The resolution was carried in silence.

The Harvest.

The CHAIRMAN: Gentlemen, it is customary to say a word or two after the vacation about the harvest. We have had, I think it may be generally considered, a very brilliant harvest and a very good time, almost a record time for the in-gathering. More than ever we have had a great yield of wheat, fair barley, and a good hay crop, which is a striking contrast to the yield of the previous year. However, there are always some drawbacks, and just when we wanted to thresh and sell prices have gone down, and, of course, there is the unfortunate potato disease in the Fens. I think, however, that the down-ward fall of the price is chiefly due to too much being threshed and put on the market at one time. The reports from abroad, except from Canada, are disappointing, and, therefore, I think there is every prospect of a rise in the price of wheat in the near future.

To-day we are to listen to a very excellent paper by Mr. Crouch on "Education," and I have not the slightest doubt it will promote a very useful discussion.

A paper on "Rate-aided Education," from which we gave extracts in a recent issue, was then read by Mr. James Crouch.

Discussion on Rate-aided Education.

Lord HENEAGE (Hainton Hall, Lincolnshire): I think Mr. Crouch struck the right note when he said "Surely the only education of real value is that which will enable the child to fill satisfactorily its position in after life." I think that is more applicable, perhaps, to agriculture than any other sphere of life. There is, perhaps, less attention given in the schools to fit a child for an agricultural life than for any other position to which it can go, and, therefore, I think this paper must be of great interest to everyone connected with agriculture, because it puts the question so clearly before you.

Whilst I do not agree with everything that has been said in the paper, still I think the main principle is this, that we do want in rural localities a great deal more elasticity in our education, and I believe the Education Department are beginning to appreciate that fact and trying to enforce that idea. I cannot go so far as to say that our children should be taken from the schools when they have learned the three Rs. On the other hand, I think they should be taught lessons which would be of use to them instead of lessons that will be of no use to them in the life they are going to pursue. (Hear, hear.) That is not only the case in our elementary schools, but all over the world. It is the case certainly in the cramming schools, in the public schools, and very likely also in our colleges.

There is another point on which I am also very strongly indeed in favour of what has been said by Mr. Crouch, and that is with regard to the age at which the children go to school. I have maintained that point in Parliament and out of Parliament. I believe I moved an amendment when the Free Education Bill was before the House to raise the age at which compulsion was to come in. I stated then that they were going to turn the school mistresses into nursery maids, and that is practically the case. I think myself that the Scotch limit is the right one. I think the age of six is an age at which children may go to school, because I do not think they learn a great deal before they are six. Certainly six is the lowest age at which it ought to be compulsory, and I do not think a child ought to go to school before he is five.

There is one point on which I do not agree with Mr. Crouch, and that is with regard to the difficulties under this Act. I suppose really it is the Act itself which is more under discussion than the general question of education—how far this Act affects education. I do not think there is any great difficulty about the multiplicity of authorities. At the present moment the only authorities that have any real power are the Education Department through or by their inspectors, and the Committee of Education which represents the county councils. The county councils have to pay, but as far as any power is concerned, all the power has gone out of them when they appoint the Education Committee, so that it is only those two authorities that have to be dealt with. The managers for all purposes are merely the agents of the county council; they have no power; they have no say in the matter; they have simply to do what they are told. I think that has an effect which is not altogether of advantage in carrying out the Act. (Hear, hear.)

I am glad to see that Mr. Crouch mentioned the question of a committee ad hoc. There was nobody who was a stronger advocate either in or out of the House, of a committee ad hoc than I was myself at the time this Bill was passed. I believe it would have been the best thing that could have been done. (Hear, hear.) I believe that if the Act of 1870 could have been what I call levelled up to the occasion without disturbing the Board schools and without disturbing the voluntary schools, which were then being carried on extremely well, that that would have been far the best way of improving the Education Act. But I think it is fair to say I have altered my opinion since then, and I am coming to the conclusion that the Act is now working very fairly well under the authorities who have it in hand. The real point will be that the advantages or disadvantages of the 1902 Education Act almost entirely depend on who are the administrators in the counties and the administrators in the boroughs. If you get good committees with good practical men upon them it will work well; if you get theorists and faddists and that class of administrator, then it will work very badly and will not work economically.

Although I believe I am not in harmony with the majority of the meeting, I very much regret that the religious question was introduced at all. I hope we shall get the Education Act amended in many practical ways, but I hope it will still remain as it is, and only be amended. With a new Valuation Bill, and with a fair and an equitable judgment according to the ability of everyone to pay their local burden, I think we shall not find the rates perhaps as heavy as they are now. At any rate, I think we have got the principle admitted that the Treasury is bound to pay the greater part of the cost of education, and, having got that, we must try and get, if we can, a little more, and at the same time, by sending good men to the county councils to be put on the Education Committee, try and get the schools under the Education Committee administered with economy and efficiency, and with, I hope, good results to all those who are taught to them. It gives me very great pleasure indeed to propose the vote of thanks to Mr. Crouch. (Cheers.)

Agriculture and Education.

Mr. E. B. BARNARD: I am delighted to second the vote of thanks to Mr. Crouch that has been moved in such a singularly suitable speech by Lord Heneage. Mr. Crouch, I think, has quite filled the situation that we require here to-day. He has read a paper which bristles with all sorts of points that are capable of approval or disapproval, according to the particular fancy of the individual who may have opinions of his own. Whilst all the points that he has raised about education, and the details that he has mentioned, may be most interesting, and, perhaps, open to discussion; at the same time, we have to realise that education has come to stay, that it is part of the policy of the country, and, whereas it may be very essential—and I think it is—in the interests of the community at large, we are entitled to contemplate what is the particular relation of agriculture towards it, and how it affects our industry and ourselves. In that respect I think it would be easy to show that a great many of the points which the speaker alluded to can be most thoroughly maintained.

It is self-evident in many directions that education has largely been at the cost of the agricultural districts, and, at the same time, the principal advantages derived out of the children educated in rural areas have, in my judgment, been for the benefit of the towns and for other parts of the community. (Hear, hear.) I do not want to labour the point; but I will give an illustration of one School Board with which I am familiar. We took out, for our own convenience a census in that district, and, out of 1,800 pupils passing through the schools, we found that 1,450 had left us to go elsewhere to try and do better for themselves. That brings home the object-lesson.

Our friend in reading his paper touched upon the word "dogma," and there were some expressions of dissent. That is the one thing which is the bug-bear of everything to do with our industry. When opinions are expressed that, somehow or other, do not exactly suit everyone amongst us, we are usually muzzled by that cant cry that I shall not mention here to-day. I would prefer to turn to the Darlington programme. I would prefer to contemplate for a minute what all those farmers' hardy men in Northumberland and Durham, and places in the north of England—what they have come to think? They met, and why did they meet? Because they said: "We live in the midst of a number of mining representatives; we live in the midst of men who have their Trade Unions and things of that description, and what is it that we see? We see that the outcome of these Trade Unions, which may not be what everyone else likes, is to the interests of the men who belong to them, and cannot we have something of the sort for ourselves, because we have been for a very long time without it, and a very long time without getting what we require."

Mr. STRATTON: I should like to say that, in my opinion, any education that boys over twelve years of age receive in the country is a luxury which cannot be afforded them. I think that, by that time, we have given the key of knowledge the three R's. The most educated and wisest men in England are not those who have been to school the longest, rather the reverse; and, consequently, I think a shorter period of education is sufficient.

Mr. J. C. KIDNER: I should like to say how thoroughly I am in sympathy with the sentiments expressed by Mr. Barnard. We want the basis of this local taxation set right. Our hair has been growing grey while this measure has been promised by successive Parliaments. I remember when I was quite a boy a great meeting held at Taunton. Sir Massey Lopes presided, and very shortly afterwards there was

a motion in Parliament, and it was agreed that the incidence of local taxation was unfair, and that it required immediate attention. What attention has it received? Nothing but just piecemeal doles, given to a starving dog. I think the dog has starved long enough; it has begun to howl, if not to bite. I think we should make our voice heard in the coming election.

The Teaching of Rural Subjects.

Mr. DYMOND (Board of Education): I should like to say, in the first place, how much I appreciate Mr. Crouch's paper. The point about which I should like to say a few words is, that as I understand he considers that the reason why the education in the schools has prepared children more for towns than for country life, is, that the children remain at school too long, and that he would like—and this has been supported by a speaker since—to see the children leave school when they are twelve years of age. I think there is another means by which we may make the education in the schools more suitable for training children for rural life, and that is, by adapting this rural education to the needs of rural life in the way that has been suggested by Lord Heneage.

There is so much that we can do. The arithmetic, for instance, in our schools, might very much more deal with the arithmetical problems that are always confronting us in our daily life in the country. Our geography, I think, should first of all deal with the geography of our own village—the soil, the land, the crops, and so on. Our nature study, in my opinion, should be based upon the observations of the children about the soil, and about the weeds that grow upon the land, about the insect pests, and birds, and so on. I think if we did this, we should find that our children were much better fitted for work in the country afterwards. I personally believe there is a certain amount of truth when people say that an interest in country pursuits is thereby aroused. What I believe also is, that in that way we should develop the intelligence of our children, and they would go out and learn about these things in their daily lives.

I should also go so far as to introduce into every school some practical subject, some subject that is of real use to the child afterwards, which he can turn into shillings and pence after he leaves school. I would not only confine it to teaching girls cookery; I would like to see the girls not alone able to cook when they leave school; but I would like to see them so educated that they could make a garment, and, in certain districts, the girls should be taught dairying, so that they would be able to help their mothers in the dairy when they left school. And for the boys, we might, in addition to teaching them gardening at school—and I think we ought to have a garden in connection with every rural school in the country—I think we might teach the boys, not only gardening, but something of the things which they can do out of doors, some of the farming operations, such as boys can do.

Work of Evening Schools.

I think Mr. Crouch has hardly referred fully enough to the work that can also be done in the evening schools. I should like to give one or two examples of the work that is being supported by the Board of Education at the present time, in the direction of rural education in evening schools. There is a village, for instance, on the northern slopes of Salisbury Plain, Rushall, where there is a gardening class being carried on in the evening in the spring and summer. I saw that class during the harvest. I found the class consisted of young men who were most of them agricultural labourers. They came right down from the harvest field—and they were working overtime—to attend this gardening class, and put off going home to tea until after the class was over. In the winter they carry on this work in the form of a night school. They study the cultivation of the garden and farm from books they have in their library, and they also study the reasons underlying cultivation. They associate with this a certain amount of farm arithmetic, and subjects of that sort. I cannot conceive that any work can be more beneficial than the work that is being done in the village of Rushall, and it is a very striking fact that I was told there was no want of agricultural labour in that village.

I cannot help believing that when we adapt rural education to the needs of rural life in this way, we shall find that the difficulties under which we are at present labouring will, to a large extent, disappear, and that that is the better policy of endeavouring to carry out what we wish than to try and save money by getting rid of the children at so early an age as has been suggested in the paper.

Mr. S. KIDNER (Bickley Farm, Milverton, Somerset): Mr. Dymond's ideal is a very high one; he says he will teach them all kinds of things in connection with agriculture at the schools, but in my experience, when they go out on to the farm they do not know how to do anything. It is all very well to talk about teaching them different things in connection with agriculture, such as science and chemistry, and one thing and another. We do not want our farm labourers to give us their opinion as to what we shall do; we want them to do the work and be practical. (Hear, hear.)

Some little difficulty cropped up with regard to the boys leaving school in our county; I do not know whether it prevails in other parts or not. We have a regulation that when the boys have attained twelve years of age, and have passed the fourth standard, that they may be taken on to work on the farms in the summer. There is also a provision made so that night schools can be carried on. I am in accord with both of these regulations. The other day in our village, which consists of just about 1,000 inhabitants, I went and saw two or three friends about starting a night school. I found the youths around me were anxious to go to school, and I though we might get twenty there. To my great astonishment, the day before the school opened we had thirty-nine names sent in, and I had to go and get another teacher. The first day we opened the school we had forty-two present, and on the second day we had fifty-two, and I can only say how delighted I was to see so many turn up. They came there looking like work, and I am quite convinced that what they learn at such a school is worth more than two or three years' training at an earlier age at school, when they go away and forget the whole of it.

Does the Chrage fall on the Proper Shoulders?

Mr. A. PELL (Hazel Beach Hill, Northampton): In the third division of his paper, Mr. Crouch asked: Does the charge fall upon the proper shoulders? We have had the statement made that the Treasury pays more than its share. I do not care twopence whether the Treasury pays more than its share or not. That is not my business, but one thing I am sure of is that we pay more than our share. (Hear, hear.) I will tell you how we come to pay more—and it will get worse and worse—it is because you have a certain number of persons applying the funds who do not supply one penny of it.

The compounding of the rates lies at the root of the whole business. I am a hereditary proprietor of land and houses in the poorest part of London of between one and two hundred years, and I am constantly amongst my people, though I live in the country. I know very well what they are doing, and how they are being educated. What have I to pay? Out of every £1 of my income 9s. is taken for rates. That is not for education. I do not mean that for a moment, but the cost of education has added to it very largely in the neighbourhood of Northampton, where I live. But why should I be the only person to pay that? Why should not my tenants, who sit by and supinely elect men to the Councils with most extravagant ideas as to education and steamboats on the River Thames and all sorts of extravagances, why should they be permitted to go on encouraging this expenditure?

Mr. WHITE: I rise to support the paper, which I think is very much to the point, and also what Mr. Kidner has said. It is no use for us to come here, or anywhere else, and grumble about the rates if we adopt such expensive ways of teaching the children of the country. The great thing we have to learn is that we cannot teach children anything before they are five or six years old; and, secondly, try and get them taught the three R's as being the most essential part of their teaching, by the time they are twelve years old; and, after that, I think there are plenty of ways for them to go on to the land and earn their daily bread, and be paid out of the farmer's pocket, rather than by the farmer paying rates.

An Imperial Question.

Mr. B. ST. JOHN ACKERS (Huntley Manor, Gloucester): I cannot agree with all Mr. Crouch said, and I will tell you in the end why I disagree with his conclusion with regard to the rates. While there is nobody more strong than myself in favour of continuation schools, I am clearly of opinion that if you want to make a child suitable for working on the land, that child should not compulsorily be kept at school after twelve years of age. It is all very well for Mr. Dymond to come here and give, as he always does, most charming pictures of how the Board of Education are going to improve education in the direction of agriculture, they could not have had a better exponent.

I should not like to pass over this paper without the strongest possible protest on my part with regard to the end of it. We do not pass resolutions at this club, but I should have thought it was our unanimous view that education is an Imperial question, and should be entirely paid for out of Imperial sources. (Hear, hear.) The Central Chamber of Agriculture, which is a cognate body on which we have two representatives, unanimously passed a resolution to that effect; and it was with the greatest possible disappointment and sorrow that, when we went to that great deputation to Mr. Balfour, our leaders turned round, and, because they wanted a certain amount of local administration, were prepared to give up the principle of the whole thing—that it was a national subject, and that national education should entirely be supported out of national funds. We have always said that, and I should not like this meeting to conclude without once again emphasising that fact. (Cheers.)

Benefits of Evening Schools.

Mr. F. STREET (Somersham, St. Ives, Hunts): I should like to congratulate Mr. Crouch upon his exceedingly instructive paper. I am very pleased indeed that he has referred to the question of evening continuation schools. In my younger days, previous to the passing of the 1870 Act, when I was living in Bedfordshire, the boys went to work when they were eight years old, they had practically no schooling, and for years and years in my native village I ran a school for two evenings a week, which was attended by young men from twelve to twenty years of age. In Bedfordshire at that time we had ploughing matches. The first class was for boys of sixteen or seventeen, then the general class of about thirty-six, and then the cup winners were taken from the rest. Mr. father's old man won that for years and years. At last one of my pupils, when he was fourteen years of age, did a first-rate piece of work, and the next year the old man came to my father and said, "I am getting old, I want Fred to go in for the champion." My father said, "No, let the boy go in for the other."

That boy went in for the prize and won the championship, and he had never had a day's schooling in his life, only what he had with me in the evening school. That boy was Fred Burser, who went to plough in every county in England and in every country in Europe before he was seventeen years of age. I believe if he had been kept at school until he was fourteen you would never have heard of Fred Burser. I had another boy who turned out to be a first-rate foreman. I am very strongly in favour of evening continuation classes.

With reference to the present Act, I must say I think it is unfair that we should have to pay for the School Boards and for the voluntary schools and then have to educate our own children at other schools. However, I believe the Act is now working well, it is as far as our county is concerned. With regard to the School Attendance Committees, I think they should really enforce the law and get the children to go to school when they are young.

Mr. HASLER: I think, in all fairness to Mr. Dymond, I should like to refer to some of the remarks which were made by a previous speaker. Mr. Dymond did not recommend for a moment the keeping of children at the elementary schools, neither did he intend the idea for a moment that children should be taught gardening in the evening. In his illustration he stated that young men, after finishing their work on the farm, instead of going home to their teas, came down and enjoyed the benefit of these classes. In the summer time in the gardens, and in the winter time they continued the theory of the thing by learning what they could from books, and learning arithmetic and other things which might be useful in connection with agriculture.

The Age at Leaving School.

Mr. W. HIPWELL (Hillside, Sharnbrook, Beds): It appears to me that the feeling in favour of boys going early on to the land is practically unanimous, and I think if that feeling is unanimous among formers it ought to be taken notice of by the Education Department. There is one celebrated instance in the general practice of the country in which boys are put at a very early age to learn what they have to do, and that instance is one of vital importance to the country—I mean the officers of the Royal Navy. If a boy is going to be a doctor, or a lawyer, or a barrister, or a soldier, he is kept at school or college until he is fairly on in life, but if he is going into the Navy he is sent there at thirteen years of age, or a little more. That has been the case from time immemorial, and it is recognised by the Government of this country as absolutely essential to the success of the Navy. The same thing applies, although it is in a humbler sphere of life, to the boy who is going to be an agricultural labourer. If the boy's education can be further carried on, either by means of the continuation schools that have been mentioned, and which, so far as my experience goes, they are very willing to attend if the boy's education can be further carried on, either by those means, or by taking him compulsorily back to school for a short period of the year when he is not wanted on the land, in the winter time, such a thing agriculturists would be glad to adopt. But we ought to have these children at an age when we can teach them what they are required to do, and not have them given to us at an age when we cannot.

The vote of thanks to Mr. Crouch was then put, and carried unanimously.

Mr. Crouch's reply to Criticism.

Mr. CROUCH, in reply, said: I have to thank you very cordially indeed for the kind manner in which you have received this very humble effort of mine, which is called a paper, but which was really only intended to open the discussion. Mr. Dymond referred to my not having exhausted the subject of evening continuation schools. I thought in my last paragraph I had made it quite clear that I had exhausted nothing. I tried to exhaust two or three points, but I found that instead of being a paper lasting half an hour it would last some six or seven hours, and that it was utterly impossible to say what I wanted in the time at my disposal.

I understood Lord Heneage to say that the county council really had nothing to do with the education after it had delegated it to its committee. My experience, of course, is a very limited one. I live in the county of Bedford, and in Bedfordshire that is not the case. Then with regard to the constitution of the committees, Lord Heneage says it is entirely our own fault if we do not put practical men on the committees. But the difficulty is this. I was on the first Education Committee in Bedfordshire, but I was bound to resign simply because I could not give up the time that was necessary to the work of the committee. The Bedfordshire Education Committee is in the habit of sitting two days a week, and it is almost impossible for any tenant farmer to give up that amount of time. Then the meetings are not held on market day. I proposed that all the meetings of the Education Committee should be held on the Saturday, which is Bedford market day. That did not suit Luton, and Luton carried a motion that it should be held on Friday. The consequence was that the next meeting of the Education Committee began at 11 o'clock on Friday morning, and did not finish till a quarter past four on Saturday afternoon. I ask you whether it is possible for any farmer to give up that amount of time?

Then Lord Heneage said that the managers did not take sufficient interest in the schools to keep down the expense. I happened to be chairman of a group of Council schools, and my committee made a long report to the Education Committee with regard to the salaries. We raise our salaries once a year. We strongly recommended that some salaries should be raised, that others should not be raised, and we left to the Education Committee itself what should be done in other cases. What did the Education Committee do? The Education Committee said, "Tell Mr. Crouch he has made a great mistake; Mr. Crouch has nothing whatever to do with the cost, only the efficiency." What is the use of managers trying to get a good article if they have nothing to do with the cost?

One gentleman alluded to our hair growing grey waiting for reforms in taxation. I can only say that mine has grown white. It is exactly thirty-eight years ago since, as a member of the Assessment Committee, I recommended the committee to hold their hands with regard to a new assessment because I said we were going to have a new Valuation Bill. That was thirty-eight years ago, and we have not got it yet.

Teaching Agriculture in Schools.

Then with regard to teaching agriculture in the schools, if the boy is to leave school at twelve years of age, which I hold he ought to be allowed to do, I do not see it is of much use teaching him agriculture before that time. I believe it is admitted on all hands now that you should not specialise with any boy until he is fifteen years of age. I believe that preparatory and public schools give exactly the same teaching to the boys until they are fifteen. Therefore I say we cannot do very much good in teaching agriculture to boys until they are twelve years old. But there is no place where you can teach agriculture as well as on the farm.

Then an allusion was made to half-timers. I have been a school manager now for forty years bar six months, and I have always set my face against half-timers, and we have never had a half-timer in any school under my management. I hold that there is nothing so subversive of discipline in a school as half-timers in agricultural districts. I say, keep the boys until you have taught them the three Rs, and then let them go to work if they can find a job. I am extremely obliged to Mr. Pell for the kind manner in which he called the attention of the meeting to the fact that my paper entirely, I hope, deals with rate-aided education, not with national education. I am quite prepared to let the nation do exactly as it likes.

I am extremely obliged to you for the very kind manner in which you have received me to-day, and can only say I wish the paper had been very much more worthy of the subject. (Cheers.)

The meeting then terminated.

Midland Notes.

The past week has brought more rain than the month before it, and Midland farmers are not ill-pleased at the change. One hundred and fifteen tons of water per acre—which is about what the returns from the Edgbaston Observatory represent—must leave effects upon the country which will endure for some time, and the forecasts and general appearance of the sky give promise of more to come. The beginning of November finds most of the wheat—indeed, nearly all, so far as we can hear—already sown in Warwickshire, where it went for the most part into a dusty seed-bed. Further north, however, there is rather more to be done, and those who have been delayed from one cause or another may congratulate themselves that even if they are later than their neighbours in clearing up arrears, they can at any rate now carry out the ancient and by no means out-of-date advice to "sow in the mud."

Stock generally have come through the season well. The early and rather heavy inroads which have been made already into the haystacks are a little disquieting to farmers who were not too well blessed with heavy hay crops, and just at the present time one hears complaints on every hand as to the poor prices paid for fat and partially fattened stock. Stores, too, have sold none too readily lately in Midland markets. But there is compensation to be found in other directions. An advance of "four or five shillings a head" in lambs, as compared with a year ago, such as a flock master in the North-East Midlands tells of, is a very substantial improvement indeed, and in Warwickshire, Worcestershire, and indeed most districts, it is long since pigs, especially small pigs, were selling so well.

At the prize-giving by Lady Windsor to members of the Redditch and District Allotment Gardeners' Association, Mr. Udale, the well-known Warwickshire County Council expert, quoted some interesting figures to illustrate the profits from scientific gardening. When he inspected the allotments at Redditch last summer, he said he calculated the produce then standing on each quarter-acre lot, at wholesale market prices, was worth about £15. On that basis the total value of the crops on such gardens during the season would be worth about £60 to £70 per acre. Considering that neither soil nor climate are remarkable, the results speak well for the cultivators. Allotments, by the way, are more numerous in this part of the country than in some others, and so are the small holdings of which we hear so much nowadays. Indeed, there is probably no county which offers better opportunities than Worcestershire to the agricultural labourer who is ambitious to climb, step by step, to the position of substantial tenant farmer. It can be done here by men of the right stamp, and one can point to men who have succeeded in doing it.

The amount of damage, or otherwise, wrought by birds is now once more among the agricultural topics of the moment. After all, there are not very many about in which there is room for any serious division of opinion. All the slender-billed warblers and their allies—swallows and swifts, pipits and wagtails—are insect-eaters and beneficial, and so are the lapwings, cuckoos, and gradually diminishing corncrakes. The thrushes feed largely on snails and insects, and magpies are worth all the encouragement they are likely to get, both as to feeding on slugs and worms, and for their raids on the eggs of wood pigeons and blackbirds. Nowadays, too, we are realising better than we used to the undeniable usefulness of owls, kestrels, and hawks. Except in fruit and market gardening districts, the rooks and sparrows are really the only birds which need much keeping down. One hears now and then some angry talk of extirpating the former altogether, but they are good friends to the farmer where they are not allowed to increase beyond reasonable bounds, for the rook is a big bird with a correspondingly big appetite, and the number of injurious grubs and insects he will dispose of when the opportunity offers is amazing.

November 3, 1905

The Great Eastern Railway have a series of lantern slides descriptive of the various points of interest on their line, which they will be pleased to loan for the purpose of lectures, etc., upon application being made. Each set of slides will be accompanied by full explanatory notes in the form of a lecture, if desired. It might be mentioned that they also loan a cinematograph film descriptive of (1) the Great Eastern Railway Company's steamer "Berlin," from the Hook of Holland, approaching Parkeston Quay; (2) the boat alongside the quay and passengers coming ashore; (3) the boat-express train leaving Parkeston Quay for Liverpool Street.

EAST ANGLIAN NOTES.

The past week has at last seen the long-deferred rain, and it has fallen in a sufficient downpour as to put a stop for the present week of further sowing; but farmers in the Eastern Counties cannot complain at this stoppage of drilling, inasmuch as the late harvest operations were not only finished early, but the weather has enabled field work to be completed at an earlier date than is usual in East Anglia. A large area of winter oats has been sown this season under favourable conditions although on light lands; the seed-bed was considered somewhat dry, and so germination was less regular than if a good rain had fallen a month ago. Early-sown rye intended for spring keep looks well, and so far as an autumn-sown barley is concerned there is little cause as yet for complaint. There is still a good area of wheat yet to be sown, as, from the general tenor of farmers' conversation at the markets, they intend to enlarge their acreage under this cereal. Now rain has come the sowing of wheat will be vigorously pushed forward.

Tally Ho! was the familiar cry that greeted the writer's ears on driving through two of the counties that help to constitute East Anglia, and, from all accounts, a good season is anticipated; although, as an Essex farmer, a follower of the hounds, stated to the writer, they in East Anglia do not expect to have the same excitement as the huntsmen in the Badminton district of Wiltshire, where they are scouring the country for a strange mouse-coloured animal supposed to be a jackal or wolf that has been worrying sheep to such a disastrous extent during the past fortnight.

Low hedges and high farming go together; but one cannot help regretting the destruction of hedgerows in our country lanes, that in many counties is now made compulsory by the County Councils. For, although one ought to rejoice when one sees wide patchwork landscapes divided only by low, round welts of quickset, newly-trimmed to uniformity of outline, one cannot forget the mixed and tangled hedgerows with their stores of winter berries for the birds, that were good enough for our grandfathers when the old order of things prevailed. So to-day throughout the Eastern Counties one can see almost on every farm one passes by journeying through East Anglia the hedge trimmer and cutter at work with the vigorous upward motion of his "bill," while closely following him can be seen the ditcher, making compact the banks and clearing out the water courses that soon will be filled with running water drained off of the land adjoining.

Taking into account the work done at the various ploughing matches that have been held this season in East Anglia, one must admit that the assertion made at the Birch Farmers' Show last week that "ploughing was looking up considerably" was more than justifiable.

Mr. John Barker, J.P., of The Grange, Bishop Stortford, is, the writer learns, a candidate for a seat on the Council of the Royal Agricultural Society of England, as a representative of Essex.

Hazel pears grown in the Eastern Counties, on account of their value for certain dyeing processes, have this year been making something like £10 per ton.

We regret to report the sudden death of Mr. W. Gordon Smith, who for many years resided in Risbygate Street, Bury St. Edmunds. He was the head of the firm of Messrs. W. Gordon Smith and Co., horticultural engineers, of the Victoria Works at Bury St. Edmunds. Mr. Smith was 69 years of age, and death doubtless arose from natural causes, as an inquest was considered unnecessary.

November 3, 1905.

Thirsk October Cattle Fair.—At this fair on Monday there was the largest show of beasts seen during the present year. Fat bullocks ranged up to £14 10s., two to three-year-old bullocks and heifers £10 to £12, year to sixteen months' old stirks £6 to £7, English calving cows and cows newly calven £16 to £20, calving heifers and half-bred calvers £12 to £15 each. There were a few herds of Irish cattle, principally in thin condition, but no remunerative offers were made.

The November fair for horses, cattle, and sheep at Doncaster was held on Thursday, when there was a large show of horses, but they were of an inferior character, and van horses were most in request, prices being from £25 to £30. The best agricultural horses made from £40 to £50, and trade was not brisk. Nags and hackneys were almost nil, and prices from £28 to £35. More cattle and sheep than required, and a very moderate demand. Bullocks, £10 to £15; young stock, £5 to £7; sheep, 30s. to 35s.; lambs, 36s. to 44s. each.

Hops at the Brewers' Exhibition and Market.

SIR,—It is to be regretted that more interest is not taken in the hop competition by hop growers. It ought to be one of the most interesting and important sections of the exhibition, and there is no reason why it should not be.

Why not do away with the rule that the judges are to select samples from the factors' boards? I suggest this keeps away a lot of entries, as many growers do not offer their hops until after the exhibition. Let the growers make what entries they please (as barley growers do), with the proviso that samples are drawn from pockets bona-fide offered, or to be offered, for sale. Also make a rule that all prize-winners shall be prepared to forward the prize-winning pockets to the exhibition, with weights marked on pocket, where they might be offered for sale, the exhibition authorities to deduct the usual commission for selling.

Judges should be empowered to re-draw any pocket. I should make the entry fee 5s., and put prizes at £5, £3, and £2, providing not less than eight or ten entries in a class. Samples to be of ordinary size.

It is not necessary to insist upon delivery of the pockets, but it would be well for the judges to have this power should there be any suspicion of "faked" samples being sent for competition. Growers should be invited to state how many pockets they have for sale.

I think, too, it would be well to introduce a hop-drying competition, with diplomas and prizes for the winning competitors, with several prizes ranging from £3 down to 10s. In Mid-Kent there are sometimes nearly a hundred entries for this competition. This would be for management, not quality. Let the entry fee for this competition be, say, 2s. per sample. Make about four classes for drying: (1) Kent, (2) Sussex, (3) Surrey and Hants. and (4) Worcester and Hereford. Growers in their competition to make as many entries as they please, but not to take more than two prizes in a class. Only one entry to be made for each dryer. I suggest, also, one merchant, one factor, and one brewer act as judges, or two of each.

If these suggestions commend themselves to the exhibition authorities they might be still further improved upon.—Yours faithfully,

INVICTA.

November 2, 1905.

Sheep and Cattle Ticks and the Transmission of Disease.

SIR,—As your readers are probably aware, we have purchased an estate in South Africa, and are conducting experiments out there regarding the transmission of disease through the medium of the tick.

This estate is situated in the very worst of the African tick areas, where these diseases abound, not only in cattle, but in sheep.

We are also making special investigations at home, the results of which will shortly be made public; but at present these investigations are being blocked for want of ticks.

We should be greatly pleased if any of your readers who can obtain a supply of these ticks, whether from sheep or cattle, would be kind enough to forward same to "The Cooper Research Laboratory," 7, Grosvenor Road, Watford.

The ticks will travel in an ordinary match-box with a little wool. Of course, we are referring to the grass tick, and not to the ordinary ked.

In the case of the cattle tick, we shall be glad to have particulars of any outbreak of red water in which ticks have been discovered on the cattle, or of louping-ill in which they have been found on the sheep.—Yours faithfully,

WILLIAM COOPER and NEPHEWS.

Chemical Works, Berkhamsted,
October 30, 1905

Position in Buckinghamshire.

SIR,—I am pleased to say this season is much better than last year, although we do not find the yield of corn very good. I hope the price of corn will improve, and also of hay; the price of hay is simply ruinous. About £2 per ton it does not pay expenses in growing. We are now moving in a serious state of things in agriculture. No legislation touches on land, which is the backbone of the country. If they let it go down any more, Old England is done for, which, if properly legislated for, might hold her own against all the world. Why is it our members in the House do not help the agricultural interest? Are they going to let the farmers be ruined? If so, it is time we kept our votes, and not trouble to support our members. If you take up a paper to read it is all about education and foreign countries, nothing done for their own. Let it fall, and then they will see their error, and where they have stood in their own light.—Yours truly,

J. H. R. HOWARD.

November 2, 1905.

Farming Prospects in the North Riding.

SIR,—The outlook for farming is not very bright in this district—N. Yorks—although the season has been fine as regards the weather; but too fine for a good many of the crops that a farmer has to depend on. The seed time was all right both for corn and roots. Corn came through the ground all right, but a good many turnips could never get a start, and they are very patchy, except in odd cases. Potatoes are fairly good, but only a poor price—quoted at 35s. per ton yesterday in Stockton.

The hay crop was fair and well got. Wheat good, also barley; but oats were a failure owing to the drought. The sheep has been the best paying animal on the farm, as both wool and mutton are dear. Beef is only a moderate trade, and grazing cattle are at a discount altogether.

JOHN DAWSON.

November 3, 1905.

Wiltshire.

SIR,—The season has been an unusual one. Early in spring we had a long period of dry weather, then a period of wet, which has been followed by a long continuance of dry. Our ponds have for some time been empty, and the land is now too dry for vegetation.

Much wheat remains to be planted, and the greater part of that sown has not yet taken root. The price of wheat is 14s. 6d. per sack weighing 12 score 12 lb.

Stock generally are healthy. Sheep are selling at last year's prices; but cattle from one to two pounds per head less money.

The present Government has done nothing for agriculture. A Liberal one could not do less.

SIMEON RUDDBY.

November 1, 1905.

Agricultural Imports.

The following is an account showing the quantities of certain kinds of agricultural produce imported into the United Kingdom in the week ended Oct. 28, 1905, together with the quantities imported in the corresponding week of the previous year:—

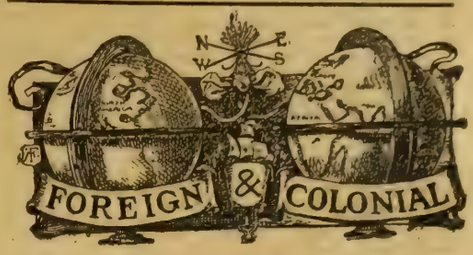
British Possessions beyond the Seas AND THEIR London Representatives.

NOVA SCOTIA.

Offers advantages to British Agriculturists with moderate capital. Improved Farms at Low Rates. Fertile Lands. Famous Fruits. Enormous mineral deposits of Coal, Gold, Silver, Iron, Copper, Lead and Tin. Climate temperate and healthy. Easily accessible to all the principal markets.—Full information supplied by the Agent-General for Nova Scotia, MR. JOHN HOWARD, 57a, Pall Mall, London, S.W.



More about Wheat Growing in Australia.

Although the possibilities of successful cereal cultivation have long been recognised in the States forming the Australian Commonwealth, it is only within the last few years that there have been any marked developments in wheat production. In 1871 the output of 1,273,200 acres (it was 703,825 acres in 1861) was 11,927,134 bushels. In 1881 the area under wheat had increased to 3,002,064 acres, and the production to 21,378,009 bushels, Victoria taking the lead, which, with the exception of a few seasons, she has still retained, with an output of 8,714,377 bushels, that of the other States being: South Australia, 8,087,032 bushels; New South Wales, 3,405,966; Tasmania, 977,365; Western Australia, 153,657; and Queensland, 89,612. In 1903 the Australian production was 74,149,634 bushels, or 15,203,005 bushels in excess of the combined outputs of 1871, 1881, and 1891, as follows: Victoria, 28,525,579 bushels; New South Wales, 27,334,141; South Australia, 13,209,465; Queensland, 2,436,799; Western Australia, 1,876,252; and Tasmania, 767,398—the total area under cultivation being 5,566,340 acres—a very limited portion of the area suitable for wheat-growing in the Commonwealth.

The value of the wheat production per acre in 1903 ranged from £2 16s. 8d. in Victoria to £1 2s. 6d. in South Australia, the average for the whole of the States being £1 19s. That the general results of Australian wheat cultivation are encouraging is shown by the fact that during the last quarter of a century there were only five years in which any of the six States did not produce sufficient wheat for local consumption. These years were 1886, 1889, 1896, 1897, and 1903. In the first-named year the wheat crop was a partial failure in Victoria and South Australia, and almost a complete failure in New South Wales and Queensland. In 1889 there was a general failure in New South Wales and Victoria. In 1896 the crop failed in Victoria, and in the following year that State, for the first time in twenty-two years, was compelled to import wheat, the net import, however, being only 61,160 bushels. In 1902 the crops of New South Wales, Victoria, and Queensland were almost a complete failure, owing to the drought, while those in South Australia were also adversely affected, but during 1904 some 35,000,000 bushels of wheat were available for export, the quantity actually exported being 33,084,523 bushels, value £5,242,348.

According to Mr. Coghlan, the minimum cost per acre of raising wheat on farms of large area, where the disc plough and drill are used, is 15s. 11d. for a ten-bushel crop, and £1 0s. 9d. for a seventeen bushel crop. It is also pointed out that the rapidly increasing use of artificial manures has an important bearing on the question of wheat-growing. In New South Wales, for instance, during the season 1903-4, an expenditure of 2s. to 3s. per acre on fertilisers gave in many cases an increased yield of six to eight bushels per acre, and although this result may have been partly due to exceptionally favourable circumstances, there can be no doubt that improved cultivation and manuring will considerably improve the returns. In Victoria the practice of manuring wheat lands is steadily increasing, and farmers are quickly realising its beneficial results. Between 1898 and 1903 the number of farmers stated as using manure increased from 7,318 to 19,921, and the area manured from 225,830 acres to 1,205,443 acres. In South Australia it is found that, owing to favourable conditions of culture, a yield of seven bushels is financially a satisfactory crop. In none of the other States would it be possible to grow wheat commercially on so low an average.

CORN MARKETS.

LONDON.

Mark Lane, Wednesday.—Generally easier tone, and demand in most cases proved of a subdued nature. English wheat remains very firm, tendency being to further harden, and a fair demand prevailed. 63lb. reds quoted 30s 6d to 31s 6d per qr. delivered up. Imported wheat proved quiet of sale, and rates in many cases were easier. No. 1 Northern Manitoba, 34s 9d ex ship; Australian, 34s 6d to 35s 6d; Russian, 31s 6d to 36s; and La Plata, 31s to 33s ex store, as to quality. Flour market remained without much change from Monday. No. 1 town households, 27s delivered in; country patents, 25s to 27s; Iron Duke, 22s 6d ex store. Grinding barley weaker. Azoff, 20s 9d ex quay. Imported oats met with slow support. 38lb. Russian, 16s 9d to 17s ex quay. Maize firm. American mixed, 26s; La Plata, 25s 6d landed.

Mark Lane, Friday.—The attendance was poor, with only a small business passing, while values generally, although about unchanged, have a downward tendency. English wheat was in limited supply at late rates, while foreign sorts were quietly steady; No. 1 Northern Manitoba offered at 34s 9d. Maize quiet and unchanged; La Plata ex quay quoted at 25s 3d and mixed American at 25s 6d. Flour steady at 22s 6d for Iron Duke. Barley quiet and tending lower; Odessa-Nicolaieff landed would come at 20s. 3d. Oats have an easier tendency; 38lb Russian landed offered at 16s to 16s 6d. Imports:—Wheat, 57,440 quarters; maize, 5,610 quarters; flour, 22,730 sacks; barley, 24,810 quarters; oats, 51,930 quarters; beans, 4,660 quarters; peas, 1,150 quarters.

COUNTRY.

Ashford, Tuesday.—Wheat very firm, with an advance of 1s in the case of the best samples; feeding corn also firm. Wheat, 27s to 31s; malting barley, 26s to 29s; foreign grinding barley, 21s to 22s; Mazagan beans, 28s to 33s; tick beans, 31s to 33s; oats, 16s to 20s; maize, 27s to 28s per qr.; flour unchanged.

Banbury, Thursday.—Wheat, red, new, 28s to 29s; barley, 24s to 30s; beans, new, 29s to 30s; ditto, old, 32s to 34s; oats, 17s to 21s; ditto, old, 20s to 24s; peas, 27s to 30s per qr.

Berwick, Saturday.—Average attendance, with moderate supplies of grain. Wheat unchanged. Oats scarce, and held for more money. Barley in good demand at 6d per quarter dearer. Wheat, 27s to 30s; barley, 24s 6d to 29s; oats, 19s to 20s 6d.

Birmingham, Thursday.—There was a good attendance, but trade ruled quiet, buyers not responding to the increased prices asked. Foreign wheats met with a very poor demand at last week's full prices. English wheats were rather scarce, and made up to 30s 6d per quarter (496lb.) delivered Birmingham. Flat maize was unchanged in value on the week, but River Plate has advanced 3d per quarter. Grinding barley is still on the up grade, sellers asking 21s 6d per quarter (400lb.) at Sharpness, this being 9d over last week's quotations. English oats rather quieter, and make from 18s 6d to 19s per 312lb. delivered Birmingham.

Bristol, Thursday.—English wheat in fair supply on our market to-day at 6d advance in values. Foreign, 3d to 6d dearer. Maize 6d, and barley 9d higher. Oats very firm at fully rates. Moderate demand for flour at slightly more money than recently.—GRACE BROTHERS

Bury St. Edmunds, Wednesday.—Wheat was in small supply, but quiet at 1s per qr. advance; reds or whites, 29s 6d to 30s per qr. Barley in fair average supply, but with fewer fine samples on offer, and these hardly making last week's prices. Useful malting runs fairly steady at 28s to 32s per qr.; grinding sorts and screenings steady, at 24s to 25s 6d per qr. Oats and beans firm at last week's full prices. Maize6d dearer, at 27s per qr. delivered. Feeding stuffs all very firm.

Canterbury, Saturday.—Wheat values fully maintained, prices ranging from 30s to 31s for milling, and up to 36s for seed purposes. Barley meets a steady inquiry, at from 28s to 29s 6d per qr. Oats are scarce and firm.

Cambridge, Saturday.—There was a thin attendance and moderate supply. Farmers asked more money, but buyers resisted and advance, and the prices of last Saturday week prevailed. Red wheat, 29s to 30s; and white, up to 31s per 504lb, near stations. Barley very firm. Oats and beans unchanged.

Carlisle, Saturday.—Small supply of oats in our market to-day; good demand and quick sale at last week's prices; 18s to 19s 6d per 335lb.—THOMAS ROBINSON.

Chester, Saturday.—The market for English grain continues firm, with an advance in wheat of 1d to 2d per bushel, and in oats of 1d per bushel. American corn not so well sold as last week, a reduction of 3d per sack having to be made. Quotations:—Wheat, white and red, 4s 4d to 4s 7d per 75lb; barley, grinding, 3s to 3s 2d per 64lb; beans, 5s 9d to 6s per 80lb; oats, new, 2s 3d to 2s 6d; ditto old, 3s 3d to 3s 6d per 46lb; Indian corn, 13s 6d to 13s 9d per 240lb.

Chichester, Wednesday.—A small attendance and very little trade. English oats were 6d dearer than last week, and flour showed a slight advance. Foreign corn was a trifle dearer, owing to the Russian strikes. New white wheat, 29s 6d to 30s 6d; new red ditto, 29s 6d to 30s 6d; barley, 26s to 33s; grinding ditto, 19s 9d to 20s; oats, English, 15s to 22s 6d; peas, 32s to 33s; beans, 32s to 33s; tares, 6s to 7s 6d; maize, 24s 6d to 25s; flour, 25s to 27s 6d.

Colchester, Saturday.—Very little wheat offering, due probably, to wet and also to farmers being busy on the land; the market was firm at the full prices of last week. Less barley showing, and all descriptions sold readily at quotations. Beans and oats scarce, and fully as dear.—JOSEPH WILES AND SON, LTD.

Coventry, Friday.—Only a moderate attendance. Supply of wheat fair, and realising about late rates. Quiet business in barley; oats firm, and good lots freely accepted. Quotations:—Old wheat, 11s to 11s 6d; new wheat, 10s 3d to 10s 9d per 186lb barley, 27s to 32s per 448lb; old oats, 23s to 25s; new oats, 19s to 22s per 352lb; old beans, 12s 6d to 13s; new beans, 11s 3d to 12s 6d; peas, 11s 6d to 14s per 196lb.

Derby, Friday.—Wheat firm, but quiet at the extreme prices of last week; spring corn 6d dearer. New white, 30s to 31s; new red, 29s to 30s; malting barley, 26s to 28s; old beans, 33s to 34s; new beans, 30s to 31s; old oats, 23s to 24s; new oats, 18s to 20s.

Devizes, Thursday.—There was a small supply of corn. Wheat has advanced 6d per sack. Barley a slow trade, and the quality being so poor it has, except in a few instances, to be disposed of at low prices. Oats, on the other hand, sell freely, and keep hardening in value. The following were the quotations: New wheat, 14s 6d to 16s; secondary, 13s to 14s; best barley, 26s to 28s; secondary, 20s to 24s; rye, 22s to 24s; old black oats, 20s to 25s; new ditto, 16s 6d to 19s; malting barley, 26s to 32s; beans, 16s to 18s; fine flour, 24s to 26s; extra fine, 27s to 30s.

Doncaster, Saturday.—Moderate supply of English wheat, and both English and foreign was firm, and made fully last week's prices. Foreign was quiet, and English in average demand. Good demand for the best samples of malting barley, but no inquiry for inferior quality. Maize and grinding barley 3d per quarter cheaper. Other things unchanged.

Dorchester, Saturday.—The stormy character of the weather throughout the week led to greatly lessened supplies at to-day's market consequent on threshing operations having been stopped through the rain. The wheat trade was less animated than at previous market; but prices, despite lessened supplies, kept firm, and the same may be said of foreign, with no abatement in prices. For best parcels of malting barley there was a good sale at firm prices, but secondary grades were scarcely as dear as they were, though hardly to a quotable extent; grinding descriptions brought outside values. The same may be said of maize. Other articles about as last quoted, though scarcely as much passing.

Dublin, Friday.—Wheat, 17s 6d to 19s; malting barley, 14s 6d to 15s 3d; grinding ditto, 12s 9d to 14s; malt 18s 6d to 20s; oats, 10s to 13s 3d; oatmeal, extra pinhead, 11s to 14s 6d; flour, 10s to 12s 6d; pollard and bran, 6s to 6s 6d.

Glasgow, Wednesday.—There was the usual attendance at our corn exchange. Wheat held for 3d per boll advance. Flour 6d per sack dearer. Maize 3d to 6d higher on the week. Barley 3d dearer. Oats 3d to 6d higher on the week, but sale slow. Beans dull. Peas 3d dearer. Oatmeal 1s per sack dearer. Thirds 2s per ton dearer, and bran unaltered. GIBSON AND CLARK.

Glasgow, Friday.—Wheat steady, with sellers asking slightly more, but buyers do not respond. Flour dull on the spot at late rates, but more asked for forward. Mixed American and Plate maize unchanged, the former being 14s 9d and the latter 13s 6d per 280lb. Oats firm at Wednesday's full rates for both home and foreign. Grinding barley slow. Beans dull. Peas scarce and the turn dearer.

Gloucester, Saturday.—English wheat in moderate supply, and prices show no change from last week. Foreign met a very quiet trade, at a decline of 3d. Grinding barley 6d dearer; maize 3d dearer, and oats firm at 3d advance.—WAIT, JAMES AND CO.

Grantham, Saturday.—Wheat was in fair supply, and changed hands at 29s to 31s per quarter. A large supply of barley; best qualities 28s to 33s, commoner sorts 24s to 27s per quarter. Beans declined 6d per quarter. Blue peas firm, and oats commanded a slight advance.

Hereford, Wednesday.—A moderate supply of English wheats; prices remain fully as firm as last week. Barley trade very difficult, and values show a tendency in buyers' favour. English oats moderate supply; best samples command 6d per qr. advance, and ordinary samples remain firm. Beans less active. Wholesale quotations: Wheat, 3s 4d to 3s 7d per 62lb.; barley, 3s to 3s 9d per 55lb.; old oats, 2s 6d to 3s per 40lb.; new oats, 2s 2d to 2s 6d per 40lb.; old beans, 4s to 4s 6d per 65½lb.; new beans, 3s 8d to 3s 10d per 65½lb.; vetches, 5s 6d to 6s 6d per 65½lb.

Ipswich, Tuesday. — Wheat only a small supply. Trade steady at 1s per qr. advance. Good reds or whites were worth about 31s per 504lb. delivered at Ipswich; flour firm at 1s per sack advance. Barley: Medium malting runs were making last week's prices of 28s to 32s per qr., with an average supply. The finer descriptions were in shorter supply; bnt, being not so much inquired for, were so hardly so good, or, as one merchant put it, "they were cheaper to sell, but no cheaper to buy"; screenings and feeding sorts made 24s to 26s per qr. Oats, beans, peas, and lentils, all extremely firm at the recent advances. Maize firm at 25s 9d to 26s per qr., with maize meal also firm at £6 to £6 15s per ton. Linseed cakes unchanged at £8 10s, and cotton at £5 10s per ton. Milling stuffs scarce, and the turn dearer.

Leeds, Tuesday.—The wheat trade has been active during the past week at 1s to 2s per qr. advance. Events in Russia have doubtless largely contributed to the rise; on the other hand, the large requirements of the Continent, especially of Germany, have foreshadowed for some time a higher range of values, and America has been only too ready to take advantage of this state of things by daily raising limits. Both foreign and English wheat is strongly held to-day at the above advance, notwithstanding the more liberal world's shipments. Maize 3d, oats 6d dearer, beans steady.—DUNNS AND CO.

Leeds, Friday.—Both English and foreign wheats are still rising in value, and at to-day's market they changed hands at a shade over Tuesday's advance. Best English made 31s, and foreign 35s 6d. Flour was also dearer, having gained from 1s to 2s per sack in a month. Beans, peas, oats, barley, and maize firmly held.

Leicester, Saturday.—Good attendance of buyers and dealers, with fair supplies of home-grown wheats in very good condition. Trade steady at higher rates. Red wheats, 30s to 31s; white wheats, 31s to 32s 6d per 36 stones; barley, 26s to 30s per 32 stones; beans, 33s to 35s per 38 stones; fine oats, 20s to 22s per 26 stones.

Lincoln, Friday.—Large show of English wheat, for which there was a quick demand at about the same prices as last week. Barley in good supply and rates easier, except for the best samples. Oats and beans firm at late rates.

Liverpool, Friday.—Wheat: There has been a fair attendance of millers at the market, and wheat is very steady at ½d decline from last Tuesday, but a very fair business has been put through at the lower figures. Flour: Firm but quiet at late rates for foreign brands; home-made also firm and mostly, though not generally, quoted at 6d per sack higher than last Tuesday. Maize: Mixed is 1d lower, owing to some pressure on quay, and only a moderate trade has been done; Plate is 1d lower, but meets a better inquiry at the lower quotations. Barley: Malting steady; feeding ½d dearer for Russian, but ½d lower for American. Beans: English and foreign steady, unchanged. Peas: Firmer, only green Indian offering at 1s per qr. advance. Oats: Firmly held, but not active, prices in some cases rather higher; small offerings. Oatmeal: Firm, with few offers, which are held at late prices, but inactive. Oilcake: In very good demand for English cakes at fully late rates; foreign a fair trade, without change in prices.—SEGAR AND TUNNICLIFFE.

Manchester, Thursday.—English wheat was 6d to 1s dearer and foreign 1d per cental higher. Flour was unchanged, and in good request. Indian corn, mixed American, 5s 5d; Plate, 5s 2d to 5s 2½d, and a good demand. Oats scarce and steady at late rates. Beans and peas slow; no quotable change. Foreign barley about ½d dearer on the week. Bran: Thirds, etc., about 3d per load dearer.

Newark, Wednesday.—Wheat a firm trade at 6d per qr. advance. Barley repeated last week's prices. Oats 6d per qr. dearer. Beans unchanged in value. Quotations:—Wheat, 30s to 31s; barley, 24s to 30s; oats, 18s to 20s; beans, 30s to 32s per qr.

Newcastle-on-Tyne, Saturday.—A steady demand for wheat prevailed at our to-day's market; prices slightly in buyers' favour. Maize firm, favouring sellers. Oats firm, with a moderate demand. Peas and beans in sellers' favour. A steady demand for barley at unchanged prices. JOSEPH POLLARD AND CO.

Norwich, Saturday.—There was only a moderate supply of wheat on offer at our market to-day, with a firm trade. Barley was in small supply at fully last week's prices. Finer weather has prevailed during the past week, enabling farmers to get on with mangel lifting. Wheat, red, 30s to 31s per quarter, weight 63lb per bushel imperial. Corn inspector's return for the week ending October 21, 1905:—Wheat, 3,015, 27s 9d; barley, 15,389, 24s 7d.—J. A. MILLS.

Northampton, Saturday. — Moderate attendance. Small supply of wheat, which sold at firm rates. Slow trade for barley, prices unaltered. 6d. advance on oats. New wheat, 27s 6d to 29s; malting barley, 25s to 32s; new white oats, 18s to 20s; new black oats, 17s to 19s; new beans, 28s to 30s; peas, 27s to 28s; flour, 24s 6d to 28s 6d.

Nottingham, Saturday.—Wheat moderate supply, last week's values supported. Fair show of barleys, best samples making full rates; secondary sorts slow sale. Oats but few offering, and 6d higher. Beans firm.—ROBT. HUBBLE.

Oxford, Saturday.—The attendance was moderate, but only small supplies of home-grown wheats were offered, last week's full prices being generally maintained. Feeding stuffs sold slowly at late rates.

Peterborough, Saturday.—Wheat a much quieter trade than last week, and the extreme prices of that day were scarcely maintained. Barley slow, and buyers had the advantage. Oats steady and quite as dear.—THOMAS HILL AND SON.

Plymouth, Thursday.—There was a good attendance on our market here to-day. Wheat 9d, barley and maize 3d, oats 6d dearer on the week. Fair trade doing. —ORLANDO DAVIS AND CO.

Reading, Saturday.—Trade was hardly up to the average. Wheat sold at 28s to 34s; oats, 17s 6d to 23s; barley, 25s to 37s; hay, 60s to 75s per ton; old beans, 35s to 39s; new, 30s to 34s.

Retford, Saturday.—Fair attendance, and a full average supply of grain. Wheat changed hands at barely the rates of the previous Saturday, the highest prices for the best being 29s to 29s 6d; others, 28s to 28s 6d per quarter. There was a good demand for first-class malting barley, which was scarce, and worth up to 0s, but there was little which realised more than 28s; inferior qualities down to 24s 6d, grinding 23s 6d to 24s per quarter. There was not much business in beans, oats, and maize, the values of which remained unchanged.

Ripon, Thursday.—Prices have gone up all round, and little business is being done. New wheat, 28s to 30s; foreign wheat, 33s to 32s 6d; barley, grinding, 23s to 24s; barley, malting, 25s to 28s; new oats, 18s to 20s; maize, round, 26s to 26s 6d; maize, flat, 25s 6d to 26s 6d per quarter.

Shrewsbury, Saturday.—Wheat, 12s to 12s 6d per 225lb; oats, old white, 15s to 16s; new, 11s 6d to 12s 6d; peas, 11s 6d to 12s 6d per 240lb; beans, 13s 6d to 14s per 240lb; barley, 18s to 19s per 280lb.

Stamford, Friday.—There was a very large attendance, and trade was sharp, although not up to the level of recent weeks. Prices were largely affected by the recent news from Russia. Wheats made 30s to 31s; barley, malting, 26s to 32s, these quotations showing a decrease; grinding barley, 21s to 25s; oats, 17s 6d to 20s; best beans, to 31s, the ruling quotations being 1s to 2s lower; peas, 45s to 48s; maize very firm and dearer.

Sunderland, Saturday.—Little business passing at this day's market. Wheat steady and unchanged in value. Spring corn firm. Arrivals:—Coastwise: Wheat, 735 quarters; oats, 700 quarters; beans, 350 quarters. Foreign nil. —E. AND F. RICHARDSON.

Tunbridge Wells, Friday.—New white wheat, 31s to 31s 6d; new red ditto, 30s to 30s 6d; barley, 27s to 32s; grinding ditto, 19s to 23s; oats, English, 16s to 19s; rye, 23s to 24s; peas, 31s to 36s; beans, 32s to 36s; tares, 48s to 56s; maize, 24s to 28s.

Warwick, Saturday.—Very small supply of wheat, which sells at a trifling advance on last week's prices. Very little other grain on offer; prices firm all round. Feeding stuffs rather dearer.

Winchester, Saturday.—English wheat in fair demand at 6d advance. Foreign firm at unaltered prices. Barley 6d dearer on the spot. Maize and oats unchanged. Flour a steady trade at a shade higher rates.—FEAR, COLEBROOK AND CO.

Wisbech, Saturday.—Very little grain offering. Wheat a slow trade at late rates. Reds, 30s to 31s. Oats 6d dearer to buy, 18s 6d to 20s. Other articles unchanged.—JAMES FLETCHER.

Wolverhampton, Wednesday.—There was a moderate attendance and quotations were firm. New wheat, 12s 6d per 216lb.; beans, old, 15s; new, 13s 6d; new oats, 13s 6d; old oats, 16s per 196lb.

Worksop, Wednesday.—Very small attendance, and moderate show of grain. White wheat, 27s 6d to 30s; red ditto, 26s to 27s 6d; best malting barley, 28s to 33s; secondary, 26s 6d to 28s; grinding barley, 22s to 24s; white oats, 17s to 18s 6d; black oats, 16s to 17s; maize, 25s to 27s per qr.

Yeovil, Friday.—Wheat, both home and foreign, sold at from 6d to 1s advance; barley, 6d to 9d; maize, 3d to 6d. English wheat of best quality made from 31s 9d to 32s 3d; secondary, 29s 3d to 30s 9d; foreign, 33s 6d to 36s; malting barley, 31s to 35s 6d; feeding, 21s 6d to 23s 6d; foreign, 21s 6d to 22s 6d; oats, black, 18s 6d to 20s; Irish black, 17s to 18s; white, 16s 6d to 20s 6d; beans, 32s 6d to 38s; maize, 25s to 26s; rye, 21s to 23s; rape, 47s to 50s; vetches, 6s to 7s per bushel. Flour in good request, and selling at from 3d to 6d per sack more money, fine making from 25s to 25s 6d, and extra fine 27s to 27s 6d. Meals and milling offals sold at prices favouring holders.

York, Saturday.—Dry samples of wheat sold slowly at last week's prices. Fine white, 29s to 31s; red and mixed, 28s to 30s per quarter of 36 stones. Malting barley firm without change in value; fine, 27s to 29s; good, 25s to 27s; feeding, 23s to 25s per quarter of 32 stones. Not many oats on offer, but a firm trade; white Tartary, 16s 6d to 17s 6d; black, 17s 6d to 18s 6d; white Garton, 18s to 19s per quarter of 24 stones; rye, 21s 6d to 22s 6d; beans, 33s to 33s per quarter of 36 stones.

FOREIGN.

Hamburg, Saturday.—We had a very lively market in the early part of the week, and higher prices were paid for all articles. During the last few days a more quiet feeling gained ground, all parties awaiting further news from Russia. German wheat continues in scanty supply; fine red Mecklenburgh and Holstein is held at 33s to 34s per 504lb. f.o.b.; American hard winter No. 2 is offering at 32s; 80 Ko River at 32s 6d per 480lb. c.i.f. Hamburg. Rye firm; 9 15 20 Odessa Nicolajeff afloat 28s 6d per 48lb. c.i.f. Hamburg. Our maltsters and brewers are buying much Danish barley, which is of good useful quality, and is selling at 29s to 30s; Bohemian in scanty supply, medium quality is held at 34s to 35s; fine Bohemian and Slavakian at 36s 6d to 40s; Oderbruck and

Silesian at 29s to 34s per 448lb. f.o.b.; feeding barley quiet, 60-61 Ko South Russian November, 19s 6d; February-March, 19s 9d; American feeding, 19s 3d per 400lb. c.i.f. Hamburg. Oats firm, American white clipped November-December, 17s to 17s 3d per 320lb. Mixed maize firm, American afloat, 25s; December 23s; January, 22s; River Plate afloat, 24s per 480lb. c.i.f. Hamburg.—JOHN TATLOCK.

THE BALTIC.

Wheat cargoes have been irregular in price. The Russian crisis leads to a great divergency of opinion among holders. Sales put through since the end of October have included Russian wheat at 7s. 3d. per cental, and at 6s. 4d. per cental, a range of 11d. per cental, of our 4s. per quarter that is to say! Other sales include Argentine wheat at 7s. per cental for best Bahia Blanca, and 6s. 8d. for Rosario and choice white Kurrachee at 6s. 8d. per cental. Transactions in American wheat have included No. 1 Manitoba at 33s. per 480lb., No. 2 at 32s. 6d., and No. 3 at 31s. 9d. per quarter; fine Hard Manitoba at 33s. 3d. per 480lb., and Walla Walla (Pacific wheat) at 33s. 3d. per 5001b.

Maize cargoes are decidedly dearer on the week; 24s. 6d. per 480lb. has been paid for American on passage, and 24s. per 480lb. for La Plata prompt shipment.

Barley has made 21s. per 400lb. for fine Russian cargoes on passage, but the purchasers would probably be glad to get rid of them now and at 3d. less. We say "probably," however, not "certainly," for there are bona-fide believers that Russian troubles are only beginning to affect the corn trade, and that the end of 1905 will see high prices made.

Oats have fetched 16s. 9d. per 320lb., for mixed American, 16s. 3d. per 304lb., for Petersburg, and 16s. 6d. per 304lb. for Odessa, all on passage.

Other cargo sales of the week include Bombay linseed at 40s. 3d. per 416lb., brown Cawnpore rapeseed at 39s. 3d. per 416lb., and Indian lentils at 25s. 3d. per 504lb.

The London Corn Trade Association c.i.f. quotations for the settlement of Rejections and Difference in Weights on Wheat, under Rule No. 4 of the Association East Indian Wheat Contract, are as follows: Calcutta, No. 2 Club, 33s. 9d.; Kurrachee, choice white, 33s 6d, both per 492lb. There are apparently no cargoes of Delhi or Bombay, or of red Kurrachee wheat on passage, under the association contracts.

The arrivals of grain and seed-laden vessels at ports of call since last review have been 1, as will be seen by the following table:—

Cargo.	Total.	Calif. and Oregon.	Total last week.	Total since Jan. 1, 1905.	Total same time, 1904.

BUTTER

(Prices per lb., except where otherwise stated.)

Saturday.—Appleby: 1s to 1s 2d. Berwick: 8d to 10d. Bridgnorth: 1s 1d to 1s 3d. Carlisle: 1s 2d to 1s 3d. Doncaster: 1s 2d to 1s 3d. Grantham: 1s 2d to 1s 3d. Howden: 1s 1d to 1s 2d. Ipswich: 1s to 1s 2d. Lancaster: 1s 2d to 1s 3d. Malton: 1s 2d to 1s 3d. Pontefract: 1s 2d to 1s 3d. Retford: 1s 3d to 1s 4d. Richmond (Yorks): 1s to 1s 2d. Shrewsbury: 1s 2d to 1s 3d. Skipton: 1s to 1s 2d. Stokesley: 1s 1d to 1s 2d. Whitby: 1s 2d. Worcester: 10d to 1s 3d. York: 1s 2d to 1s 3d.

EGGS.

(Number per 1s., except where otherwise stated.)

Saturday.—Appleby: 6 and 7. Berwick: 1s 5d to 1s 7d per dozen. Bridgnorth: 8. Carlisle: 6. Doncaster: 7 and 8. Grantham: 7 and 8. Howden: 7 to 9. Ipswich: 7 to 9. Lancaster: 6 and 7. Malton: 6 to 8. Pontefract: 7 and 8. Retford: 2s 8d to 2s 10d per score. Richmond (York): 6 and 7. Shrewsbury: 6 and 7. Skipton: 7 and 8. Stokesley: 7 and 8. Whitby: 6 and 7. Worcester: 7. Yorks: 6.

CHEESE.

Newport. Wednesday.—A good supply, and trade was also good. Quotations: Caerphillies, 56s to 58s per cwt.; fancy dairies, 58s to 62s; truckles, 54s to 60s; Derbys, 65s to 68s.

Glasgow. Wednesday.—Arrivals were light, and the trade passing small. Holders adhered to previous prices; Cheddars were quoted 56s to 61s per cwt.; and Dunlops 54s to 60s. The trade are pretty well supplied with cheese.

Review of the British Corn Trade

DURING THE PAST WEEK

Written exclusively for the Mark Lane Express.

The weather of October was sunny, cold, and dry, favourable to threshing, ploughing, and sowing but bad for the roots and the pastures. The record since January 1 thus stands :—

1905.	Rainfall. Inches.	Sunshine. Hours.	Warmth. Degrees.
January	1.08	45	36.0
February	0.70	61	42.5
March	3.70	108	48.0
April	1.80	90	47.5
May	0.81	215	52.0
June	4.50	171	59.0
July	1.17	240	65.0
August	3.00	150	59.0
September	1.30	100	54.0
October	1.00	84	48.0

The five days of November thus far completed have been very showery, mild, and windy a complete contrast to October conditions. As the last fortnight of October had seen increasing difficulty in the way of ploughing and drilling owing to the land getting too dry, the inch of rain which has fallen since November came in will be welcome in most agricultural regions. France reports wet and mild weather, and, as the wheat was nearly all sown by the third week of October, the moisture is welcomed. The winter is slow to set in on the Continent this year. In India a further heavy rainfall is reported, and agriculturists in that thirsty land are rejoicing. The crops of 1906 will be a great deal better than anyone dared to hope. Heavy rain in Argentina, where November answers to our June, is not an unmixed blessing. It will plump out the growing wheat, and make straw, but it may also start fungoid growths and produce the same evils that like weather in early summer does here. Still, the old English saying was that a dripping June "put all things in tune," and, on the whole, we imagine the weather news from the great wheat plains of South America to show a margin on the side of promise.

The Russian crisis is said to be over, but the French Revolution took four years to come to a head, and the French are as impulsive a people as the Russians are stolid. Nobody, we fancy, would give any Government or settlement in Russia any very long period of stability. On the other hand, the shipments for the week ending November 4 were surprisingly heavy, and the only ports at which shipments have been stopped are Revel, Riga, Petersburg, and Odessa. The stocks on which Russia has drawn for wheat were about 1,500,000 qr. in fifteen ports.

If no fresh grain has arrived from the interior, the 565,000 qr. shipped must have reduced the total to less than a million, and another fourteen days would see the stock exhausted. If Russia ceased to ship wheat from the end of November we should see a big rise in prices here. But the one thing which thus far seems to have been regarded by all contending parties as sacred to be kept from molestation is the export of corn. The stocks of barley and oats at the Russian ports are liberal, but very little maize is in store.

America cables a decided increase in the visible supply of wheat. The figures are :—

	Quarters.
November 4, 1905	6,450,000
November 5, 1904	6,495,000
November 6, 1903	5,850,000

As compared with previous years, the present total is quite ordinary : the important increase is from the 4,050,000 qr. visible supply on October 1 ; five weeks ago.

Sales of British wheat at the statute markets during September and October were 807,000 qr., as compared with 435,000 qr. for the first two months of last cereal year. The average price was 26s. 11d., as compared with 30s. 1d. per qr.

Sales of British barley at the same 190 markets during September and October were 1,065,000 qr., or almost exactly the same total as last season ; the price made, however, shows a sad falling off, 24s. 3d. against 25s. 3d. per qr. In the case of wheat the disposal of so much larger a quantity accounts for the price fall on the year, but the decline in barley is not to be so explained.

Of oats the sales were 250,000 qr. against 327,000 qr., and the price made 16s. 3d. against 15s. 11d. per qr. Here reduced offers led to a slight improvement in the price realised.

Imports of the U.K. last week were as follows :
Wheat, 301,000 quarters ; a full average.
Flour, 152,000 sacks ; nearly an average.
Barley, 137,000 quarters ; a full average.
Oats, 118,000 quarters ; nearly an average.
Maize, 167,000 quarters ; less than usual.

Since September 1 total imports have been :—
Wheat, 3,674,000 quarters ; moderate.
Flour, 1,016,000 sacks ; fair.
Barley, 1,681,000 quarters ; good.
Oats, 976,000 quarters ; fair.
Maize, 2,244,000 quarters ; a full average.

The imperial averages for October show 3d. rise on wheat, 1s. 2d. rise on barley, and 6d. rise on oats ; thus we seem slowly rising out of the slough of despond into which September cast the trade. London averages for October were :—Wheat, 28s. 3d., barley 25s. 6d., and oats 18s. 5d., against September averages of wheat 28s., barley 24s. 11d., and oats 16s. 11d. per quarter.

London arrivals of grain since January 1 have been as follows, the figures being in thousands ; thus "wheat, October 270," means that London arrivals for October were 270,000 qr. :—

1905.	Wheat. Qrs.	Barley. Qrs.	Oats. Qrs.	Maize. Qrs.	Flour. Sacks.
Jan.	255	96	224	179	215
Feb.	284	138	311	182	338
March	345	34	251	137	273
April	401	90	272	139	342
May	299	105	363	90	283
June	285	28	328	100	202
July	414	21	494	124	215
August	340	56	369	118	223
Sept.	282	175	364	190	227
Oct.	270	144	340	117	226

It will be seen that it is only in oats that London has been the recipient of specially heavy supplies, and the London demand for staple is so heavy and so steady that the market is advancing despite receipts of 1,073,000 qr. in three months. Motors have thus far produced absolutely no effect on the horse bill of London.

Supplies of wheat on passage show an increase. On November 4 they were :—

	Quarters.
Californian	85,000
American	290,000
Indian	228,000
Russian	400,000
Argentine	270,000
Australasian	80,000
Various	20,000
Total	1,373,000

The quantity of flour on passage is 338,000 sacks, of maize is 540,000 qr., and of barley is 565,000 qr. Of oilseeds, moderate quantities are on passage. The chief items are 110,000 qr. of linseed and 22,000 tons of cottonseed.

Shipments last week from Russia were 565,000 qr. of wheat, 250,000 qr. of barley, 301,000 qr. of oats, and 5,000 qr. of maize, to which Roumania added 300,000 qr. of wheat and 16,000 qr. of barley. India shipped 113,000 qr. of wheat and 49,000 qr. of linseed, but there were no grain shipments from Australia.

The New World was a fairly free shipper, but nothing very remarkable was exported, either from the U.S.A. or from Argentina. Returns for North America were :—Wheat 216,000 qr., barley 43,000 qr., oats 88,000 qr., maize 72,000 qr., and flour 154,000 qr., and for South America were wheat 107,000 qr., maize 182,000 qr., oats, 10,000 qr., and linseed 19,500 qr.

WET GRAINS.

London, Saturday.—Wet Grains : There has been no movement of note during the past few days, but if anything, a slightly easier tendency, due to milder weather and slightly increased brewings, and prices have ranged from 17s 6d to 19s ale, and 14s 3d to 15s 6d porter, which prices may possibly prevail for a time until there is an increased demand for milk, when a rise of 15 per cent. to 25 per cent. may be looked for, and this usually occurs between November and December. Wet Distillers' Grains : These continue at 30s to 32s 6d per ton. Pressed White Distillery Meal : 32s 6d per ton. Dried Grains : The good consumptive inquiry continues, and prices advance to 100s ale, 95s mixed, 92s 6d porter, and 115s distillers per ton. Dried distillery meal, containing 45 to 80 per cent. of oil and albuminoids, 117s 6d per ton. All the above are free on rail, London.—HAMLYN AND CO., 37 and 38, Mark Lane, E.C.

GAME AND POULTRY.

Smithfield, Saturday.—Good supply, moderate demand. Prices :—Geese, 4s 6d to 6s 6d ; ducks, 2s 3d to 2s 9d ; Surrey fowls, 2s 3d to 3s ; Essex fowls, 2s to 2s 6d ; Lincolnshire fowls, 2s to 2s 3d ; Irish fowls, 1s 6d to 1s 10d ; Russian fowls, 1s 4d ; wild duck, 1s 6d ; black game, 1s 4d ; snipe, 6d to 9d ; quails, 9d to 1s 3d ; live hens, 1s 6d to 1s 9d each ; pheasants, 4s to 4s 6d ; young grouse, 3s 6d to 4s ; old, 2s 6d to 3s ; young partridges, 2s 6d ; old, 1s 3d to 1s 6d per brace.

OIL-SEEDS.

MARK LANE, MONDAY, November 6.

LINSEED.	per 416 lb. s. s.
Russian	42 to 43

Roumanian	34 to 36

POPPYSEED.	per 377 lb.
Indian	30 to 40s

SUNFLOWERSEED.	per 448 lb.
Finest	48 to 52
Ordinary	40 to 44

TO-DAY'S MARKETS.

MARK LANE, MONDAY, November 6.

[FIRST REPORT.]

The market to-day commanded a fair attendance. English wheat was well maintained in price. Foreign was not dearer for American or New Zealand, but Russian sorts were decidedly up from the end of October, and Indian tended to rise. The market for Australian and Argentine may be called firm, with an upward tendency. Maize was written in some market circulars as 3d. to 6d. lower, but this was only where last week, during the Russian "crisis," an exceptionally high price had had to be quoted to intending buyers. Actual values are as subjoined in our quotations. Barley lost 6d. of the advance made on Wednesday for Russian sorts, but the latter are still comparatively dear. English barley was a fairly good trade at 32s. to 38s. for fine malting, 27s. to 31s. for sound brewery types. Oats, though quiet, were held with confidence for substantially higher prices than prevailed a fortnight ago. Beans and peas appeared to be upon the upward move, so, too, did linseed and cottonseed.

CLOSE OF THE MARKET.

WHEAT, BARLEY, OATS, AND MAIZE WERE QUIET, BUT NOT DEPRESSED. BEANS AND LENTILS ADVANCED 1s. PER QUARTER, BUT LINSEED WAS NOT SO STRONG AS AT THE COMMENCEMENT.

THE FLOUR TRADE.

MARK LANE, Monday, November 6

The top-price was put up 1s. 3d., namely to 31s. 3d. net. The price of Households and of Town Whites was correspondingly raised. For country flour 1s. more money was demanded and obtained. All foreign sorts may be quoted 1s. dearer on the week. This is a somewhat curious report to appear on a day of some reaction, but the London trade holds three weekly gatherings and a weekly publication has to compare, not from market to market, but from week to week. The shorter period meets business exigencies, but the weekly period is required for anything to be due consideration of what prices really should be. Whether or no, existing prices are sound, whether they are too high or too low, we are for the moment precluded from saying; because the cause of variation is in politics, and moreover in foreign politics; matters beyond our scope. If any serious interruption to Russian wheat exports occurs, a greater rise than has yet occurred is inevitable, while if no interruption at all occurs, prices may go back.

LONDON TERM MARKET.

This market is open to elected members only and is held at the Baltic Club, St. Mary Axe. No business except for future delivery is done, and the smallest quantity that can be purchased is 1,000 quarters, or 4,800 cental.

Prices quoted on Saturday at the close of the week's trade were as follows:—

WHEAT (per cental).

No. 2 American Red	7s. 1d.	Nov. delivery.
,, ,,	7s. 0d.	Dec. ,,
,, ,,	7s. 0d.	Jan. ,,
,, ,,	7s. 0d.	Mar. ,,
,, ,,	7s. 0d.	May ,,

MAIZE (per cental).

American	4s. 1d.	Dec. delivery.
,,	4s. 0d.	Jan. ,,
,,	4s 5d.	Mar. ,,
,,	4s. 5d.	May ,,

Futures to-day are sometimes 1d. per cental lower, both for wheat and maize, but there is a strong undercurrent, due to a large minority of firms declining to offer grain for future shipment or delivery at anything under Saturday's closing rates.

HOPS

London, Monday.—W. H. and H. Le May, 67, Borough, London, report:—The demand for English hops continues, many consumers taking sufficient to carry them over the two years; prices are below the cost of production, and are below those current on the Continent and America. Choice hops are hardening in value, and others are strong at current rates.

GRAIN AND FLOUR FACTORS REPORT.

Offals.—Bran continues in good demand; prices are unchanged but firm.—GREENHILL BROS. (Belfast).

Flour.—There has been more inquiry, and prices are firm, at an advance generally of about 1s. per sack.—GREENHILL BROS. (Belfast).

Flour is in better request at an advance of 6d. per sack. Grain.—Indian corn is firm but unchanged. Plate maize quiet. Foreign oats, both light and heavy, are active and 3d. per boll up. Barley steady. Calcutta pease are getting into small compass, and are held for 17s. to 17s. 3d. per 280 lb. Beans rather firmer. Oilcake very firm, with more demand. Oatmeal advanced a further 6d. per sack. Mill Stuffs very scarce and in demand.—MCKINNON AND MCDONALD (Glasgow).

Flour.—Trade to-day has been quiet but fairly steady. Prices are the turn easier on the week.—T. S. MEDILL AND SONS, LTD.

Arrivals of wheat are moderate, and we have a quiet trade at the prices of last Monday. Flour is unchanged in value. Maize, barley, and oats are 3d. per qr. lower.—COVENTRY AND SHEPPARD.

Milling Offals.—Offals move off freely at last Monday's quotations, and mills keep clear of all qualities.—JOHN BAWCOMB AND CO.

FEEDING STUFFS.

London, Monday.—Linseed cake: Trade has been rather quiet, but owing to a considerable advance in price of seed, London made are 1s 3d to 2s 6d dearer; foreign unchanged. Undecorticated cotton cakes: There is a strong demand and values are the turn dearer. Linseed meets with very good inquiry, and is 1s 6d to 2s per qr. dearer.

ROBERT AND JOHN HEWETSON

THE BALTIC. 1 p.m.

STATE OF TRADE.

Wheat cargoes are for the moment against holders, but the speculative market remains essentially unsettled. Maize has gone back 3d. since Saturday, and so has barley. Oats are steady but neglected. Cargoes of peas, linseed, and cottonseed are held for more money. No cargoes of beans are on offer, either on passage or for future shipment.

BUSINESS DONE.

WHEAT.—Finest Russian Winter, 36s per 492lb., on passage; Odessa Ghirka, 34s per 492lb., on passage; Hard Taganrog, 31s 9d per 492lb., on passage; Kustendje, 32s 6d per 492lb., November shipment; Blue Stem, 34s 3d per 500lb., November shipment; Walla Walla, 33s 6d per 500lb., November shipment; South Australian, 34s per 480lb., new crop, December shipment; South Australian, 33s 9d per 480lb., new crop, January shipment; New South Wales, 33s 3d per 480lb., new crop, February shipment; Roumanian Best, 33s 6d per 504lb., prompt shipment; Roumanian Common, 31s per 480lb., prompt shipment; Rosario, 32s 3d per 480lb., prompt shipment.

MAIZE.—Argentine, 24s 3d per 480lb., arrived; American, 22s per 480lb., December shipment.

BARLEY.—Azoff, 20s 9d per 400lb., on passage; Californian, 25s 6d per 448lb., on passage.

OATS.—Canadian, 17s 7d per 320lb., November shipment.

LINSEED.—Calcutta, 40s per 410lb., arrived.

COTTONSEED. — Egyptian, £5 17s 6d per 2,240lb., on passage.

LOCUST BEANS.—Portuguese, £5 per 2,240lb., November shipment.

FRUIT AND VEGETABLES.

Covent Garden, Saturday.—Ample and varied supplies, trade being tolerably brisk. Quotations of English produce:—Apples, 5s to 12s 6d per bushel; pears, 2s 6d to 5s per half-sieve; cranberries, 10s 6d to 14s per case; grapes, 6d to 3s; melons, 1s to 2s 9d each; tomatoes, 2s to 4s; peaches, 6s to 12s 6d; green figs, 6d to 10d per box; onions, 4s 6d to 5s 6d; ditto (picklers), 5s 6d to 6s 6d per cwt; Jerusalem artichokes, 2s to 2s 6d; Brussels sprouts, 1s 3d to 1s 6d per half-sieve; cauliflowers, 4s to 6s 6d; cabbages, 3s to 4s per tally; celery, 6s to 12s per dozen rolls; parsnips, 2s 6d to 3s; carrots, 2s 3d to 3s per bag; horseradish, 3s 6d to 12s 6d per dozen bundles; parsley, 1s 6d to 2s; leeks, 1s 3d to 1s 6d; turnips, 2s to 2s 6d; radishes, 6d to 9d per dozen bunches; mushrooms, 9s to 12s per 12lb; cucumbers, 1s 6d to 5s; endive, 9d to 1s 3d per dozen; beetroots, 2s to 2s 3d per bushel; potatoes, 55s to 75s per ton.

CATTLE.

Metropolitan Market, Islington.

	Monday, Nov. 6, 1905. British.	Total.	Monday, Nov. 7, 1904.
Beasts	930	930	1,450
Sheep and Lambs	6,140	6,140	6,290
Calves	10	10	—
Pigs	50	50	—
Milch Cows	59	59	99

Quotations per 8 lb. (sinking the offal):—

ENGLISH

	Inferior.	Second.	First.
Beasts	3s 10d	4s 6d	4s 6d
Sheep	3s 10d	4s 8d	5s 10d
Pigs	3s 10d	3s 8d	4s 6d

Milch cows, per head, £16 to £22.

British arrivals include as follows: Scotland, nil; Eastern Counties, 24; Midland, Home and Western Counties, 823; Devon, 25; Ireland, 58.

We note to-day a decrease of 60 head in the number of beasts offered for sale compared with Monday last. The majority of the supply was consigned from the Midland Counties and Ireland, these latter consisting of 21 Dublin shorthorns, and 37 Waterfords, no store cattle were included. Trade for all grades was a slow and dragging one, with a downward tendency in value, especially was this so, with regard to the Irish trade, sellers having to accept 2d. less money, to affect sales. Fat butchering cows and bulls were in shorter numbers, but met with little demand, late rates only being upheld with difficulty.

The following are top quotations per 8 lb. (sinking the offal):—

	To-day.	Monday, Nov. 6, 1904.
Devons	4s 4d to 4s 6d ...	—
Herefords	4s 4d to 4s 6d ...	4s 4d to 4s 6d
Runts	4s 0d to 4s 4d ...	4s 0d to 4s 4d ex 4/6
Lincolns	3s 8d to 3s 10d ...	3s 10d to 4s 0d
Irish	3s 8d to 4s 0d ...	4s 0d to 4s 2d ex —
Fat Cows	3s 4d to 3s 6d ...	3s 4d to 3s 6d

There was an increase of 50 in the number of sheep penned compared with Monday last. Trade for both wethers and ewes was a disappointing one, with a downward tendency in value, though not sufficient to warrant our quoting lower rates. Irish shared in the general depression and were difficult to vend, even at less money, on the other hand Scotch sold slowly, late currencies being well upheld for the best. A clearance if made will be a forced one. The supply included 200 Scotch, 7,060 Irish, and 495 from the Eastern Counties.

Undermentioned quotations are at per 8 lb. (sinking the offal), and are for the best of each class penned:—

	To-day.	Monday, Nov. 6, 1904
7½ to 8 st Downs	5s 8d to 5s 10d ...	5s 10d to 6s 0d
9 st Downs	5s 6d to 5s 8d ...	5s 8d to 5s 10d
10 st Half-breds	5s 4d to 5s 6d ...	5s 6d to 5s 8d
10 st Irish	5s 0d to 5s 2d ...	5s 0d to 5s 2d
10 st Down Ewes	4s 0d to 4s 2d ...	4s 0d to 4s 2d
11 st Half-bred ditto	3s 10d to 4s 0d ...	3s 10d to 4s 0d

Calf trade not worth noting or quoting.

There was a good supply of pigs, trade for which was slow but firm; best small breeds being quoted at from 4s 4d to 4s 6d per 8 lbs sinking the offal).

St. Ives (Hunts), Monday.—Beasts, 716; sheep, 441; pigs, 487. Beef, 7s to 7s 6d; mutton, 8s 2d to 10s 6d; pork, 6s 6d to 7s 6d. Fat cattle, fair demand; stores, better trade; fat sheep, good demand; horses, fair; fat and store pigs, good demand; milch cows, fair show, trade prices, £14 to £23.

FOREIGN

Deptford, Monday. — Beasts, 921. To-day's supply, compared with Monday last, showed a decrease of 470 head, and consisted of 200 from the United States, and 121 Canadians. Trade, taken as a whole, was fair, late currencies governing all sales for the former. Besides the above 300 States' beasts were withheld from sale. The best States made 3s 10d per 8lb.; seconds, 3s 6d; Canadians, 3s 4d per 8lb. (sinking the offal). On Saturday, 1,375 beasts from the United States and 547 Canadians (270 of which were ranch cattle), were offered for sale. Trade was extremely slow for all grades. Ranch cattle were unsold. Besides the above, 1,000 States and 400 Canadians were withheld from sale. The best States' beasts were quoted at from 3s 8d to 3s 10d; seconds, 3s 5d; Canadians, 3s to 3s 4d per 8lb. (sinking the offal).

Liverpool, Monday.—A slightly smaller supply of cattle in market to-day, demand was very slow, but prices practically unchanged. Sheep also shown in reduced numbers, good selling trade experienced for all classes; prices, however, as a rule, were not quotably higher; finished small sorts made top quotation. Beef, 5¾d to 4¼d; mutton, 9d to 6d per lb. At market, 1,416 cattle and 4,039 sheep.

SEEDS

London, Monday.—There is more inquiry for spring sowing seeds all round, both clovers and grasses. Prices firm where fixed. Red clovers, as usual at the opening of the season, attracts most attention. Samples of the new English reds are now coming on the market.—JOHN PICARD AND CO.

POTATOES.

Borough, Saturday.—Good supplies were available, but met with quiet support. Best silts, 55s to 65s; Blacklands, 50s to 55s; and Scottish, 55s to 65s per cwt.

Goole, Wednesday.—There was a large attendance, but a very slow trade for potatoes. Evergoods, 4s to 4s 6d; Royal Kidneys, 4s 9d to 5s 6d; King Edwards and Up-to-Dates, 5s 6d to 5s 9d per load; retail, 4d to 6d per stone.

Manchester, Saturday.—Yorkshire warps, 7s to 8s; sands, 6s to 7s; Cheshire kidneys, 4s to 5s 6d; Irish, 3s to 3s 6d per cwt.

Southwark (Waterside), Saturday. — During the past week the quantities of potatoes on sale have been moderate, but trade being slow, prices have not improved. The following are this day's quotations: Scotch Up-to-Dates, 55s to 65s; British Queens, 55s to 65s; Lincoln Evergoods, 55s to 60s; Up-to-Dates, 55s to 65s; Blackland Up-to-Dates, 55s; British Queens, 55s per ton.—R. G. BROWN.

Spitalfields, Saturday.—Moderate supplies; demand quiet.

York, Saturday.—A thinly-attended market, and a poor supply. Only a few sales were effected, and these were at last week's rates. Sands made up to 40s; warps, 45s to 50s per ton.

LIVE STOCK AND MEAT TRADE REVIEW

(WRITTEN SPECIALLY FOR THE "MARK LANE EXPRESS.")

Trade in London.

At the Islington Cattle Market on Monday there was a decrease in the supply. Trade for fat beasts of both prime and second quality was of a dull nature, partly due to the heavy rainfall on that day; the supplies were chiefly drawn from the Midland, Home, and Western counties, with a few Devons and Irish, these latter consisted of 9 Dublin Shorthorns, 10 choice Black Polled ditto, and 28 Waterfords. For this class of cattle trade ruled very slow, nevertheless Monday's prices were both asked and obtained: for English cattle the tendency was a downward one, although not quotably so. Fat beasts met with no inquiry on Thursday. Fat butchering cows and bulls on Monday met with little demand by both town and country buyers, difficulty being experienced in maintaining late rates, but on Thursday late rates were well maintained, about twenty fat shed cows having failed to find purchasers were held back in the lairs for Monday.

At the Foreign Cattle Market, Deptford, trade throughout the week was of an extremely slow nature, and on Wednesday the supply was of rather poor quality, consequently a bad trade ensued. The total number offered for sale at both markets was 4,797, as against 5,756 during the preceding week, consisting of 1,030 British (decrease 340) and 3,767 Foreign (decrease 619), these latter comprising 2,679 States and 1,088 Canadians. The following were the top rates paid per 8 lb. (sinking the offal):—80 to 90 stone Devons, 4s. 4d. to 4s. 6d.; 90 to 95 stone Herefords, 4s. 4d. to 4s. 6d.; 95 stone Runts, 4s. to 4s. 4d.; 100 stone Shorthorns, 3s. 8d. to 3s. 10d.; 80 to 95 stone Irish, 3s. 10d. to 4s. 4d.; 90 stone States, 3s. 8d. to 3s. 10d.; Canadians, 3s. 4d. to 3s. 6d.; 90 stone fat cows, 3s. 4d. to 3s. 6d.

At Islington, on both market days, notwithstanding a decrease in the supply, trade was extremely dull and dragging for all grades, with the exception of ewes, these alone maintaining last week's prices. Scotch and Irish descriptions shared in the general depression, the former meeting with a decline of 2d. per 8 lb. At Deptford, a small supply of Canadian sheep were offered for sale, rates for which were fairly steady. The total number penned at both markets was 6,572, as against 6,590 during the previous week, consisting of 6,170 British (decrease 420) and 202 Canadians. Best pens made per 8 lb. as follows (offal given in):—7½ to 8 stone Downs, 5s. 8d. to 5s. 10d.; 8 stone Scotch, 5s. 6d. to 5s. 8d.; 9 stone Downs, 5s. 6d. to 5s. 8d.; 10 stone Irish, 5s. to 5s. 2d.; 10 stone halfbreds, 5s. 4d. to 5s. 6d.; 10 stone ewes, 4s. to 4s. 2d.; 8½ stone Canadians, 4s. 4d. to 4s. 6d.

Calves numbered 20; trade was nominal, quotations not worth recording

Pigs numbered 50 on Thursday, trade for which was slow, best small breeds being quoted at from 4s. 4d. to 4s. 6d. per 8 lb. (offal given in).

Trade in the West.

Now that a break has occurred in the cold, frosty weather experienced for over a fortnight, followed by an exceedingly genial rain, which has tended still further to lessen the cold, we may confidently anticipate greater activity in regard to store things, transactions in which have been greatly stagnated by the sharp "snap" which set in so suddenly, and which left many wondering where they really were. This applies especially to the barrener trade, few of which, excepting anything very special, could be cashed for "love or money," the shortness of keep almost everywhere, consequent on the protracted drought—which is almost without precedent unless going back to a very remote date—making everybody extremely cautious about buying, especially in the way of grazing cattle, though it had no such deterrent effect in sheep sales. The barrener trade at the present moment is almost as stagnant as it well could be, no one showing any disposition to buy, despite the low price which even good barreners are now making, the best scarcely anywhere, except for very special lots, realising more than £13 or £14 apiece for really good forward cattle, whilst the plainer grades can be bought at almost any price from £7 upwards. This is not very encouraging just at a time when graziers are about to lay in their winter supplies, and no doubt the present depressed condition of the beef trade is largely responsible for the low prices ruling, bullocks in some places only making a trifle more apiece than what they cost when put up for fatting. With dairy beasts things are very different: the inactivity so generally prevalent two or three weeks back has totally disappeared, and given place to unusual briskness, especially for heifers and calves of a good type, and, for the matter of that, equally so for really good cows, these classes of milchers bringing from £27 up to £22, which is now getting quite a common figure again where beasts with special milking qualifications are being acquired. As will be understood, this is the range for a class of milcher specially adapted for a town milk walk, but there is no lack of the plainer grades, and, though these are not so eagerly in request, still anything that can be turned to account for the purposes of milk is saleable at all kinds of prices, ranging from about £16 down to £11 or £12 for animals soon going off their milk. Store sheep, for the close of the season, are making exceptionally good prices, and this is not confined to any particular district, the trade being equally good at Winchester, Sturminster, Salisbury, Blandford, Dorchester, and other fag-end fairs. This proved an agreeable disappointment to flockmasters, who, in the face of the rigorous weather experienced and the poor outlook for keep, had quite reconciled themselves to a poor trade, with low prices, which, however, did not prove to be the case.

Trade in Scotland.

The supply of fat cattle this week has been exceedingly large. For those of prime quality last week's prices were as nearly as possible obtained, but secondary and inferior descriptions met a much worse market at a £1 a head reduction. Fat cows also were considerably cheaper. Fat sheep have been offered in very large numbers. The better class are selling well, but secondary sheep and ewes were quite 2s. a head lower. Fat calves very dear, while pigs met a good inquiry at late rates. For the time of year, there was a fair supply of store sheep. These are rather slower to sell at prices slightly tending downwards, with a few inferior sheep left unsold. There was a fair supply of store cattle. Anything of a good class got sold at previous prices, but rough cattle and stirks are difficult to sell at rather less money. A fair show of milch cows met a very good trade. Quotations:—Top price of best cattle per live cwt., 39s. 6d.; current, 35s. to 37s.; Irish 28s. to 33s.; mutton to 9d. per lb.—JOHN SWAN AND SONS, LTD.

Trade in Ireland.

There was an average attendance of home and export buyers at Dublin Thursday Market so far as the cattle trade was concerned, but few buyers for sheep were present. There was a falling off in the supplies in both branches of stock, the decrease in cattle on the week being 748, and in sheep 1,057, but this shrinkage did not seem to affect prices, as the market was not any firmer, except for well-finished beasts, which met with a readier sale, but at no advance on last day, while half-meated cattle were practically unsaleable. Some nice fairly-finished lots of bullocks and heifers changed hands tediously at from 23s. to 24s. (live weight) per cwt., which must be considered a very moderate figure at this season of the year. Dealers claim that cattle kill very disappointingly this year, and, though apparently cheaper, are really dearer than usual. Coarse beef and rough dairy cows remain quite a drug at very irregular prices. The enormous arrival of over 14,000 head of cattle and 86,000 cwt. of fresh beef at English ports from Australia during the past week must account to a great extent for the sluggish state of the Irish cattle trade. A few very fine beasts, fed in the co. Kildare, attracted a good deal of attention, and were bought for the London market at from £20 to £23 each. Rough cattle did not clear.

In spite of the shrinkage of over 1,000 sheep, trade was even slower than on the previous Thursday, but scarcity of supplies saved a complete slump in values, and all that can be said was that prices were weaker all round. The inquiry from English and Scotch buyers was remarkably slow, due to the fact that Irish sheep are not wanted across-Channel. Home and North of Ireland buyers picked up all the best lots on easier terms. Best ox and heifer beef sold at from 48s. to 52s. 6d., and a few extra lots up to 54s. per cwt.; good second-class beef, 45s. to 47s. 6d.; and coarse beef from 40s. upwards. Prime wether mutton was worth from 6½d. to 7d. per lb.; ewe, 5½d. to 6½d.; and inferior sheep from 5d. per lb. Large heavy hoggets made from 44s. to 55s. each; small to medium ditto, 32s. to 42s. Choice veal was scarce, and sold at from 7d. to 8d. per lb.; other sorts from 4½d. per lb. upwards. The dairy cattle market was thinly supplied, but quite enough for the demand, except for best springers and newly calved cows, which cleared readily at late rates, but secondary and inferior cows sold very slowly. Stores were confined to a limited number of young cattle, which met with a dull inquiry.

The pig market was sparsely supplied, and much keener competition prevailed than at the previous market, home and export buyers purchasing freely at improved prices. Best light-weight pigs made from 50s. to 53s. per cwt.; coarse, from 36s. per cwt. upwards. A good clearance was easily effected. The general opinion was that the average prices for cattle of all descriptions last Thursday were lower than for many years past—a poor lookout for Irish graziers.

LONDON.

Central, Friday.—Good supplies were received, for which a very slow demand again predominated, values being in some cases lower. Arrivals of beef included 70 tons Scotch, 120 Liverpool sides, 2,600 hindquarters, and 1,650 forequarters American refrigerated; also 1,400 Argentine chilled hindquarters and forequarters. Quotations: Beef: Scotch short sides, 3s 10d to 4s 2d; extreme, 4s 4d; long sides, 3s 8d to 3s 10d; English, 3s to 3s 2d; American Deptford-killed, 2s 9d to 3s 2d; Liverpool sides, 2s 8d to 3s; American refrigerated hindquarters, best, 3s 2d to 3s 4d; forequarters, 2s to 2s 2d; rancher hindquarters, 2s to 2s 4d; forequarters, 1s 8d to 1s 10d; New Zealand hindquarters, 2s 2d to 2s 4d; forequarters, 1s 9d to 1s 10d; River Plate hindquarters, 1s 10d to 2s; forequarters, 1s 8d to 1s 9d; Argentine chilled hindquarters, 2s to 2s 4d; forequarters, 1s 5d to 1s 8d. Mutton: Scotch wethers and tegs, 4s 4d to 4s 10d; ewes, 3s to 3s 4d; English wethers, 4s to 4s 6d; ewes, 2s 10d to 3s 4d; New Zealand, 2s 3d to 2s 8d; River Plate, 2s to 2s 2d; Dutch wethers, 3s 8d to 4s; ewes, 3s. Veal: English and Dutch, 3s to 4s 2d. Pork: English, 4s to 4s 8d; Dutch, 3s 10d to 4s 6d per 8lb.

Islington, Thursday.—Beast supply showed decrease of 50 head, and consisted almost entirely of fat butchering cows and bulls, and very small consignment of prime quality beasts, which were unsaleable. Trade for fat cows and bulls slow but steady, late rates governing all sales. Top value fat cows, 3s 6d; fat bulls, 2s 10d to 3s 2d per 8lb. Decrease of 70 in number penned in sheep market, supply consisting entirely of Downs and halfbreds. Trade, owing to scarcity of retail buyers, was practically at a standstill, wethers showing downward tendency in value, whilst ewes met no inquiry, even at reduction of fully 2d per 8lb. Best pens made per 8lb. as follows:—8st Downs, 5s 8d to 5s 10d; 9st ditto, 5s 6d to 5s 8d; 10st ditto, 5s 4d to 5s 6d; 10st halfbreds, 5s 4d to 5s 6d; 10st Down ewes, 4s. Calf trade not worth noting. Pig trade shared in the general depression, a decline of 2d per 8lb. having to be made to effect sales. Quotations per 8lb., sinking the offal:—Beasts, 2s 10d to 3s 6d; sheep, 3s 10d to 5s 10d; calves, 5s 4d; pigs, 2s 10d to 4s 6d. Total supply:—Beasts, 40; sheep, 80; calves, 10; pigs, 50.

COUNTRY.

Ashford, Tuesday.—Beef trade dull, with reduction in the case of inferior qualities. Best made 4s to 4s 6d; and cows, 3s 8d to 3s 10d per stone. Mutton depressed, but not cheaper; Downs up to 5s 8d; small Kents, to 5s 2d; barrens, to 4s per 8lb.; veal, 5s to 5s 2d; pork, 4d per stone cheaper, roasters making up to 4s 6d; and larger hogs up to nearly 4s.

Basingstoke, Wednesday.—At Raynbird and Sons' Sale Yard there was a fairish attendance to meet a supply of 33 fat beasts, 66 calves, 475 fat sheep and lambs, 269 pigs, and 133 head of dairy and store cattle, for which the following prices were realised:—Fat two-year-old Devon steers made up to £19; Polled Aberdeen, £17 7s 6d; Shorthorn steers, £17; heifers, £15 12s 6d; cows, £12 5s; fat calves, 70s to 95s; small, 20s to 65s; fat hogs, 55s to 75s; fat porkers, 42s to 51s; small, 25s to 38s; store pigs, 7s 6d to 22s; dairy cows, £10 to £21 5s; prime Down wethers and young ewes made from 48s to 56s; ten months' old ditto, from 50s to 55s; smaller half fat, 40s to 47s; old ewes, 34s to 40s; Down rams, 50s to 54s; small and inferior, 25s to 42s. For fat beasts there was a slow inquiry, with a strong downward tendency in prices. For fat sheep and lambs previous prices were maintained, and a clearance very nearly made. A choice consignment of Hants Down tegs from Amport realised up to 55s. The very best stocked milch-cows and heifers met a brisk trade, but, taking the milk trade generally, prices ruled a trifle lower than last week. Store cattle trade was absolutely at a standstill. Fat calves a short supply, and met a clearance at late rates. Fat hogs and porkers sold readily, prices showing an advance. Store pigs met a good demand. Ruling values: Best fat beasts, 6d to 6½d; second ditto, 5½d to 6d; bulls, cows, and inferior, 4½d to 5d per lb.; best fat sheep, 8¼d to 8¾d; second ditto, 7d to 7½d; old ewes, rams, and inferior, 5½d to 6d per lb.; fat calves, 6½d to 8d per lb.; fat porkers, 9s to 11s per score; fat hogs, up to 9s 6d per score.

Berwick, Saturday.—Beasts numbered 756, 151 more than the previous week. Attendance of farmers and buyers small, and trade quiet. Calves, £6 10s to £7; heifers, £8 10s to £10 10s; stirks, £9 to £11; two-year-olds, £12 10s to £14; three-year-olds, £13 to £16 10s; Shorthorn bulls, £11.

Birmingham, Thursday.—Fair supply of pigs; small supply of beasts and sheep. Trade fair for pigs, but slow for beasts and sheep. Quotations: Beef, 5d to 6½d per lb.; mutton, 6½d to 8½d per lb.; bacon pigs, 9s 9d to 10s per score; cutting pigs, 10s per score; porkets, 10s 10d to 11s 6d per score; sows, 8s 4d to 8s 6d per core.

Bristol, Thursday.—Beef was in average supply, but demand, if anything, rather less than usual, and whilst trade in best qualities was slow at the recent price of 56s, secondary sorts declined from 53s to 52s. Mutton plentiful and trade moderate at about late rates. Pigs scarce, porkers rising from 10s 6d to 11s, and baconers from 8s 2d to 9s.

Canterbury, Saturday.—Wether tegs, 36s to 40s; rough old sheep, 18s 6d to 22s; good useful ewes up to 48s per head. Rather more doing in horned stock, useful yearlings, £8 10s to £10 10s; two-year-olds, £10 10s to £13 5s.

Calne Friday.—Present prices for prime pigs, in lots of not less than ten, on rail within 100 miles of Calne.

Prime Stores.	Thickness of fat in any part of Back.	Price per Sc. s. d.
6sc. 10 lb. to 9 sc. 10 lb...	2½ in. and under ...	9 6

Under 11 sc. 10 lb.	2¾ in.	9 0
Under 12 sc.	3 in.	8 6

C. AND T. HARRIS AND CO., LTD.

Carlisle, Saturday.—Between 300 and 400 Irish cattle, chiefly wintering heifers, were exposed on the Sands, and there was also a better supply of bullocks. Buyers were fairly well represented, and a steady trade was done at £8 10s to £10 10s for bullocks, £7 10s to £8 10s for small wintering heifers, and up to £10 10s for better sorts. A few good heifers fetched £14 to £15 10s.

Chester, Thursday.—The market was thinly supplied with good stock, and buyers were few than of late. Prices generally of last week may be repeated, with a

slightly downward tendency. Milch cows were quoted at £17 to £23, calvers £15 to £20, barrens £9 to £13, heifers £9 to £15, stirks, £5 to £10, and sheep 18s to 32s.

Colchester, Saturday.—There was a good supply of beef and mutton, and trade was good. Grass beef, 4s 4d to 4s 8d per stone; mutton, 5s 6d to 6s, and pork, 8s 6d to 9s per score.

Doncaster, Saturday.—Good supply of cattle, chiefly Irish, and moderate attendance. Trade dull, milch beasts making less money. Milch beasts, £16 to £21; bullocks, £11 to £16; heifers and drapes, £10 to £15; stirks, £6 to £8; young stock, £4 to £6 each. Moderate show of sheep, but a quiet trade, and no change; hoggs, 40s to 44s; ewes, 38s to 42s each.

Dorchester, Saturday.—Good average supplies came to hand at the cattle market, Messrs. Ensor and Son offering some very good milch beasts, which met a very good sale, though prices were scarcely as firm as they were, except for the very best grades, which ranged from £15 15s to £20 apiece (the latter being the top price reached); seconds selling from £13 to £15; some rare cows and calves also sold very well at from £18 15s to £20 each. Barreners are still quiet, though some of the more fancied bullocks brought as much as £13 5s apiece where sold singly; but pairs must be quoted from £18 to £22, as a general run, with no great demand at the price. Fat beef a slack trade, to-day's range being for the best animals, £16 to £18 10s each (or 10s to 11s per score); seconds, 9s to 9s 6d. Mutton in limited offer, and met an inactive sale at 6d to 7d, bettermost qualities up to 8d.

Dublin, Thursday. — Numbers in market: Beasts, 3,749; decrease, 748. Sheep, 5,517; decrease, 1,057. Calves, 29; decrease, 11. Finished beef scarce, and in good demand at late rates. Secondary and inferior sorts met with a repetition of last week's trade, the finish up being tedious and uncertain. Sheep of all classes met a slow dragging trade at weaker prices, fewer buyers being in evidence and their wants evidently smaller. Cattle, live weight (best), 27s 6d to 30s per cwt.; exceptional (for Angus crossbreds), 33s per cwt.; rough and inferior sorts, 24s to 27s per cwt. Mutton, dead weight, 5½d to 7½d per lb.—GANLY, SONS AND CO.

Edinburgh, Wednesday. — Fair supplies. Horned cattle, £12 10s to £16 10s; stirks, £8 8s to £10 10s; Cheviot Dinmonts, 26s to 30s; Cheviot ewes, 23s to 28s; best Shorthorn cows, £24 to £26; Ayrshires, £15 to £21; crosses, £20 to £23.

Glasgow, Wednesday. — There was a fair show of cattle and sheep. Good cattle were in demand, but secondary were hard to sell. Prices steady. Top Scotch cattle, 65s; current, 60s; top Irish, 56s per cwt. A fair inquiry for sheep, and values were unchanged. Best hogs, 9d; secondary, 8½d; best wedder, 8d to 8½d; secondary, 7d to 7½d per lb. Dead meat slow, with values easier. Best Scotch beef, 6d; best States, 5½d; best Canadians, 5d per lb.

Gloucester, Saturday.—Messrs. Bruton, Knowles, and Co. report their sales as follows:—Cows and calves and incalvers, a large supply (86), with excellent trade, the highest prices being £23 15s, £22 15s, £21 15s, £20 10s, etc. Store cattle, a fair supply and moderate trade.

Hereford, Wednesday. — Supplies were larger, and trade somewhat fluctuating. There were several graziers from Northamptonshire buying store cattle, of which there was the largest supply since October fair, but the trade on them was very slack. Fat cattle were over supplied. The ruling figure was 5d to 5½d for bullocks and heifers, the best going at 6d to 6½d per lb., fat cows at about 4d to 4½d per lb. Calves were an off trade altogether. Butchers' calves were few, but anything of choice quality made 6½d to 7d per lb. Sheep were a moderate supply, and the quality notup to the average. Wethers were scarce, making about 8d. Yearling ewes also reached 8d. Fat old ewes 6d. Butchers' lambs wer few, and made 8d. Ther were several bunches of store lambs, and they had a ready sale. The pig trade was not quite so firm as of late, the market being rather over supplied. Porks sold pretty well at 6d per lb., and bacons 5½d to 6d per lb. The few store pigs were in demand, and had a firm trade.

Ipswich, Tuesday.—Messrs. Robert Bond and Sons report an average supply of fat cattle and a good attendance of buyers. Trade for the best yard-fed animals was brisk, up to 9s per stone, but others ruled rather cheaper than last week. Grass cattle slow at about 7s 6d per stone. At the special sale of grazing cattle about 600 were penned, including a large entry of Cumberland and Westmoreland Shorthorns of first-class quality, buyers were numerous, and a good clearance was effected without any improvement in values. Two-year-olds, £11 7s 6d to £10 10s; eighteen months, £9 15s to £8 10s; sixteen to twelve months, £8 to £5 15s. Cows fresh calved or near met with more inquiry, up to £18. Fat sheep short, trade slow, and prices lower, the best hoggets making from 58s 6d to 52s. Grazing sheep were in fair demand, at from 40s to 34s. Fat swine dear at from 6s 6d to 7s per stone; well-bred stores in strong demand, at from 32s to 18s. Numbers at sales and market: 1,352 cattle, 786 sheep, and 1,404 swine.

Leicester, Saturday.—Large consignments of home-bred stock. Buyers and dealers were well represented. Choice lots sold freely, but secondary sorts were 10s to 20s per head lower. High-class milch cows made £20 to £23; good lots, £17 to £19; inferior, £14 to £16; polled bullocks, £16 to £17; Shorthorn bullocks, £12 to £14 10s; Irish cattle, £11 to £13 10s; Welsh runts, £10 to £14; young stock, £5 to £6; calves, 15s to 35s. Sheep sold slowly at firm rates.

Lincoln, Friday.—Cattle were in small numbers, and the demand was slow. Strong beasts made £13 to £16 10s; yearlings, £8 to £10. The sheep pens were but poorly filled, and trade was good, lambs realising 36s to 44s each.

Lynn, Tuesday.—Average show of fat beasts made late rates, 7s to 8s per stone. Store beasts plentiful and slow, £6 to £16 each. Average show of fat sheep, 9s to 10s per stone. Few store sheep, 40s to 50s each. Lambs, 35s to 40s. each.

Manchester, Friday.—Beef: First-class, 4¾d; second-class, 3¾l to 4¼d; third class, 2¾d to 3¼d. Mutton: First-class, Cheviots, Scotch, 7¾d; others, 7d; second-class, 6¾ to 6¾d; third class, 5d to 5¾d. Veal: First-class, 6¾d; second class, 5¾d to 6¼d; third class, 4¾d to 5¼. Bacon pigs: First-class, 5¼; second class, 4¼d to 5¼; third-class, 3¾l to 4d. Porket pigs: First class, 7¼d; second-class, 6¾d to 7d; third-class, 6¼d to 6¾d.

Norwich, Saturday.—Show of fat beasts about equal to home requirements, and trade was quiet, at prices ranging from 7s to 8s per stone of 14lb. There was again a full supply of store cattle, and demand was slow throughout; values show no material change, and prices ranged from £5 to £17 per head. Store sheep were represented by a limited number of lambs and breeding ewes, and for these there were very few customers; lambs made from 25s to 40s per head. Supply of fat sheep was up to the average of the past few weeks, and trade was a trifle easier; prices for best qualities averaged from 10s to 10s 6d per stone. There was a short supply of fat pigs, and trade was prime at 7s to 7s 3d per stone; store pigs were also offered in limited numbers, and for these there was a bigger demand.

Nottingham, Saturday.—Average show of milch beasts with a rather slow trade. Best milch cows, £17 to £21; in-calf heifers, £12 to £17. Fair supply of store beasts, for which trade was dragging. Strong heifers and steers, £9 to £14, and younger beasts, £6 to £9; calves, 25s to 50s.

Preston, Wednesday.—There was a very slow trade in cattle and sheep, and customers were not very numerous. Heifers and bullocks made 5¼d to 6¼d; cows and bulls, 4¾d to 5¼d; hoggs, 8d to 8¼d; lambs, 8d to 8½d; ewes, 6d to 7d; and tups, 5½d to 6d per lb.

Retford, Saturday. An improved show of store stock, and trade was fairly brisk at the rates current last Saturday. With a few exceptions, milch cows were of medium quality, and sold from £15 to £18; bullocks, £9 to £12 10s; two-year-old steers and heifers, £8 to £11; yearlings, £6 to £8; calves, 40s.

Romford, Wednesday.—Fair supply of fat beasts, average trade. Best, 4s 2d to 4s 4d; middlings, 3s 10d to 4s per stone. Calves scarce, fair trade at 5s 2d to 5s 4d per stone. Average supply of sheep, trade about the same. Best, 5s 6d to 5s 8d; middlings, 5s 2d to 5s 4d; ewes, 3s 10d to 4s per stone. Slow demand for store beasts. Average supply of pigs; trade about the same.

Shrewsbury, Tuesday.—Usual supply of store cattle, which met a good demand. Fat cattle met a ready sale. Small number of store sheep, but larger of calves and pigs. Quotations: Beef, 5½d to 6¼d per lb.; mutton, 7¾d to 8¾d per lb.; veal, 8d to 8¾d per lb.; porket pigs, 10s to 10s 3d per score; bacon pigs, 9s to 9s 6d per score. Numbers offered as follows: Cattle, 833; sheep and lambs, 960; calves, 130; pigs, 525.

Thame, Tuesday.—Entries of cattle and sheep showed a slight falling off on previous weeks. There was a capital attendance of buyers, a large number coming from Oxford. Choice quality beef still continues in demand and sells readily, but secondary quality was difficult to dispose of. Sheep were a decidedly better trade, every pen changing hands. Grand show of weaning calves met a brisk demand. Bacon hogs, porkers, and store pigs at late high prices. Messrs. Bond and Burrows' sale comprised 88 fat beasts, 202 fat sheep, 142 fat and weaning calves, and 118 fat and store pigs. Fat oxen made from £16 15s to £19 10s; fat heifers, £15 to £18 17s 6d; fat wethers, 46s to 58s; fat ewes, 42s to 56s; fat calves, £3 to £4 10s; weaning cow calves, 28s to 60s; bull calves, 10s to 48s; bacon hogs, £4 to £6 15s; porkets, 28s to 46s.

Truro, Wednesday.—Business rather slow, owing to the weather. Atetndance fair. Fat bullocks, 56s to 58s cwt.; barreners and store bullocks, 40s to 45s; cows and calves, £10 to £16 each; rearing calves, 20s to 30s; wethers, 7¼d per lb.; ewes, 5½d to 6d; lambs, 7½d; pigs, 7s 6d to 25s; beef, 6d to 8d per lb.; mutton, 6d to 8d; lamb, 6d to 8d; veal, 6d to 8d; pork, 6d to 8d; bacon, uncured, 6d to 7½d; ditto, cured, 7d to 9d; pork carcases, 4½d to 5½d. Numbers in cattle market: Bullocks, 343; calves, 51; sheep, 226; pigs, 164; horses, 2.

Wolverhampton, Wednesday. — Fair supply all round, except for beasts. Quotations: Beef, 5d to 6½d per lb.; mutton, 6d to 8½d per lb.; veal, 6½d to 7½d per lb.

Worksop, Wednesday.—Smaller show of cattle, and attendance small. Best beef, 6s 9d to 7s 3d; ; secondary, 6s 3d to 6s 9d per stone; best Southdown wether and crossbred shearlings, 8d to 9d; ewes, 8½d to 6½d; lamb, 9d per lb.

MANURES.

Liverpool, Saturday.—Nitrate of oda unchanged since last week's report. There is a moderate demand for kainit and basic slag at unaltered rates. The increased values of feeding stuffs following the better inquiries have retarded business, and consumers are purchasing only their immediate wants, some preferring to use home productions, considering them better value than oil cakes, etc., at current rates, and to this may be ascribed the somewhat brisk demand for feeding treacle, which is being used as an auxiliary. Fattening cake, prime Liverpool make, in bags, £6 12s 6d to £6 15s; feeding or dairy cake, prime Liverpool make, in bags, £6 5s to £6 7s 6d; nitrate of soda, best quality, i.e., guaranteed 95 per cent. pure, in bags, £10 15s to £11; East India bone meal, in bags, £5 5s to £5 7s 6d; kainit, prime 23 per cent., sulphate of potash, in bags, £2 1s 3d to £2 2s 6d; palm nut cake, prime, in bags, £5 15s; linseed cake, American thin oblong, prime, in bags, £8 to £8 2s 6d; linseed cake, English, prime, in bulk, £8 10s to £8 17s 6d; linseed meal (pure crushed linseed), prime, in bags, £14 to £15; cottonseed cake, N.A. decorticated good to prime, in bags, £6 17s 6d to £7 3s 9d; ditto, ditto, English decorticated, prime, soft, in bags, £7 5s to £7 7s 6d; ditto, ditto, English undecorticated, prime, in bulk, £4 12s 6d to £4 17s 6d; ditto, ditto (crushed), 20 to 25 per cent. oil guaranteed, prime, in bags, £6 17s 6d to £7; maize germ meal, prime, in bags, £5 15s to £5 18s 9d; corn oil cake,, 10 to 13 per cent. oil, prime, in bags, £6 to £6 2s 6d; rice meal Rangoon, as imported, in bags, £5 2s 6d—per ton. Linseed, fine bold feeding, in bags, £2 6s to £2 8s per quarter 416lb.; cod liver oil, cattle feeding, prime, in cake, 4s 6d to 4s 9d per gallon; treacle, feeding, prime, in brls., 4s 3d to 4s 6d per cwt.; D.N.S. Brand superphosphate of lime, guaranteed, 25 to 27 sol., in bags, £2 to £2 2s; ditto, ditto,, guaranteed, 30 to 31, in bags, £2 5s to £2 7s; ditto, ditto, guaranteed 35s to 36 sol., in bags, £2 15s to £2 17s; basic slag, prime quality, guaranteed 30 to 35 per cent. phos., in bags, £1 11s 6d to £1 13s 6d; ditto, prime quality, guaranteed, 38 to 45 per cent. phos., in bags, £1 19s to £2 0s 6d; ditto, finest quality, guaranteed, 42 to 50 per cent. phos., in bags, £2 2s to £2 3s per ton at depots inland.—H. JONES LANGAR AND CO.

COLONIAL DAIRY PRODUCE.

London, Saturday.—Butter: The receipts of Canadian butter for the last two weeks are only about two-thirds of what they were for the previous fortnight. The demand, however, is fairly good for secondary quality, and for "Choicest" there is a good demand, owing to scarcity of this grade. The arrivals during October this year were 46,761 cwts., against 61,849 cwts. last year. Prices are 2s down on the week. The market for Australian butter has been dull, and as there is a desire among holders to clear their receipts week by week, prices are consequently easier to the extent of about 2s per cwt., 110s being the general price, and 112s the very top of the market for best brands of salted and 114s for unsalted. Cheese: There is not that amount of business passing in Canadian cheese which is usual at this time of the year, but though the market is dull prices well maintain their position viz., 57s per cwt. for "Choicest" white, and 58s for "Choicest" coloured, with very little at 55s, and only a fair quantity at 56s.

FEEDING STUFFS.

Hull, Tuesday.—Linseed: Linseed has been a firm and advancing market throughout the week. River Plate, spot has buyers at 37s 6d, 38s 54 bd for Oct. Nov., 39s 6d the value Jan. Feb. Petersburg sold from 37s 6d to 38s 3d prompt shipment. Cottonseed: The market has ruled firmer during the week, and a fair business was done in new crop Egyptian at £5 15s to £5 16s 3d passage and October loading, also in November and Nov Jan, at £5 13s 9d to £5 15s. Old crop ex store made £5 15s. Several hundred tons Bombay were placed at £4 17s to 4 5 Oct.-Nov., and up to £4 18s paid Nov.-Dec., also £4 14s 6d to £4 16s 6d Dec. Jan. Both descriptions firm at the full prices to day. Oilseed cakes: Linseed cakes in better demand, and 2s 6d per ton dearer, with strong tendency. Russians scarce and dearer. Cotton cakes more orders, and prices are 2s 6d per ton dearer on the week. Decorticated cakes and meal are cleared off the market.—KEIGHLEY, MAXSTED AND CO.

London, Monday.—Linseed meets with a steady demand and prices improving, owing to reserve shown by importers. Calcutta-London Spot, 39s, and afloat 38s 9d; Oct.-Nov., 38s 9d; Nov.-Dec., 38s 6d; April-June, 37s 6d. Hull firm, with a good demand for seed on the spot. La Plata spot, 38s 6d; passage, 38s 9d; Oct. Nov., 39s; Dec.-Jan., 37s 6d; and Jan.-Feb., 37s. Rapeseed has advanced considerably, with a good business doing, but closes rather quieter. Brown Cawnpore, Nov.-Dec., 39s 6d; Ferozepore, 39s 6d. Cottonseed has met with a good demand, and closes firm. London—Passage, new, £5 17s 6d, old, £5 13s 9d; prompt new, £5 17s 6d asked; Nov.-Jan., £5 16s 3d. Hull, spot and passage, £5 17s 6d to £5 16s 3d; Nov.-Jan., £5 15s. Linseed oil continues to advance in value. Spot and month in pipes, £17 15s; barrels, £18; Nov.-Dec., £18 5s; Jan.-April, £18 10s; May-August, £18 15s. Hull naked spot, £16; Nov.-Dec. £16 5s; Jan.-April, £16 15s; May-August, £17. The stock in public warehouses in London on October 28 is given as 4,971 tons Oil cakes: Linseed cakes firmer. London made £7 17s 6d to £8. Cotton cakes firm. London made £4 13s 9d to £4 15s.—THE PRODUCE BROKERS CO., LTD.

Mark Lane, Monday.—Linseed cakes: Last week's improvement is well maintained, the trade assuming a healthier aspect, especially in forward positions, there being a decidedly better consumptive demand at the higher rates now asked. Russian find a ready sale at 1s 3d per ton more money. American move off steadily, unchanged. Round Trieste are obtainable at last week's prices. London-made meet a better inquiry and are fully as dear. Cotton cakes: In spite of the recent heavy arrivals of Egyptian, the market is well supported, and 1s 3d per ton more money has been paid for ready parcels, which is also the price asked for November-April shipments. English are again held for 2s 6d per ton more money. Decorticated: London-made is much inquired after being exceptionally good value at £6 17s 6d for cake and meal, and £5 5s for special digestive meal, while American "Open Hand" brand makes £7 2s 6d. Rape cakes do not offer. Maize germ meal: Steamer parcels of white American have changed hands at £5 8s 9d to £5 10s c.i.f. terms, while English makes are if anything the turn dearer. Maize gluten meal is nominally quoted at £5 15s per ton. Rice meal: The market is almost bare of stocks and second-hand sellers still demand £4 16s 3d ex ship terms for November-December shipments. Broken Rangoon rice, in bags, is cheaply offered at £4 15s per ton. Locust beans remain quiet but firm at £5 5s for whole and £5 15s per ton for kibbled. Nitrate of soda is without change at £10 15s per ton ex quay.

MOLASSINE FEEDING MEAL, packed in bags of 1 cwt. each. Price per ton, £6 15s., in ten lots and upwards. £7 10s. per ton in less than ten lots. Free on rail, Liverpool or London. Uniform delivered price for small quantities, 10s. per bag of 1 cwt.

HAY AND STRAW.

Birmingham, Friday.—Small supply; trade quiet. Quotations:—Hay, £3 10s to £3 12s 6d per ton; straw, 2s 6d per cwt.

Derby, Friday.—New hay, 75s to 80s per ton; best hay, 80s to 90s per ton; other hay, 75s to 85s per ton; best old clover, 80s to 90s per ton; wheat straw, 60s to 70s per ton; pressed straw, 50s to 55s per ton; oats straw, 50s to 60s per ton; peat moss litter, 35s to 40s per ton.

Manchester, Friday.—Hay, 4¾d to 5¼d; clover, 5¼d to 5¾d; straw (wheat), 3¼d to 3¾d; ditto (oat), 3¾d to 4d per stone.

Whitechapel, Saturday.—Light supplies were on offer, which, however, met a quiet demand at late rates. Best clover, 72s to 80s; inferior ditto, 60s to 70s; specially picked hay, 75s; good ditto, 63s to 72s; inferior ditto, 45s to 60s; mixture and sainfoin, 67s to 72s 6d; straw, 27s to 36s per load.

HOPS.

Canterbury, Saturday.—Steady demand, and more than three-fourths of the crop is believed to have changed hands, a large quantity being placed in cold storage. Best East and Mid-Kent Goldings quoted up to 70s per cwt.

Bath and West and Southern Counties.

At a Council meeting of the above-named Society, held at Bristol, on Tuesday, the 31st ult., the President (the Earl of Radnor) was in the chair.

The death of Mr. W. J. Llewellyn, a member of Council for the Western Division, having been reported, the president moved:—"That this Council desire to place on record their sense of the loss which they have sustained by the death of their colleague, Mr. W. J. Llewellyn, who, both as a member of Council and as a Steward of Stock, rendered such good service to the Society."

Stock Prizes.

Mr. Milton Bruce, as chairman of the Stock Prize Sheet Committee, brought up the committee's report dealing with the prizes and regulations proposed for the Swindon meeting. The report recommended that to the present classes for South Devon cattle be added two classes for yearling bulls and heifers, and to the present classes for Hampshire Down sheep be added a class for ewe lambs. Also, that there be three classes added for Somerset and Dorset horn sheep. Several classes, competition in which is confined to residents in the county of Gloucester or Wilts, were recommended to be added in the heavy and light horse section, together with classes, similarly restricted, for dairy herds, to be judged on the farm to which they belong.

In the cider section, the report recommended that, instead of classifying the exhibits, as hitherto, in accordance with their alcoholic strength and the county in which they were made, prizes be offered for cider made in a certain year and previously.

The total amount offered in money prizes at Swindon (including £200 contributed jointly by the Wilts Agricultural Association and the Gloucestershire Agricultural Society, and £60 by the Education Department of the Wilts County Council), will be not less than £3,300, in addition to medals and plate.

The committee recommended that an auction sale of exhibited animals be held in the showyard during the show.

The adoption of the report was moved by Mr. Milton Druce, seconded by Mr. Sillifant, and agreed to, power being given to the Stock Prize Sheet Committee, to accept, should they see fit, and incorporate in the list, any additional prizes that might be offered by the Swindon Local Committee, by breed societies, or others, so that the issue of the prize list might not be delayed.

Dairying.

Sir C. T. D. Acland, as chairman of the Dairy Committee, moved the adoption of the committee's report, the most important recommendations in which referred to the provision of classes in the Swindon prize list for single and double Gloucester and Wilts cheeses. The adoption of the report was seconded by Mr. Story Maskelyne and agreed to.

Poultry.

Mr. Ashcroft, as steward of poultry, moved the adoption of a series of recommendations having for their object a considerable enlargement of the number of classes hitherto provided, so as to permit of a more detailed classification of breeds. This was seconded by Colonel the Hon. C. Byng and agreed to.

Nature Study and Forestry.

Mr. Farwell, as chairman of the Science and Art Committee, moved the adoption of the Committee's report, which provided for the holding of a Nature Study and a Forestry Exhibition in connection with the Society's Swindon meeting. The committee also asked for power to arrange, if possible, for an exhibition of models of machinery and mechanical appliances to which artisans and others should be invited to contribute. The adoption of the report was seconded by Mr. Napier and agreed to.

1907 Meeting.

Mr. Edwards, on behalf of the Special (1907 Meeting) Committee, reported that the committee had received an invitation from the Mayor and Corporation of Newport for the Society to hold its 1907 exhibition in that town, and, acting upon the power vested in them by the Council, the committee had accepted the invitation, on behalf of the Society, subject to the usual requirements as to site, etc., being complied with. The adoption of the report was moved by Mr. Edwards, seconded by Mr. Phillips, and agreed to.

Railways.

A communication was read from the President of the Board of Agriculture, notifying a correspondence he had had with the principal railway companies of the kingdom, and suggesting that if any members of the Society are experiencing difficulty in disposing of agricultural produce owing to delay in transit or heavy cost of carriage, or if any of them are adversely affected by an inequality or anomaly in rates, or by the insufficiency of facilities at their disposal for the carriage of agricultural produce by rail, they should communicate with the Board, giving particulars of the difficulties or anomalies in question, with a view to the holding of a conference between some of the members of the Society and representatives of the railway companies, and one of the inspectors of the Board.

On the motion of Colonel Parry Okeden, seconded by Mr. J. D. Allen, it was resolved to thank the President of the Board for his communication.

Horses.

A communication was read from Mr. Phillpotts Williams, of Liskeard, hon. manager of "The Brood Mare Society," asking for support for that society, which, it was stated, was established in 1903 for the purpose of obtaining suitable mares by gift or purchase and lending them to farmers and others on certain conditions, the object being to keep good brood mares in the country and restrict their wholesale exportation, and the consequent deterioration in the breed of horses in the United Kingdom.

On the motion of Major Sherston, seconded by Captain Casberd Boteler, it was resolved to inform Mr. Williams that he had the good wishes of the Council for the success of the object which his society had in view.

Newport and the 1907 Show.

A deputation from the Society, consisting of Major Sherston and Messrs. C. L. F. Edwards, H. B. Napier, C. D. Phillips, A. C. Skinner, and Thomas F. Plowman (Secretary and Editor), visited Newport (Mon) on Friday last for the purpose of inspecting the site proposed for the 1907 exhibition. The deputation was met by the Mayor, the ex-Mayor, the Town Clerk and others, who conducted the members of it to the site proposed for the exhibition. This being conveniently situated close to the town and with a tram line running to the entrance, and being suitable in other respects, was approved. Those present were entertained to luncheon by the Mayor, who assured the deputation that the Society would be very heartily welcomed at Newport, and that every effort would be made to ensure a successful meeting. The Society last visited Newport in 1888, when the show was a very successful one, both in regard to its extent and its financial result.

Carmarthenshire Chamber.

At the quarterly meeting of the Carmarthenshire Chamber of Agriculture, held at Carmarthen, on Wednesday last, under the presidency of Mr. J. W. Harries Pilroath, a comprehensive paper on the Agricultural Holdings Acts and their effect upon tenant-right, was read by Mr. John Roberts, land valuer, Towyn, who said that the last Act was comprehensive in its items of improvement, and its procedure was simple and cheap, the Board of Agriculture doing the work of the solicitor gratis should such assistance be necessary. As the right to compensation under the combined Acts was one that the tenant could not contract out of, he had no hesitation in predicting that when the general agricultural community understood its friendly provisions better the majority of tenant-right claims would be recovered by the aid of its machinery; for an arbitration under it amounted in practice to nothing more than an ordinary valuation, whilst, on the other hand, the amount of compensation would be increased very much on large holdings, and almost tenfold on small holdings, and that also without the least fear of the dreaded law suit being involved, whilst the security for the amount awarded was secure. The Act affected tenant-right in such a way as to make it welcome to good farmers and broad-minded and generous landlords. Through its influence over tenant-right the Act tended to improve the state and raise the standard of agriculture generally.

Royal Cornwall.

The report of the Council read at the annual meeting of the Royal Cornwall Agricultural Society was a most satisfactory one, the Council stating they had every reason to be gratified with the progress of the society during the past twelve months. The forty-seventh exhibition, which was held at Newquay, was very successful, and the continued popularity of the society was demonstrated by the large number of new members elected during the year. The membership now stood at 674, a much larger number than ever stood on the books before. The show at Newquay was an unqualified success in almost every department—not the least important element of success being the great interest shown in the implements and machines exhibited. The accounts for the past year showed receipts £2,054 2s.; expenditure £1,836 3s., credit balance £197 19s. At the council meeting prior to the annual meeting, the Hon. John Boscawen said that he had been speaking lately to a prominent gentleman with reference to the Bath and West of England Show. The gentleman seemed to think it was the wish of the council of the Bath and West of England Society to hold their exhibition in Cornwall. He (the speaker) said he would bring the matter before the council. Some might think it would be a great advantage for such a show to be held in the county of Cornwall, whilst others might hold an exactly opposite view. He left it with them to think over.

ADVERTISMENTS RECEIVED TOO LATE FOR CLASSFICATION.

HOME FARM, WADDESDON, BUCKS.

HIGHLY IMPORTANT ANNUAL SALE OF PRIME FAT STOCK.

Messrs. BOND & BURROWS are favoured with instructions from Miss Alice de Rothschild to SELL by AUCTION, on the Premises, on THURSDAY, NOVEMBER 23rd, 1905, at One o'clock precisely.

Live Stock Record.

THE PIG-KEEPING INDUSTRY.

Essex agriculturists have been turning their attention to what in the past has been considered one of the humbler farm industries. At Chelmsford, on the 20 ult., they invited Mr. Sanders Spencer to give them a lecture on the animals he has won a high reputation for breeding, who chose as the title of it "Pigs: Past and Present." He did not extend his historic notice to Anglo-Saxon times when England was one vast forest and the gaunt swine of the period fed very much on acorns. The contrast was sufficiently striking between the stock patronised by our grandfathers and the improved porkers and baconers, which, at the present day, are alone profitable for those who do not go in for pedigree to make a market of. Mr. Spencer told his auditors that the old-fashioned pig of from 400 lb. to 600 lb., live weight, was a creature of the past. Consumers now demanded bacon-cuts from flitches, small, mild cured, lean flesh interspersed with not too much fat. The Danes and Canadians have not been slow to study the particular kind of animal required, but British farmers have failed to note the revolutionary change, the result being that of bacon imported from across the Atlantic and Denmark appearing on English breakfast-tables far more than home produced.

When it is considered that the value of the bacon imported in 1904 was estimated at £12,832,142, and of hams £3,104,999, and that twenty years previously the imported bacon was only of the value of £6,798,803, and of the hams £1,942,078, we perceive how very industriously foreigners have been working, while British farmers have allowed this source of wealth, like that of butter, to slip through their fingers. As Mr. Spencer stated, these foreigners have sent to this country men of experience to ascertain all the more perfectly how to capture the wholesale trading provision houses. That they have worked with our own weapons there can be no question. The Danes have especially improved the quality of their baconers by making a profuse use of English pedigree boars. Even this autumn, a deputation of skilled experts has been making a tour of inspection to discover the best piggeries to draw their pedigree boars from. There can be no doubt that the Danes and other foreign producers are still actively pursuing their enterprise, and hoping by the still greater improvement of their stock, to increase their exports to this country very greatly.

Whether the Essex farmers are awake to the necessity of exerting themselves to secure a portion of the wealth now flowing out of the country has not been disclosed. But if so, it appears necessary that it should be borne in mind that it was not solely by studying the urgent requirements of our markets, improving their stock, and conforming to popular taste that the Danes succeeded so well. Their co-operating system was, after all, the chief cause, just as it had previously been when they drove English butter-producers out of their own wholesale markets. And it seems probable, that, without organisation of the most determined nature for the establishment of co-operative bacon factories in Great Britain, it would be difficult, if not impossible, to succeed in making pig-keeping for the bacon trade permanently prosperous in this country. Mr. Spencer does not appear to have told the Essex audience this, although a former lecture he delivered a few years since in another country contained a strong recommendation for such a course to be taken. Our English proprietary factories have not in the past given sufficient high prices for baconers to cause the feeding of them to yield profit. Consequently, the returns of the factory must be joined to those of pig-production for successful competition with the Danes and Americans.

STOCK AND SHOW NOTES.

By Herdsman.

The Hereford bull Endale, of which we give a capital illustration on the front page of this issue, was born on December 1, 1900; sire Commerce, dam Royal Luna II., and was bred by its present owner, Mr. Peter Coats, Sheepcote, Clifford, R.S.O., Herefordshire. Endale has had a most successful show-yard career, and included in its wins this year were firsts at the Royal Dublin, Shropshire and West Midlands, Welsh National, and Hereford and Worcestershire shows, being also the champion at the last-named show.

Buenos Ayres papers just to hand contain copious reports of the recent great sales of Shorthorn cattle exported from this country in the course of the past summer to the Argentine. The Argentine trade in pedigreed Shorthorns of the best class has been exceedingly buoyant this autumn, and high prices for blood-red or dark roan bulls have been the order of the day. By far the most important of these Argentine sales was that conducted by Senors Yriondi and Co., at which the great bull Royal Emblem, the champion at the Royal Agricultural Show of England, and champion also of the Edinburgh and Birkenhead shows, was sold along with Pitlivie General II., which also won first in his class at the Edinburgh and Birkenhead shows. These bulls were both exported by Mr. Robert Taylor, of Pitlivie, Carnoustie, and of Pitlivie Chiki, Argentina, who has this year exported 500 Shorthorns to the Argentine, together with large consignments of Border Leicester and Lincoln rams. According to the *Buenos Ayres Standard*, the sale ring was simply packed to see the sale of Royal Emblem, and the sale was the most sensational of the kind that has ever been held in the Argentine, some 5,000 persons being present.

When Royal Emblem entered the ring he was cheered to the echo. The first bid for this great bull was 20,000 dols., and in a few minutes it was at 35,000 dols. Then another 1,000 dols. was put on, and then another. Under great excitement, he was knocked down for 37,000 dols., equal to £3,230, to Sir Victor Dgris. Royal Emblem, it may be noted, was bred by Mr. Dunro, Jackstown, Aberdeenshire, and was bought as a calf by the Marquis of Londonderry, from whom Mr. Taylor bought him in October, 1904. Other high prices realised by Mr. Taylor for bulls at these sales were as follows:—£2,600 for Dairyman, bred by Messrs. Cameron, Westside, Brechin; £2,008 for the home-bred Pitlivie General II.; and £919 for Unionist, bred by Mr. Anderson, Ballachroggan, Alness, and bought along with Royal Emblem from the Marquis of Londonderry.

A very choice Large White Yorkshire gilt, from the well-known prize-winning Walton herd, owned by Sir Gilbert Grenall, of Walton Hall, Warrington, was shipped from Grimsby on Tuesday last to Hamburg, to the order of Mr. A. O. T. Bennett, of Gately Hall, who personally selected the animal on behalf of a client in Germany

Mr. T. C. B. Dixon, of Barff House, Brandesburton, Hull, the well-known breeder of Lincoln Longwool sheep, has shipped thirty-two rams to Buenos Ayres this season, and hopes to ship forty more in a few weeks' time, whilst he has just sold some ewes in lamb to go into the North, and also some to go into Wales this week—surely a good testimonial to the excellence of his flock.

The secretary of the Scottish National Fat Stock Club (Mr. J. Wylie), at a meeting of the Council held last week, reported that additional donations had been received towards the prize fund, bringing the total sum up to £185 2s., which is £20 more than at the same period last year. The financial statement for the year showed a balance in hand of £469 7s. 8d., against £356 11s. 1d. last year, the profit for the past year having been £113. The membership of the Club at September 30 was 686, and a strong feeling was expressed that an endeavour should be made to raise the number to 1,000. On the motion of Mr. Shields, Dolphingston, Tranent, it was unanimously agreed to increase the secretary's salary from 100 guineas, at which it had stood for the last five years, to 125 guineas, the chairman complimenting Mr. Wylie on the very satisfactory condition of their finances, which was largely due to his indefatigable exertions on behalf of the Club. The Duke of Roxburghe was nominated as president of the Club in succession to the Duke of Portland.

Our foreign friends are still drawing very freely upon our herds of pure-bred pigs. This week I have heard of an important sale of twenty-five Large White Yorkshire sows for Austria, from that herd of world-wide repute at Holywell Manor, the property of Messrs. Sanders Spencer and Son.

I have received a copy of the schedule of prizes, with regulations, etc., for the seventeenth annual dairy show of the Whitchurch (Salop) Dairy Farmers' Association, which is to be held in the Market Hall, Whitchurch, on the 14th and 15th inst. The majority of the classes are restricted to farmers within the society's radius (twenty miles from the town of Whitchurch on the Cheshire and Flintshire sides), but there are one or two open classes, and in all the prizes are very liberal, some of those for cheese having no fewer than seven prizes allotted them, ranging from £1 to £15, whilst in addition there are some specials. Entries close November 8 with the secretary, Mr. T. Nunnerley, Whitchurch, Salop.

The annual fat stock show, at Leeds, will this year be held in the large Victoria Hall and annexe in the cattle market, Copley Hill, Leeds, and, with the increased accommodation, the society are looking forward to even larger entries, and they should not be disappointed, for a most generous prize schedule has been drawn up, and should attract entries from all parts. The date of the show is December 12, 13, and 14, and entries close on December 2, with the secretary, Mr. H. Kitchen, 3, Wormald Row, Albion Street, Leeds, from whom prize-schedules, entry forms, etc., can be had.

At the annual meeting of the Lincolnshire Agricultural Society, the council, in their report, stated that for the Grantham Exhibition in July the society had many advantages, but the attendance of the public on each show day fell much below Boston and Grimsby, and, as a consequence, they had to report a small

decrease of funds. The numerous alterations made in the prize list were announced too late to influence the entries for 1905. Further changes might still be necessary, and the matter needed careful consideration in making the preparations for the ensuing year. The income of the year, less the balance brought forward, had been £3,859, and the expenditure £3,992, showing a deficiency on the year of £133. The financial statement showed a cash balance of £742 in hand, and that the other assets of the society consisted of Consols value £1,964; show plant, etc., £390; and subscriptions outstanding. £50. The report was adopted, it being the opinion that considering what bad luck most of the agricultural shows had during the year, they had done very well, and the hope was expressed that the show at Gainsborough next year would repay the loss. Mr. J. D. Sanders, of Gainsborough, was elected chairman for the year.

Mons. Hornez, director of the *haras*, has just published his report to the French Minister of Agriculture upon the "administration des haras" for the year 1904. In 1904, the number of horses exported has been 1,989 more than those imported; the numbers being 19,464 animals exported, and 17,475 imported. These figures include all business done with Algeria; if the animals supplied to and by that colony be deducted, the figures stand as follows:—Importation, 10,387, and exported, 18,849, thus showing a difference of 8,462 head. The French import their animals chiefly from Austria, Belgium, and England, and the largest number of exports are to Belgium, Germany, Switzerland, Spain, and Italy.

Contagious Diseases of Animals.

Summary of Returns issued by the Board of Agriculture for the week ending Oct. 28, 1905:—

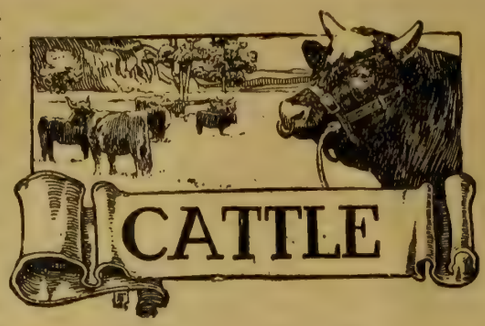
NOTE.—The figures for the current year are approximate only.

Sale of Store Stock at Kidderminster.—Messrs. Nock and Joseland's first annual autumn store stock sale at Kidderminster took place on October 27, and proved most successful. The entry of cattle numbered nearly 800 head and the sheep 1,400. There was a capital attendance of buyers present from London, Leamington, Birmingham, Stafford, Wolverhampton, Bridgnorth, Dudley, Stourbridge, Tenbury, Worcester, Bromsgrove and surrounding districts. Trade for the best cattle was good, but secondary qualities were a slow sale, and the sheep generally met a fair demand. A large proportion of the cattle were home bred Herefords, straight from the breeders, and this class of stock met a most satisfactory market, ten two-year-olds made from £14 15s. to £9 10s., and three-year-olds up to £14 17s. 6d. The sheep were a very fine lot, 120 in-lamb ewes making from 44s. to 53s. each, 120 cross-bred Shropshire and Hampshire wethers reaching 50s., Radnor wethers to 45s. 6d., and store lambs to 37s



Notes and Jottings.

The drought at last appears to have broken up—at least, in many parts of the country—and the sparkling springs that have already started will be greatly appreciated by stock owners in dry districts where water has had to be carted long distances for several weeks past. Not less grateful will the poor cattle be, for these seldom thrive as well when their water supply rests entirely with the men and the water-cart. At such times they are very apt either to take too much or not be able to get sufficient, and so their system becomes deranged. Grass remains very sweet and fresh though short, and in many districts hay will require to be used rather sparingly. It is ever bad to starve them, however; very false economy.

Travelling the other day the subject of abortion once more cropped up. The season appears to have become rather noted for this terrible scourge. Some breeders go as far as to say the plague should be scheduled as infectious. To do so, however, would involve great trouble in many instances. It would be difficult to begin with, to decide at what time abortion commences, and simply breaking service begins. It is quite difficult to know why some cows break service at irregular periods, going perhaps three weeks one time, a month another time, and at other times six weeks and two months. At both these latter periods it would seem as though there must have been abortion, for surely the embryo calf must have been formed at six weeks after the service.

From experience of late with several animals that have been continually breaking service, there has been frequently found something wrong internally. When fattened after refusing to hold to the bull it is not at all uncommon to find that the cow or heifer has developed some internal growth that has prevented the usual circumstance of holding to the service. When slaughtered this is discovered. In far the majority of cases, unless some extra choice or valuable animal is concerned, it is much better to accept the inevitable after three or four times of covering in season and fatten the animal off. If a heifer covering for the first time this can be done at once; if a cow in milk, fatten as soon as the milk has become so reduced as not to pay its way.

Good as the Shorthorn trade has been for months and years past, the recent sale of Mr. Jolliffe's famous herd has quite eclipsed most or all previous records of recent years. The excellent average of £120, including calves, is one to be coveted, and the district around Stratford-on-Avon has not been, and is not now one of the best in England for producing high-class Shorthorns. The blood, however, and the management make all the difference. Rarely do Irish, Scotch, and South American buyers vie with each other, as was the case at this sale, and it is well that so many breeders at home stuck to their guns long enough to prevent the American contingent taking the whole herd. The dispersion of these cattle should have good effect all round.

One lesson may be learnt, at any rate, from the success of the sale—namely, how much depends upon the sire. The old Clipper bull Chorister, a son of William of Orange, appears to have done excellent work, as seventeen of his produce in the sale realised the wonderful average of £153 12s. 2d. This great average was apparently due to the excellent quality and uniformity of the stock of this bull rather than simply to his breeding—in other words, his progeny carried their pedigrees on their backs. It is good for our great bovine friends, the red, white, and roan, that this should be so. We recollect the time when Shorthorns were sold entirely upon their pedigree on paper, and animals light fleshed, tender, and without milk appearance either went up to fabulous prices.

Those days marked the beginnings of sorrows with Shorthorn breeders, for years after that time the breed had a very bad name amongst farmers on that very account. To-day we are full of herds of Shorthorns with constitution, style, breeding, and of the very highest quality for beef-making purposes, and that can, by judicious feeding, be made equally good and useful at the pail. This is precisely what is wanted to ensure profitable stock breeding. Hitherto complaints have been made that Scottish breeders did not patronise sales of Shorthorns in England. Experiences at this memorable Stratford-on-Avon sale, however, must have dispelled any cause for complaint on that score, and it is quite probable that Scottish breeders will continue to patronise southern herds perhaps as much from obligation as choice.

The decrease in exports of live stock from Ireland this year appears to cause our Hibernian friends some uneasiness, and, doubtless, is rather a difficult subject to understand. It is easy to understand that fewer horses should have been demanded from that country, as a good number of these are exported as colts, and for young stock of that kind the demand in England and Scotland has not been very brisk, but when it comes to cattle, the decline of 27,196 between July 1 and October 31, as compared with the same period last year, is rather difficult to reason about. Yet the very dry season that has prevailed in England, extending far into the north, must have had a very deterrent effect upon requirements on this side the Channel, and, after all, the total is not very overwhelming.

The idea that has been conceived in that country of commencing a direct export business with France, may be of service for some time. It is but a few years ago when Ireland found herself overdone with store cattle, that a trade began between the northern counties of Europe, Denmark, Norway, and Sweden, I believe, and many cargoes were consigned thither with, we may hope, mutual benefit. At the same time, it is worth while to give deep consideration to the fact that the present rather slow demand for young lean stock in England is due to the effects of the drought mentioned above, and that probably with a good forward spring—which we all hope to be blessed with—prices will again rise, and demand be probably insatiable, so that it would pay best to winter these surplus cattle in the Emerald Isle.

The price of second and third rate beef just now, as is generally the case, is not without its effect upon young stock that will require very long keeping. By the bye, how the dead-meat quotations, and live meat also, at Deptford show the quality of much of our imported supply. The different quotations are quite a study, and give an idea how much our pedigree stock must be needed in other countries, which probably has been the cause of the unprecedented demand for our leading beef breeds. A few of these quotations may be worth repeating in these notes as tending to show, probably, what benefit the importation of English pedigree stock has had in the counties whence the greatest numbers have been exported.

In the London Central dead-meat market we find best Scotch short sides quoted at 4s. 2d. to 4s. 4d. per 8 lb.; American, Deptford killed, 3s. to 3s. 4d., a great difference this, but a far greater difference, proportionately, exists between American refrigerated hind quarters, which are quoted at 3s. 6d. to 3s. 8d., and New Zealand hind quarters, which, in the same market, are only quoted at 2s. 3d. to 2s. 4d. per stone. We do not know whether this great difference in the primest parts of the cattle is due to the better conditions under which the two consignments are marketed, or if due to the quality as caused by better breeding and feeding of the animals that produced that beef. We do, however, know that America has been a very large and continuous importer of our pedigree cattle, whilst New Zealand has taken but quite an incignificant number.

In the live market at Deptford New Zealand cattle, of course, are not shown, the distance being too great to admit of bringing them over at a profit, but the quotations of the different grades of American are rather startling, and show that there is still great room for improvement in some of their cattle, which means continued need of our Shorthorn, Hereford, and Angus bulls. The total supply of foreign cattle offered at Deptford last Monday appears to have been 1,391, 1,050 of which were from the United States, the remainder Canadians. The quotations for these were: States cattle, 3s. 8d. to 3s. 10d. per 8 lb.; Canadians, 3s. 4d. to 3s. 6d. On the Saturday previous 2,046 States cattle and 180 Canadians were offered, the former making 3s. 9d. to 3s. 11d., and best Canadian 3s. to 3s. 2d., seconds only 2s. 10d. per 8 lb., cinking offal.

The highest quotation for these Canadians is but 4¾d. per lb., whilst the second-rate ones run to but 4¼d. per lb. It does seem strange that English and Scottish feeders should for a moment clamour for the importation of store cattle of

such a class as this, which would at once tend to give our home-produced meat a bad name, and it is quite certain those are the class of cattle we should get. Canadian farmers and feeders are much too well alive to their own interests to allow for a moment their best feeders to be sent over here, retaining only such indifferent animals for their own feeding as those quoted above. Quality in store cattle for fattening is the all-important point, making all the difference between profit and loss.

Sale of Shorthorns at York.

There was a good entry for the autumn sale of Shorthorns, held by Messrs. J. Thornton and Co., at the Wool Sheds, York, on Tuesday, Lord Henry Bentinck, of Underley, Mr. T. Atkinson, Mr. J. Harris, the executors of Mr. J. Midgley, and Mr. J. Stamper all sending a number of good young cows and heifers, as well as some capital young bulls. There was a large company present, not only of local farmers, but many breeders from a distance, as well as representatives of South America and Germany. As will be seen from the sale list, no outstanding prices were made, the highest being 70 gs., given by Mr. C. O. Hall for Messrs. Smith's Harthill Duke, the winner of a couple of first prizes at the Harthill Show, the same purchaser also taking one of the best cows—Lord Armstrong's roan Wild Duchess of Geneva 195th at 64 gs. Several animals were also purchased to go to Chili and to Germany. The sale, however, went well throughout, an average of £24 11s. being realised for the 114 lots passed through the ring. Several choice Guernseys from Mr. J. E. Ellis's herd at Scalby, near Scarborough, were forward, and these were sold at remunerative prices, Mr. Henry Williams giving 27 gs. for a two-year-old cow. A list of the chief sales is appended:—

COWS AND HEIFERS.

Laurestina 65th ('Mr. C. O. Hall's), roan, c. Aug. 16, 1895; s., Duke of Albemarle 18th 63890 ..... Mr. Robson 25 Gs.

Heroine 5th (Lord Henry Bentinck's), roan, c. July 30, 1896; s., Royal Briton 64710 ..... Mr. Wright 25

Stanley Molly 3rd (Mr. T. Atkinson's), roan, c. May 25, 1897; s., Sentinel 69567 ..... Mr. C. Marshall 29

Stray Planet (Lord Henry Bentinck's), red and white, c. Nov. 30, 1897; s., Golden Treasure 67137 ..... Mr. J. H. Kelly 26

Primrose 2nd (Exors. of Mr. J. Midgley's), roan, c. June 23, 1898; s., Mariner 69071 ..Mr. Parlour 28

Lucy Raglan 2nd (Mr. J. Harris), light roan, c. July 6, 1898; s., White Prince 68806 ..Mr. G. Harrison 24

Golden Princess (Mr. J. Harr's), roan, c. Oct. 2, 1898; s., Golden Robin 68718 ....Lord Middleton 46

Waterloo Duchess (Mrs. Pinder's), red and white, c. April 4, 1899; s., Bright Prince 72100 ..... Mr. Hornsby 23

Snowdrop 4th (Exors. of Mr. J. Midgley's), roan, c. June 7, 1899; s., Mariner 69071 .....Mr. J. Noble 29

Laurestina 90th (Lord Henry Bentinck's), roan, c. Jan. 2, 1900; s., Royal Bounty 69494..Mr. J. Straker 28

Annie Benson 14th (Mr. I. Asbridge's), roan, c. April 4, 1900; s., Matchlock 70383 .....Lord Zetland 39

White Peony (Mr. J. Harris'), white, c. Sept. 2, 1900; s., Emperor of Cumberland 74487 ..... Mr E. Appleyard 24

Lady Janet (Mr. J. Harris'), white, c. Sept. 17, 1900; s., Emperor of Cumberland 74487 ..... Mr F. Appleyard 26

Rosebud 3rd (Lord Henry Bentinck's), roan, c. Sept. 10, 1900; s., Njzam 73136 ....Mr. M. Sproul 28

Freedom's Beauty (Lord Henry Bentinck's), roan, c. Dec. 26, 1900; s., Pride of Freedom 73241 ..... Mr. G. H. Proctor 30

Honeydrop (Mr. J. Harris'), red and little white, c. March 2, 1901; s., Red Butterfly 75375 ..... Mr. J. Straker 25

Morning Dew 4th (Mr W. Botterill's), roan, c. April 18, 1901; s., Look Ahead 67327 .....Mr. Riddell 23

Honey 92nd (Mr. T. Atkinson's), white, c. Aug. 14, 1901; s., Jewel Star 76919 ....Mr. J. P. Rayner 35

Primula (Mr. J. Harris'), red, c. Nov. 26, 1901; s., Quirinus 79678 .....Lord Zetland 28

Lady Muriel (Lord Henry Bentinck's), red and little white, c. Jan. 2, 1902; s., Muriel's Crown Prince 67523 .....Mr. Jackson 22

Rose of Calthwaite (Mr. J. Harr's), roan, c. Feb. 12, 1902; s., Duke of Cumberland 13th 78738 ..... Mr. H. Dudding 23

Peerless of Petteril (Mr. J. Harris'), roan, c. March 30, 1902; s., Duke of Cumberland 13th 78738 ..... Mr. H. Dudding 26

Jessica (Mr. A. E. Unna's), red, c. June 5, 1902; s., Magna Charta 77166 .....Mr. J. H. Kelly 20

Honeywort (Mr. J. H. Harris'), red, c. April 7, 1903; s., Duke of Cumberland 13th 80511 ..Mr. Mitcham 20

Morone Rose (Mr R. Hornsby's), red, c. March 29, 1904; s., Crown Prince 76452 ....Mr. R. P. Cooper 28

Gay Lillan (Mr. G. H. Procter's), white, c. May 18, 1904; s. Dominican 8880 .....Mr. W. R. Trotter 24

Wild Duchess of Geneva 195th (Lord Armstrong's), roan, c. May 19, 1904; s., Emperor of Oxford 7th 74488 .....Mr. C. O. Hall 64

Waterloo Daisy 14th Mr. R. Blezard's), red, c. July 12, 1904; s. Lord Lenton 72890..Mr. A. T. Gordon 39

York's Certainty Duchess 19th (Mr. R Blezard's), red, July 17, 1904; s., Lord Lenton 72890 ..... Mr. C. O. Hall 47

Olive Princess (Mr. R. Hornsby's), roan, c. July 18, 1904; s., Crown Prince 76452 .....Mr. Young 20

Birdsall Empress 3rd (Lord Middleton's), red, c. Aug. 12, 1904; s., Aaaron 75978 .....Mr. R. P. Cooper 45

Kussie 19th (Mr. J. W. Harrison's), roan, c. Oct. 5, 1904; s., Royal Emperor Oxford 15th 84608 ..... Mr. J. Parsley 23

Lily of the Dale (Mr. T. Atkinson's), white, c. Jan. 10, 1905; s., Chewton Victor 6th 80686 ..... Capt. Harrison 36

Anona (Mr. J. W. Harrison's), roan, c. Jan. 20, 1905; s., Royal Emperor Oxford 15th 84608 ..... Mr. R. P. Cooper 41

BULLS.

SUMMARY.

	Average. £ s. d.	Total. £ s. d.
114 Shorthorns	24 11 0	2,799 6 0
6 Guernseys	20 11 3	123 7 6
		2,922 13 6

Scotch Shorthorns and Aberdeen-Angus.

The sales of pure-bred cattle have again come to a close, and the *Banffshire Journal* gives tables showing the results which have attended the year's transactions as they have affected the two leading breeds cultivated in Scotland—the Shorthorn and the Aberdeen-Angus breeds. Of both breeds there were sold during the year 2,621 cattle of all ages, representing a total value of £83,874 12s. 6d., and an average of £32. Last year there were sold 2,540 cattle at an average of £34 17s. 2d., which, as noted, was the highest average made by pure-bred cattle in Scotland within the last twenty years. The nearest approach to it was in 1899, when 2,189 animals sold at an average of £30 1s. 1d. In view of the very pronounced partiality foreign buyers have shown for Shorthorn cattle, and of the limited extent to which the Aberdeen-Angus breed has benefited in the extensive export trade of the year, one would not natually expect that this fall in prices as between this year and last year is wholly accounted for by a falling-off in the general average of Shorthorn cattle. Indeed, they have fallen no less than £8 14s. 8d. per head as compared with last year, a few shillings of a rise in the general average of bulls being counterbalanced by a fall in the general average of all other classes of the breed. An average of £43 0s. 5d. for 1,202 head must, however, be considered highly gratifying, and is, indeed, next to the great average of £51 15s. 1d. of last year, the highest average made by cattle of the breed during the past quarter of a century, for which period we have year by year provided statistics.

Aberdeen Angus cattle have, on the other hand, increased their average by 15s. 10d. It is not a very large increase to turn last year's average of £21 17s. 1d. into an average this year of £22 12s. 11d., but it is little short of a feat for the breed that this increase should have to be recorded at all, considering the circumstances, and the disadvantages under which the breed has laboured during the past year. The sales both in England and Scotland were unusually numerous, and though a few animals found their way during the year to South America, New Zealand, and South Africa, there was to all intents and purposes no foreign outlet. Ireland also provided a smaller market than usual, and thus the market was a home one in a very marked degree.

The little rift in the cloud which for the past year or two has bedimmed Aberdeen-Angus interests must be set down partly no doubt as a reflex action of the briskness of trade in Shorthorn cattle, but in a greater measure to the inherent qualities of the breed itself, as the best race of beeving cattle the country can produce, and accordingly the leading race of cattle for the ordinary purposes of the Scottish breeder and feeder. It is to be hoped, for the sake of the very large interests involved, that the rift in the cloud may widen until there may be reached again those halcyon days of the early eighties, when the Aberdeen-Angus transactions of the year brought averages exceeding by a good deal even the highest record for the favourites of the present day—the Reds, the Whites, and the Roans.

The Canadian Cattle Embargo.

At a conference of co-operators and others promoted by Perth, Forfar, and Aberdeen Co-operative Association, held in Dundee, Mr. Peter Glasse, chairman of the Glasgow and West of Scotland Defence Association, who presided, said Mr. Fellowes, Minister of Agriculture, had just stated that he would not likely be in office next year, and they must, therefore, see to it that his successor was one who would support the removal of the embargo.

Mr. William Henderson, Coupar-Angus, said there could be no doubt that this was a consumers' question, and he believed if the matter were submitted to them they would be found to be in favour of the removal of the embargo. He calculated that farmers had been prevented from earning six millions sterling by the restrictions, and he believed the embargo, coupled with the reduction in the turnip acreage and the reduced supplies of potatoes and grain, had had the general effect of deteriorating the land and depopulating country districts. Then they knew nothing about the inspection of the meat that came in tins, of extracts of meat, and of meat that came chilled, and therefore it was of the utmost importance to the consumer that the supplies should be brought in in a live state, so that they could be properly inspected. The fact was the Board of Agriculture had one end in view, and that was to protect the breeders.

Lord Provost Barrie, Dundee, moved a resolution in favour of the amendment of the Diseases of Animals Act, 1896, so as to admit of the entry into this country of cattle from Canada without the animals being subject to slaughter at the port of landing, and this was carried unanimously, as also was one to the effect that the meeting should do all in its power to assist in having the embargo removed.

Sale of Red Polls at Ipswich.

The annual sale of pedigree Red Polled cattle, held at Ipswich Drill Hall, took place on Tuesday, when 65 cows, heifers, and bulls were catalogued. The class for bulls was judged by Mr. Fred Smith, of Woodbridge, and the prizes were awarded to Mr. R. Eaton White and the trustees of the late Duke of Hamilton. There was a large attendance of buyers, including representatives from Surrey, Cheshire, and Lincolnshire; but prices were only moderate, the top being 26 guineas, obtained twice, once for a

cow and the other for a bull. The next best price was 24 guineas, and only four others made 20 guineas or over.

Sale of Messrs. Lewtas's and Halsall's Shorthorns.

On Thursday last the small entire herds of pure-bred Shorthorn cattle, the property of Mr. M. Lewtas, of Stalmine Grange, Poulton le Fylde, and Mr. T. P. Halsall, of Mawdesley, near Ormskirk, were submitted for sale by Messrs. Thornton and Co., at Stalmine Grange. There was a good local company, and very satisfactory competition was forthcoming for most of the lots. Several of Mr. Lewtas's animals were prize winners, and although those from Mawdesley had not been exhibited, they were mostly bred from prize stock. A handsome show cow, Stalmine Lavender, was bought by Mr. Rowland at 46 gs., the same buyer getting her roan cow calf at 20 gs. Mr. Tong, a neighbouring farmer, sent over a very fine two-year-old bull for sale, which realised the top price of the afternoon, going at 66 gs. to Mr. J. Green, of Calwich, Derbyshire. The following were the best prices:—

Islington Cattle Market.—At a meeting of the City of London Corporation, held on Thursday, the Cattle Markets Committee brought up a report suggesting that steps should be taken forthwith to obtain Parliamentary powers to dispose on building lease of certain land belonging to the Islington Cattle Market, as circumstances might from time to time render expedient; that private slaughterhouses at the Market should be abolished, and public abattoirs erected at a cost of £30,000, and that the Committee should have authority to take these steps by promoting a Bill in Parliament next session. Mr. Dove, the chairman, said owing to the altered conditions of the cattle trade, the Corporation had been losing from £4,000 to £7,000 a year on the Islington Market for some time past. It was estimated that the construction of abattoirs would bring in a profit of £4,200 a year. After discussion the report of the Committee was referred back for further consideration.

Horse Notes.

"He doth nothing but talk of his horse."
—Merchant of Venice.

I wonder if any of the old Devonshire pack horses are still to be found. They were a wonderfully hardy and useful sort, not unlike the Cleveland Bay, though scarcely possessing the size of the northern breed. John Lawrence has nothing to say about them, neither has Nimrod; and Professor Ridgeway does not mention them in the book on the "Origin of the Thoroughbred Horse." I only remember seeing one, at one of the Crystal Palace shows some years ago, and he was a very useful short-legged, powerful horse, bay, with white markings; but I cannot say whether all his legs were white. I have been told by an old Devonshire man that the Devonshire Pack Horse was always bay with white legs and a white star, and that on occasion he was a very useful hunter indeed. There was also in Northumberland in the early part of the nineteenth century, a Chapman breed similar in every respect to the Cleveland Bay, only that their legs were white instead of black. It may also be noted here that in some of the East Moor Dales the Cleveland Bay was known as the Chapman horse, and until quite lately prizes were given for Chapman mares, etc., at the Danby Agricultural Society's show.

The Devonshire Pack Horse and the Northumberland Chapman Horse, with their white markings, raise a very interesting question. Professor Ridgeway's theory is that the origin of our thoroughbred horse is the Libyan Horse, who was himself the progenitor of the Arab, and, I think it may fairly be stated that he has established this theory. Now, according to Professor Ridgeway, the best Libyan horses were bright bay with white stars and white legs; exactly the same colouring as the Devonshire Pack Horse and the Northumberland Chapman Horse. Now it is well-known that long before the Roman invasion, a considerable trade was carried on between Britain and North Africa, and what so likely as that some of these Libyan horses should be brought over at the instance of British chiefs? These, breeding with the native mares, might easily result in the Devonshire Pack Horse.

But whence was the Northumberland Chapman derived? It is quite certain that there was no trade between Northumberland and the North African merchants. We have nothing, then, to fall back upon, so far as I know, but the Roman legions. It has been suggested, and the theory is a very plausible one, that the Cleveland Bay is descended from Barbs, and that these Barbs were brought over by the Crispinian horse, which was stationed at Doncaster. This is likely enough, but we are left with the awkward question to answer: Where do the black points of the Cleveland Bay come from, if, as is most likely, the Crispinian legion was mounted on bay horse with white legs? It is, of course, possible that the black points on which Cleveland Bay breeders prided themselves so much, was a subsequent development. Indeed, it is very likely that it was. At first this might have been accidental, and then, when it found appreciation, it might have been carefully cultivated. At any rate, it was the boast of Cleveland Bay breeders in the eighteenth century that there was not a single white hair to be found on them.

Professor Ridgeway has a remarkable theory respecting colour, and it is only fair to say that he has made out a very strong case in support of it, if he has not proved it outright. Before, however, accepting it in its entirety, I should like to study it again carefully, for I know from practical experience what a difficult question that of colour is. One of Professor Ridgeway's theories is that black horses are all the ultimate result of crossing the North African, or Libyan horse, with the common horse of Northern Europe, and he brings a very considerable amount of interesting evidence in support of his theory which I have not space at command to reproduce, or even epitomise. There is, however, practical evidence of the correctness of his theory, or rather I should say there was in the Yorkshire clean-legged cart horse, a sturdy, active horse with good shoulders that was the foundation of weight carrying hunter breeding in the south-east part of the county as the Cleveland Bay was in the north-east. This horse was black, and seldom was more than 16 hands high—from 15 hands 3 inches to 16 hands being the normal height of the ordinary working horse. Stallions might be a little bigger.

This breed I knew a little of in my early days; but even then it was beginning to get out of favour. "Not big enough for the towns" was the verdict of the dealers; and, of course, the market had to be met. So the Yorkshire or Holderness cart horse,* as Marshall calls him, was lost by crossing with the heavier and coarser draught horse of Lincolnshire. The Northumberland Vardy Horse was no doubt very similar in character, and it is on record that on one of these Vardy horses a well-known Shorthorn breeder, whose weight with his saddle was over 19 st., was wont to ride from his farm near Darlington to Newcastle market and back in a day. Of course, he started in the early hours of the morning, and it was midnight or near it when he got home.*

I made several attempts to trace the history of the Vardy horse many years ago, but met with no success. The late Sir Jacob Wilson had seen a few in his younger days, and was enthusiastic in their praise, but most of the little he knew about them was at second-hand, and consisted of such incidents as that which I have related in the preceding paragraph. The prevailing colour of the Vardy horse was black, and it is interesting to note that the practical disappearance of the Vardy and the Holderness carthorse is practically coeval with the complaints as to the scarcity of home-bred, weight-carrying hunters.

One of the last of the Holderness cart mares; I remember, was owned by that fine judge of horses and capital sportsman, the late William Holtby, of Rotsea Manor. Of her I know but little, and I only saw her once. But her offspring by Waveney were of the very best. And nothing went better over the deep ploughs of Holderness than they did. Mr. Holtby was a very "hard" man, and rode right up to hounds, and his home-bred ones never failed him when hounds ran fast and far.

Marshall had a bitter hatred for the Holderness carthorse. Says he: "Farmers are most assuredly wrong when they give encouragement to the Fen breed, the 'Howden Mack' of black carthorses, which I am sorry to see worming their way into the Vale. The breed of grey rats with which this island has of late years been overrun, are not a greater pest to it than the breed of black fen horses; at least, whilst cattle remain scarce as they are at present, and while the flesh of horses remains to be rejected as human food." He goes on to say that "a breed of horses better calculated for eating than working, and whose main tendency is to render their drivers as sluggish as themselves, are ill-adapted to the present rents of the Vale." It is a matter of regret that Marshall does not more particularly describe the horses which he admires so much, but it is with him as with so many of the writers about horses both before and after him, they describe what they dislike or what comes from a distance, and leave the well known as being too familiar to need careful description.

Marshall recommends his farmer friends of the Vale of Pickering to use the coach-horse for ploughing and oxen for draught, and somewhere he talks of the increasing value of coaching horses as making them expensive to use on the farm. There are more unlikely things than that the increasing value of coach-horses, and that they did increase in value very rapidly from 1780 to 1820, does not need insisting upon, was the reason for farmers taking to the "Howden mack" of carthorses, which were such an abomination to Marshall. The latter we have seen were practically driven out by the demand for a weightier horse for town work and by the competition of the Clydesdale. And now, when there seems every reason to think that a good

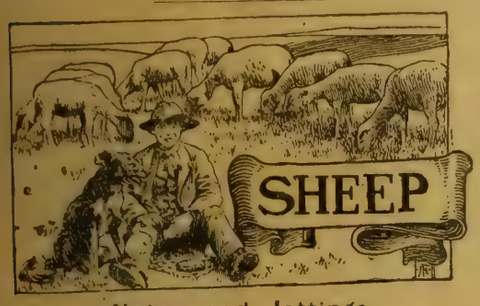
deal of our heavy traffic will be done by motor vehicles, we are lamenting the loss of those breeds which were the best foundation for the serviceable half-bred horse.

THE LOOKER-ON.



Notes and Jottings.

Flock owners who have pure-bred flocks which are not yet registered should take note of the fact that there is a strong tendency amongst registered flock owners to stop the entry of unregistered sheep into the different flock books.

The Lincoln flock book will close on January 1 next, the Hampshire Down will close on December 31, 1906, and notice is given of a resolution which, if carried, will effect the same purpose in the Southdown book on December 31 next year. It is a matter open to question whether or not this step is correct. It is perfectly true that every flock owner has had ample time to make up his mind, but, even admitting this, there is something to be said in favour of the system adopted by the Kent or Romney Marsh Sheep Breeders' Association—namely, that which requires the exclusive use of registered sires in the flock from four or five years previous to its being eligible for registration after inspection has been satisfied.

Under the latter system there is the inducement offered to those not registered to purchase registered sires in order to become eligible for registration, and thus to some extent provide a market for registered rams, but once definitely close the flock book this inducement will be done away with. The closer attention being given to pedigree sheep breeding is mainly the reason of the more stringent rules now in force, as well as the closing of the books. The flock owner already registered is quite justified in his contention that so long as it is possible for any flock to become a registered one, they are at a disadvantage when such flocks can be registered immediately previous to dispersal, but surely some arrangement short of actual closure could be devised to prevent the registration of flocks for the purpose of sale. To those who have for the past twenty years or so been firm adherents of the registration of sheep, the present position is most gratifying. That the present position would eventually come about most of the early advocates for registration believed, but few, if any, anticipated it to come so quickly.

There are still a few who contend the results secured are hardly commensurate with the expense, etc., but here the facts are absolutely the other way. Take the result of the export demand for stud rams, etc., for the past year, and compare it with any similar period, say, from ten to twenty years back, the facts ascertained will more distinctly than words can express prove the excellent result that registration has brought about. The recent meeting of the Southdown Society was a notable one, for no less than seventeen new members were elected. The breeders in the Southdowns are at last waking up to the fact of the need of greater care in breeding being taken, and it is satisfactory to find several well-known flock owners included in the list of new members.

If the closing of flock books is adopted for this breed, there will then arise the necessity of being able to prove beyond dispute whether or not any sheep is a registered one. So far as regards that portion of the Southdowns that are trade marked there will be no difficulty, but how will the remainder be able to be identified? This is a point that must sooner or later be taken in hand by flock masters in all those societies in which registered sheep are not officially trade marked. It will be a difficult matter to decide upon, but it is one that will have to be done some road or other. The simplest way out of the difficulty is to officially trade mark all registered sheep, and to adopt that plain, but clear, rule of the Kent or Romney Marsh Sheep Society—namely, that no sheep, no matter how bred or by whom bred, is a registered sheep except the same be clearly trade marked by the society's official.

The National Sheep Breeders' Council, at its meeting this week, adopted two excellent resolutions, one asking that the Royal Agricultural Society should put sheep breeders upon the same footing as those of horses, cattle, and swine; namely, make it one of the conditions of entry that all animals entered for the sheep prizes in the pure bred classes should be eligible for, or entered in their respective flock books; and the other that all judges in the pure bred sheep classes at the Royal and other leading county shows, should be selected from the judges' lists of the different sheep societies.

These resolutions are both worthy of adoption, because, so far as regards the first, there ought to be no sheep exhibited at the national show of England except the same is eligible for export to any country as a stud animal; this they cannot be, unless entered in their several flock books, at any rate, so far as regards the Argentine. This being the principal source of the export demand at the present time makes the matter an urgent one.

As regards the selection of judges, the contention of the breed societies indicated by the terms of the resolution amounts to this: That exhibitors of pure bred sheep ask for the judges selected to award the premiums at shows should be men fully acquainted with the breed they adjudicate upon, and who have the full confidence of the exhibitor. Viewed in this light, there ought to be no real objection to the full adoption of the principle.

One of the most striking features of the reports of the American shows this autumn has been the very few imported sheep that have been given in the award lists. More probably than not, particularly amongst the classes for aged rams and ewes, many British sheep have been exhibited and the fact not noted; but when it comes to the classes for yearlings and lambs, the number of imported sheep mentioned amongst the winners is the smallest noted for very many years.

At Springfield show, one of the most important in the States, the following English breeders were represented by winning sheep:—In the Shropshire classes—Messrs. R. P. Cooper, A. Tanner, T. S. Minton, E. Nock; in the Oxford Downs—Messrs. J. T. Hobbs, A. Brassey, M.P., and W. A. Treweek; in the South Downs—H.M. the King, the Earl of Cadogan, and Mr. C. Adeane; and in the Cotswolds—Mr. W. T. Garne.

It is satisfactory to find that the Central Chamber of Agriculture, at its meeting this week, again urged upon the Government the necessity of passing the Dog Bill at once. The Governmental neglect of the agricultural interests is a matter of regret, particularly in connection with this matter, for all that is really wanted is power over the uncontrolled dog provision for the strict enforcement of the Dog Tax, and the immediate slaughter of all dogs for which the tax has not been paid. The damage inflicted upon flockowners by dogs is enormous, and as it arises very largely from the lax manner in which the Dog Tax is enforced, increased supervision is necessary on the part of those whose duty it is to collect the tax.

At Newark November Fair, held on Wednesday, beasts were very numerous, but proved a drug in the market. Two-year-old heifers made about £10, and two to three year old steers £12 to £15. Messrs. E. Bailey and Son sold by auction eight bulls, which made 8 gs. to 15 gs. In the same fair the same auctioneers penned nearly 900 lambs, and the principal prices were:—70 from Mr. Dickins, Newark, at 31s. 6d. to 40s.; 30 from Mr. Barnes, Staunton, average 37s.; 20 from Mr. Chapman, Spelford, at 40s.; 23 from Mr. Stangor, Stubton, at 35s. to 41s.; Mr. Hunt, Girton, made up to 45s. for his consignment. Messrs. Bailey and Sons' sales amounted to £2,331 7s. 3d.

Burton Horse Fair.—The annual winter horse fair at Burton-on-Trent was held on the 28th and 30th ult., a large portion of Horninglow Street, in the centre of the town, being lined with animals. Owing to the periodical local horse sales and other causes the fair shows signs of decadence. Up to a century ago the fair was one of the best and largest in the kingdom. It then extended over nine days, and concluded with a huge pleasure fair. It was known as the Fair of St. Modwen, Burton's patron saint, and was granted to the abbey by King John in 1200. This year animals of really good quality were few and far between. Farm workers fetched 27 gs. and 30 gs., and Welsh ponies from £5 upwards.

South Devon Sheep.

The council of the South Devon Flock Book Association met at Plymouth on October 28, when some interesting statements were made concerning the treatment of South Devon sheep at the Royal and Smithfield shows.

First a discussion took place upon the necessity of the breed making a full entry at the Royal Agricultural Society's show. It was agreed that until the breed was properly represented at the national show of the country it would not stand a fair chance in competition with other breeds so exhibited, in the export demand, and it was also urged that the society, representing no less than 213 registered flocks, ought to receive due recognition as a separate breed in the Royal Show, and it was resolved unanimously "That the Royal Agricultural Society be asked to give a full classification for the South Devon sheep at their next show; that in the event of these classes being given, the council of the South Devon Flock Book Association have every reason to anticipate that many of the 233 members of their society will become members of the Royal Agricultural Society in order to support such classes."

It was resolved to ask the National Sheep Breeders' Association's council to support the resolution.

The chairman (Mr. E. H. Hoskins) remarked that now they were asking the Royal Agricultural Society to give them separate classes for their breed, it would be only right that members interested in the breed should give more support to the Royal Agricultural Society. Eight out of the seventeen members present agreed to become members of the Royal Agricultural Society, subject to the classification asked for being granted; and it was agreed that the secretary should take means to ascertain whether any members other than those present would become members of the Royal Agricultural Society upon the terms mentioned.

A number of new members were then elected and inspectors of new flocks appointed.

Afterwards a discussion took place upon the treatment received by the owners of South Devon sheep at the Smithfield show, and letters were read from Messrs. J. W. Hallett and J. P. Matthews. The principal grievance was that the judge appointed for South Devon sheep was a judge not connected with the breed, and it was felt that the breed was of sufficient importance to have for itself one of its own judges; in fact, there are many smaller breeds represented at Smithfield that have a special judge. The secretary was directed to forward the following resolution to the secretary of the Smithfield Show:—

"That this council regrets that the council of the Smithfield Club have not selected from the South Devon Flock Book Association's judges' list a judge to judge the South Devon sheep at their show in 1905, and beg to point out that, entirely owing to this fact, several entries of the breed that would have been sent for competition at that show have been disposed of; and this council asks that in future years one of the judges included in their official list may be elected to award the prizes offered for South Devon sheep, a breed now represented by a society with a membership of 233, and having 213 flocks recorded in its flock book."

The question of colouring of show sheep, raised by Mr. Smale, did not receive support from the Council, as it was felt that whilst there were objections to the practice, each breeder must have liberty of action, in being able to exhibit his sheep in that condition which he himself considered most advantageous to the sheep and to his flock. Certain complaints having been received in connection with members not keeping to the rules re the individual registration of rams or ram lambs, etc., it was pointed out that that had in many cases occurred from inadvertence, and the council resolved unanimously that Rule 3, Section c, must be strictly adhered to. It provides that every owner of an entered flock must enter individually in the flock book, before they pass out of his control, all rams or ram lambs, used, let, or sold for breeding purposes. It was further resolved, to prevent misunderstanding, that no flock number could be transferred from one flock owner to another flock owner.

Local Taxation.—According to Part III. of the Local Taxation Returns for 1903-4, issued last week, the total receipts of the rural district councils amounted to £4,088,441. These figures, compared with those of the previous year, show an increase amounting to £89,395. The total expenditure was £4,043,190, an increase of £125,561. The aggregate receipts of the parish councils and parish meetings were £208,177, while in the previous year the amount was £230,794. The expenditure was £210,829, exclusive of outlay in respect of charities and out of loans. The total receipts during the year of the inspectors and committees amounted to £3,386.

THE ROYAL AGRICULTURAL SOCIETY.

The Society's Staff—Show Arrangements—Deputation from Derby Selling Park Royal—The Journal £4,000 Prizes for Derby.

The monthly Council was held on Wednesday—Mr. F. S. W. Cornwallis (President) in the chair. There were also present :—

Trustees.

Earl Egerton of Tatton, Sir Walter Gilbey, Bart., Colonel Sir Nigel Kingscote, G.C.V.O., K.C.B., Lord Middleton, Lord Moreton, Sir John H. Thorold, Bart.

Vice-Presidents.

Mr. J. Bowen-Jones, Mr. Victor Cavendish, M.P., Mr. Percy Crutchley, Mr. J. M. Dugdale.

Other Members of Council.

Mr. George Adams, Mr. Charles R. W. Adeane, Mr. T. L. Aveling, Mr. S. N. Bankart, Mr. Richardson Carr, Mr. R. P. Cooper, Mr. J. P. Cross, Lieut.-Col. Curtis-Hayward, Mr. John T. C. Eadie, Mr. R. M. Greaves, Sir Gilbert Greenall, Bart., Mr. R. Neville Grenville, Mr. W. Harrison, Mr. R. W. Hobbs, Mr. J. Howard Howard, Mr. Walter F. Ingram, Sir Charles V. Knightley, Bart., Mr. Ernest Mathews, Mr. W. A. May, Mr. C. Middleton, Mr. T. S. Minton, Mr. Ralph C. Palmer, Mr. Claude M. S. Pilkington, Mr. George G. Rea, Mr. F. Reynard, Mr. John Rowell, Mr. W. Scoby, Mr. E. W. Shackle, Mr. A. J. Smith, Mr. E. W. Stanyforth, Mr. R. Stratton, Mr. Herbert Tallent, Mr. George Taylor, Mr. John Thornton, and Mr. E. V. V. Wheeler.

The PRESIDENT, in opening the proceedings, made sympathetic reference to the death, on October 30, of Earl Cathcart, a past-President and Trustee of the Society.

Election of New Governor and Members.

The minutes of the last meeting of the Council, held on October 4, 1905, having been taken as read and approved, the election of the following Governor and twenty-three members was proceeded with :—

GOVERNOR.

Mildmay, F. B., M.P., Flete, Ivy Bridge, Devon.

MEMBERS.

Bradley, J. W., Swallownest, near Sheffield.
Butland, Benjamin, Leigham Barton, Plympton.
*Drax, J. Erule Erle, 7, Lypiatt Terrace, Cheltenham.
Frayne, James, Pipers Pool, Egloskerry, R.S.O., Cornwall.
Helmer, Henry, Wonwell Court, Kingston, Kingsbridge, Devon.
Hine, Ernest, Courtgate Farm, Plymstock, Plymouth.
Holdsworth, A. F., Widdicombe, Kingsbridge, Devon.
Jones, Llewellyn M., Bradbury Farm, Crick, near Chepstow, Mon.
Jones, Thomas, Bradbury House, Llanelly, Carm.
Maxwell, Robert M., Beverley, Yorks.
Paynter, E. E. W., Battens Farm, Bere Ferrers, Bere-alstone, Devon.
Pearson, Lady, Paddockhurst, Worth, Sussex.
Rogers, Andrew, Brownstone, Holbeton, Devon.
Rowe, Fred. W., Trwego, St. Winnow, Lostwithiel.
Spence, Col. John, Biddlesden Park, Brackley.
Stevens, James, Beaufort Chambers, Newport, Mon.
Tighe, R. H. M., 121, Belsize Road, N.W.
Trant, Brooking, Trethawp, Liskeard.
Tucker, John J., Pathada, Menheniot, Cornwall.
Wakeham, John, Rowden, Revelstroke, Devon.
Walton, W. C., Home Farm, Cransley, Kettering.
Wandsworth, Lord, 10, Great Stanhope Street, Mayfair, W
Wroth, J. Sparrow, Coombe, Aveton Gifford, Kingsbridge.

* Re-elected under By-law 12.

The reports of the various Standing Committees were then presented and adopted, as below :—

Finance.

Sir NIGEL KINGSCOTE reported that at the Finance Committee's usual monthly meeting, held that morning, the accounts for the month ended October 28, 1905, as certified by the Society's accountants, had been submitted. They showed receipts amounting to £1,748 8s. 1d., and expenditure amounting to £1,413 0s. 4d. Accounts amounting in all to £540 4s. 1d. had been passed, and were recommended for payment. The draft balance-sheet for the show of 1905 had been submitted to the Committee, and had been referred by them for audit to the Society's accountants and the auditors appointed by the members.

The Society's Staff.

The Committee had held, in addition to their usual monthly meeting, a special meeting on October 17 to consider the references made to them by the Council on October 4, of the paragraphs in the report of the Special Committee which related to the Society's staff.

With regard to the Secretary, it had already been reported on his behalf to the Council, at their meeting on October 4, that he was willing to retire at once, with a view to facilitate the new arrangements for carrying on the business of the Society coming into force as soon as possible, on the understanding that he received what was legally due to him as regards remuneration. In view of Sir Ernest Clarke's past services to the Society during the 18½ years that he had been its Secretary, the Finance Committee unanimously recommended to the Council (1) that his tenure of office as Secretary of the Society should be considered as terminated at Christmas next; (2) that he should receive at that time, in lieu of further salary, the sum of £1,000 in full discharge of all pecuniary claims upon the Society; (3) that he be permitted to occupy his present rooms at Harewood House until not later than March 25 next, it being understood by him that if rendered necessary by the previous sale or letting of the house, he would have to vacate such apartments at an earlier date when required.

With regard to all the other officials of the Society at Hanover Square and Park Royal, the Committee recommended that notice be given to each officer and clerk by the President immediately after the November Council (1) that his engagement by the Society would terminate on March 25 next (Lady Day, 1906); (2) that the Council reserved the power—acting through their Finance Committee—to dispense (with or without request) with his further attendance at any date prior to March 25, and would take into consideration the circumstances of any new appointment which he might meanwhile obtain in deciding as to the date when his salary from the Society should terminate.

Appointment of New Secretary

In order that the selection of the new Secretary might be expedited, the Committee drew up, on October 17, a form of application for the post, and ordered the appointment to be advertised forthwith : the forms of application to be returnable not later than Tuesday, October 31. The Committee recommended that the question of the appointment by the Council of an Assistant to the Secretary be reserved until the new Secretary had been selected and was in office.

A total of 481 forms of application for the post of Secretary had since been issued to applicants, and 230 actual applications had been received. The Committee proposed to hold a further meeting after the rising of the Council to go through these applications and to make a selection of a small number of candidates therefrom to be personally interviewed by the Committee with a view to the final appointment of the new Secretary being made at the next Council meeting on December 6.

Show of 1906 at Derby.

Sir GILBERT GREENALL, in presenting a further report from the Special Committee appointed on August 1 last, said that in paragraph 8 of that Committee's report of September 21, 1905, it was recommended that a show be held by the Society in 1906 in the provinces if a suitable site could be obtained and financial arrangements made. As notified direct to the Council in the letter from the Mayor of Derby, dated September 29, an invitation had now been received from that borough; and a Sub-Committee consisting of Mr. Carr, Mr. Cooper, and Mr. Crutchley had visited the site on Friday, October 13. The Sub-Committee's report indicated that a good and convenient site was available at Derby, that the Mayor and Corporation were willing to carry out the Society's customary requirements, and that the Derbyshire Agricultural Society was ready to suspend its own show for 1906 if the Royal Show should be held at Derby. The Sub-Committee had recommended "that the invitation from Derby be accepted if the Council decide to hold a show in 1906," and in that recommendation the Special Committee concurred. The Committee had the assurance of one of their number that in the event of the Society holding a show at Derby in 1906, and such show should (under the new arrangements as to administration, etc., which had already been sanctioned in principle by the Council) involve a loss to the Society's general funds, he would be prepared to make such loss good; and the Committee recommended that this generous offer be accepted.

The Committee thought that the show of 1906 should be held at the usual time, viz., in the week after Ascot, and that it should be a four-days' show ending on a Saturday. They recommended, therefore, that the show be open on Wednesday, June 27, 1906 (admission 5s.), Thursday, June 28 (admission 2s. 6d.), Friday, June 29 (admission 1s.), and Saturday, June 30 (admission 1s.). They recommended also that in view of the Derbyshire Agriculture Society having consented to suspend its show of 1906 in favour of the Royal Show, every member of the Derbyshire Society (numbering some 700) who was on that Society's books at the end of 1905, and who paid his subscription to it for 1906, be granted without payment the same privileges of admission to the show as a member of the Royal Agricultural Society.

In view of the present financial position of the Society, the Committee were of opinion that the Council would not be justified in voting from the Society's own funds a larger sum than four thousand pounds (£4,000) in prizes for the show of 1906. They hoped that this sum might be supplemented by grants from the various breed societies, and they were of opinion that in the distribution of the prize-money every established breed of live stock should, as far as possible, have classes and prizes allocated to it.

Deputation from Derby.

Mr. JOHN T. C. EADIE, the Member of Council representing Derbyshire, then introduced a deputation from the Borough and County of Derby, consisting of the Mayor of Derby (Mr. W. Hart), the Chairman of the Derbyshire County Council (Mr. G. Herbert Strutt), the Chairman of the Derbyshire Agricultural Society (Mr. J. Pakeman), Sir Thomas Roe, M.P., Alderman E. T. Ann, and Mr. C. Salt, with the Town Clerk of Derby (Mr. G. Trevelyan Lee).

Mr. W. HART (Mayor of Derby) said that the Society had already received an invitation from him to hold the next show in Derby, and the deputation came there that day to endorse and confirm that invitation. He was sure that if the Society could see their way to accept the invitation they might depend upon a very hearty welcome. The fact that the show held in Derby a quarter of a century ago was a very successful one inspired them to hope that if the invitation was accepted they would meet with success during the forthcoming year. Derby was a most convenient railway centre, it was the headquarters of the Midland Railway Company, and there were splendid services of trains from all towns in the Midland counties and also from London. When the new extension of the tramway from Derby Station to the entrances of the show-ground was completed, it would be possible to reach the show-ground from St. Pancras in less than three hours.

Mr. G. HERBERT STRUTT (Chairman of the Derbyshire County Council) thought Derby was an eminently fit and proper place for the Society to visit, and, as the Mayor had said, everyone had been highly satisfied with the show of 1881. It had given a considerable stimulus to the agricultural interest in Derbyshire and the surrounding counties, and they had felt the influence of that visit up to the present time.

Mr. J. PAKEMAN (Chairman of the Derbyshire Agricultural Society) said that Derbyshire was not only situated in the centre of England, but was easily approached by railway from all parts. Not only was the ground offered suitable for the purposes of a show, but there was within one hour's journey by rail a population of 3,000,000 people. He might mention that the attendance on the second day of their local show numbered 23,000 people. The Derbyshire farmers were very warm-hearted people, and in the event of the Royal holding its show at Derby in 1906, the Derbyshire Agricultural Society was prepared to forgo holding its own show.

The PRESIDENT inquired whether any member of the Council desired to ask any question of the deputation; and satisfactory replies to inquiries by Mr. Crutchley upon detail matters connected with the Show site and approaches thereto, and the railway facilities for the cartage of live stock and implements, having been furnished by the deputation,

The PRESIDENT said that, in reply to the question which had been asked earlier in the proceedings by the Chairman of the Derbyshire Agricultural Society, he might say that it had been decided to recommend that, in view of the Derbyshire Agricultural Society having consented to suspend its show of 1906 in favour of the Royal Show, every member of the Derbyshire Society who was on that society's books at the end of 1905, and who had paid his subscription to it for 1906, be granted, without payment, the same privileges of admission to the Show as a member of the Royal Agricultural Society.

Mr. PAKEMAN said that he desired, on behalf of the Derbyshire Society, to thank the Council for this privilege, for which he was very grateful.

Mr. GREAVES remarked that something had been said about local prizes. Were the Council to understand that these prizes would only be open to the area of the Derbyshire Show? If so, the suggestion would have to be considered, as such prizes had never been given.

Earl EGERTON of TATTON said that it had been suggested that the local prizes should be confined to the district of Derbyshire, and he was strongly in favour of that proposition. It was a new idea, but it did not follow that because it was

a new one it was a wrong one. If they had the local farmers competing for those prizes, it would increase the interest in the Show and add to the interest of the Show generally.

The deputation having withdrawn,

Mr. VICTOR CAVENDISH, M.P., said that although he had no claim to represent Derbyshire on the Council, yet he thought he had a certain connection with Derbyshire which enabled him to speak with authority, and also as the representative of one of the divisions of that county in Parliament, he desired to support, as strongly as he could, the invitation which had been tendered to the Society. He begged formally to move "That the invitation which had been tendered by the Mayor of Derby and representatives of the County be accepted, and that the Society's Show of 1906 be held at Derby, from the 27th to the 30th June next, subject to the usual formal agreement being entered into by the Mayor and Corporation."

Mr. J. T. C. EADIE said he had much pleasure in seconding the motion, which, having been formally put by the President, was carried unanimously.

On the motion of the PRESIDENT, a General Show Committee was formed, to consist of the whole Council, with representatives of the Local Committee, to be nominated by the Mayor of Derby. It was arranged that the first meeting of the Committee should be held at 10 a.m. on Wednesday, December 6.

The Park Royal Estate.

Sir GILBERT GREENALL said there was another matter which had come before the Special Committee at their last meeting on October 17—viz., the question of the sale of the Society's estate at Park Royal. In their report of September 21 the committee had recommended that "immediate steps be taken for the disposal of the Society's interest in the Park Royal estate," and this recommendation had been referred back by the Council to the Committee for further consideration. The Special Committee, after again going fully into the matter, felt that they must adhere to their previous recommendation. They were of opinion that the Society would not be justified in incurring the large annual expense for interest, upkeep, etc., which would be necessary if Park Royal were retained in the Society's possession until the pre-emption period expired at the end of 1911; and they recommended, therefore, that the Council should forthwith instruct the Directors of Park Royal, Ltd., to offer the property to the original vendors at the price of £375 per acre stipulated in Clause 14 of the agreement of purchase, dated September 30, 1901.

Mr. HARRISON having seconded the adoption of this recommendation,

Mr. WHEELER thought the Council should have some statement as to the expense of holding this site, and also as to the revenue they might make out of it for other purposes.

Mr. HARRISON said the charge that Park Royal would be to the Society in case the land were retained as a speculation had been calculated at anything from £1,300 to £1,700 per annum. The Special Committee, in considering this, felt that in the present financial position of the Society it could not recommend the Society to retain possession of Park Royal for the six years which would elapse before the vendors' right of pre-emption expired. A capital expenditure of more than £1,000 a year was considerably more than the Special Committee felt justified in recommending to the Council for the retention of Park Royal.

Mr. CHUTCHLEY did not see what advantage there could be in the Directors of Park Royal expressing their views further on the subject now before them. If the Council had decided once for all not to go back to Park Royal to hold its shows there, he thought the best course, under the circumstances, would be to realise the estate, and that it was only waste of time for the Council to postpone dealing with the question.

After considerable discussion, the President formally moved the adoption of the recommendation of the Special Committee for the sale of Park Royal, which, on being put, was carried nem. dis.

Harewood House.

Sir NIGEL KINGSCOTE (Chairman) reported from this Committee the progress of negotiations as to the sale of the Society's House. The Committee asked for authority from the Council to close promptly with any satisfactory offer that might be received from an intending purchaser. This authority was granted after a short discussion.

Journal.

Sir JOHN THOROLD (Chairman) reported that the Committee had had before them estimates for the production of the Journal at a net cost to the Society of not exceeding £600, including distribution, as recommended by the Special Committee. They had arrived at the conclusion that the annual volume could be reduced for the sum named, provided that the volume be bound in paper covers instead of cloth covers, and that the size be reduced to 450 pages. They recommended therefore that the preparation of the volume for the current year (Volume 66) be proceeded with on these lines.

Cost of Chemical Department.

Mr. BOWEN-JONES (Chairman) reported that the Committee had carefully considered the report of the Special Committee as passed by the Council on Oct. 4, and had review the position with the object of making such further economies as might be possible. They pointed out, in the first place, that the very considerable economies in the chemical department effected at the beginning of the present year had not yet had time to make themselves felt. It might be remembered that, as the outcome of the Report of the Sub-Committee on Finance, presented in May, 1904, there was a reduction of £150 per annum made in Dr. Voelcker's salary, and further, the allowance of £400 given to Dr. Voelcker for the work of his laboratory, salaries of assistants, etc., was dropped, Dr. Voelcker taking in return the fees paid by members for analyses, which amounted in 1904 to £330. Accordingly there was, as commencing from January, 1905, a direct saving of about £220, which would appear for the first time when the accounts for 1905 were presented.

The present cost of the Chemical Department, inclusive of the Pot Culture Station at Woburn, did not exceed £650 per annum, this including Dr. Voelcker's salary (£550), printing, etc. (say £50), and the balance required (about £50) to pay the salary of the assistant at the Pot Culture Station (£200), over and above what was received from the Hills' Bequest.

The Committee had reviewed the work of the Woburn Experimental Station, and they desired to call the attention of the Council to the fact that owing to the liberality of the Duke of Bedford, the work of the station entailed at present no charge on the finances of the Society beyond a proportion of Dr. Voelcker's salary.

Prizes for the Derby Show £4,000.

Mr. GREAVES (Chairman) reported that the Committee had considered a draft of the prize-sheet for the show of 1906, on the lines laid down by the Special Committee, viz., that the total amount of the prizes offered by the Society should not exceed £4,000.

The Committee had considered a communication from the Polled Cattle Society asking that the age of Aberdeen-Angus cattle should be reckoned as from December 1 instead of January 1, and proposed that in the prize-sheet for 1906 the ages of Aberdeen-Angus animals should be calculated as from December 1. The Committee recommended that the Ayrshire cows or heifers should be shown in-milk only; that the auction sales should be held, as usual, in the showyard, and that facilities be afforded to exhibitors of stock for showing their animals for the purpose of sale, a privilege already granted in the case of exhibitors of horses.

Owing to the small number of exhibitors who entered in the Cotswold, Devon, Longwool, Dartmoor, Exmoor, Cheviot, Black-faced Mountain, Lonk, and Herdwick sheep classes, the Committee recommended that the Secretary be instructed to write to the breed societies concerned, informing them that the Council were very averse from the omission of any breed from the prize-sheet, and they proposed, therefore, to offer a first prize of £10 in two classes for each of these breeds, at the same time suggesting that it was open to the societies to offer second and third prizes in the classes of their respective breeds. A communication from the South Devon Flock Book Association as to the inclusion in the prize-sheet of 1906 of classes for South Devon sheep was considered, and the Committee recommended that two classes be offered for this breed of sheep with first prizes only in each class, and that the Association be informed that it was open to them to offer second and third prizes.

On the question of the age of Aberdeen-Angus cattle the President put it to the meeting, and the motion to refer this matter back to the Committee was carried by 16 votes to 3.

Implement.

Mr. NEVILLE GRENVILLE reported that, in the absence of Mr. Frankish, he had been called to the Chair. The Committee had considered the regulations of the Implement Department, and recommended that they should be printed and circulated to the Council before their next meeting. The Committee also recommended that trials of suction gas engines should take place in connection with the show to be held next year.

Selection.

Sir JOHN THOROLD (Chairman) reported the Committee's recommendation that the Earl of Northbrook be elected a Vice-President of the Society to fill the vacancy caused by the death of Sir Jacob Wilson. Under Bye-law 77 Lord Northbrook would hold office as Vice President until the next ensuing annual general meeting. As Lord Northbrook was elected in July last to represent Hampshire as an ordinary member of the Council, his election as Vice-President would create a vacancy in the representation of that county. The Committee recommended, therefore, that Bye-law 88 be put in force by the issue to each governor and member of the division of Hampshire of a notice of the vacancy, and fixing the date by which nominations of candidates to fill the vacancy must be received at the office for Saturday, November 18.

Education.

Lord MORETON (Chairman) reported the Committee's concurrence with the proposal to appeal to the Government for an annual grant in aid of the Education and Scientific Branches of the Society's work.

Appeal for Government Grant.

The PRESIDENT stated that in view of the recommendations by the various Scientific Committees as to the proposal to ask the Government for a grant in aid of the Education and Scientific branches of the Society's work, he had thought it expedient to invite the Chairmen of those Committees to confer with him as to the procedure to be adopted. A meeting had accordingly been held on the previous afternoon, attended by Mr. Bowen-Jones (Chairman of the Chemical and Woburn Committee), Mr. Wheeler (Chairman of the Botanical and Zoological Committee), Mr. Stanyforth (on behalf of the Veterinary Committee), and by Lord Moreton (Chairman of the Education Committee). They had agreed to suggest to the Council that a Deputation should be appointed to wait upon the President of the Board of Agriculture in support of a strong appeal from the Society for a Government grant in aid of the Education and Scientific Branches of the Society's work.

The course proposed by the President was unanimously agreed to, and the following members of Council were appointed as the Deputation to wait upon the Minister of Agriculture:—The President, the Earl of Northbrook, Lord Moreton, Sir John Gilmour, Mr. Bowen-Jones, and Mr. Wheeler.

Date of Next Meeting.

After the transaction of other business the Council adjourned until Wednesday, December 6, 1905, at 12 noon.

Horncastle October Cattle Fair was held on Monday with a comparatively small supply of fodder in the district and a good show of beasts; trade was not particularly brisk. About 500 animals were offered, amongst them being some particularly fine 2½-year-old bullocks, which realised £20, and 1½-year-old bullocks £13 10s. At the auctions heifers made up to £15, steers, £13, bull calves £12, and calves £6.

The two handsome prizes of £30 each which Mr. W. R. Smith, of Tattenhall Road Bone Works, Chester, offered this year for the five heaviest mangels and the five heaviest swedes respectively, grown with the aid of his special manures aroused a considerable amount of interest among root growers, as was evidenced at the competition which took place on Saturday. Competitors from various parts of Cheshire, Flintshire, Shropshire, Staffordshire, Warwickshire, and Gloucestershire, assembled at Mr. Smith's works, where the roots were adjudicated upon by competent experts. The first prize of £30 for the five heaviest mangels was awarded to Mr. Leonard J. Smith, of Newent, Gloucester. These five bulbs, although naturally of an immense size, were remakably fine in shape, and the flesh also showed an excellent texture. This entry was closely followed by Mr. Frank Burgess, of Arrowe, Birkenhead, and Mr. Robert Shepherd, of Parkside, Aston, whose five bulbs weighed respectively 137 lb. and 133 lb. The special prize of £30 for the five heaviest swedes was won by Mr. John Johnson, of Spurstow, Cheshire, with five handsome bulbs of the variety known as Garton's "Keepwell," which were of very symmetrical proportions; Messrs. R. and W. Roberts, Wellhouse Farm, Flintshire, and Mr. Frank Burgess, coming next in order of merit. In addition to these prizes for roots Mr. Smith offered this year some special prizes for Cheshire cheese, and in this class Mr. Bourne, of Bickerton, Malpas, a well-known Cheshire cheese maker, gained the handsome amount of £18. Mr. W. R. Smith, together with his eldest son, who has recently been admitted into partnership, along with Mr. H. A. Longrigg, showed all the competitors who were present over the works containing the latest methods in the way of machinery and other plant employed in this up-to-date establishment. We understand that Mr. Smith intends repeating these prizes again next year.

THE CENTRAL CHAMBER.

Butter and Dogs Bills—Motor Cars—Birds and Agriculture—Agricultural Holdings Act.

A meeting of the Central and Associated Chambers of Agriculture was held on Tuesday at the rooms of the Society of Arts—Mr. T. Courtenay T. Warner, M.P. (vice-chairman for 1905), in the chair. The Chairman moved a vote of condolence with the family of the late Mr. Clare Sewell Read, which was seconded by Mr. Everett, and supported by Mr. Chaplin, M.P., who stated that it was not too much to say that the death of Mr. Read was a national loss.

The motion was agreed to upstanding.

Among the new members elected were Lord Onslow and Mr. R. W. Hudson.

It was agreed that the Chambers should again co-operate with the Farmers' Club in holding a joint dinner on the Tuesday in Smithfield week (December 5).

The Butter and Dogs Bills.

The Parliamentary Committee reported that the Prime Minister had declined to receive a deputation from the Chamber on the subject of the Butter Bill. As showing the interest taken in the matter the Committee mentioned that 22 Chambers had previously intimated their intention of being represented, as also had the Australasian Colonies, through their agents-general, as well as other societies, while Lord Strathcona, the High Commissioner for Canada, had written saying that "the Dominion Government feel that the provisions of the Bill, if adopted, would be greatly in the interest of the Canadian butter trade, and they would regard the passage of the Bill into law with much satisfaction."

The Committee recalled the fact that the session of 1905 was the fourth consecutive session in which the Bill had been introduced. This year the Bill was read a first time on March 28, and it could have been easily passed if the Government had shown the slightest sympathy towards the measure.

The Committee recorded their conviction that this want of sympathy on the part of the Government was in no way shared by the President of the Board of Agriculture.

In regard to the Dogs Bill, the Committee regretted that the efforts of the Board of Agriculture to secure its passing had been so entirely unsuccessful.

Redistribution of Seats.

In regard to the Government proposals for a redistribution of seats, the Committee pointed out that those proposals, if adopted, would involve a considerable loss in the representation of rural and agricultural districts. Under such a scheme a rural constituency with anything less than 65,000 population would lose its representation, but a borough of anything over 18,500 would retain it. The Committee were decidedly of opinion that any such proposals should be most strongly opposed by the Council, and recommended that they be authorised to take any necessary steps to secure their rejection.

Sir EDWARD STRACHEY, M.P., moved the adoption of the report. The Council felt, he said, that the Government were not in earnest about the Butter Bill. The Bill would, however, be once more introduced, and then the Council would again bring pressure to bear on the Government. He agreed that the Bill did not go far enough at present, because other forms of adulteration had arisen, but their only chance of getting the Government to take up the Bill and carry it before Easter was to keep the Bill in its present form. They must ask for it as an instalment of justice before Easter, at any rate, before the Government goes to the country. He hoped the Dogs Bill would also be passed before the Government dissolved. With regard to the redistribution proposals, the feeling of the Committee was very strong that they ought to be opposed. (Hear, hear.) They would practically reduce the county, rural, and agricultural representation while retaining the representation of the boroughs.

Mr. CHAPLIN, M.P., said although he did not think for a moment the Redistribution Bill was likely to be passed during the coming session, yet it was very important that the Chamber should make its views on the subject known. His own view, and probably that of the agricultural interest generally, was that no measure dealing with redistribution which decreased the influence or lessened the fair proportionate representation of county constituencies as compared with borough constituencies would be satisfactory to the great interest which the Chamber represented. This was the view which he intended to press when the proper occasion arose, and this was the view which he believed all the agricultural associations would do well to press. (Hear, hear.)

Mr. MIDDLETON said they had had to wait four or five years for the Butter Bill, and perhaps they might as well wait a little longer and leave it to the present Government's successors to give them a more stringent Bill, and he ventured to think that whatever Government was in office it could not afford to ignore the representations of the agricultural interest.

The report was adopted, and it was agreed that a copy be sent to the Prime Minister, the President of the Board of Agriculture, and the President of the Local Government Board, accompanied by the following resolution:—"That this Council earnestly press upon the Government the necessity of passing the Butter and the Dogs Bills at an early stage of next session."

Motor Cars.

The CHAIRMAN moved that witnesses be appointed to give evidence before the Motor Car Commission. He suggested that Messrs. Kinder, T. Latham, and H. Biddell be appointed to give evidence. In regard to the Departmental Committee on Small Holdings, he put forward as witnesses the names of Mr. W. Auber Simmons and Mr. R. S. Balden, and as witnesses before the Inter-Departmental Committee appointed to inquire into the expenditure on public education the names of Messrs. F. S. Corrance, R. L. Everett, and C. D. Johnson.

Colonel MAUDE hoped they would appoint some one to give evidence before the last-named Committee who could speak of the outrageous extravagance of the West Riding County Council.

Another member urged that the suggested witnesses for the Motor Car Commission should not be appointed if they owned motor cars. (Laughter.)

The three gentlemen named denied possessing cars, and one remarked that although he did not own one he had ridden in one once to his cost.

The suggestions made from the chair were adopted.

Birds and Agriculture.

Mr. POWELL (Mayfield Farmers' Club) moved "that this Council is of opinion that the depredations of birds are a serious loss to growers of various products of the soil, and that an official inquiry should be made as to what means should be adopted to prevent such losses." He said that since the County Councils had exercised their powers with regard to the protection of birds the depredations of many kinds of birds had been more severely felt by agriculturists. Boys had been prevented from bird nesting, and the increase of birds had been greater than ever. He had nothing to do with the farming of agricultural land at present, but he could well remember that in the past the depredations of birds had been a grievous loss to him.

Mr. ACKERS seconded the motion. All that the Council had to do now was to ask for an inquiry. There was no doubt that in certain parts of England there was a very strong feeling that the great increase in certain sorts of birds prevented the birds from getting enough of their proper food and caused them to prey upon the produce of the farmers and so inflict injury.

Mr. GARDENER (Worcestershire) did not agree. He thought that the request for an inquiry into this subject was frivolous. Every cultivator had the power in his own hands to keep down pests, and there were farmers' clubs and other bodies of agriculturists who could deal with the pests. He thought that it would only be belittling the Council to put forward a frivolous question like this.

Mr. CHRISTIAN (Fareham and Hants) did not agree with Mr. Gardener. The matter was of vital interest to agriculturists. He thought that the Council ought to pass a resolution on it. His Chamber had agreed that the Wild Birds' Protection Act required amendment. Rooks, larks, and starlings ought to be kept under control, and as for the sparrow it should be exterminated as far as possible.

The Rev. E. OLIVEY (Wadebridge Farmers' Club) thought that if gentlemen could see, as he saw in his own fields and in those of other people, the immense damage which starlings and rooks did because they were not kept down, they would be of opinion that the damage far surpassed any good which the birds might do.

Colonel HARBIN: I move that the question be now put.

The motion was then carried unanimously.

Consolidating the Agricultural Holdings Acts.

Mr. MIDDLETON moved: "That this Council is of opinion that the various Agricultural Holdings Acts should be consolidated." The Acts, imperfect as they were, could, he said, be made more perfect by their being better administered. There was too little elasticity, and the bad farmers received too much and the good farmers too little compensation.

Mr. H. AMOS moved to add to the resolution the words "and amended." The Acts, he said, were a great detriment to good farming, and if the English farmers had a free hand in the cultivation of their land, they could beat foreign competition "hands down."

Mr. CHRISTIAN seconded the amendment. The talk of agricultural depression, he said, was "rot." A man should not be allowed to have more land than he can cultivate.

Mr. BALDEN said his experience in the West Riding was that the landlord in order to let his farms had to let them free of tenant rights, and take his risk of what he might get when the tenant left.

Major DENT was convinced that it was only advisable to go as far as consolidating the Acts in view of the widely differing views of the members of the Chamber in regard to amending the Acts. Landlords, valuers, tenant-farmers, and agents would all like to see the Acts consolidated in a simple and intelligible form. (Hear, hear.) They could not put forward a proposal for amendment without laying down the lines on which such amendment should be based.

The amendment was defeated, and the resolution agreed to.

Hackney Horse Society.

Meetings of the Council and Committees of this society were held at 12, Hanover Square, on Tuesday and Wednesday last, Sir Lees Knowles, Bart., M.P., in the chair.

Appointment of Judges.

The report of the Judges' Selection Committee furnished the Council with the names of suitable judges for the next London show, and the Council proceeded from these names to elect by ballot judges and reserves in various districts. The following was the result of the voting:—

HACKNEY SECTION.—Yorkshire District: Judge, T. M. Bentley, Skerne Road, Driffield. 1st Reserve: T. D Reed, The Grange, Beeford, Hull. 2nd Reserve: Alfred Craggy, Manor House, North Newbald. Norfolk and Eastern District: Judge, Alfred Rowell, West Rudham Hall, King's Lynn. 1st Reserve: Lionel Rodwell, Manor House, East Rudham, Norfolk. 2nd Reserve: A. Beldam, Bluntisham, St. Ives, Hunts. Other Districts: Judge, Arthur E. Evans, Bronwylfa. 1st Reserve: J. K. Ford, Chellaston, Derby. 2nd Reserve: J. McMeeken, Mosspark, Dumbreck, near Glasgow.

PONY SECTION.—Judges: Alex. Morton, jun., Gowan Bank, Darvel, N.B.; Robert Whitworth, Southwood End, Halifax. 1st Reserve: Evan Jones, Manoravon, Llandilo, Carmarthen. 2nd Reserve: R. Brydon, The Dene, Seaham Harbour.

Prize Schedule for 1906 Show.

A few additions and alterations were made in the prize schedule, as already outlined in these columns. It was agreed to open the classes for Hackney and pony stallions in harness to horses of any age, and not to restrict them to horses four years old and over. Any exhibitor of three-year-old stallions who may desire to enter in the harness classes will now be able to do so.

Representations having been made to the Committee that there should be two classes for pairs as previously, instead of one as proposed, it was agreed to assent to this request, dividing them into over 14 hands and not exceeding 15 h. 2 in., and a second class for horses over 15 h. 2 in. Under these circumstances the class for single harness horses over six years old will have 15 hands as the dividing limit instead of 15 h. 1 in.

Several communications were received by the Committee urging the establishment of a class for ponies in harness not exceeding 13 hands. It was agreed to establish such a class for pony mares and geldings not exceeding six years old; also a class for the same aged ponies exceeding 13 hands and not exceeding 13 h. 2 in., and a further class exceeding 13 h. 2 in. and not exceeding 14 hands. It was originally intended that the pony produce group should be confined to harness ponies, but the Committee, on careful consideration, thought it well to open the group to the whole of the pony section, offering the Challenge Cup to the best sire of three pony stallions, mares, or geldings to be shown in hand. The three produce can be drawn from any of the classes in the pony section, provided that they compete for the cup in hand and not in harness. These additions will make the total amount of prizes £1,685.

Medals at the Royal and County Shows.

It was agreed to offer three gold medals at the Derby Show of the R.A.S.E., two for the best Hackneys in hand, and one for the best Hackney in harness.

It was reported that during the past season the following medals had been awarded at country and foreign shows:—Nine £10 gold medals, nineteen gold harness medals, twenty three silver harness medals, and 175 silver medals in hand.

Finance.

Sir Gilbert Greenall (Chairman) reported that

he had been re-elected Chairman of this Committee for the ensuing year.

The names of eighteen members in arrear with their subscriptions were submitted, and the Secretary was requested to take the necessary steps to recover the sums due.

A balance in the bank of £311 3s. 2d. was reported, and accounts were passed for payment amounting to £259 16s. 8d.

The Committee reported that they had received from the President a donation to be devoted to the increase of the Old Age Endowment Fund for the society's officials. It was resolved to express the society's thanks to the donor for his kindness, and to forward this and any further donations for a similar object to the insurance companies who are concerned in the matter. The report was adopted.

Stud Book.

Mr. John Rowell reported his re-election as Chairman of this Committee, and the report which he presented dealt with various details immediately concerned with the publication of the new volume next February. It was resolved that the conditions for Volume 24 should be the same as those for Volume 23. The fee for future export certificates was fixed at 10s. each certificate, non-members 20s. The American Customs Authorities having refused to admit horses duty free, unless an actual Stud Book number was attached to the horse's name, it was resolved to number all horses sold for export immediately the entries for the Stud Book are received. This will doubtless encourage export trade, and as arrangements can be made so that the present alphabetical order of the Stud Book is adhered to, there will be no inconvenience to breeders who are not directly interested in the sale of horses for export. The Committee examined applications for prefixes and affixes, and granted the following:—

Prefixes.	Applicants.
Bangor	Thomas Williams, Bangor Isycoed, Wrexham.
Cefni	O. Trevor Williams, M.R.C.V.S., Llangefni.
Ceiriog..	Richard Hughes, Pontfaen Farm, Chirk, Ruabon.
†Clearbrook	E. P. Burton, The Bungalow, Hoo Meavy, Yelverton.
Coron	W. H. Jones, Fferam Rhosydd, Bodorgan, Anglesea.
Frith Manor ..	H. G. Regnart, Frith Manor, Mill Hill, N.W.
Gwyddfor	E. Shelton Roberts, Gwyddfor, Penygroes, R.S.O.
Holly	H. Rodmell, The Hollies, Holderness Road, Hull.
Hooton	T. R. Evans, Brookfield, Hooton, Liverpool.
‡Inverness	William McAllister, The Inverness Hackney Stud, Inverness.
Johnstown	Joseph Edwards, Havod View, Johnstown, Ruabon.
Langley	W. H. H. Sykes, 9, Curzon Park, Chester.
Lascelles	Mrs. J. C. Broadbent, Lascelles Hall, Kirkheaton.
†Manor	Mrs. N. Paulet, The Manor House, Leigh, Staffs.
Morecambe	T. W. Speight, Battery Hotel, Morecambe, Lancs.
Priory	Charles Woodall, Priory Farm, Hessle, E. Yorks.
Putney	Robert Day, Prickwillow, Ely, Cambs.
Rundell's	Mrs. Frank Jagger, Rundell's, Harlow, Essex.
Scampston	T. W. Braithwaite, The Firs, Scampston, Rillington.
Sedgeford	T. J. S. Brown, Hall Farm, Sedgeford.
Trumpington ..	Alexander Towler, River Farm, Trumpington Road, Cambrige.

† Prefix and affix. ‡ Affix only.

A communication was submitted to the Committee alleging that entries of two mares in previous volumes were incorrect. As the writer furnished the names of persons likely to be in a position to know the true facts, it was agreed that full inquiries should be made for further report. Several entries of animals for the new volume, which after personal inquiries were considered to be doubtful, were either rejected or deferred.

Vacancy on Council.

The Council with great regret received an intimation of the death of Mr. Nathaniel Morton, who had for many years been a consistent supporter of Hackneys in Ireland, and it was agreed that a letter expressing the sympathy of the Council with Mr Morton's family should be signed by the President, and the vacant seat on the Council was not filled up.

The next meeting was fixed for February 8, 1906, and the Council then adjourned.

The show of sheep at Horncastle October Fair on the 28th ult., was the smallest on record, though trade was brisk. The animals shown were chiefly Lincoln lambs, and these sold at 41s. 6d. per head. Only comparatively few horses were shown in the streets, and these were mainly of the drove class.

Bridgnorth St. Luke's Fair, said to be the oldest statute cattle fair in England, it being granted by King Henry III. in 1226, was held on Monday, when a large number of horses and cattle were on sale in the streets, and at the annual store stock sale in the Smithfield about 1,000 head of cattle and 1,500 sheep, together with lambs, pigs, and calves, changed hands.

By Lupulin.

Home Notes.

The Borough.

During the past fortnight our trade has gone along merrily as to volume, but sadly with respect to values. I cannot remember a season in which growers have been more ready to dispose of their produce. Their former experience seems to have destroyed for the moment their confidence in any prospective improvement, and, despite the absence of present foreign competition, the English crop is being rapidly sacrificed at such low rates that no possible margin is left for profit, and it is more than probable that if a general balance of results could be struck it would be found that our industry will this year suffer from heavy losses Already we have heard of several of our planters being unfortunately compelled to consult their creditors about their financial positions, and in some cases the outcome of such investigations has revealed disaster. These unhappy circumstances indicate the probability of further reduction of the English acreage, and it goes without saying that if our field of operations is thus lessened another heavy blow to British agriculture will be inflicted, an important autlet for the employment of capital and labour on the land will be closed, and a wider opening will be made for the entrance of foreign produce. Our planters are intelligent and progressive, skill and economy in the growing of hops are everywhere evident, and it is admitted that our climate and soil are sufficiently favourable to enable us to secure qualities equal to those of any of our competitors. To what cause then can the present depression of our market be attributed? Although we have grown an exceptionally large crop this season it is not heavier than our brewers require for their year's consumption. There is, therefore, little doubt that but for the possibility of further supplies being sent into our open ports, reasonable remuneration might have been secured by our home growers. The reports from America and the European Continent have, however, alarmed us, and consequently we have pressed our hops for sale, in order to be clear of the crop before the foreigners have a chance to get in. The remedy for this state of panic could certainly be found in the enactment of a moderate import duty. A steady balancing of the market would be secured, and although the advancement of values would be felt by brewers, the interests of the beer-drinking public would not be affected, while our special section of agriculture would be necessarily benefited. Fortunately, the whole question of Tariff Reform is now being considered, and I have faith in the recognition of the claims of our industry when this movement is brought into practical realisation. Until we have accomplished this desirable object our planters must hold on as best they can. They must fight a hard battle, so long as present conditions exist, and justice demands that the decision cannot be long delayed, or another important element in British prosperity will be erased from our records.

The large East and Mid Kent growths have been lately brought to market, and have been readily sold at low prices now current. There is a certain amount of firmness in the trade for choice qualities, the scarcity of which becomes daily more pronounced. But merchants, encouraged by the anxiety of holders to realise, have not made any material advances in their bids. Therefore, the highest figures do not exceed 70s., or occasionally 75s., while whole growths of good average quality have changed hands at 56s. to 65s. Medium hops rather hang fire at 40s. to 45s., and the lower grades are in fair demand at 25s. to 35s. The good yearlings, which holders expected to be able to sell at much higher prices than their new growths, are being disposed of at most disappointing rates. It is to be hoped that these cruel sacrifices will arouse growers to action in defence of their grievously-threatened industry. Present experience should give them courage. The consequences of apathy must be evident. I trust I may soon be able to discern signs amongst our people of their consciousness of the gravity of their position.

Foreign.

America.

According to letters recently to hand, the final reports have not materially altered previous estimates of the crop, which is now set at about 290,000 bales, or 480,000 cwt. This figure includes 55,000 bales for N.Y. State, 70,000 for California, 115,000 for Oregon, and 52,000 for Washington. My correspondents name the current prices being paid about fourteen days ago to growers as 9 to 12½ cents on the Pacific Coast, and 14 to 17 cents in New York. It is stated that growers are free sellers, and that after the October demand is supplied everyone expects a dull dragging market, with declining prices. This anticipation is confirmed by a subsequent cable message, which refers to the market being demoralised and bordering upon panic. Speculative dealers had evidently reckoned upon such a downward tendency, as offers for future delivery are being made at 13 cents delivered in the breweries, which means not more than 7 to 8 cents to the farmer. It is estimated that about 10,000 acres of hops were planted in the U.S. in 1904, whereby the area of cultivation has been increased by about 25 per cent. The immediate effect of this extension must be evident, if we can accept as correct the statement of a Californian friend, who writes me as follows: "We had 10½ acres of new hops. The cuttings were planted in March, and from them we picked 39,000 lb. (nearly 17½ tons) of dry hops. How is that for California?" My reply to his query is that our English experience cannot produce a parallel, and that it is almost incredible, even with all the advantages of climate and soil possessed by California.

Germany.

The arrivals at Nuremberg have largely exceeded the sales during the past fortnight, stocks having been increased by several thousands of bales. The wet weather having retarded the air drying, hops arriving from the country could not be generally offered in attractive condition. These circumstances have therefore checked business, and have somewhat weakened values.

Prices are certainly firm for good green samples, which are comparatively scarce, but inferior sorts are neglected, and, with slow demand for these, quotations are falling. Ordinary market hops are selling at 25s. to 48s., Hallertans from 40s. to 80s., Wurtembergs from 40s. to 70s., Spalts from 50s. to 90s., these being the prices paid to growers.

The official return issued at Munich for the week ending October 20 shows that 587 cwt. of hops, valued at £3,530, were sold, the stocks on hand at that date being 3,752 cwt. The prices for local consumption averaged 105s. for Bavarians, 110s. for Franconians, and 140s. for Bohemians.

German imports during September last amounted to 11,746 cwt. (principally from Austria-Hungary), against 6,320 cwt. in the same month of 1904. The exports from Germany for the month were 7,332 cwt., compared with 15,488 cwt. in September, 1904. The returns enable us to trace the destination of these exports, and therefrom we find that 1,216 cwt. were shipped to England, 1,684 cwt. to Belgium, 984 cwt. to the U.S.A., the remainder being distributed in various proportions to every beer-drinking country in the world; the general popularity of the German produce, as well as the enterprise of Continental traders, being thus demonstrated.

Belgium.

The hop markets continue to be well supported in a firm position, with some tendency towards improvement in values. Recent quotations on the Brussels Bourse are 42½ to 45 francs (34s. to 36s.) for Alosts, and 32½ to 35 francs (26s. to 28s.) for Poperinghes. Buyers in the country markets are willing to pay rather higher figures, but growers are somewhat reserved. The sales in the four open markets held at Assche, the last of which took place October 24, amounted to 120,000 lb., exceeding the sales of last year by 50 per cent. A correspondent of *Le Petit Journal du Brasseur*, speaking of the results of these markets, says he is proud to be a Belgian grower when he sees that their soil can produce hops of such excellent quality. He is convinced that if they continue to thus improve they will, in a few years, have nothing to fear from foreign competition.

Thirsk October Sheep Fair.—The largest show of sheep which has been seen on St. James' Green for many years was forward at the fair held on the 28th ult., and in spite of the large supply all the pens with but few exceptions found customers. Prices ruled high, and anything fit to slaughter was readily bought up, whilst good running-on stock at the back end of the year never met a better trade than it did on Saturday. Quotations:—Pure-bred Wensleydale shearling ewes, £2 10s. to £3; half-bred shearlings, 45s. to 48s.; twice-crossed lambs 35s. to 38s.; half-bred lambs, 17s. to 22s.; black-faced and Scotch and moorland lambs, 15s. to 20s. each. There was a fair show of grazing beasts, but of moderate quality, which ruled, for two-year-old bullocks and heifers, from £8 10s. to £9 5s.

FARMS, BUSINESSES, &c.

FARMS.—Rents from 10s. Acre: prices £7 Acre. Monthly List 2 stamps RUTTER, 10, Norfolk Street, Strand, London

MESSRS. CRONK'S LIST of FARMS, containing particulars of numerous Farms in Kent, Surrey, Sussex, and elsewhere, to be obtained gratis at their office or will be sent by post on receipt of a stamp. Properties inserted free. 12, Pall Mall London, S.W., and Sevenoaks, Kent.

J. PRIEST & SON, Ltd., Castle Iron Works, Victoria Road, Bristol.

AUCTION SALES.

IPSWICH,

SPECIAL SALE OF PEDIGREE RED POLL CATTLE.

FRIDAY, NOVEMBER 24th, 1905.

ROBERT BOND & SONS will SELL by AUCTION, at the DRILL HALL,

70 HEAD OF PEDIGREE RED POLLS, the property of Mr. ALFRED J. SMITH, Rendlesham, including:

19 HEIFERS with their calves by side,
8 COWS with their second calves by side,
5 COWS with their five calves by side,
6 BULLS.

The Rendlesham and Eyke Herds were established some thirty-five years since.

The Heifers, Cows and Calves are an extraordinary good lot. They are from the best milking strains and have grand square bags, a large proportion of them being descendants of the famous Pear tribe, which includes Ripe Pear 3100, whose yield was 10,088¾ lbs., Wondrous Pear 10,141 lbs., Orange Pear 10,125 lbs., and Rendlesham Wonda 2nd, who headed the Rendlesham Herd this year with a yield of 10,514½ lbs. of milk during twelve months. Others are descended from Minx, who is first this year in the Eyke Herd with a yield of 10,541 lbs. in twelve months; in fact, most of the animals offered for sale are descended from cows giving 700 to 1,000 gallons per year. The above animals are all sired by first-rate bulls, including the noted bull New Sirdar 7415, winner of six prizes, including first and Reserve Champion, and whose dam won two firsts as best milking cow; Rowdy Roy 6595, winner of first and champion at Suffolk Show, 1901, and whose dam gave 800 gallons milk in a year.

Since June, 1896, over 100 honours have been won by exhibits from these herds at the London Dairy, Royal, and County Shows, and many animals have been exported to all parts of the world.

No herd stands higher for its milking qualities.

Catalogues on application to Mr. ALFRED J. SMITH, Rendlesham; or of the AUCTIONEERS, Old Bank House, Ipswich.

HOME FARM, WADDESDON, BUCKS.

HIGHLY IMPORTANT ANNUAL SALE OF PRIME FAT STOCK.

Messrs. BOND & BURROWS are favoured with instructions from Miss Alice de Rothschild to SELL by AUCTION, on the Premises, on THURSDAY, NOVEMBER 23rd, 1905, at One o'clock precisely.

90 GRAND FAT POLLED ANGUS, SHORTHORN and JERSEY BULLOCKS and HEIFERS, very ripe, of exceptional quality, and nice weights, several fit for show; **170** FAT DOWN THEAVES, EWES and TEGS of choice quality.

The Auctioneers particularly invite the attention of Butchers, Dealers, and others, to this important Unreserved Annual Sale, The Cattle are fully up to the usual high standard, many of great weights, very ripe and of excellent quality, including Five Grand Show Beasts.

Luncheon from 12 o'clock.

Conveyances will run from Thame, Aylesbury and Manor Station, for the convenience of buyers.

Catalogues with Train Service may be obtained of G. A. Sims, Esq., Winchendon; or of the Auctioneers, Thame, Oxon.

RAILWAY ANNOUNCEMENT.

MIDLAND RAILWAY.

GREAT EXHIBITION of POULTRY, &c., at BINGLEY HALL, BIRMINGHAM, NOV. 25th, 27th, 28th, 29th, & 30th, 1905.

Exhibitors of Poultry and Cage Birds at this Show are informed that the Midland Railway Company make every arrangement for the convenient and careful transit of exhibits to and from the Show.

NATIONAL EXHIBITION OF SPORTING AND OTHER DOGS, CURZON HALL, BIRMINGHAM, NOV. 27th, 28th, and 29th.

Exhibitors at this Show are informed that the Midland Railway Company will afford facilities for the expeditious, safe, and convenient transit of all animals consigned by their route.

The rates for the conveyance of Dogs can be obtained at the various stations, or on application to the District Superintendent, Derby, or of the Superintent of the Line, Derby.

Arrangements will also be made for the return of the traffic in through vans direct from Birmingham at the close of each Show.

Exhibitors are requested to clearly address all cases, &c., containing exhibits "per Midland Railway," and to also insert this on the return portion of the address.

The Midland Company's representatives at Birmingham (New Street Station) and at each Show will give every information to exhibitors as to the return journey.

GREAT CATTLE SHOW, BINGLEY HALL, BIRMINGHAM, NOVEMBER 25th, 27th, 28th, 29th, and 30th.

Specially constructed vans for the conveyance of prize cattle by passenger train can be supplied for conveying Cattle to and from this Show on application being made to the Stations, Mr. Mitchell, District Superintendent, Derby, or to Mr. J. Elliott, Superintendent of the Line, Derby.

THE

"BIBBY" CAKE

V.

LINSEED CAKE.

In out-of-the-way districts, amongst farmers who perhaps do not often see the Agricultural papers, there are some few feeders who still fatten bullocks and other cattle on Linseed Cake.

To all such we venture to suggest that the present high price of Linseed Cake affords an opportunity for putting the "**BIBBY**" **CAKE** to a competitive test.

Consider the saving! At the relative prices the cost of "**BIBBY**" is something like 30s. per ton less than the cost of any good brand of English Linseed Cake, so that on a four-ton truck of Cake a saving of £6 is effected.

But this is not all; we maintain that cattle can be fatted more expeditiously on "**BIBBY**" **CAKE**, which effects a saving of both time and other keep.

But let us waive the latter point, for the money saving alone is well worth the feeder's attention.

We supply the whole Cakes, or in the form of Cakettes, as may be desired.

We also supply our famous **DAIRY CAKE** in Cakettes, Whole Cake or Meal, and we believe better value for Dairy Cows is not to be obtained than we are now giving in out well-known **DAIRY CAKE, CAKETTES, and MEAL.**

Bibby's Quarterly.

The new number of BIBBY'S QUARTERLY, edited by our Mr. JOSEPH BIBBY, is now out, and can be had during this month at all Smith's Bookstalls, price 1/-.

There be those who say that BIBBY'S QUARTERLY is the best periodical which comes into the farmhouse, but there be also gainsayers who affirm that if it dealt more with live stock, and less with high ethics, it would be more acceptable to the average farmer; and we are rather of that opinion ourselves, but the Editor tells us that he edits BIBBY'S QUARTERLY to please himself, and we have to leave it at that; should, however, any reader of BIBBY'S QUARTERLY make a purchase at Smith's Bookstall, and is afterwards doubtful that he has got his shilling's worth, we undertake to make matters straight with him if he apprise us of his dissatisfaction within the present month.

VESTA CAKES and MEALS.

In order to enable us to supply clean Cotton Seed and a Cotton Cake of good quality we have taken over a mill lately fitted up with the very best modern machinery, which enables us to sell at the lowest possible and at the same time turn out an Undecorticated Cotton Cake practically free from LINT, DIRT, and SAND.

The Cakes are branded "VESTA" PURE.

Buyers of the "VESTA" FEED CAKES can have the Cottons shipped at same time, thus saving any delay.

Blackstock Street, LIVERPOOL.

HOW TO SECURE

Healthy, Thriving, Profitable

CALVES.

USE

SILCOCK'S

SOLUBLE

CALF MEAL

The most reliable and economical on the market.

BUT

DO NOT MAKE THE MISTAKE

of discontinuing its use too soon. The trouble and expense will be well repaid by giving it until the Calves are 9 or even 12 months old.

Price ***12/6*** per cwt, carriage paid. Send a trial order,

R. SILCOCK & SONS, Union Street, LIVERPOOL.

Wonderlyk 'Warble' Preventitive. If the Warble Lumps have appeared in your stock, dress the affected part with our Preventitive at once. This will prevent further damage and save you money. In any case apply a dressing now, and another in April, to prevent any further trouble. Full directions for use are sent with each gall. drum. Price **4/6** per gall. delivered free. One drum will suffice for a large herd.—Sole Proprs., **Ralph Rigby & Co.** Mfg. Chemists, **Walsall.**

In writing to advertisers readers will confer a favour by mentioning the "Mark Lane Express" as the source of their information.

WINTER OATS OR WHEAT.

A great many heavy-land farmers have substituted winter oats for wheat in their rotations in recent years. There are several reasons why. Chief among them is the low price of wheat, and the fact that unless about an eight-quarters crop to the acre can be grown, or the straw can be marketed, there has been found to be little or no profit in growing wheat. Then there is the larger yield of grain of the oats when there is only low medium-class or ordinary farming. They also, owing to heavy weight to measure, frequently sell for about 24s. per quarter, when such wheat as could be grown only commands three or four shillings more. In the next place, the land is occupied a shorter time, winter oats being harvested at least a fortnight before wheat, and frequently being taken from the ground early enough in July for a turnip crop or a planting of kale seedlings to be put in. When this is not required, the extra time is still valuable for fallowing, especially if the soil happens to be at all foul and in want of cleaning. For soils subject to charlock there is another advantage of no mean character, for the winter oats, together with all the charlock and other annual weeds in full growth, might be fed with sheep during the last half of April, or even in the first week of May, and a second plant of oats would spring up afterwards to have satisfactory growth for the corn crop.

Owners of breeding flocks frequently grow winter oats solely to serve the object of their serving as a provision of sheep-feed for that usual period of scarcity. Growers having no sheep might often secure a considerable profit by buying a sufficient number to feed their oats within the prescribed period, for if given auxiliary fattening food they could be finished off on grass or some other green crop afterwards.

In the autumn of 1904 a great many farmers who for several previous years had been growing winter oats instead of wheat, changed back again because, owing to the great deficiency of United States crops, a great rise in wheat prices was anticipated. The returns of last June gave an oat deficiency of 201,586 acres for Great Britain compared with the previous year, while on the other hand the increase in the wheat area amounted to 421,701 acres. The market advance was not so great as expected, and after harvest prices fell back well-nigh to the old low margin. There are this year abundant supplies of bread corn to come from across the Atlantic, but, on the other hand, failure from the Russian dominions. The autumn seeding season is a particularly fine one both for wheat and winter oats, and how far, or by what considerations, one crop is being preferred to the other, it is impossible to know. Some soils are more kindly for the one grain than the other, and certainly when such is the case this should be allowed to determine matters far more than speculations as to future prices, the most probable of which are uncertain. Then there is the still more important consideration of climate, which has always caused Scotland and Wales to grow more oats and less wheat than England, and the four northernmost English counties have climatic conditions more akin to the state of things in Scotland than that of Southern England. Still, wheat is the hardiest of all the cereals, and will withstand the severest winters in situations where farmers would deem it unsafe to attempt the growth of any other cereal planted previous to February. Thus it will be seen that there are several considerations bearing on the selection of one of these crops rather than the other, which should be alone determined by the peculiar circumstances of the farm itself.

The King's Birthday Honours.

We were pleased to see that the list of honours issued in connection with His Majesty the King's Birthday on Thursday contained the names of one or two gentlemen connected with our greatest industry. Among the new baronets figures William Beilby Avery, of Oakley Court, Windsor, whose name is associated with the well-known firm of W. and T. Avery, weighing machine and scale manufacturers, of Birmingham. Sir W. B. Avery is a large landowner, and takes an interest in the farming industry, and his name, if not he himself, is a familiar one in agricultural circles.

Then, in the list of new knights, we come across the name of Professor John McFadyean, head of the Veterinary College at Camden Town, and one of the most prominent figures in veterinary circles. Continuing our search, we did not notice another name well known to the agricultural world until we came to the list of C.M.G.'s, and amongst these we noticed that of William Saunders, Esq., LL.D., Director of the Experimental Farms of the Department of Agriculture, Canada. Mr. Saunders has done some good work in our ever-increasing and popular possession across the herring pond, so that the honour is well-deserved. No other gentlemen connected with farming matters figure amongst this quite ordinary list of Birthday Honours.

Ploughman's Valuable Find.—Whilst a ploughman was at work in one of the fields at Smalley Bight Farm, Stanley, Wakefield, his ploughshare struck an earthenware vase, and exposed to view a large number of bronze coins, which must have been buried in the earth for something like 1,500 years. The vase, which was scarcely two feet below the surface of the ground, was unfortunately broken to pieces. The coins, of which there are some 6,000, all of bronze, date from the time of the Roman occupation of Great Britain, and many of them are in excellent state of preservation. Most of them are about the size of a sixpence, and a little, if any, thicker, while the largest are no bigger than a shilling. Some of the best preserved bear the name of Constantine, with the word Constantinopolis; while others have on one side a head, with the inscription "Urbs Roma," and on the other a design depicting Romulus and Remus being suckled by the she-wolf. Some were evidently struck in the time of Nero. The vase was about eighteen inches high, and of rough unglazed earthenware. No similar discovery has been made in the district before.

Seasonable Topics.

Farmers, as a rule, are slow to move, and they like to see the way fairly clear in front before they leave any beaten track they have traversed for long, but it is quite evident that the spirit of co-operation is catching on, and **Co-operation.** that the movement is making headway. Rarely does a Chamber of Agriculture meet now without the question of co-operation cropping up somewhere in the proceedings, and meetings to establish co-operative societies and further the end in view are frequent occurrences. It is well for co-operation that it is being pushed by real enthusiasts who do it in no half-hearted manner, but thoroughly believe in its benefits for the agricultural fraternity, including landlord, tenant, and labourer. Again, co-operation has for its supporter a no less important person than the President of the Board of Agriculture, who has expressed himself freely on the subject on more than one occasion. Indeed, it may be said that farmers are at last waking up to a sense of their own interests, and ere long co-operation will be as general as it is now novel.

Some sensation has been caused of late by accounts which have appeared in the press about a mysterious animal that has been doing considerable damage within the limits of the Badminton Hunt in Gloucestershire. **A Mysterious Animal.** Several persons are reported to have seen this mysterious creature, which kills sheep and sucks their blood, and then vanishes like Jack the Ripper, leaving no traces behind him. Just exactly what this animal is no one seems to know. It is not a fox, but whether it is a jackal or a wolf seems open to doubt, and certainly its fame has been spread through the reports of its depredations appearing in the daily press. It is really surprising how much the daily papers make of a little diversity of this kind, and for several days the misdeeds of the strange wild animal at Badminton occupied nearly as much space as was accorded to the crisis in Russia. Thrilling stories were told of farmers watching their flocks at night with flaring lights and loaded guns, and casual wayfarers catching sight of the strange animal as it flitted from place to place. We have not heard whether the creature has been killed, for less news has been forthcoming of late about it, so perhaps it has vanished again, and, if so, we hope the Badminton farmers will again be able to rest in peace.

As we are now in the season when fruit trees are being planted, the vexed question again arises as to whether newly-planted orchard apple trees should be pruned at once, or whether they should be left for a year before any **Pruning Newly-planted Fruit Trees.** shortening of the leading shoots is done. Opinions differ very much on this matter, and several of our leading fruit-growers argue that it is better to let a newly-planted tree remain for a year before it is pruned, as this gives opportunity for the specimen to get established at the root, and the growths which are made after the pruning is done are stronger than they would be if the pruning was done at the time of planting. Other experts contend that if other conditions are favourable, good results follow the pruning at planting time, and to leave a tree a year before any shortening is done means loss of time. As far as our own view is concerned, we have seen excellent results through leaving the trees a year before pruning, and we know trees that were pruned immediately after planting do equally well, so the advocates of both methods are in a measure right, but the people who are undoubtedly wrong are those who never prune newly-planted trees at all, and we should not like to say how many naked, lanky trees there are now which are the result of non-pruning after planting. We are disposed to take a modified view of the question, and if trees are planted in the autumn, which is undoubtedly the best time, there need be no hesitation about cutting the leading growths hard back before growth commences the following spring, and a compact head will be formed. If, on the other hand, planting is left till late in the spring, say March, we think it is better to leave the growths intact till the following spring, particularly if the situation is dry, because if a hot summer follows late planting the trees often break badly. Our rule, however, is to plant in the autumn, and shorten back the leading growths the following spring.

As some of our readers will doubtless be establishing young orchards or renovating old ones by putting in fresh trees, we would impress the importance of keeping the turf away from the stems for the first few years. Farmers **Fruit Trees on Grass.** sometimes complain that this means losing a considerable amount of grass, but we take it that every man who plants a fruit tree wishes it to do well, and consequently it is worth the sacrifice. When young trees are planted on grass the turf should be removed in a circle at least five feet in diameter. The top spit of soil to the depth of one foot should then be removed and placed on the side, and the subsoil to the depth of another foot should be broken up in the hole. The turf should then be cut up and placed over the lower spit, and, after putting back a portion of the top soil, a stout stake should be fixed to support the tree, and the latter be planted. The fibres should be laid out horizontally and be covered with not more than 3 in. of the best soil. As a rule, it is not essential to add manure to the soil at the time of planting, but a mulching on the surface conserves moisture, and encourages surface root action. Again we say that for the first few years weeds should not be allowed to grow round the tree, and a space of two or three feet from the stem all round should be kept clear of turf.

We had something to say a short time ago about the local pig clubs which have existed in Wiltshire for a long time, and there seems a prospect of extending the movement into the adjoining counties. At a well-attended **Pig Clubs.** meeting held in Gloucester a short time ago, the matter was discussed by a number of influential people, and it was decided to take steps towards the establishment of pig clubs in the latter county. There is certainly every reason for encouraging the industry of pig-keeping amongst the working classes, and it is desirable that they should go in for the type of animal which is likely to be the most profitable. In units they cannot do very much, but if village pig-keepers combine themselves into clubs, working mutually together, the benefits are felt and shared by all. It is hardly to be expected that cottagers and working people will establish these institutions of their own accord, but if persons of influence can be induced to set the thing going we do not think that the cottagers would fail to take advantage of the movement for their mutual benefit.

We hear a good deal about agricultural education in these days, and the necessity of instructing country children in rural arts and crafts, but the other day an instance came before our notice of this being done in a way that **Farm Boys and Animals.** does not appear to have occurred to educationalists, who have almost worn the subject threadbare. It was a case of a farm bailiff who has several growing boys, and, unlike many others of this craft, he intends to bring them up to his own occupation, and he deems it advisable that, above all things, they should be taught to look after animals properly. With this end in view, the man encourages his lads to keep pets, in the way of rabbits and pigeons, on the distinct understanding that they shall not be neglected, and in the farmyard there are calves, pigs, and lambs which are the special charges of the different boys. This is practical education, and the man informed us that if the lads were taught to look after the animals now they would realise the importance of it when, in due time, they came to have valuable stock under their charge. Individuality is a great factor in education, and the bailiff in question has given up a portion of his own garden to the boys. The latter have a plot each, which they cultivate under paternal directions, and a spirit of keen rivalry exists between them. The father argues, and rightly so, that if the boys work in his garden they look upon it as drudgery, but having plots of their own, they accept the responsibility, take a pride in them, and endeavour to surpass each other in the work. This strikes us as being a practical mode of rural education.

We do not know how far it is general throughout the country, but within the range of our own observations we have noticed a great scarcity of acorns this year. Usually about this time it is a common sight to see the children **The Scarcity of Acorns.** of the village out in the lanes and fields collecting up the acorns, which help to feed the cottager's pig; but this season they may search a long time without getting much in return. The scarcity of acorns may be also responsible for the absence of the hordes of wood pigeons which invarially swoop down on districts where oaks are plentiful when acorns are abundant, but, unfortunately they do not confine their attention to what the woodland offers in the way of food, as many farmers know to their cost. Speaking of acorns, opinions differ somewhat as to their value as food for pigs, but the cottager remembers that he used to collect them for his father's pig when he was a lad, so he takes it for granted that the custom should be continued in his family.

FOREIGN CROP PROSPECTS.

FRANCE.—Mild, rainy weather succeeded the recent cold spell, retarded field operations, and also was unsuitable for wheat threshing. Satisfaction is expressed, however, at the fact that the first sowings of wheat, rye, and barley are germinating nicely owing to the milder weather. The potato crop is about all gathered, and turns out very well.

BELGIUM.—The young crops are coming up well, favoured by mild weather with light rains.

HOLLAND.—The weather has been propitious for the autumn-sown crops, which promise well so far.

AUSTRIA.—Fine weather has prevailed during the past week, and consequently field work, which was greatly in arrears, has been facilitated.

GERMANY.—There was a change in the weather from cold and rain to more comfortable conditions, which have much helped the progress of field work and winter sowings.

SPAIN.—Dry weather has delayed sowings in various parts of the Peninsula, and the province of Badajoz in particular would benefit much by some rain. The sowings in the districts of Tejares and Valladolid are nearly concluded.

CANADA.—Advices from Toronto show that in some parts of the province rain has fallen and the roads have begun to break up. In some rural districts more rain is badly wanted, the land being too dry for the plough, whilst the wells and springs require replenishing. A revised estimate by the North-West Grain Dealers' Association of this year's crop in Manitoba, Assiniboia, and Alberta, gives for wheat—acreage—4,019,000; yield, 21.6 bushels per acre, total bushels, 88,810,400.

UNITED STATES.—The *Cincinnati Price Current* of yesterday says that the wheat crop maintains its excellent position, and there is almost a complete absence of reports of fly. There is continued disappointment over the yield of maize and the excellence of the quality of the grain.

ARGENTINA.—Weather and crops generally are satisfactory, particularly within the last few days. This news is qualified somewhat by the intelligence, however, that locusts endanger the growing maize crop in the Provinces of Santa Fe, Cordoba, Saint Luis, and Mendoza.

INDIA.—From the Viceroy a telegram, dated November 4, was received in which it is stated that crop prospects for Bombay had greatly improved in Deccan and Karnatak, through rain which had fallen the previous week. More was wanted, but there was no cause for serious anxiety. The conditions were unchanged in the United and Central Provinces, where no rain was reported. Spring sowings had germinated well, but rain was much wanted for rice and other standing crops. In Rajputana, also, there was no rain, and harvests in progress showed poor outturn. In Central India, the spring crop prospects were unfavourable. Slight and partial rainfall in Hyderabad, and spring crops and sowings retarded in parts. Bengal has had good rain, and the crops promise well, whilst in Madras and the Punjab rain was needed, but the general prospects were satisfactory. Private advices received since were reporting further beneficial rains.

AUSTRALIA.—Fair weather for the young crops throughout the Commonwealth was mentioned in the last report by our special correspondent at Sydney, with the addition that rain, however, was urgently needed in many parts. This, again, was modified by the statement that Australia was always crying out for rain, and up to date there was nothing to cause alarm for the coming harvest. Since the despatch, however, telegrams from both Sydney and Melbourne state that crop prospects have been greatly improved by good rains, thus ensuring a good wheat yield. This according to quite recent despatches is estimated for Victoria at 35,000,000 bushels, against the previous record year (1903-4) of 28,536,000 bushels. The South Australian yield is put at 18,000,000 bushels, the previous highest being 13,200,000 bushels in 1903-4. *-Dornbusch.*

The National Potato Society has had the happy idea of publishing an illustrated guide to its great show in the Horticultural Hall, Vincent Square, Westminster, on Thursday and Friday, November 23 and 24. This gives a resume of the schedule, with the judges who will officiate in the different classes, an alphabetical list of stand holders, particulars of excursion trains, notes of conference and committee meetings, etc.

Agricultural Politics.

BY A LOBBYIST.

I will again risk the criticism of those estimable persons who do not agree with my assertion that Colonial preference would, with the illimitable fertility of Canada brought to the very doors of the home producers, operate to the hurt of the British farmer. My hardihood is attributable to the emphatic association of the Minister of Agriculture with this position. Mr. Ailwyn Fellowes cannot for a moment be said to belong to that class of politicians who regard Free Trade as *sacro-sanct*, and any meditated disturbance of it an act of greater impiety than sacreligious treatment of the Ark of the Covenant. Neither has he any ineradicable objection to tariff reform or to a policy of retaliation against the tariff-imposing foreigner, a fact of which his membership of the Government is a sufficient evidence. However, he is convinced that the Colonies would, under the scheme of preference, "soon be able"—I quote the Minister's actual words—"to supply every bit of wheat that this country requires." And so observant a man as Mr. Fellowes cannot be indifferent to the fact that Canadian statecraft is already making preparations with a view to supplying very much more than the wheat we require. Canadian agents are at this moment carefully studying what I may describe as the general produce markets with a view to meeting their requirements. Of course, I am not, and certainly Mr. Fellowes is not, indifferent to the value of uniting the Colonies to us by a more tangible and practicable bond than that of sentimental loyalty. It is a Shakespearean axiom not to heat the furnace for thy foe so hot that it doth singe ourself. And in forging this bond we must see that it does not mean our disaster.

• • •

Of course, the danger may be capable of avoidance. It may be even a phantom of a too-sensitive imagination—though, by the way, I should not say that Mr. Ailwyn-Fellowes is the kind of man to be misled by will-Fellowes is the man to be misled by will-omened suspicion is justifiable is deepened benefit to agriculture. Yes, it might. But gonists of the new economy have refused to deal with it. The late Mr. Clare Sewell Read certainly believed that the danger has not the grim and sinister character some of us believe it possesses; but, excellent as was his position and authority, he could scarcely be said to be representative of Mr. Chamberlain. Now, the right hon. gentleman is himself to speak in Kent. Surely a meeting in such a county should be the fitting occasion for a careful exposition of the new purpose, so far as it affects the farmer. We want something more than the vague assurance such as we have recently received from Mr. Akers-Douglas that tariff reform would be a great benefit to agriculture. Yet, it might. But there is tariff reform and tariff reform. Would that tariff reform be a great benefit to British farmers which, whilst penalising foreign competition in the British markets, would deliberately and systematically encourage a Colonial rival of limitless resource, of disciplined method, and who would be able to present his products at a cheaper rate than the British farmer? This question is not antagonistic to the Protectionist principle. So far is this from being the case that it suggests rather that the Protectionist principle is to be really evaded. Will Mr. Chamberlain devote himself to a reply to this interrogation, an interrogation inspired by no querulous objection to his general purpose, and which possesses men in sympathy with his main anxiety to conserve and preserve Britain's industrial position?

• • •

"One of his last acts," said Lord Curzon, in bidding farewell to Bombay, "was to propose to the Secretary of State the establishment in every province of an agricultural college, with a research station and a farm attached." This is for India. When will the Premier of England, or the Minister for Education, be able to make a similar announcement? Of course, it would be held to be an act of unwisdom to establish colleges under the ægis of the State. Well, it may be. Still, if we had an institution or institutions to which entrance should be by a competitive examination—which should be in the nature of a reward for special aptitude revealed in other schools—we should have taken a great step towards that proper State recognition which the first traditional interest of the country deserves. This action of Lord Curzon's is of the more importance as revealing that very soon the centre of the Imperial fabric will be alone in the somnolent indifference with which it regards the agrarian weal. If we had in this country an agricultural grant proportionately of the same extent as that given to Ireland, we should be able to secure an equipment and a machinery which would be of the utmost value to the farmer. The British Board of Agriculture would then be able to enter—and this was the original purpose in its establishment—into the daily life and weal of the British farmer.

• • •

In reviewing the birthday honours' list, one thought impressed itself upon me. Why is it that agricultural activity or agricultural research is not now deemed worthy of honour? Every interest but that of agriculture would seem to have been recognised in this honours' list. Personalities in benevolence, patriotism, science, medicine, shipping, commerce, finance, the law, politics, the services, and municipal enterprise, have been selected for titular distinction; but you cannot discover in the long array of names one gentleman who owes the favour to his interest and enterprise in either the practical or the scientific work of agriculture. Of course, no one for a moment would attribute this to want of sympathy on the part of his Majesty. If King Edward's title in the international sphere is that of "The Pacificator," in the rural and agrarian sphere it is that of "The Farmer King." The incident is simply another evidence of the apathetic attitude of the State towards agriculture—an apathetic attitude which has certainly at last bred a spirit of protest and mild rebellion. When agriculture has the assertiveness of the other interests which have again received the rolay smile, then agriculture will be recognised.

• • •

It is at least a gratifying fact that statesmen now comprehend that agriculture is a profitable theme for oratorical attention. The fashion of verbatim reporting of men of Front Bench rank has gone out. Here was the *Times* of a few days ago content to discuss a Minister holding the rank of Secretary of State for India in twenty or thirty lines. However, the perusal of the full reports reveals that agriculture is almost invariably one of the subjects selected for more or less illuminative consideration. This, I may say, has been particularly the case with Mr. Brodrick and Mr. Akers Douglas. This action of theirs is—I hope this assertion will not be regarded as an impertinence—is of more moment than the speeches of the statesman. I do not in the case of the Ministers I have indicated accept the incident as an evidence of the self-reproaching remorse at the Government neglect of the interest. I rather prefer to regard it as an assurance that a future Conservative Government would not consent to a repetition of this neglect. Mr. Akers-Douglas would appear to look to tariff reform as the means of agricultural redemption; and it is conceivable that under certain conditions this would be so. The farmers, however, need other things. Will the Home Secretary tell us what is his attitude towards the Darlington platform? This is the irreducible minimum of rural reform, and no man with any intimate knowledge of agriculture should find its sensationless propositions impossible of acceptance.

• • •

"The Darlington programme!" "Yes, of course," said Mr. Dudley Ward, the Liberal candidate for West Somerset, "I accept it Who could not?" In this optimised opinion of Mr. Ward's, whose significance is all the greater, apart from his intellectual gifts, in that he is fighting Sir A. Acland-Hood, Mr. Dudley Ward reflected the view of the general Liberal party. Fighting a purely agrarian seat, he regards the agrarian programme as little more than the ratification of a platitude We are forming a farmers' organisation. Why not a farmers' programme beyond which the most timid man would advance? This is the attitude of Liberalism as indicated by Mr. Dudley Ward. Liberalism and wise Toryism are with the farmers in this project, and wish a more defined attitude on subjects of moment. I know that this is the position of Conservatives like Sir John Dorington.

MILLING.

Flour has advanced at least 1s. per sack of 280 lb. during the past fortnight in sympathy with wheat. Ogals of all kinds are making good prices, which will improve throughout the winter. There is a large demand for coarse makes, especially broad bran. Some of the large port millers are doing a very good export trade in the latter. English wheat has been coming to the mills in large quantities and in very satisfactory condition, except when the weather has been very damp, which always affects that cereal. Being of a soft nature it takes up moisture faster than most foreign wheats, and in wet weather the yield of the mill is generally lowered. Still, there has been little to complain of, and many millers would like to have a good deal more English wheat in their grist than they can obtain under present conditions. No wheat in the world is able to impart such a sweet, nutty flavour to the bread much from it, and it is much to be regretted that farmers are not encouraged to grow a great deal more.

Grading and Sizing in Flour Milling.

The process of grading, or sizing, is an important operation, both in the cleaning department and in the mill. In fact, the principle is applied throughout many of the different operations in the manufacture of flour. Upon being received at the silos, foreign wheat should be passed over a warehouse separator in order to give it a preliminary cleaning before storage. By this operation all the worst impurities are removed, and the wheat will be much less liable to deteriorate while in store. Very often the development of heat is traceable to an abnormal admixture of impurities. The warehouse separator is a most useful machine, and should occupy a place in every mill, large and small. It should have two sieves and a double aspirator—that is to say, the dirty wheat should be aspirated when it goes on to the machine and also when it leaves it. By treating it in this way all dust, chaff, and lighter impurities are, to a great extent, eliminated. The feed should be arranged to extend the whole width of the sieve, in order that the current of air may freely act upon it. If No. 14 or No. 15 zinc be put upon the top sieve, according to the size of the wheel, all the impurities larger than the latter will tail over the end, while the wheat and everything smaller than wheat will pass through the holes. If the second sieve be covered with No. 8 or No. 9 zinc the wheat will pass over the end, and everything smaller will pass through. This secures a very good preliminary cleaning, after which the wheat may be safely stored for a time, unless it is of a soft nature, and then it will need careful attention; otherwise it will heat or mould.

Grading for the Extraction of Cockle and Barley.

When the wheat is to be ground it is commonly passed over a milling separator, so as to make a more thorough separation of the impurities. A grader should follow this machine, to size the wheat, because it will be found that, practically, all the large wheat will contain the barley, if such exists as an impurity, while the small wheat will contain all the cockle. The medium size will generally be found to be practically free of both impurities. Sometimes, however, the grader is combined with the milling separator, and the combination provides a very useful machine. A sieve covered with No. 10 or No. 10½ zinc would pass over all the large wheat to barley cylinders, and another covered with No. 8 or

No. 9 zinc would fall over the small wheat to cockle cylinders. Yet another covered with No. 6 zinc would make a separation of the broken wheat and seeds from the dust and smaller impurities which would pass through.

Grading for Rye Extraction.

Again, it is absolutely necessary to grade wheat into three sizes for the extraction of rye, an impurity which approximates so nearly to the different sizes of the wheat, principally Russian and Danubian, which contain it. If three sizes of the wheat are made, the large rye will go with the large wheat, the medium with the medium wheat, and the smallest with the smallest wheat. All three sizes will approximate in length, both as regards wheat and rye, but the latter, being thinner than the wheat, will pass through slots on the rye cylinders which will not admit of the wheat. The thicker and shorter the rye, the more difficult it is to make a separator.

Grading for the First Break.

It is customary to grade wheat before it passes to the first break rolls for reduction. In the bulk there will always be found large and small grains of wheat, and, if not graded, the former receive the benefit of the first reduction. If the rolls are set properly to act on the large grains, they are too open for those which are smaller; if they are set to suit the small grains, the large ones are broken up too much. If there is a compromise, none but the medium-sized grains are properly handled. Grindage are properly handled. Grinding individual wheats and mixing the flours from them was the rule in the earlier days of gradual reduction, but that was when conditioning was almost unknown. Now, by the application of water and heat, all the wheats in a mixture can be brought into like condition, although it must not be supposed that they are all cleaned and conditioned together. That depends entirely on their structure and individual characteristics. In a four-break system, working on mixed wheats, the rolls taking the large size might be corrugated 8 to the inch, and the small size 10 to the inch. The same corrugations would do for soft wheats, like English.

Grading for Purifiers.

These are given as examples of grading in the course of flour manufacture, but the process of sizing is going on, more or less, from the time the graded wheat enters the first break rolls until the flour finds its way into the sack. The middlings from the break rolls, after being dusted, are graded into several sizes for so many purifiers. In the early days of the system, this grading was done upon reels, but the process was slow and tedious. Now the plansifter performs all these operations in a very perfect manner. Good results, too, can be obtained on rotary sieves and inter-elevator reels. The system and the manner of operation on all flour milll products may vary, but the principles underlying those operations are always the same.

MILLER-FARMER.

Agricultural Imports.

The following is an account showing the quantities of certain kinds of agricultural produce imported into the United Kingdom in the week ended Nov. 4, 1905, together with the quantities imported in the corresponding week of the previous year:—

NORTHERN NOTES.

Early sown wheats usually germinate more quickly than those put in later, but, considering the favourable character of the season, it is somewhat surprising that there is a marked difference in the periods taken by the different sowings to make their appearance above ground. The growth of the September wheats was very rapid, and some fields will become "winter-proud" if there be no real frosts until after this month is out. But the fields put in a month ago are still brown and bare, and it is evident that though the soil retained considerable heat, yet the withdrawal of part of the sun's heat, and the advent of cold showers of sleet and of hail, have very perceptibly retarded the process of germination. Birds—particularly larks—have caused considerable damage to the young plants, and the operation of the laws relating to education render it increasingly difficult for the farmer to obtain boys to scare birds. The larks that are causing the damage are not of local origin, they are of foreign extraction, and have come over the water, and however strongly a farmer may uphold the doctrines of Free Trade in general, he strongly desires Protection against foreign larks.

Speaking of birds, it seems that the time has come when the agriculturist should protest against the senseless policy adopted by some County Councils. There are those who would even protect the rook (common crow) and the common house sparrow, and if it were possible would make it an offence for a farmer to kill these birds on his own land, and they contend these particular birds never do perceptible harm. No reasonable man would ever desire to decrease the numbers of most varieties of feathered songsters, but there are some birds whose habits cause much damage to the farmer. It was no doubt wise to give to local authorities (County Councils) great powers in the administration of and in the matter of the extension of the Wild Birds Protection Acts, but it seems that some of the faddists are determined to ride their hobby-horses to death.

From time immemorial it has been customary to employ boys to scare birds from growing crops in their earliest stages, but it is becoming increasingly difficult to obtain boys for such work, and to employ men at men's wages for the purpose is expensive The effect of the measures adopted to promote elementary education in England is to prevent farmers from employing any perceptible amount of child labour. There were many subsidiary matters for which the employment of children was especially suited, and the earnings of those children formed an appreciable and welcome addition to the income of their parents. But all this is changed now, and this at the instance of those who contend that the father of a family should always be able to earn sufficient for the due maintenance of his children. Some of us think it would have been wiser to have first taken steps to secure that the father's earnings were sufficient before depriving him of any of his extraneous income.

We hear much about the increased cost of education, and the effect of the recent Education Act is seen in the ever-increasing precepts of the county councils, and we grumble and continue to grumble, although we fully believe in the blessings of education, and also believe, with certain reservations, that it is the duty of the State to give each child in the community a reasonable education. But the farmer finds only bitter irony in the situation when he endeavours to engage the services of children whose education has been received in a school mainly supported by rates upon land, and learns that the brightest and best of them despise the humdrum life of the farm servant and elect to go into the towns and follow commercial and industrial pursuits.

There are few farms now on the market; the majority of those which will change hands at Lady Day (the usual term-time in the North) are already let. There were fewer notices given than usual, and there has been a strong demand for the farms that were at liberty. This certainly does not look as though agriculture was depressed, but the key to the situation is found when it is noted how many persons previously engaged in commercial and mercantile pursuits and in trade are competing for farms, especially the smaller farms of from one hundred to two hundred acres. Many of these outside competitors have made their pile, others are fairly well-to-do, and all are possessed with an innate confidence in their ability to succeed in the management of a farm, and they are usually quite willing to give any rent the landlord or his agent requires. They go into the business, and for a time delude themselves by imagining their "improvements" will lead to future profits, but, as a rule, their after-success is not great.

The President of the Board of Agriculture in Lincolnshire.

The Right Hon. Ailwyn Fellowes, M.P., President of the Board of Agriculture, was the chief guest at the dinner held in connection with the annual Bull Fair at Alford, Lincolnshire, on Tuesday, and amongst others present were the Duke of Portland and Lord Willoughby de Eresby, M.P.

The Duke of Portland, in proposing success to the Lincoln Red Shorthorn Association, referred in congratulatory terms to the success of the Alford bull fair. The efforts of the committee had been furthered, not only by the proprietors of cattle, but by the townspeople as well, and they were all trying to make the bull sale a distinctive feature of present-day agriculture. In the past it had been a frequent reproach that the farmer was an unenterprising fellow, that he had no initiative, and was content to run in a groove. Here they had a distinct proof to the contrary, and he was certain the charges of doing nothing could not be brought against the farmers of East Lincolnshire. Having realised that the days of profitable corn growing were now at an end, they had grasped the fact that their rich marsh land was specially fitted for rearing stock, and they already possessed in the Lincoln Red Shorthorn one of the finest kinds of cattle in existence. But the best specimens of the breed were in the hands of a comparatively few individuals, and the breed would become better when young bulls of moderate prices were available for general use. It was to remedy this defect, as well as to encourage the breeding of bulls of special quality for home and export purposes, that the Alford bull sale had been organised. In 1889, when the first sale took place, twenty-seven bulls fetched between £400 and £500, whereas last year £2,521 was paid. His Grace concluded by welcoming Mr. Fellowes, who was a well known and practical agriculturist before going to the Board of Agriculture, and by touching upon the subject of agricultural co-operation, which would enable farmers to trade on much more advantageous terms.

Mr. J. Evens replied, urging that the magnificent example which the Duke of Portland set in taking a personal interest in the welfare of his tenants should be followed by other landlords. The Duke was an ideal landlord, as was shown at the Welbeck Show. Mr. Evens also thanked Mr. Fellowes for his firm attitude in prohibiting the importation of diseased foreign cattle.

Lord Willoughby de Eresby, M.P., in proposing "Success to Agriculture," said that agricultural discussions in the House of Commons were seldom edifying or helpful. It had been said that the Diseases of Animals Act was merely a dodge of the British agriculturist to raise the price of meat, but this he strongly denied. All they asked was that their flocks and herds should be protected from disease.

The President of the Board of Agriculture, who described himself as an East Anglian agriculturist, pointed out that it cost no more to keep a good animal than a bad one, and therefore it was necessary for agriculturists to do everything possible to improve their live stock. Selection of animals was of the utmost importance, as the yield of milk could be enormously increased thereby. The action taken by successive Presidents of the Board of Agriculture in stopping the importation of diseased cattle deserved the gratitude of every live stock owner. It was deplorable that during the past few weeks men who would no doubt hold high office in a new Government should have openly stated that this question ought to be amended; and consequently he looked with great apprehension on what might take place in the next few months. As long as he had the honour—and he supposed from all accounts it would not be long—of being head of the Department, nothing would induce him to ask the House of Commons to alter this law, which was one of the greatest safeguards the British live stock owner had. (Loud applause.) Cattle disease was now practically extinct in this country, and swine fever had gone down 39 per cent. in the first nine months of this year, compared with last. Mr. Fellowes appealed to his hearers to believe that the restrictions imposed upon the removal of swine were only put on by the Board of Agriculture owing to a strong sense of duty. What they wanted was to exterminate swine fever. With the disease now so largely decreasing their policy was to combine county with county, so that there should be free movement of swine between the two.

Turning next to sheep, Mr. Fellowes said that sheep scab had been reduced by 31 per cent. this year, as compared with last year. If any county cared to approach the Board for compulsory powers in sheep-dipping, they would be given. He strongly warned his hearers to do everything in their power to export only healthy animals, for if the present condition of affairs was allowed

to go on, especially as regards the Argentine, the fair fame of the British breeder would suffer.

From stock Mr. Fellowes passed to crops, and touching upon the increase of 29,000 acres of potatoes in Lincolnshire during the last few years, he cautioned them to adopt spraying as a preventive of potato disease. About small holdings, he did not seem very enthusiastic. In some districts he thought they would pay, and in some they were absolutely useless. (Applause and cries of "No.") The enormous local burdens placed on the land would kill small holdings in the same way as they were killing farming. Despite the relief afforded by the Agricultural Rating Act, the rates on his own land in Norfolk had more than doubled during the last few years.

Alluding to General Booth's scheme for sending labourers to the colonies, Mr. Fellowes expressed the opinion that it would be much better for agriculture if they could be kept at home. He thought co-operative associations were of the greatest use to farmers, especially in the saving of railway rates. Complaints were often heard that the railway companies favoured the foreigner, as against the home producer, but it had been extremely difficult to get any evidence of that, although attempts had been made. If any agriculturist had a grievance about railway rates, the Board of Agriculture would willingly consider it and would arrange for an official of the railway company concerned to meet a representative body of the agriculturists of the district. (Applause.) What was chiefly wanted was cohesion amongst agriculturists, both in and out of Parliament.

Messrs. J. Ashworth and Sons' Root Competition.

Messrs. Joseph Ashworth and Sons, Limited, Bone and Manure Works, Frodsham Bridge, via Warrington, announce the following awards in their competitions:—

WHITCHURCH, ELLESMERE, AND BRONINGTON DISTRICTS.

Clovers.—Messrs. F. Willis, Joseph Williams, and Mrs. Allwood; 2, Messrs. G. Parry, W. Boughey, A. Hughes, and Joseph Williams; 3, Messrs. John Edwards and W. H. Edwards.

Swedes.—1, Messrs. Thomas Williams, Joseph Siddall, Thomas Emberton, and J. Simcock; 2, Messrs. John Lea, William Jones, E. Rogers, and E. Bright; 3, Mr. A. Shaw; champion, Mr. Robert Wade, Aston Grange, Preston Brook.

Mangolds.—1, Messrs. Thomas Hulse, John Beardmore, and Frank Batho; 2, Messrs. John Williams, R. Marsh, and Hockenhull; 3, Mr. Joseph Reeves.

STONE, STAFFORD, AND NEWPORT.

Swedes.—1, Mr. Elijah White; 2, Mr. James Bassett; champion, Mr. Robert Wade, Aston Grange, Preston Brook.

SANDBACH, MIDDLEWICH, AND HOLMES CHAPEL.

Clover.—1, Mr. James Davenport; 2, Mrs. Mason and Mr. Joseph Slater; 3, Mr. Thomas Leech; 4, Mr. Arthur Newton; 5, Mr. George Webb.

Swedes.—1, Mr. Thomas Hayes; 2, Messrs. Thomas Bell and Steinway Bowers; 3, Mr. William Buston; champion, Mr. Robert Wade, Aston Grange, Preston Brook.

Mangolds.—1, Mr. Joseph Frith; 2, Mr. Joseph Buckley; 3, Messrs. Clement Poffey and William Hooley.

Clover Roots.—1, Mr. Henry Hope; 2, Mr. Henry Hooley.

ALSAGER AND CONGLETON.

Clover.—1, Mr. William Thorley; 2, Mr. William Whitehurst; 3, Mr. J. W. Chadwick.

Swedes.—1, Mr. Thomas Lomas; 2, Mr. William Rorson; 3, Mr. Joseph Dale.

CREWE AND NANTWICH.

Clover.—1, Mr. James Sadler; 2, Mr. S. Holland.

Swedes.—1, Mr. Thomas Parton; 2, Mr. J. Hockenhull; 3, Messrs. Thomas Brassington and Thomas Wood; champion, Mr. Robert Wade, Aston Grange, Preston Brook.

Mangolds.—1, Mr. Fred Wood; 2, Mr. Vernon Smith; 3, Mr. T. G. Parton.

MALPAS, FRODSHAM, TARPORLEY, AND CHESTER.

Swedes.—Champion, Mr. Robert Wade; 2, Miss F. Jones.

SHREWSBURY AND WESTBURY.

Swedes.—1, Mr. William Davies; 2, Messrs. Robert Roberts and John Powell; 3, Messrs. Edward Edmunds, John Bowdler, J. E. Gwynne, and Miss Moyle; champion, Mr. Robert Wade, Aston Grange, Preston Brook.

AUDLEM AND MARKET DRAYTON.

Clover.—1, Messrs. John Heaver, E. E. Jackson, and John Simpson; 2, Messrs. William Hendley, H. F. Blackhurst, and William Hood.

Swedes.—1, Messrs. John Barnett and H. Cooke; 2, Mr. F. W. Furnival and Mrs. Major; 3, Messrs. Edwin Bourne and William Tapley; champion, Mr. Robert Wade, Aston Grange, Preston Brook.

Mangolds.—1, Sir George Chetwode and Mr. Jonathan Yarwood; 2, Mr. Fred Bickley and Mrs. Bebington; 3, Messrs. James Dodd and Daniel Eardley.

OTHER DISTRICTS.

SWEDES.

Penrith and Langwathby Districts: 1, Mr. John Burns; 2, Mrs. Bellas.

Warcop.—1, Mr. William Cleasby; 2, Mr. William Thorn.

Appleby: 1, Mr. Thomas Bell; 2, Mr. Thomas Graham.

Cockermouth: 1, Mr. Tyron Gill; 2, Messrs. Birkett; 3, Mr. Joseph Postlethwaite.

Lancaster, Cartmel, Dalton, and Ulverston: 1 Mr. George Hutchinson; 2, Mr. Henry Langhorn.

Fruit Grading in Herefordshire.—At a meeting of the Herefordshire Fruit Growers' Association, held at Hereford last week, a report was presented with regard to the Hereford Co-operative Fruit-grading Society. This stated that temporary premises were being used, but the railway company were erecting a permanent building at a cost of £500, with another £500 expended on the site and its preparation. The fruit received this season up to date from members amounted to 122 tons, out of which 119 tons had been graded and packed. The number of packets sent off was 6,887

Midland Notes.

There is mist in the air to-day, and the sun is again invisible; while the land is still sodden with wet, and country roads and lanes are full of mire. Yet we have had glimpses of an Indian summer just enough to remind us that that beautiful but necessarily transcient season is due and may be with us any time for its brief stay of a few days. Whence did it get its name? There seems to be no doubt it was from the North American Indians, who commonly put off the harvesting of their small crops of maize in full reliance upon the coming of the brief second summer in November, which was consequently named after them. Upon the Continent one finds it known as the "old woman's summer," or "girl's summer," but everywhere its frail loveliness seems to awaken a certain sentiment of sadness. St. Luke's Summer, the Indian Summer, St. Martin's Summer—we are fortunate in their possession, and they serve to remind us of one of the beauties of our much abused climate, which is that our seasons are not violently and distinctly marked out, but gently pass into one another through intermediate stages full of a beauty that is all their own.

Proof of the fine season in mangels is found in the remarks of the judges in the Derbyshire Agricultural Society's competitions for growing crops, for they declare that in over thirty years' experience they never found so regular a plant or such an average of great weights. Swedes, especially in the south of the county, have turned out disappointing; but as all the competing crops of field cabbage run to over 40 tons per acre there will evidently be no shortness of fodder on well-managed farms for some time to come.

At a time when young farm hands are so scarce, and those with any real skill are scarcer, it is interesting to find a comparative youngster of 23 years running the old stagers hard in the same society's stacking and thatching contests, his task being the harder from the fact that all his ricks were set up on staddles only just exceeding three yards wide. Messrs. Barber and Walker, of Eastwood, Notts, entered some gigantic ricks in this competition: in three stacks in one yard the estimated quantity of hay is 530 tons, and two of them each measure 63 by 4 yards, by about 5 yards high. These stacking and thatching competitions might be more generally tried with advantage, for at a small cost in prizes they secure not a little benefit to the farmer in having his produce well secured and a general saving by neatness in the stackyard.

Two topics of much concern to agriculturists—motor traffic and animal diseases—have been before Midland County Councils at their quarterly meetings this week. The Staffordshire county authority has decided to cremate locally all animals which may die from anthrax; but the committee which is concerned with contagious diseases among stock has failed, so far, to come to any arrangement with adjoining counties in respect to the removal of pigs, Derbyshire having been approached without result. Mr. T. C. Smith, the chairman of the committee, is, by the way, evidently a very firm believer indeed in the virtues of rock salt, for he declared that as the result of his long experience he was convinced that when animals had access to it every day their owner need have no fear of blood-poisoning—in which, no doubt, anthrax was meant to be included.

The motor question came up indirectly before the same council when Sir Reginald Hardy mentioned the refusal which had been given to all requests for danger boards to be placed at dangerous corners and cross roads; but it arose in a more acute form at the Warwickshire County Council's meeting when it was proposed to purchase no fewer than 42,000 tons of material to be laid down during the ensuing year. This represents an increase of 9,000 tons on the present year, and, as the Marquis of Hertford observed, the great increase in traffic was largely motor traffic, which caused "immense damage." Lord Denbigh and Mr. L. W. Lowe both pleaded the cause of rural rate-payers, the latter putting the case in a nutshell when he declared that they "never used the roads less than now, and never paid more for them, and it was quite impossible for them to raise any more money." But it was all in vain, and the increase was voted.

One hears good accounts of the recently-formed Co-operative Fruit Grading Society in Herefordshire, which has already dealt with 122 tons of fruit this season from its members, and marketed 119 tons, representing close on 6,900 packets—no doubt on better terms than could have been secured by growers on the old haphazard system. The Society is now installed in temporary premises, but it was announced on Wednesday to the County Fruit Growers' Association that the railway company was putting up a permanent building at a cost of £500, with another £500 expended on the site and its preparation.

Nov. 10, 1905.

EAST ANGLIAN NOTES.

As the last of the harvest of the year is being gathered in and banked in long, low heaps in convenient corners by field gates or close at home near the farm buildings, we cannot but notice this year that an extra amount of golden straw is being utilised to protect these piles, and as fast as possible, on account of the unusual frosts at this period of the year, spades, handled by sturdy labourers, fling another foot deep covering of brown earth over the straw in order to secure the long pile of mangolds from what is now looked upon as a severe winter. But while these operations are going on we see this November morning a distinct emerald tint on the late ploughed and sown fields that proclaims the coming of another spring before the winter has hardly yet begun—for the winter-sown cereals have already changed the appearance of the scene. In this way Nature gives to man the agricultural art—and, indeed, all industries, a heart to persevere. Notwithstanding the words of Reginald Heber, written a hundred years ago:

> But earthly hope, how bright so e'er,
> Still fluctuates o'er this changing scene;
> As false and fleeting as 'tis fair.

To-day the writer of these "Notes" is despondent, for prices for British produce are not what was to have been expected in the early autumn. Why? Not for lack of quality! Not for want of commercial knowledge when selling it on our market! But because the burden of taxation is so great that there is no margin for existence. In November, 1805, wheat weighing 17 stone per coomb was sold at Norwich market at 30s. 1d., or £3 0s. 2d. per quarter, and meat was one-quarter of the present price per pound. Then we had not the great burden of the unemployed, as we have now.

Talk to the old crow-scarer, over whose head some four score years have passed, and ask him of the time when he earned his first wage by raising a shrill young voice to scare the birds from the same fields that now he is too old to plough, and he will state that his brothers and sisters who had "gone to town" in the old days knew not poverty, while those who were left at home had good wages and liberal masters. Yet even now we see him when bowed with age fallen back to the labour of his boyhood. But he has learnt to recognise the annual procession of migrant rooks which passes harmless overhead where he stands, for as each flock grows from the horizon he gets ready his old harmless muzzle-loader, and "bang" goes his pinch of powder as the birds pass on. So the old man is busy, and the stream of migration is neither checked nor quickened, although all must acknowledge the thieves grow more numerous round the cultivated patch because the arable area is so much diminished.

The growth of beetroot and the extraction of sugar therefrom has been an industry in England closely connected with East Anglia, and so far been a failure. It is not surprising, therefore, to learn that again for the same industry a site has been secured at Owston Ferry in Lincolnshire for the erection of a sugar beet factory. The new factory will be situated on the banks of the Trent and in the centre of one of those districts where alluvial plains reach away for many a mile. In the Fen district water carriage is cheap, so that this enterprise will be watched with keen interest.

Nov. 10, 1905.

Wheat Stocks in England.—At the Conference of the National Union of Conservative Associations to be held at Newcastle-on-Tyne this week, Mr. W. E. Riley (North-West Suffolk) will move the following resolution:—"Inasmuch as the rapid decline in the growth of wheat in the United Kingdom during the last thirty years, together with the meagre stocks of food-stuffs generally held by merchants and traders in this country, have become a source of danger which may at any moment develop into an appalling national calamity, this Conference urges upon the Government the imperative necessity of introducing such measures during the next Parliamentary Session, as shall lead to a large augmentation of the wheat stocks normally held, and thereby insure the nation against panic and famin prices in the event of a sudden stoppage of the supplies of sea-borne grain and flour."

The Royal Society and Aberdeen Angus Breeders.

SIR,—The breasts of all Aberdeen Angus breeders are doubtless now throbbing with a profound indignation at the action of the Council of our so-called National Society, in again contumeliously referring back to its largest and most important committee—Stock Prize Sheet—its recommendation that the request of the Aberdeen Polled Cattle Society should be conceded, and that the ages of A.A. cattle should be calculated from December 1 (its Herd Book date) instead of January 1. You are aware we have been fighting for our birthright at the Royal Show for many years past, every other society in Great Britain, including the Bath and West, the Royal Counties, the Highland Society having one and all granted it. It has worked well and without detriment or injury to our other grand breeds. Who are the 16 councillors who referred this recommendation back? Mr. Thornton we know, Mr. Palmer we know, and Mr. Greaves we know; but who are the silent 13 who are anxious to intensify past grievances and to accentuate old prejudices against the governing body? Their objection is based merely on sentiment, and is destructive, whereas the recommendation of the S.P.B. committee is practical, and would forward the work of reconstruction by a concession that would bring the society the hearty co-operation of the whole body of A.A. breeders.

And surely that is an object worth attaining at such a crucial period of its existence; harmony is strength, discord weakness. I fear there are still too many of the old regime on the Council. One of our leading A.A. men, in a letter to me, expresses surprise at Mr. J. Thornton's action; it did not come as a surprise to me, for he was adverse to the reforming spirit that came over the Smithfield Club a few years ago, and was one of the reactionaries who would have imposed rules to stultify the voting powers of its members. Besides, Mr. Thornton is not consistent; some years ago he suggested that December 1 should be the date for all beef breeds; he was not then the victim of red tape.

There is another way out of the difficulty. We should be content to have the date fixed as from the date of the holding of the R.A.S. show as is done at the Yorkshire, Northumberland, and Durham. Now he says it hardly seems just to give us our date, but if it is considered just by the Councils of all other societies, surely that overwhelms his contention; is his sense of righteousness greater than that of all others?

Mr. R. Palmer never showed much reforming zeal on the Council, and yet he is on the new, a fact he owes principally to the rule that every London member must vote for the full number to be elected—a Tammany method, "the whole ticket and nothing but the ticket." This is the rule that the members of the Smithfield Club denounced in no measured terms, and refused to accept at the great general meeting immediately preceding its incorporation. Why should such an odious method of voting have been allowed to be embodied in the rules of a regenerated Royal? Mr. Palmer, opposing the recommendation, however, was of opinion that if any alteration was made in this direction (viz., the December 1 date), it should apply to all classes of stock. To this no A.A. breeder would object; though to alter all the H.B. dates is not a feasible method of meeting so simple a difficulty; all we ask is for a date to be fixed that will not exclude over 40 per cent. of our cattle.

One can understand Mr. Greaves' perturbation and trepidation if Welsh cattle were to be compared to A.A. cattle two or three weeks older, "by a man going round the Royal Show not observing the fact in his catalogue"; he is also fearsome for the Council, and thinks it is unwise to bring a hornets' nest about their ears. Is not this "the phantasmagoria," I will not say "of a disordered mind," but of a timorous one? And yet he had heard a moment before from the lips of Mr. R. Stratton, that eminent Shorthorn breeder and experienced agriculturalist, that the concession granted by the Highland, the Bath and West, and other societies had worked well, "and damaged no one," there being no inter-breed contest.

What practical buyer wanting Shorthorn, Hereford, Angus, Welsh, or other cattle would take into consideration the difference of two or three weeks in age; it would be a very clever expert, indeed, who could carry in his mind's eye from shed to shed the difference in size that two, three, or four weeks would make in growth.

Buyers wanting Shorthorns certainly will not look at A.A. cattle, and A.A. buyers would certainly not look at Welsh cattle, although they are black, and who else could such a matter affect?

I cannot conceive that the opinion of Mr. Thornton, Mr. Palmer, and Mr. Greaves are representative of that of Shorthorn, Hereford, and Welsh breeders; their views are too narrow; surely there is room for us all.

Let me give an illustration of the injustice this rule exercises which is typical of many others: A bull born December 12, 1901, as a yearling was first at the Bath and West, Bristol, first prize and reserve champion male at the Royal Counties, but ineligible to be shown at the Royal because it was 19 days' too old; as a two-year-old he had to enter the lists in a class with a disadvantage of 11½ months; as a three-year-old he this year won the gold medals and championships at the Bath and West and Royal Counties; when shown at the Royal was unfortunately, through lameness, discarded, and although now at his zenith, cannot be shown at the Royal, 1906, or a later period owing to these age restrictions; consequently such an A.A. bull can only be shown on terms of equity one year at the Royal. For our best to be handicapped 11 months in the yearling and two-year-old classes and eliminated from the aged bull class may suit Mr. Greaves, and add to the prestige of Welsh cattle by the unobservant visitor who does not look at his catalogue, but it is an intolerable burden to an important body of breeders who are anxious to help in the resurrection of the Royal.

The thanks of every Aberdeen Angus breeder is due to Mr. R. Stratton, Mr. Rea, and their colleagues for their broad-minded recommendation to the Council in this matter, and they sincerely trust they will presevere in their action by further recommending a course that Mr. R. Stratton truly says "would do no harm to anybody," and would promote harmony

As facts speak louder, one has only to refer to the statistics for 1904 and 1905, kindly furnished by the able hon. sec. of our association, Mr. Pulling; statistics of other years speak as eloquently. So long as the Council wilfully blinds itself to the injury it is doing to our breed, so long will there be dissension and dissatisfaction; to exclude over 40 per cent. of our prize winners at other great shows from the Royal, proves unmistakably that it cannot be called a national show, and where our cattle are concerned is a mere travesty and farce; we have in the past strongly supported the society, and but for this narrow hard and fast rule should be an easy second in number of the beef breed exhibits; hitherto we have been loyal, but would the number of any other important breed society have shown so liberally under such monstrous conditions? I trow not. We ask for justice to be allowed to show our animals under the reasonable conditions of our Herd Book date to the detriment of none other.

We respectfully request the Council to exercise a little magnanimity, to put petty jealousies on one side, so that we one and all can work for the common weal, and weld the component parts of our diverse body into a solid homogeneous whole, labouring for its success and resurrection from the Slough of Despond. We cry aloud for our birthright; we can no longer be satisfied with classes for emasculated editions of the beef breed which is supreme in the great markets of the world.

It were far better in the interest of the breed that there should be no classes that pose under the present false pretence than the animals shown at the R.A.S.E. are our best and most representative.

If the new Council is to steer to success, it must remove the ban; a broad policy in this as in all other matters is the only road to prosperity and peace.

Trusting still that the sound practical common sense and the equity of the members of the new regime may rise superior to the occasion, I remain, yours respectfully, J. J. CRIDLAN.

Home Farm, Maisemore Park, Gloucester.

P.S.—Is it not remarkable no single A.A. breeder represents our interests on the new Council of 50?

Mr. Mannington's Hops at the Brewers' Exhibition.

SIR,—With reference to the remarks contained in your issue of the 28rd ult. on the "Hop Exhibits at the Brewers' Exhibition, 1905," I think that your "expert's" criticism is somewhat unfair. Last year his remarks exceeded fair criticism even more than this year, and why I should be singled out for such treatment I am at a loss to understand. I am well assured that you would not knowingly allow anything unfair to appear in your paper, and I think if you will compare last year's remarks with this year's you will agree with me that there is an undercurrent somewhere

A more representative body of judges than those who judge at this exhibition it would be impossible to find. I am quite aware that all exhibits are open to criticism, but let it be fair and above board. I beg to remain, yours faithfully,

ERNEST MANNINGTON.

[We are sorry that Mr. Mannington considers an "undercurrent" was responsible for the criticism we felt justified in passing upon his exhibits at the Brewers' Exhibition. He has, we think, in the heat of the moment, read more into the expressions used than was intended, and no doubt will be one of the first, upon more mature consideration, to withdraw the suggestion that our criticisms were prompted by unworthy motives. – ED.]

Farming in the North Cotswolds.

SIR,—The agricultural year just ended has been very variable. I am afraid a great many of the extraordinary yields of corn did not get beyond paper. Wheat hereabout is only average at present, beans (winter) good, ditto oats. Spring oats the worst on record. Few spring beans threshed, so cannot say. Barley 25s. to 30s., certainly under average. Best mutton good trade; beef very low indeed. Milking cows selling well. Store cattle very slow. Store sheep have sold well all summer. Ram trade has been good Most of the planting is now done, but some of it must have been much too dry. Roots fairly good, except early planted.

The weather has been capital for starting tegs on roots, and they are doing well. Grass going very fast—nearly over. People say we are always grumbling, and no doubt we have some cause at the present time. I am paying men to do boys' work—that is, to lead horses.

It is next to impossible to get plough boys Our far-seeing, education-run-mad people keep them at school until they are of no use to work; cricket and football seems more in their line.—Yours faithfully, H. D.

November 10, 1905.

Position in Hampshire.

SIR,—At this season of the year it is a very good time to report, as now the threshing machine has been around sufficient to enable us to form an opinion. I have the dealing with over 5,000 acres of corn of my own and other people's, and find that wheat is the crop of the season, and on some farms it has yielded fourteen sacks per acre where done well; some others only six sacks per acre.

Barley not much grown, only for feed Oats, where sown early, has proved about fourteen sacks per acre, but not so good a colour as last year.

Hay taken in good condition, but not a heavy crop, sainfoin being the best. The pastures are becoming bare owing to the frost of three weeks ago and now nearly every night stop all growths. Roots, where sown early are good, and done well All catch crops of mustard, trifolium, and vetches are doing well.

Sheep and wool have been selling for more money this year, but are falling now. —

Cows that are full of milk are wanted, but stores are not selling as well as they were a month ago In this neighbourhood the season will compare with any for the last ten years.—Yours truly, E. D.

November 10, 1905.

Cambridge Prospects: Too Few Sheep.

SIR,—The season, since harvest, in this district has been all that could be desired for farming operations. Harvest being gathered in fairly early gave the farmer a good opportunity to prepare his wheat land for drilling; and most of those who take advantage of time and season have pushed forward and got in their seed wheat early and well. The month of October throughout being exceptionally fine for outdoor work, a great many acres of mangold wurtzels have been clamped in fine condition; a better season was never known for these particular roots, as the crop on well-farmed land has been abundant—the produce good both in quantity and quality. Other roots for sheep feed are also looking quite up to the average.

Threshing has progressed most favourably during the past five or six weeks, and the yield of all grain, with abundance of straw, has been on the whole deemed satisfactory.

What our country really needs to crown a prosperous season is at least double the number of sheep, as so many farms, once well stocked with excellent flocks, are now destitute of that valuable animal, so beneficial not only to the owner but to the land on which they are needed. It is indeed most difficult to know how such farms can be worked at all from year to year without the aid

of a good flock of sheep. Better prices, as well as better yield, is what the farmer needs—the latter would be the natural result, of course, if more sheep were bred upon the land. J. C.

November 6, 1905.

Prospects in South Nottinghamshire.

SIR,—A slightly increased price for wheat will cause a larger acreage to be sown this autumn under remarkably favourable circumstances. In this district the best wheat is grown after mangel, but when the mangel has to be carted in wet weather, it is often impossible to work the land for the autumn corn crop. This year the roots have gone off clean and well, and the soil has ploughed up excellently for the seed-bed. More winter beans have been sown than I remember for years. Owing to slackening of bean imports, there has been a better demand for English beans, and a further inducement to sow beans has been the very low price for blue peas although they have shown an uncommonly sound sample. There appears to be a large stock left over from last year, and the low price of potatoes react on the peas.

A remarkably early series of frosts in October diminished the autumn keep in the pastures, and particularly in the seed land. Cattle will have to be yarded earlier than usual, but straw and root keeping is plentiful. Hay is good, but not great in bulk. H. S.

November 9, 1905.

Situation in Suffolk.

SIR,—Beetroots have been carried, and have come out a good crop—roots of good size. Turnips are scarce, more especially early ones; those that have a crop can secure a good price for same. Swedes for the most part are a failure.

As to wheat feeding, a greater part has now been planted, and the work on the farms generally is fairly forward. The threshing of barley has been very heavy, and a good many samples have found their way to Bass (Burton) at 31s. to 34s. Farmers speak of peas as being a poor crop. Wheat a fair crop of good quality. Barley and beans (winter) appear to be the best crops of the year. A large quantity of winter beans have been sold since harvest out of the county at good prices—beans generally considered to be the crop of the year.

Labour is plentiful, and several men in county parishes would be glad of regular work.

R. H. L.

Good Prospects in Warwickshire.

SIR,—The agricultural prospect is much better than this time last year. The harvest was rather catchy, but where the best use was made of the fine weather, both hay and harvest were secured in good condition. There were a few instances where a good deal of corn was much damaged, where opportunities of carrying were neglected.

The root crop generally is above the average, especially the later planted swedes and turnips There was a difficulty in getting a plant in the early part of the season, but when the failing crops were resown and kept free from weeds there is a very good crop. Unfortunately prices are very low: wheat about 28s per qr. and barley, except a few of best samples, 3s. or 4s. less than the wheat.

Best mutton sells fairly well, but beef is a very dull and unprofitable trade, many beasts are being sold at less than cost and value of cake they have eaten. There are a great many losses in some flocks of lambs from the usual autumn lamb disease (threadworm in the throat and windpipe), and in some cases the same trouble has taken the calves. C. P.

November 10, 1905.

Wiltshire.

SIR,—We have had a fine season as far as weather is concerned throughout 1905, and a very fine autumn to clean any foul land, and for putting in wheat for next year. Mangolds also have been got together clean, and not much labour required. Roots have also grown considerably of late; the crop up till now has done the cattle well, as it has been so dry. Fine rains have set in, which have been beneficial, as the wells and ponds were mostly dry, having had no vast rainfall for the last six months. The frosts, which have been lately severe, and were for weeks along May and June, spoilt the fruit crop, and also the barley. Very much corn does not yield nor answer expectations. J. BROWN.

November 5, 1905.

A Fair Season in South Wilts.

SIR,—The season has been a fair one, but the yield of corn and the prices are both disappointing. Sheep have been selling well all through. Cattle are cheaper, and milk is rather lower in price. Wheat sowing is nearly completed, and it has gone in well; there is plenty of hay and a fair supply of roots for winter feeding; but our wages bill creeps up year by year, and although there is a sufficient supply, there is no surplus. Rates increase rapidly, mainly owing to the expenditure on the main roads and education, both of which ought to be a National charge, and not a local one.

Milk and live stock is what agriculturists here exist by; corn is, so to speak, a bye product, and should disease of any kind attack our sheep and cattle the consequences would be appalling; and it behoves the Board of Agriculture to see that no risk whatever is allowed by any tampering with the present regulations excluding the importation of live stock: protection against disease is of much more importance to the tenant farmer than a protective duty on corn. G. F. G.

November 10, 1905.

Hampshire Outlook—Agricultural Politics.

SIR,—After an unusually dry autumn we have recently had some splendid rains, which were much needed for wheat sowing. Roots and all vegetation were much benefited. Wheat sowing is now being pushed forward, and this morning I noticed some fields of mine, sown during the dry weather on clover leys, coming thick and strong. All catch crops, such as rye, winter barley, and vetches, sown after harvest look well, as do also the young seeds and clovers. The roots in this neighbourhood are not promising, and it is an exception to see a really good piece of swedes, although some of the late-sown turnips are growing fast now.

Sheep are healthy, and have realised satisfactory prices. The trade was very brisk at Winchester Fair, October 23; good, fresh, working lambs made up to 44s., and fat lambs up to 67s. It is somewhat puzzling that mutton should sell so well, and beef so wretchedly bad.

Store cattle (except milk and nice young heifers for bulling) are difficult to dispose of, except at unremunerative prices. Although the hay crop is under average (with so much of last year's crop on hand), it is as difficult to sell as straw. The wheat, although yielding well, is not up to expectations; neither is barley. Oats (our principal Lent corn crop) are much under average in yield and quality, and a really fine sample is quite the exception.

Now the busy season is over, we have time to turn our attention to agricultural politics; and if agriculturists would wake up, as our friends in the North are doing, we should soon see a transformation in reference to some of our agricultural burdens. As a result of this awakening, I wish we could see farmers' clubs formed all over the country, and a good agricultural paper in every home.

I have quite recently had a delightful holiday in North Cornwall, and whilst I found the Cornish farmers most friendly, free, and large hearted, I was surprised to find practically no combination or farmers' clubs in their beautiful county, and yet they bitterly complain of increasing taxation, etc.; but, alas! the same lack of self-help applies to many other counties in England. We have a vast amount of power if we only realise it, but I venture to hope the time is near when the cant phrase "Our greatest industry" will become "Our awakened industry."

THOMAS CHRISTIAN.

November 10, 1905.

The Central Chamber.

SIR,—In your report on the Agricultural Holdings Act at the Central Chamber you say, "The amendment moved by Mr. Amos was lost," whereas it was carried by 15 votes to 11.

In reference to your short report on my speech as seconder you thoroughly misinterpret the sense of it by saying, "The talk of agricultural depression was rot, etc." What I did say was "If you give greater security to the tenant, you ought also in fairness to protect the landlord from a bad tenant. Some holdings were farmed rascally badly; it was all rot to blame agricultural depression when many tenants took more land than they had capital for."—Faithfully yours,

THOMAS CHRISTIAN.

Bushey Down, Droxford, Hants,
Nov. 11, 1905.

Agricultural Co-operation in Suffolk.—At a recent meeting of the Committee of Management of the Eastern Counties Farmers' Co-operative Association, the Chairman (Mr E. J. Cheney) reported a continued increase of business, which, with the large number of members elected that day, justified the confident expectation that the Association would be able to show a turnover of £50,000 for the current year. The Chairman also announced that the Right Hon. Ailwyn Fellowes, M.P., the President of the Board of Agriculture, had promised to honour the Association by his presence at the annual meeting of members, which had been fixed for January 26, 1906.

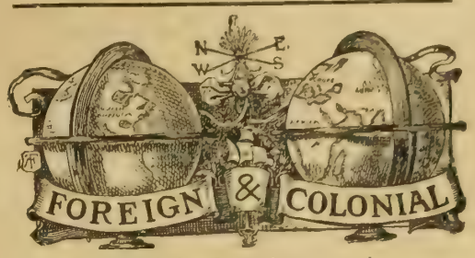
London Representatives.

NOVA SCOTIA APPLES.

An Exhibition of NOVA SCOTIA APPLES, selected and forwarded by the Nova Scotia Government is now on view in the Canadian Court at the Crystal Palace.

Specimens may be loaned for exhibition at local Shows upon application to MR. JOHN HOWARD, Agent-General for Nova Scotia, 57a, Pall Mall, London, S.W.



Canada's Development.

Sir Gilbert Parker, M.P., gave a most interesting address on "Canada after Twenty Years" at the Caxton Hall, on Wednesday. There was a very large attendance of the members of the Victoria League. Lord Strathcona was in the chair.

Sir Gilbert Parker, in the course of his remarks, stated that since 1890 Canada had emerged from practical isolation into open-eyed contact with outside interests, with markets to four of the seven seas. So far back as 1886 he welcomed to Australia Canada's first commercial agent. What a change had taken place since then! In 1890 there were practically but two railways in all the Great West. Meanwhile a score of lines had been built, and were feeding the Canadian Pacific Railway, and were tapping a wide area of country. He could not conceive of British money being put into South America, and other outlying places, while the country with the greatest agricultural and commercial potentialities in the world was open for investments, under a British administration, with sound laws, and a population increasing through immigration alone at the rate of 130,000 a year. (Applause.)

In 1881 the exports of home produce, including mines, fisheries, forests, animal products, agricultural produce, manufactures, etc. were valued at £16,000,000; to-day they were valued at £58,000,000. The shipping service was valued at £6,000,000; to-day it was valued at £15,000,000.

There were 7,000 miles of railway then, and there was 20,000 miles in operation now; 7,000,000 passengers were carried then, 25,000,000 were carried now. Two million and a half tons of freight were carried in 1881, ten millions were carried in 1904; the earnings of the railways were 2¼ millions then; they were 22 millions now. Paid-up bank capital then was £7,000,000; to-day it was £17,000,000. The deposits in the savings banks were £11,000,000; to-day they were £94,000,000. The premiums for life insurance had risen from £3,000,000 to £20,000,000. (Applause.) It must be remembered that that progress was made with a very small increase of population—not more than 25 per cent.—and the manufacturing output was now within a few million dollars of the agricultural output of the country.

Referring to wheat production, Sir Gilbert quoted what one noted American wheat expert had lately said of Canada:—"I believe that it is a matter of a very few years until what we in the United States call North-Western Canada will produce a larger surplus of wheat than is now produced in any country. Western Canada inside of ten years will be the principal source of European wheat supplies, and will have the position occupied by the United States for a quarter of a century." Alongside that might be placed the report of Professor W. Saunders, director of the Dominion Experimental Farms, who said:—

"The total imports of wheat and flour into Great Britain in 1902 were equivalent in all to about 200,000,000 bushels of wheat. Were one-fourth of the land suitable for cultivation in Manitoba and the other provisional territories under crop with wheat annually, and the average production equal to that of Manitoba for the past ten years, the total crop would be 812,000,000 bushels. This would be able to supply a home demand of 50,000,000 inhabitants, supposing the population of Canada should by that time have reached that figure, and meet the present requirements of Great Britain three times over."

We had seen occasional expressions of fear that Canada was in danger of becoming Americanised. He did not find Americanisation greatly developed. It would surprise very many to know that 65 per cent. of the Americans in Canada were already Canadian citizens.

CORN MARKETS.

LONDON.

Mark Lane. Wednesday.—The attendance, as customary in mid-week, was small, and trading generally of a retail character. English wheat ruled steady, with only a small quantity on offer, while foreign sorts were quiet and unchanged from last day. Maize ruled quietly steady; for American ex quay 25s 6d is wanted, but La Plata was the turn easier at 24s 9d landed. Flour dull at 22s 6d for Iron Duke. Barley marks no change in price; Odessa Nicolaieff quoted at 20s to 20s 3d; Persian at 18s 9d, and American at 19s 3d to 19s 6d; for English malting, 28s to 34s is required. Oats steadily held but quiet; 38lb. Russian offered at 16s 6d to 16s 9d; white American at 17s 6d, and mixed at 17s 3d to 17s 6d.

Mark Lane, Friday.—Thin attendance and business in all directions ruled slow. English wheat, however, was firm, in spite of the slackness of demand, while foreign descriptions tended in sellers' favour, with No. 1 Northern Manitoba quoted at 34s 9d ex ship. Although maize is in only moderate request, previous rates are maintained, mixed American being quoted at 25s 6d ex quay, and La Plata at 24s 9d. Flour: Both English and American is steady, 22s 6d still being the price asked for Iron Dukes. Barley is neglected, and values are nominally unaltered; English malting, 28s to 34s; Odessa Nicolaieff, 20s to 20s 3d, and American, 19s 3d to 19s 6d. Oats sell slowly, and rates in the meantime are without material change; white American, 17s 6d; mixed, 17s 3d to 17s 6d, and Russian, 38 lb., 16s 6d to 16s 9d.

COUNTRY.

Ashford. Tuesday. In spite of improved feeling in London and other centres, English wheat was slow of sale, at 27s to 31s per quarter. English malting barley was a little dearer, best samples making up to 34s. Foreign grinding barley firm, at 22s to 23s. Mazagan beans made 28s to 33s; tick beans, 31s to 33s. Oats, 17s to 20s; and maize, 27s to 28s per quarter.

Banbury, Thursday.—Wheat, red (new), 28s to 29s; barley, 24s to 30s; beans (new), 29s to 30s; ditto (old), 32s to 34s; oats, 17s to 21s; ditto (old), 20s to 24s; peas, 27s to 30s per quarter.

Berwick, Saturday. — Moderate attendance, with smaller supplies of grain. Barley firm at fully last week's prices. Oats firm. Oats 12s to 20s; barley, 24s to 28s; wheat, 27s to 30s.

Birmingham. Thursday. There was a good attendance, and a much better tone about the business. Foreign wheats were at last week's full prices to 6d dearer. English wheats not active, and made up to 33s per quarter (496lb.) delivered Birmingham. Grinding barley has receded 6d since last market day. Both flat and Plate maize were unchanged in value. English oats met with a good demand at prices varying from 19s to 20s per 312lb. Beans rather easy at 12s 3d per bag (196lb.) delivered Birmingham.

Bury St. Edmund's. Wednesday.—Wheat was in average supply, and quiet, at the turn less money. Reds and whites, 29s to 30s per 504lb. Barley in average supply, with a fairly steady inquiry for malting runs at 27s to 31s per quarter, but a very quiet demand for anything better; the average of quality all round was not equal to last week's; grinding sorts firm at 23s 6d to 25s per quarter. Oats, beans, and peas firm at fully last week's prices. Maize unchanged at 26s 6d per quarter. Linseed cakes firm at £8 10s to £8 15s, and cotton at £5 10s per ton. Milling stuffs scarce and firm.

Cambridge. Saturday.—There was a better supply of wheat, which sold at last week's prices. Red wheat, 29s to 31s, and white up to 31s per 504lbs. Barley in good demand at full rates. Oats the turn cheaper. Beans firm.

Canterbury. Saturday.—Seed wheats continue to sell at from 32s to 36s and millers' grain up to 32s for 65lb. lots. Barley in steady inquiry at from 28s 6d to 31s. Spring oats, 18s, and black winter's up to 20s per quarter.

Carlisle. Saturday. — Small supply of oats in our market, owing to half year end. Good demand at full prices. 18s to 19s 6d per 336lbs.—THOMAS ROBINSON.

Chester. Saturday. — Moderate supplies of English grain found ready buyers at the extreme prices of last week. Indian corn and other feeding stuffs have been in good request at about last week's prices. Quotations: Wheat, white and red, 4s 4d to 4s 7d per 75lb.; barley, grinding, 3s to 3s 2d per 64lb.; beans, old, 5s 9d to 6s per 80lb.; oats, new, 2s 3d to 2s 6d; ditto, old, 3s 3d to 3s 6d per 4s 6dlb.; Indian corn, old, 13s 6d to 13s 9d per 240lb.; River Plate, new, 12s 9d to 13s per 240lb.

Chichester. Wednesday.—Small attendance for a cattle market day. Not much on offer, but readily sold at following prices: New white wheat, 30s to 31s; new red ditto, 30s to 30s 6d; barley, 28s to 32s; grinding ditto, 21s 21s 6d; oats, English, 17s to 21s; peas, 29s to 30s; beans, 31s to 32s; maize, 25s to 26s; flour, 25s to 27s.

Colchester. Saturday.—Wheat small supply; steady trade at last week's prices. Barley, very little offering for this period of the year, and all descriptions sold readily at prices favouring sellers. Beans scarce and full prices given. Oats rather dearer. JOSEPH WILES AND SON, Ltd.

Coventry. Friday. Wheats were in moderately good supply, but the demand was quiet at barely late rates. Other grain realised generally last week's prices. Quotations: Old wheat, 11s to 11s 6d per 186lb.; new wheat, 10s 3d to 10s 9d per 186lb.; barley, 27s to 32s per 448lb.; old oats, 23s to 25s per 352lb.; new oats, 19s to 22s per 352lb; old beans, 12s 6d to 13s per 196lb.; new beans, 11s 9d to 12s 6d per 196lb.; peas, 11s 6d to 14s per 196lb.

Derby. Friday. Wheat was in small supply, and a quiet trade was done at the full rates of last week. Spring corn 6d per qr. dearer. Quotations: Wheat, new, white, 30s to 31s; new, red, 29s to 30s; malting barley, 26s to 27s; do., old, 27s to 32s; new, 30s to 31s; oats, old, 20s to 24s; new, 18s to 19s.

Devizes. Thursday. Trade for wheat was dull at last week's prices, and for inferior samples less money had to be taken. No change in the value. Oats in demand, and selling very freely at late rates. The following were the quotations:—New wheat, 14s 6d to 16s; secondary, 13s to 14s; best barley, 26s to 32s 6d; secondary, 20s to 24s; new, 22s to 24s; old black oats, 20s to 23s; new ditto, 18s to 19s; malting barley, 26s to 28s; beans, 16s to 18s; new ditto, 24s to 26s; extra fine, 27s to 30s.

Doncaster. Saturday.—Small supply of English wheat and only moderate attendance. English a shade dearer, but foreign steady at last week's prices. Rather more inquiry for barley, unless very fine samples offered. Oats and maize in good demand at last week's prices.

Dorchester. Saturday.—Considering the stormy nature of the weather, rain having fallen in torrents in many parts of the district, there was a fair attendance and a moderate offer of grain, seeing how threshing operations have been interrupted by the wet. Wheat trade ruled somewhat inactive, and with no great demand we must quote prices as practically unchanged from previous market. Grinding barley firm, and good samples of malting made late rates. Maize also held for full values. Oats rather quiet, but no decline in value. Beans and peas nominally unchanged. Flour made late values.

Dublin. Friday.—Wheat, 17s 6d to 19s; malting barley, 14s 6d to 15s 3d; grinding ditto, 12s 9d to 14s; malt, 18s 6d to 20s; oats, 10s to 13s 3d; oatmeal, extra pinhead, 12s 6d to 14s 6d; flour, 10s to 12s 6d; pollard and bran, 6s to 6s 6d.

Exeter, Friday. — Trade dull. Both grinding and malting barley were very much easier, there being but little demand. The general price was 28s, exceptional quality 30s; otherwise, prices were nominally the same as last week.

Glasgow. Wednesday. There was the usual attendance at our Corn Exchange. Wheat and flour quiet, and practically unchanged since last week. Maize unaltered, and corn 3d per boll dearer on the week. Barley a quiet trade, and no change in value. Oats continue firm at late rates. Beans 3d per boll dearer, and pease 3d per boll dearer since Wednesday. Bran and thirds, owing to scarcity, 2s 6d per ton dearer. Oatmeal 1s per sack dearer. GIBSON AND CLARK.

Glasgow, Friday.—Wheat dull, with prices the turn in buyers' favour. Flour steady, but not much business passing. Plate maize firmly held at Wednesday's prices; mixed American the turn higher with a moderate business doing. All feeding stuffs are quiet at previous values.

Gloucester. Saturday. There was a fair supply of English wheat, and prices were the turn easier. Foreign wheat met a very dull trade, and must be quoted 3d cheaper. Grinding barley 6d lower. Maize and oats unchanged. WAITE, JAMES AND CO.

Grantham. Saturday.—Moderate attendance. Wheat was in fair supply, and prices showed a decline of 6d to 1s per quarter. A large supply of barley, and if pressed to sell holders were compelled to accept less money. Beans, peas, and oats firm. Wheat, 28s to 30s; barley, 24s to 32s; blue peas, 42s to 48s; oats, 18s to 21s per quarter.

Hereford. Wednesday. A moderate attendance. The wheat trade slightly tended in favour of buyers. Barley trade difficult. Oats firm, with new consignments. Beans slightly easier. Maize unchanged. The wholesale dealers are inquiring for English clover seeds. We understand that in the South of England threshings are proceeding, and turning out satisfactorily. Now that clover is demanded, perhaps our local farmers would do well to thresh somewhat earlier than usual. Wholesale quotations:—Wheat, 3s 4d to 3s 7d per 62lb; barley, 3s to 3s 9d per 56lb; old oats, 2s 6d to 3s per 40lb; new oats, 2s 2d to 2s6d per 40lb; new beans, 3s 8d to 3s 10d per 65 1-3lb; old beans, 4s to 4s 6d per 65 1-3lb; vetches, 5s 6d to 6s 6d per 65 1-3lb.

Ipswich. Tuesday. Wheat was in small supply, and steady at about 31s per 504lb for good reds or whites, delivered at Ipswich. Barley: All sorts in shorter supply; fair malting runs were quite as good at 27s 6d to 32s per quarter, but Burton descriptions, although sparsely offered, were not so much in demand; grinding sorts firm, at 24s to 25s 6d per quarter. Oats very firm on the week, at 20s to 22s; black, 18s to 20s per quarter. Maize firm and unchanged, at 25s 6d to 26s per quarter. Beans firm and unaltered. Peas: Dun steady, at 30s to 31s; blue, 33s to 33s 6d per quarter. Feeding stuffs all very firm at fully last week's prices.

Leeds, Tuesday.—There has been a slight reaction from the excitement of the previous week, but the decline in prices has not exceeded 6d per quarter, and the tone of the trade continues healthy. This week's shipments are liberal, but not excessive, the Continent again getting the lion's shares. Business in wheat is limited to-day at 3d to 6d below last Tuesday. Malting barley unchanged. Maize slow and rather easier. Beans and oats steady.—DUNNS AND CO.

Leeds. Friday.—English and foreign wheats barely maintained Tuesday's prices, an easier tone prevailing owing to increased arrivals from abroad. There was no change in beans, peas, barley, maize, or flour.

Leicester, Saturday. — Good attendance of buyers and dealers, with fair supplies of home-grown wheats. Trade slow at slightly easier rates. Red wheats, 29s to 31s; white wheats, 30s to 32s per 36 stones. Larger supplies of barley in rather rough condition, and trade slow at 25s to 28s per 32 stones. Old beans firm at 34s to 36s per 38 stones; fine oats in active demand at 19s to 22s per 26 stones.

Lincoln, Friday.—Fair show of English wheat, for which there was a tolerably good inquiry at a reduction of 6d per qr. on last week's rates. Best and common barleys in request; common sorts a slow trade. Oats and beans firm at unaltered rates.

Liverpool. Friday.—Wheat: There has been a good attendance at to-day's market, but wheat meets only a moderate demand, and prices are occasionally ½d lower except Manitobas, which are in limited supply and ½d to 1d dearer. Flour: A moderate trade at about last market day's prices for both foreign and home-made brands. Maize: Mixed is steady but quiet, at ½d advance fro mlast Tuesday; Plate sorts are also ½d dearer, but there is only a limited business passing: European grades are quiet, unchanged. Barley steady, but quiet for malting; feeding slow and ½d lower to sell. Beans are firm at former prices, but quiet. Peas very scarce, and firm at fully late rates. Oats quietly steady, but with rather more offering in American, which are the turn lower: English steady at fully late rates. Oatmeal firm at full prices, but moving very slowly. Oilcake: A quiet trade in foreign cakes, but English in good demand at occasionally rather better prices. — SEGAR AND TUNNICLIFFE.

Manchester. Thursday.—Both English and foreign wheat were unchanged on the week, with rather more inquiry for the former. Flour 6d per sack dearer. Plate maize was rather easier. English and foreign oats about 1d per bushel dearer. Bran and feeding stuffs firm and unchanged. Peas and beans steady. Foreign barley unchanged.

Newcastle-on-Tyne. Saturday. — A quiet demand prevailed at our to-day's market for wheats of all descriptions. English sold at fully 9d. below last week's prices. Foreign changed hands at a slight reduction on last week's quotations. Maize steady, and here Saturday's prices were maintained. Beans slightly in the favour of buyers. Peas firm and dearer. Oats favouring buyers. Barley in poor request at last week's prices.

Newark. Wednesday. A small show of wheat, which value. Quotations: Wheat, 30s to 31s; barley, 24s to value. Oats and beans unchanged in value. Quotations: Wheat, 30s to 31s; barley, 24s to 27s; oats, 18s to 20s; beans, 29s to 31s per quarter.

Norwich. Saturday. Wheat was in small supply at our market to-day, at last week's quotations. There was more barley offering, with no alteration in prices. Foggy and frosty weather has prevailed during the past week, which has to-day ended in rain. Wheat, red, 30s to 31s per quarter, weight 64lbs. per bushel imperial. Corn inspector's return for the week ending October 28, 1905: Wheat, 2,327 qrs. 5 l; barley, 15,852 qrs. 4d. 0d.—J. ARTHUR MILLS.

Northampton. Saturday. Small attendance, and a moderate supply of wheat, at unchanged prices. Best quality barley 6d advance. Oats and beans very firm. New wheat, 27s 6d to 29s; malting barley, 25s to 32s; new white oats, 18s to 20s; new black oats, 17s to 19s; new beans, 28s to 30s; peas, 27s to 28s; flour, 24s 6d.

Nottingham. Saturday. Wheat in better supply; trade ruled quiet at about 6d decline. Barley in better demand, and values for all sorts well supported. Oats small supply, and 6d higher. Beans firm. ROBERT HURRELL.

Oxford. Saturday.—The attendance was small, and trade ruled dull. Wheat was in moderate supply, and met a slow demand, at rather easier rates. Barley was also in poor request, with prices tending in buyers' favour.

Peterborough. Saturday. — A moderate supply of wheat; trade rather slow, and in many cases 6d less money was taken. Barley steady, and last week's prices were repeated. Oats firm but quiet. THOMAS HILL AND SON.

Preston. Saturday. — There was a moderate attendance. New grain comes forward slowly. Prices of both oats and wheat differ little from those prevailing a week ago, and there is no change in the price of any article. Quotations: Wheat, white, new, per windle of 220lb., 12s 9d to 13s 6d; ditto red, 12s 6d to 13s. Flour, extra superfine, per pack of 240lb., 26s to 27s; ditto superfine, 24s to 24s 6d; ditto, best fine, 22s 6d to 23s. Oats, new, white, per bushel, 2s 9d to 2s 10d. Beans, per windle, 16s to 16s 6d; bran, 10s 6d to 11s.

Plymouth. Tuesday. There was a fair attendance on our market to-day. Wheat unchanged. Barley and oats quiet at last week's prices.—ORLANDO DAVIS AND CO.

Reading. Saturday.—There was a fair supply and an average attendance, but trade was very disappointing; what business was transacted was at last week's prices.

Retford. Saturday.—Wheat was rather lower in value, and very little business was transacted, the ruling quotations being 28s 6d to 29s 6d per quarter. Really choice qualities of malting barley were not to be had, but there was some very useful lots, which changed hands at 27s to 28s; interior, 25s to 26s; grinding, 23s 6d to 24s per quarter. Round maize, 26s; English beans, 30s to 32s; oats, 16s to 19s; rye, 20s to 21s per quarter.

Ripon Thursday.—English wheat shows a downward tendency, otherwise business was done chiefly at late rates. Prices:—New wheat, 28s to 29s 6d; foreign wheat, 33s to 36s 6d; grinding barley, 23s to 24s; malting barley, 25s to 28s; new oats, 18s to 20s; round maize, 26s to 26s 6d; flat maize, 25s 6d to 26s 6d per quarter.

Shrewsbury, Saturday.—Wheat, 12s 6d to 12s 9d per 225lb.; white oats, old, 15s to 16s; new, 11s 6d to 12s 6d per 240lb.; beans, 13s 6d to 14s per 240lb.; barley, 14s to 19s per 280lb.

Stamford. Friday.—There was a large attendance of local agriculturists, and a good business was done. Best wheat, 29s to 30s; secondary ditto, 27s to 28s 6d; best barley, 31s to 31s 6d; grinding sorts, 23s to 25s 6d; best oats, 18s to 20s; and beans, 29s to 31s per qr. Maize firm.

Sunderland. Saturday.—Wheat in fair supply, and last week's prices were barely maintained. Little doing in spring corn. Arrivals coastwise: Barley, 1,000 qrs.; foreign, wheat, 20,992 qrs.—E. AND F. RICHARDSON.

Tunbridge Wells. Friday.—New white wheat, 31s to 31s 6d; new red ditto, 30s to 30s 6d; barley, 27s to 32s; grinding ditto, 19s to 23s; oats, English, 17s to 20s; rye, 23s to 24s; peas, 31s to 36s; beans, 32s to 35s; tares, 48s to 52s; maize, 24s to 28s.

Warwick, Saturday.—Very small supply of wheat, which made about last week's prices. Very little other grain on offer. Feeding stuffs unchanged.

Wisbech, Saturday.—A small supply of grain. Wheat declined 6d to 1s per quarter. Best reds 33s. Oats firm at late rates, 19s to 30s. Barley, 24s to 28s.—JAMES FLETCHER.

Winchester. Saturday. — English wheat quiet at about last week's prices. Foreign unaltered. Barley, oats, and maize unchanged. Flour in better demand, and a shade dearer.—FEAR, COLEBROOK AND CO., LTD.

Worksop, Wednesday.—Small attendance, and fair show of grain, which sold at practically last week's prices. White wheat, 27s 6d to 30s; red ditto, 26s to 27s 6d; best malting barley, 28s to 30s; secondary qualities, 26s 6d to 28s; grinding barley, 22s to 24s; white oats, 17s to 18s 6d; black oats, 16s to 17s; maize, 25s to 27s per quarter.

Yeovil, Friday.—Market easier all round except for wheat, of which foreign sold at 3d per qr. more money. Best quality English wheat realised from 31s 9d to 32s 3d per qr.; secondary, 29s 3d to 30s 9d; foreign, 33s 6d to 33s 9d; malting barley, 31s to 35s; feeding, 21s 6d to 23s 3d; foreign, 21s to 21s 6d; oats, black, 18s 6d to 20s; Irish, black, 16s 9d to 17s 9d; white, 16s 6d to 20s; beans, 32s 6d to 38s; maize, 25s to 26s; rye, 21s to 23s; rape, 46s to 49s 6d; vetches, 6s to 7s per bushel. Flour sold freely, fine making from 25s to 25s 6d per sack, and extra fine, 27s to 27s 6d. Milling offals and meals for feeding in good demand at fully late rates.

York. Saturday.—Only a small supply of wheat. Good dry samples sell at last week's prices. Fine white wheat, 29s to 31s; red and mixed, 28s 6d to 30s 6d per quarter of 35 stones. Malting barley is steady, but a smaller offer; fine makes, 27s to 28s; good, 25s to 27s; and feeding, 23s to 25s per quarter of 32 stones. Oats very firm and scarce; white Tartary, 17s to 18s; black, 18s to 19; white Garton, 19s to 20s per quarter of 24 stones; rye, 22s to 23s; beans, 30s to 33s per quarter of 36 stones.

FOREIGN.

Hamburg. Saturday.—Barley market remains very firm here, there is still a good demand at the higher prices, and rather larger importations from Denmark continue, but also the finer Bohemians are in demand and obtain full value. In Hungary, the crop seems to be practically exhausted, only a few parcels are offering in dealers' hands, and are held at ridiculous high prices, although the quality is by no means nice. FRANCIS M. TH. DUHNE.

Hamburg. Saturday.—Weather seasonable. We had a very quiet market in the early part of the week; buyers were scarce, and to effect sales lower prices had to be taken. During the last few days, however, a better feeling gained ground. There is again a good demand for all articles, and prices are the turn in sellers' favour. The imports into Germany from August 1 till October 31 amounted to: 1905, wheat 730,515 tons, 1904, 597,853 tons; 1905 rye 309,775 tons, 1904, 119,386 tons; 1905, oats 352,655 tons, 1904, 110,040 tons; 1905, barley

542,315 tons; 1904, 332,580 tons; 1905, maize 222,473 tons, 1904, 242,865 tons. Fine new red German wheat is firmly held at 33s to 34s per 504 lb f.o.b., with scanty supplies. American hard winter is quoted at 35s. 80 kc.; River Plate 32s 6d, 77 78 kc.; South Russian 32s 9d per 480 lb. Offers of Russian rye are wanting, 71 72 kc.; Bulgarian afloat is held at 27s 9d per 480 lb c.i.f. Hamburg. Malting barley firm in value. Good Danish is selling at 29s to 30s; good Bohemian is held at 34s to 35s; fine Bohemian and Slovakian at 36s 6d to 40; Oderbruck and Silesian at 29s to 34s per 448 lb f.o.b Russian feeding barley, prompt and spring delivery, is held at 19s 6d to 19s 9d per 400 lb c.i.f Hamburg. American white clipped oats meet with a ready sale at 17s to 17s 3d per 320 lb. c.i.f Hamburg. Maize firm. Mixed American, November shipment, 24s 6d to 24s 9d; December January 22s 6d to 22s 9d; River Plate (afloat) 24s 3d to 24s 6d per 480 lb c.i.f. Hamburg.—JOHN TAYLOCK.

Paris, Wednesday. Markets continue short of supplies, although offers are getting easier than they have been for some time past. The tendency at the Bourse de Commerce is firmer, and, due to steady inquiry from sheets, the price of flour has risen from 10c to 20c, with sellers reserved. Wheat was also firm, and closed with a rise of 5c to 10c. Rye quiet but firm. Oats in good demand, with an advance of from 5c to 20c. At the weekly spot market, home-grown wheat is quoted at the same prices as eight days ago; there is also no appreciable change to report from the provinces. Foreign wheat is quiet, there being hardly any demand. There are now plenty of offers in offals, even of available parcels at Paris, and sellers have had to lower their prices 25c. After some recrudescence of weakness the prices of rye now seem inclined to improve, whilst the situation in oats is somewhat abnormal, as offers are small despite the large harvest. In barley things remain the same; there are buyers, but no sellers, as farmers are not threshing. Prices are rising steadily, and buyers now display some hesitation.—*Dornbusch.*

THE BALTIC.

Wheat cargoes are rather pressed on sale. The prices made on the 10th and 11th were: Bahia Blanca 33s. 6d. per 504 lb., Rosario 31s. per 480 lb., Odessa Ghuka 33s. per 492 lb., Hard Taganrog 31s. 6d. per 492 lb., Finest Russian Winter 35s. per 492 lb., Nicolaieff 32s. per 492 lb., Kustendje 32s. per 492 lb., Roumanian 31s. per 492 lb., Blue Stem 34s. per 500 lb., and Walla Walla 33s. 3d. per 500 lb.

Maize is decidedly easier to buy, and futures are a penny per cental lower on the week. Sales have included American at 21s. 9d. per 480 lb. for December shipment, and Argentine at 23s. 9d. per 480 lb. on passage. No round maize has been on offer apparently, either on passage or for future shipment.

Barley made on Saturday 22s. per 416 lb. for a cargo just arrived from Bulgaria, and 20s. 6d. per 400 lb. for one just sailed from the Sea of Azoff. Oats made 16s. 3d. per 304 lb. for American peas, 27s. per 504 lb. for Dun Calcutta, and cottonseed 5s. per cwt. for prompt shipment from Bombay.

The Secretary of the London Corn Trade Association announces that the following standards have been made up, viz.:—Wheat.—Choice White Kurrachee, Soft Red Kurrachee, No. 1 Club Bombay, Choice White Bombay, Atbara from Calcutta. Lentils.—Bombay, Calcutta. Peas.—Calcutta Green, Calcutta White, Calcutta Mutter, Calcutta Gram—all August shipments. Samples may be inspected at No. 26, St. Mary Axe.

The arrivals of grain and seed-laden vessels at Ports-of-Call for the week were 1 maize (Buenos Aires).

The sailings of grain and seed-laden vessels from Ports-of-Call for the week were 1 maize (Hamburg), 1 linseed (Harburg).

Since January 1, 1905, the total arrivals have been 296 wheat, 2 flour, 2 wheat and oats, 1 wheat and linseed, 1 flour and wheat, 13 barley and wheat, 10 barley, 10 maize, 1 beans, 4 locust beans, and 51 linseed—Total 391.

Last year during the same time the arrivals were 270 wheat, 1 wheat and maize, 37 barley and wheat, 17 barley, 10 maize, 6 beans, 4 locust beans, 1 rye, 39 linseed, and 1 canaryseed—Total 386.

EGGS.

(Number per 1s., except where otherwise stated.)

Friday.—Altrincham: 5 and 6. Ashburton: 1s 9d to 1s 10d per dozen. Barnstaple: 6 to 8. Camelford: 9. Chester: 6. Crewe: 6. Congleton 6. Dartmouth: 1s 6d per dozen. Derby: 6. Helmsley: 7. Knutsford: 6. Leyburn: 7 and 8. Lincoln: 7 and 8. Lostwithiel: 8. Macclesfield: 5 and 6. Nantwich: 7. Northwich: 6. Otley: 6 and 7. Redruth: 1s 6d per dozen. Runcorn: 5 and 6. St. Austell: 8. Stamford: 7 to 9. Stockport: 5 and 6. Tavistock: 6 and 7. Totnes: 1s 8d to 1s 9d per dozen.

Saturday.—Appleby: 6 and 7. Berwick: 1s 5d to 1s 7d per dozen. Bridgnorth: 8. Carlisle: 5. Doncaster: 7. Grantham: 7 and 8. Howden: 7 and 8. Ipswich: 7 to 9. Lancaster: 5 and 6. Malton: 7 and 8. Pontefract: 8 and 9. Retford: 2s 8d to 2s 10d per score. Richmond (Yorks): 6 and 7. Shrewsbury: 6 and 7. Skipton: 7 and 8. Stokesley: 7 and 8. Worcester: 7. Yorks: 6.

CHEESE.

Newport, Wednesday.—A pitch of ten tons, and a fair demand. Quotations:—Caerphillies, 52s to 59s per cwt; tancy dairies, 60s to 62s; truckles, 58s to 60s; Derbys, 66s to 68s; and Cheddars, 58s to 60s.

Glasgow, Wednesday.—Arrivals of cheese this week were liberal. The demand was again very quiet indeed. Holders were not disposed to yield, as advices from Canada were strong. Cheddars were quoted from 58s to 61s; and Dunlops, from 54s to 59s per cwt.

GAME AND POULTRY.

Smithfield, Saturday.—Good supplies; slow demand. Prices: Surrey fowls, 3s to 3s 6d; Essex fowls, 3s 3d to 3s 9d; Lincolnshire fowls, 2s to 2s 6d; Irish fowls, 1s 9d to 2s; Russian fowls, 1s 9d to 1s 11d; geese, 4s 9d to 5s 6d; ducks, 2s 3d to 2s 9d; wild ducks, 1s 4d to 1s 6d; woodcock, 1s 6d to 2s; snipe, 6d to 9d; quails, 9d to 1s 3d; black game, 1s 4d; feathered pigeons, 7d to 9d; Bordeaux pigeons, 10d to 1s 1d; English hares, 2s 3d to 2s 9d; leverets, 1s 9d. Scotch hares, 1s 6d; tame rabbits, 1s to 1s 4d; wild rabbits, 8d to 10d; live hens, 1s 6d to 2s each; Australian rabbits, 6s to 8s per dozen; pheasants, 3s 6d to 4s; young grouse, 4s; old, 2s 6d to 2s 9d; young partridges, 3s to 3s 6d; old, 1s 6d per brace. Venison: Haunches, 1s 6d to 1s 8d each; loin

HAY AND STRAW.

Manchester, Friday.—Hay, 4½ to 5½; clover, 5½ to 6d; straw, wheat, 3½d to 3¾d; oat, 3d to 4d per stone.

Whitechapel, Saturday.—Fair supplies were to hand, but met a quiet demand at late rates. Best clover, 72s to 80s; inferior ditto, 60s to 70s; specially picked hay, 75s; good ditto, 65s to 75s; inferior ditto, 45s to 60s; mixture and seconds, 67s to 72s 6d; straw, 27s to 36s per load.

Review of the British Corn Trade

DURING THE PAST WEEK

Written exclusively for the Mark Lane Express.

Ploughing and sowing are both in active progress, and the disposition to confide wheat to the soil is greater than the low prices prevailing, and apparently likely to prevail, would appear in any way to justify. None the less, we do not anticipate that the area of last season will be repeated.

The agricultural event of the week is the Bureau Report of the American maize crop, published at Washington on Saturday. According to this report, the yield is 28.8 bushels to the acre, which on the area under cultivation, would give the following total yield Figures which we give for preceding seasons show that this year's harvest is far and away the largest ever secured.

AMERICAN MAIZE CROP.

	Bushels.
1905	2,707,000,000
1904	2,467,000,000
1903	2,244,000,000
1902	2,523,000,000
1901	1,523,000,000
1900	2,105,000,000
1899	2,078,000,000
1898	1,925,000,000
1897	1,903,000,000
1896	2,283,000,000

Out of the 2,467,000,000 bushels of 1904, the total exports have been 88,000,000 bushels, which points to home wants of about 2,379,000,000 bushels. On this basis the exportable surplus of the new crop works out at 328,000,000 bushels, or 41,000,000 qr., a truly colossal quantity. How much of it will actually be shipped remains to be be seen, but there seems to be every prospect of cheap maize for ten months of 1906, i.e., from March 1 to December 31. The new American crop will require, like all maize crops, two months to dry, and shipments will not have time to get over much in bulk to the United Kingdom and Europe before the end of February

The buckwheat crop in the United States proves to be the best ever reaped, but the total production is not very large. In 1904 the yield was 18.9 bushels to the acre, and was then itself a record. The yield of 1905 is 19.2 bushels to the acre. The yield in 1902 was 1,891,000 qr., and was 18.1 bushels to the acre.. Perhaps this year two million quarters have been secured.

The American potato crop is put as 87 bushels to the acre, which is 1 to 2 per cent. above America's average production usually estimated at 85½ bushels to the acre. In 1904, however, the U.S.A had a colossal yield of potatoes, 110 bushels to the acre, so that this year's crop looks by comparison quite small.

The hay crop of America is evidently rather above the average, thereby reducing the needs of dry food for stock. Rice is only a moderate crop, but it is never of much importance except for the negro population of the Old Confederacy. Linseed is a fine quality crop, but the yield to the acre is only 11.2 bushels.

Of linseed the area is usually about 2,250,000 acres, at which rate the crop of this year would come to a total of 25,200,000 bushels.

Other agricultural events affecting the markets are (1) the improved crop prospects in India, (2) the remarkable wheat yields now expected in South Australia and Victoria, and (3) the generally favourable character of Argentine crop news. These all have told against value, and made old prices very hard to obtain.

The affairs of Russia are in everybody's mind, but it is particularly difficult to get at the truth concerning the real position of the agriculture and commerce of that vast empire. The large shipments of grain and the liberal supply of food generally seem incompatible with an utterly dislocated rail and river service, let alone with riots and anarchy. It would look as though the Russian put in his eight hours daily work, and then rioted in his leisure. Were crowds of Russian workmen quietly loading up grain steamers at the Odessa quays while other crowds were massacring Jews, fighting Cossacks, and indulging generally in the accessories of civil war? For the present the market is of opinion that the trouble in Russia is over and prices have gone back for Russian produce all along the line. But this view of the matter may be falsified in turn; it is a situation whereon everyone must read and judge for himself.

The quantity of wheat to arrive at British ports between now and the end of the month is less than usual, so that farmers are threatened with less foreign competition than usual, and should be able to get at least present rates for their wheat. Of the grain expected nearly half is new American, so that that type may prove difficult to maintain in value. Russian is also in liberal perspective supply, and as much Roumanian as is asked for is freely to be forthcoming. On the other hand, there seems bound to be a decided scarcity of Indian, Argentine, and Australian, nor are Californian, Walla Walla, Chilian, and New Zealand cargoes likely to be in evidence before December. It is to be noted that Paris is gradually hardening for wheat. On Saturday 40s. was averaged for the week's trade, against 38s. 10d. averaged on September 1, at the opening of the cereal year.

The American flour mills are exceedingly busy. Returns of quantities ground at the ten chief mills last week were as follows:—

Week ending Nov. 11, 1905 .... 511,000 barrels.
Week ending Nov. 12, 1904 .... 307,000 barrels.

Despite this large increase in business the supply on passage to the U.K. is actually somewhat smaller than it was a week ago.

Barley had its period of brisk markets from September 29 to November 4; since the 6th inst. inertia has prevailed, and the prices ruling to-day are not so good as those of a week ago. Californian is the only sort which is held with a real confidence.

Oats have not varied much on the week, but what change there has been has favoured buyers. The competition between America and Russia is rather keen this season, but English growers are showing reserve.

Maize has naturally been sobered as a market by the news of the gigantic new crop in America, but as scarcely any of this will reach us before Candlemas the holders of stock actually in granary maintain an attitude of steady resistance to price decline.

Linseed is a little cheaper to buy at all markets, whereas cottonseed is dearer for fine Egyptian; and a little more money is making for poppyseed.

Supplies on passage show an increase on the week in the case of wheat, oats, and cottonseed, but a reduction with respect to barley, maize, linseed, rice, and flour.

Of wheat, the following supplies are in prospect:—

Californian	130,000
American	360,000
Russian	440,000
Indian	180,000
Argentine	285,000
Australasian	70,000
Various	30,000
Total	1,495,000
A week ago	1,393,000

Of flour 306,000 sacks are on passage, mainly, as usual, from the United States

Maize supplies on passage consist chiefly of flat and yellow corn. Barley is fairly divided between the feeding and the malting kinds. For oats we are still relying for the most part on Russia, but not so exclusively as a month ago. The following are particulars:—

	Maize. Qrs.	Barley. Qrs.	Oats. Qrs.
Russian	7,000	240,000	245,000
American	190,000	230,000	55,000
Argentine	310,000	none	15,000
Total.....	507,000	470,000	315,000

The sales of wheat at the statute markets since harvest have been large, with the natural result of reducing the price.

This season, 888,000 quarters at 27s 1d per quarter.
Last season, 479,000 quarters at 30s 2d per quarter.

The sales of barley have been rather heavier this season than last, but the difference is too slight to account for the rather serious decline in price.

This season, 1,297,000 quarters at 24s 3d per quarter.
Last season, 1,269,000 quarters at 25s 3d per quarter.

The sales of oats have been decidedly small, and value has advanced a little in the shires, though by no means so markedly as in the metropolis.

This season, 278,000 quarters at 16s 4d per quarter.
Last season, 353,000 quarters at 15s 11d per quarter.

The imports of the U.K. last week were as follows:—

Wheat, 380,000 quarters; a good supply.
Flour, 126,000 sacks; a modest supply.
Barley, 244,000 quarters; very heavy arrivals.
Oats, 62,000 quarters; extremely small imports.
Maize, 106,000 quarters; about half the average.

There were good imports of linseed, rice meal, and lentils, but very small imports of beans and rapeseed.

OIL SEEDS.

MARK LANE, MONDAY, November 13.

LINSEED.	per 416 lb. s. s.
Russian	42 to 43
Morocco	47 to 48

Finest	48 to 52
Ordinary	40 to 44

TO-DAY'S MARKETS.

MARK LANE, MONDAY, November 13.

[FIRST REPORT.]

Farmer's to-day obtained fully last week's prices for their wheat, and Red sorts were the subject of a very fair demand. Foreign was a little cheaper for Russian and Roumanian, but made old prices for Indian, Australian, and Argentine. Barley was rather irregular. Californian and Persian, two very different sorts, were the turn dearer; while English and Russian favoured buyers. Maize was not nearly so depressed as some expected to find it after the American definite report of a crop exceeding all previous returns. The general belief is that granary stocks of maize will barely meet the most ordinary demand between now and new crop arrivals, and the majority of holders to-day refused to abate their price demands. The competition of Russian and American light oats made both these kinds 3d. to 6d. cheaper on the week; but heavy oats (home and foreign) fully supported the current values of the 6th. Peas and beans tended in sellers' favour, and there was a rise of 1s. 3d. to 2s. 6d. per ton in linseed cakes.

CLOSE OF THE MARKET.

THE MARKET CLOSED IN BUYERS' FAVOUR FOR WHEAT, BARLEY, AND OATS; WHILE MAIZE WAS NOT QUITE SO FIRMLY HELD AS AT THE COMMENCEMENT OF THE MARKET.

THE FLOUR TRADE.

MARK LANE, MONDAY, November 13.

LONDON FLOUR.

The trade in London makes is decidedly reactionary to-day, and prices are irregularly lower on the week. Country flour, while not quotably cheaper, is weaker in position, owing not only to the London makes being lower, but to large arrivals from East Anglia and Cambridgeshire. The market for American flour is firmer for good bakers' grades than for the fancy and patent types. Manitoba patents made 28s landed. Iron Duke is quoted at 22s. 6d. per sack. Red Dog or feeding flour is quoted 14s. to 15s. per sack. Hungarian is 1s. cheaper from October's best prices. Australian and Argentine sorts are scarce and firm. French flour is neglected. Fine middlings are 5s. per ton dearer in some instances, but pollard and bran are slow of sale.

LONDON TERM MARKET.

This market is open to elected members only and is held at the Baltic Club, St. Mary Axe. No business except for future delivery is done, and the smallest quantity that can be purchased is 1,000 quarters, or 4,800 cental.

Prices quoted on Saturday at the close of the week's trade were as follows :—

WHEAT (per cental).

No. 2 American Red	7s. 3d.	Nov. delivery.
,, ,,	7s. 0d.	Dec. ,,
,, ,,	6s. 9d.	Jan. ,,
,, ,,	6s. 11d.	Mar. ,,
,, ,,	6s. 11d.	May ,,

MAIZE (per cental).

American	4s. 1d.	Dec. delivery.
,,	4s. 0d.	Jan. ,,
,,	4s 4d.	Mar. ,,
,,	4s. 4d.	May ,,

The fall in wheat prices telegraphed to-day as having occurred at New York and Chicago made wheat futures here weak; 6s. 11d. per cental was the best price obtainable. Maize was quiet at 4s. 4d. for remote futures; 4s. 5d. for January.

HOPS.

Canterbury, Saturday.—Prices are firm all round, with the demand chiefly centred upon the brightest and healthiest samples. Choice descriptions are very scarce.

London, Monday.—W. H. and H. Le May, 67, Borough, London, report:—The demand noted in our last continues; consumers are taking all classes freely at current rates. The imports of hops for the month of October, 1905, were 14,165 cwt; for the corresponding month last year, 65,530 cwt; the total imports for September and October, 1905, were 12,771 cwt; for the corresponding period last year, 93,647 cwt. The exports of hops for the month of October, 1905, were 5,012 cwt; for the corresponding month last year, 2,618 cwt; the total exports for September and October, 1905, were 6,236 cwt; for the corresponding period last year, 3,365 cwt.

GRAIN AND FLOUR FACTORS REPORT.

Milling offals are scarce, and prices against buyers.—JOHN BAWCOMB AND CO.

Wheat in moderate supply; trade at prices of last Monday. Flour quiet, unchanged. Maize, 3d. lower. Barley a slow trade at late rates. Oats 3d. and 6d. per qr. lower. — COVENTRY AND SHEPPARD.

Flour.—The demand to day has been very quiet and prices remain about the same as on this day week except for bakers' grades and low grades, which owing to extreme scarcity, command 3d. to 6d. more money.—T. S. MEDILL AND SONS, LTD.

Flour.—The tone is quieter, but prices are unchanged. Values here are still below replacing values. Grain.—Indian corn is scarce, but in small demand. Plate maize held for 14s. 7½d. per 280 lb. Oats are a shade quieter. Calcutta pease are getting into small compass, and are held for 17s. 3d. to 17s. 6d. per 280 lb. Beans 3d. better. Oilcake 2s. 6d. per ton dearer. Oatmeal advanced a further 6d. per sack. Mill Stuffs.—Millers are behind with orders, and the demand continues brisk.—MCKINNON AND MCDONALD (Glasgow).

FEEDING STUFFS.

London, Monday.—Linseed cake: Owing to scarcity of spot linseed home-made cake are decidedly firm, and foreign are in short supply. Russian-made in particular. Decorticated and ordinary cotton cake are firm in sympathy with all feedings stuffs. There are an unusually good demand for linseed.

ROBERT AND JOHN HEWETSON.

THE BALTIC. 1 p.m.

STATE OF TRADE.

Wheat cargoes are a little steadier this morning, and barley is not quite so depressed as on Saturday. The market for oats is still reactionary and maize is again lower. Linseed and rapeseed cargoes are steadier, and cargoes of peas are rather dearer.

BUSINESS DONE.

WHEAT.—White Calcutta, 33s 3d per 492lb., arrived; White Kurrachee, 34s per 492lb., on passage; No. 1 Manitoba, 32s 9d per 480lb., on passage; No. 2 Manitoba, 32s 3d per 480lb., on passage; Australian, 33s 3d per 480lb., February shipment; Red Walla, 32s 6d per 500lb., prompt shipment.

MAIZE.—American, 24s per 480lb., arrived; American, 21s per 480lb., January shipment.

BARLEY.—Oregon, 27s 6d per 448lb., prompt shipment; Odessa, 21s per 400lb., prompt shipment.

OATS.—Black Libau, 16s 6d per 304lb., prompt shipment; South Russian, 16s 9d per 304lb., prompt shipment.

BEANS.—Smyrna, 35s 6d per 480lb., December shipment.

PEAS.—Green Calcutta, 25s 6d per 504lb., December shipment; Green Calcutta, 24s 3d per 504lb., April shipment (new crop).

LINSEED.—Calcutta, 32s 3d per 410lb., November shipment; Argentine, 38s 3d per 416lb., on passage.

RAPESEED.—Brown Cawnpore, 39s 9d per 416lb., January shipment.

COTTONSEED.—Egyptian, £5 17s 6d per 2,240lb., on passage.

FRUIT AND VEGETABLES.

Covent Garden, Saturday.—Fruit and greenstuff in fairly good supply, but business rather quiet. Quotations for English produce: Grapes, 8d to 3s 6d per lb.; apples, 5s to 12s per bushel; cranberries, 10s 6d to 14s per case; Redon chestnuts, 6s to 10s 6d; Grenoble walnuts, 7s to 8s per bag; cobnuts, 5s to 7s per 12lb.; tomatoes, 2s 6d to 4s 6d; celery, 6s to 12s 6d per dozen rolls; artichokes, 2s 6d to 3s; Brussels sprouts, 1s 6d to 1s 9d per half sieve; parsnips, 2s 6d to 3s; carrots, 2s 3d to 3s per bag; cucumbers, 2s 6d to 4s; endive, 1s to 1s 6d per dozen; turnips, 2s 3d to 3s; parsley, 1s 6d to 2s; leeks, 1s 6d to 2s; radishes, 6d to 9d per dozen bunches; cauliflowers, 4s to 7s 6d; cabbages, 2s 6d to 3s 6d per tally; onions (English), 4s 6d to 6s per cwt.; horseradish, 8s 6d to 12s 6d per dozen bundles; mushrooms, 8s to 12s per 12lb.; sprue, 9d to 10d per bundle; potatoes, 60s to 75s per ton.

SEEDS

London, Monday.—There is an increasing demand for spring sowing seeds, both clovers and grasses, with a reasonable trade passing at unchanged prices. The new English reds are coming out very slowly, principally on account of the weather. Values consequently not determined.—JOHN PICARD AND CO.

CATTLE.

Metropolitan Market, Islington.

	Monday, Nov. 13, 1905. British.	Total.	Monday, Nov. 14, 1904.
Beasts	870	870	1 240
Sheep and Lambs	5,340	5,340	6,670
Milch Cows	40	40	50

Quotations per 8 lb. (sinking the offal):—

ENGLISH

	Inferior.	Second.	First.
Beasts	2s 8d	3s 6d	4s 6d
Sheep	3s 10d	4s 8d	5s 10d

Milch cows, per head, £16 to £22.

British arrivals include as follows: Scotland, nil; Eastern Counties, 26; Midland, Home and Western Counties, 792; Devon, 20; Ireland, 32.

We note to-day a decrease of 60 head in the number of beasts offered for sale compared with Monday last. The majority of the supply was drawn from the Midland Counties; Ireland showed a falling off in point of numbers, and consisted entirely of Waterford cattle, for which trade though slow, was fairly steady, late rates being both asked and obtained; the same remark with regard to the trade applies to all classes of both prime and second quality cattle. Fat butchering cows and bulls met with a limited demand by both town and country buyers. A clearance will be made.

The following are top quotations per 8 lb. (sinking the offal):—

	To-day.	Monday, Nov. 14, 1904.
Devons	4s 4d to 4s 6d	
Herefords	4s 4d to 4s 6d	4s 4d to 4s 6d
Runts	4s 0d to 4s 4d	4s 2d to 4s 4d
Lincolns	3s 8d to 3s 10d	3s 10d to 4s 0d
Irish	3s 8d to 3s 10d	3s 10d to 4s 0d
Fat Cows	3s 4d ex 3s 6d	3s 4d to 3s 6d

There was a decrease of 830 in the number of sheep penned compared with Monday last. Trade in the early morning for all descriptions was of a brisk nature, but owing to the inclement weather, became slower as the day advanced, nevertheless no decline in value can be noted. There was very little inquiry for middling quality descriptions. Both Irish and Scotch sheep sold well at an advance of 2d. per 8 lb. in value. A clearance will undoubtedly be made. The supply included 200 Scotch, 1,150 Irish, and 633 from Eastern Counties.

Undermentioned quotations are at per 8 lb. (sinking the offal), and are for the best of each class penned:—

	To-day.	Monday, Nov. 14, 1904
7½ to 8 st Downs	5s 8d to 5s 10d	5s 10d to 6s 0d
9 st Downs	5s 6d to 5s 8d	6s 2d to 5s 10d
10 st Half-breds	5s 4d to 5s 6d	5s 6d to 5s 8d
10 st Irish	5s 4d to 5s 6d	5s 2d to 5s 4d
10 st Down Ewes	4s 0d to 4s 2d	4s 2d to 4s 4d
11 st Half-bred ditto	3s 10d to 4s 0d	3s 10d to 4s 0d

No pigs or calves on offer to-day.

London (Central), Monday. — Fair supplies, quiet demand. Beef: Scotch, 3s 10d to 4d 5d; English, 3s to 3s 6d; American, 2s 8d to 3s 2d. Mutton: Scotch wethers, 4s 8d to 5s; ewes, 3s 4d to 3s 6d; English wethers, 4s to 4s 8d; ewes, 3s to 3s 4d; New Zealand lamb, 2s 8d to 3s; veal, 3s to 4s 2d;; pork, 4s to 4s 8d per 8lbs.

St. Ives (Hunts), Monday.—Beasts, 657; sheep, 244; pigs, 501. Beef, 7s to 7s 9d; mutton, 8s 2d to 10s 6d; pork, 6s 6d to 7s 6d. Fat beasts sort supply, better demand; fat sheep short supply, good demand; stores very short supply, dearer; fat store pigs, good demand; milch cows good demand, prices £14 to £22.

FOREIGN

Deptford, Monday.—Beasts 970. To-day's supply of beasts, compared with the corresponding day last week, showed an increase of 51 head, and consisted entirely of shipments from the United States. Trade was of a firm and steady nature, with an upward tendency in value, to the extent of 2d per 8lbs. Besides the above number given about 260 also from the United States was withheld. Best States were quoted at from 3s 10d to 4s; seconds ditto, 3s 8d (offal given in). No sheep on the market for sale to-day. On Saturday 1,206 from the United States and 480 Canadian beasts were offered for sale; trade was of a firm nature at an advance in value. Besides the above 300 more were withheld. The best States were quoted at from 3s 9d to 3s 11d; seconds, 3s 6d; Canadians, 3s 6d to 3s 8d.; seconds, 3s 2d.; 266 Canadian ewes were offered for sale, and were quoted at from 4s 2d to 4s 4d per 8lbs.(offal given in).

Liverpool, Monday. — Smaller supply of cattle in market to-day; demand slow and prices unchanged; an increased supply of sheep. Trade was decidedly of a firmer tone, finished handy weights made top quotation, middling and rough sorts though easier to cash were not quotably dearer. Beef, 5¾d to 4¼d per lb.; mutton, 9d to 6d. At market, 1,325 cattle and 4,913 sheep.

PROVISIONS.

London, Monday.—Bacon: The arrivals of bacon last week were from Ireland 2,533 bales, and from foreign ports 11,449 bales. There was a better tone and demand in the bacon market last week, the market closing steady:—Irish, 61s to 63s up to 66s; Danish, 56s to 61s up to 64s; Canadian, 54s to 56s up to 60s. Butter: Finest butters were in good demand, and Danish some 3s dearer; prices ranging:—Danish, 123s to 125s; French, 96s to 114s; Russian, 94s to 108s; Argentine, 112s to 114s; Australian, 84s to 105s; Irish, 104s to 115s; Canadian, 92s to 103s; Australian, 92s to 114s. Lard: The lard market was quiet: Irish, 56s to 64s; Danish, 52s to 58s; American, 38s to 39s 6d.

COLONIAL DAIRY PRODUCE.

London, Friday.—Butter: The demand for Australian, especially for "Choicest," brands, is steady at unchanged rates. Cable advices from Australia report a continuance of droughty weather which is causing a great reduction in the output of butter in Queensland and the Northern part of New South Wales, where the greater portion of the butter exported from that State is produced. The shortage of Siberian supplies, owing to the strike in Russia, has caused an advance of 3 kroner in Denmark, and the official quotation is now 103 kroner, against 95 kroner last year, a difference in English money of 11s 3d per cwt. Cheese: The improved demand for Canadian cheese has caused an advance of fully 1s per cwt. this week, and cables from Montreal indicate a further advance in the c.i.f. price. On the spot "Choicest" white is selling at 57s to 58s per cwt., and for coloured 58s to 59s, and an occasional 60s.—W. WEDDEL AND CO.

LIVE STOCK AND MEAT TRADE REVIEW

(WRITTEN SPECIALLY FOR THE "MARK LANE EXPRESS.")

Trade in London.

At the Islington Cattle Market during the week the supply numbered precisely the same as the preceding week, and, as is usually the case at this season of the year, the majority of the supply was drawn from the Midland Counties and Ireland. Trade throughout the week was of a slow and dragging nature, the tendency in regard to value being in favour of the buyer. The Irish arrivals on Monday consisted of 21 Dublin Shorthorns and 37 Waterfords, no store cattle being included; for this class of cattle salesmen had to accept 2d. less money to effect sales. Fat beasts on Thursday were quite unsaleable. For fat butchering cows and bulls throughout the week late currencies were difficult to maintain, trade on Thursday being practically at a standstill, owing to the marked absence of retail buyers and carcase butchers. At the Foreign Cattle Market, Deptford, trade became firmer as the week advanced; nevertheless, rates remained about the same. The total number on offer at both markets was 4,597, as against 4,797 during the previous week. The supply consisted of 1,030 British and 3,567 Foreign (decrease 200). The following were the top rates paid per 8 lb. (sinking the offal):—80 to 90 stone Devons, 4s. 4d. to 4s. 6d.; 90 to 95 stone Herefords, 4s. 4d. to 4s. 6d.; 95 stone Runts, 4s. to 4s. 4d.; 100 stone Shorthorns, 3s. 8d. to 3s. 10d.; 95 stone Irish, 3s. 8d. to 4s.; 90 stone States, 3s. 8d. to 3s. 10d.; 90 stone fat cows, 3s. 4d. to 3s. 6d.

The sheep trade at Islington was of an extremely dull and dragging nature on both market days, and, notwithstanding Thursday's supply being one of the smallest noted this year, trade was practically at a standstill, owing to the extremely slack demand of the retail buyers. On Monday the tendency in regard to value was a downward one, with the exception of Scotch descriptions, last week's quotations being well upheld for these.

At Deptford 266 Canadian ewes were consigned, rates for which were fairly steady. The total number of sheep and lambs penned was 6,476, as against 6,372 during the preceding week, consisting principally of British consignments. The following were the top rates paid per 8 lb. (sinking the offal):—7½ to 8 stone Downs, 5s. 8d. to 5s. 10d.; 8 stone Scotch, 5s. 6d. to 5s. 8d.; 9 stone Downs, 5s. 6d. to 5s. 8d.; 10 stone Irish, 5s. to 5s. 2d.; 10 stone ditto, 5s. 4d. to 5s. 6d.; 10 stone Halfbreds, 5s. 4d. to 5s. 6d.; 10 stone Down Ewes, 4s. to 4s. 2d.; 8½ stone Canadian ditto, 4s. 4d. The calf trade, with a very small supply, was nominal. Pigs numbered 120, and met a slow but firm trade at from 4s. 4d. to 4s. 6d. per 8 lb.—BALDRY AND CO.

Trade in the West.

Supplies of milch beasts having come to hand somewhat in excess of the demand, a slight reaction in the trade has resulted, and prices are scarcely as good as they were, though the decline, which we only look upon as of a temporary character, can hardly be quoted at present more than from 10s. to 20s. a head—due to so many being anxious to realise whilst the market was so buoyant, and to this alone. From £17 to £20 is the best value now current for the most serviceable milchers, against £18 to £22 realised a week since. Secondary grades, too, are at the same time less saleable than they were. With barreners there is also a poor sale, though here and there a few good meaty bullocks are making from £13 to £14 apiece where sold singly; pairs are not bringing such a good return, £18 to about £23 or £24 being about the general range of values, rougher grades selling as low as from £14 to £17, the depression in this particular class of stock being undoubtedly the outcome of the poor price fat beasts are making.

The trade in fat bullocks is still very unsatisfactory, prices generally having receded 2d. per stone since our last report. This applies not only to the rougher grades, but equally so to bullocks of the choicer kinds, the very best quality Devons, small weights, only making 4s. 6d. to 4s. 8d. per stone, and heavier beasts 4s. 4d.; whilst Shorthorns are selling at from 4s. 2d. to 4s. 4d., and occasionally 4s. 6d.; but fat cows are very sluggish at 3s. 6d. to 3s. 10d., very little realising more. Fat calves are still bringing high rates, well-finished lots selling up to £7 apiece down to £5 for smaller weights (or from 8½d. to 9d. per lb.), seconds selling from 7d. to 8d. Best wether mutton and maiden ewes sell fairly well up to 6s. per stone (or from 48s. to 57s. each); secondary grades 5s. 4d. to 5s. 8d. for heavier sheep; and coarse ewes 4s. 4d. to 4s. 10d., with a very sluggish sale for anything lacking quality. In pigs, porkers are in more demand than ever at prices ranging from 10s. 6d. to 11s., another 6d. being made occasionally for animals of exceptional finish, fat hogs also commanding a good sale at 9s. to 9s. 6d.; and, though heavier pigs find buyers at considerably lower rates, there is not such a keen enquiry by any means for this class of meat as there is for the smaller weights.

Trade in Scotland.

The number of fat cattle on offer this week has been rather less. For the best qualities previous prices were maintained, but secondary and third-rate kinds still meet a very bad trade at low prices. There were also fewer sheep on offer. Anything of a good class and adapted for shop purposes were easily sold. Ewes still selling at moderate prices. Fat calves and pigs just the turn cheaper. There was a much smaller supply of store sheep on offer, and generally of an indifferent class. Anything good sold at full prices. Rather fewer store cattle on offer, and the quality not quite so good as last week. A slow demand was experienced without change in value, and a portion of the rougher cattle were left over. Milch cows a good show, and the best class sold dear. Quotations: — Top price of best cattle per live cwt., 38s.; current, 31s. to 34s.; secondary, down to 28s.; mutton from 7d. to 9d. per lb.—JOHN SWAN AND SONS, LTD.

Trade in Ireland.

The attendance both of home and export buyers at last Thursday's Dublin market was fairly large, but any good that might have come through this was more than discounted by a large increase of supplies in both departments, leaving trade as bad and inactive as ever. In the cattle market business opened with a little vigour, but the increase in the number of cattle soon told its tale, and buying fell into a cautious and tedious groove, buyers seeming afraid to offer at all. The early sales were the only ones which gave any satisfaction to sellers. Middling and inferior beasts were about as slack as they could be, and at a late hour large numbers were left over unsold. Both ox and heifer beef sold at from 48s. to 52s., and in a few cases up to 54s. per cwt.; good second quality beef, 45s. to 47s. 6d., and inferior from 42s. per cwt. There were 4,364 beasts on the market, an increase on the week of 615.

Trade for sheep was also poor, an increase of over 700 head making those on offer quite in excess of the requirements of the day. Home buyers appeared indifferent as to whether they bought or not, and the export buyers seemed to be of the same mind. But hough the tone of the market was weaker, there was no quotable decline in the value of mutton. Prime wether mutton sold at from 6½d. to 7d. per lb.; ewe, 5¾d. to 6½d.; and inferior sheep from 5d. per lb up. Large, heavy made from 44s to 55s. each; and small to medium ditto from 32s. to 42s. Veal was in increased supply, too, and this gave a weaker tone, but still choice veal sold readily at from 7d. to 8d. per lb.; inferior veal did not bring over 5d per lb. Milch cows of good quality were in fair demand and firmer, freshly calved making fram £15 to £18. and tip-top springers going at from £19 to £21; small and inferior cows from £8 upwards. Store cattle without change for the better, but beasts of good breeding in forward condition were looked for at some of the store sales which took place on Thursday. A good many nice beasts were bought to ship for Norfolk, Cambridge, Leicester, and Warwickshire, and a few lots for Wales and Scotland. The graziers from the Counties Meath, Dublin, Wicklow, and Kildare wanted nice young cattle, but were not able to get all they required. Business was brisker, but no sign of a rise in price. The top price for Aberdeen-Angus and Hereford crosses would be about 27s. 6d per cwt. £13 a head was paid for some cross Shorthorns, suitable for stall-feeding. For the last couple of weeks trade in the Dublin pig market has been very good, and, doubtless it was the prospect of another brisk day which brought such a big supply in last Thursday. Trade proved tedious, however, as buyers were poorly represented, and in the absence of competition sellers had to give way from 2s. to 4s. per cwt., and even at this reduction it was hard to effect a clearance. Choice light pigs paid from 50s to 52s. per cwt.; heavy, from 46s. to 50s.; and inferior from 32s. up.

LONDON.

Islington. Thursday.—Beast supply compared with Thursday last, showed increase of 60 head, majority consisting of fat butchering cows and bulls, and very small consignment of prime quality cattle; for former trade ruled firm, last Monday's quotations being well maintained. Fat beasts, however, met absolutely no demand, and consequently unquotable. Top value, fat cows, 3s 6d; fat bulls, 2s 10d to 3s 2d per 8lb. Sheep supply consisted entirely of Downs and half breds. For both wethers and ewes trade ruled dull, with downward tendency in value, though not sufficient to quote. No Scotch or Irish sheep shown. Best pens made, per 8lb, as follows: 8 stone Downs, 5s 10d; 9 stone ditto, 5s 8d; 10 stone ditto, 5s 6d; 10 stone half breds, 5s 4d to 5s 6d; 10 stone Down ewes, 4s. Calf trade not worth noting. Full supply of pigs, and trade slow but firm; best small breeds quoted 4s 6d per 8lb. Quotations, per 8lb, sinking the offal:—Beasts, 2s 10d to 3s 6d; sheep, 3s 10d to 5s 10d; pigs 2s 10d to 4s 6d. Total supply beasts 100, sheep 70, calves 10, pigs 70.

London (Central). Friday.—Good supplies were on offer, for which a fair demand prevailed at about late rates. Arrivals of beef included 80 tons Scotch, 220 Liverpool sides, 1,850 hindquarters, and 1,500 forequarters American refrigerated; also 1,150 Argentine chilled hindquarters and forequarters. Quotations: Beef, Scotch short sides, 4s 2d to 4s 4d; long sides, 3s 10d to 4s; English, 3s 3d to 3s 5d; American Deptford killed, 2s 9d to 2s 1d; Liverpool sides, 2s 8d to 3s; American refrigerated hind quarters (best), 3s 4d to 3s 6d; forequarters, 2s 2d to 2s 4d; Argentine chilled hindquarters, 2s 2d to 2s 6d; forequarters, 1s 10d to 2s. Mutton, Scotch tegs and wethers, 4s 8d to 5s; ewes, 3s 4d to 3s 6d; New Zealand, 2s 3d to 2s 8d. Lamb, New Zealand, 2s 8d to 3s. Veal, English and Dutch, 2s 8d to 3s. Pork, English, 4s 2d to 5s; Dutch, 4s to 4s 10d per 8lbs.

COUNTRY.

Ashford. Tuesday.—Beef trade dull, but without quotable reduction in prices. Best steers an dheifers made 4s 2d to 4s 4d, and cows 3s 8d to 4s per stone. Mutton depressed. Downs, 5s 2d to 5s 6d; choice Kent wethers, up to 5s 4d; old sheep, 3s 8d to 4s. Veal about 5s, and roasting pigs from 4s 2d to 4s 6d per stone.

Basingstoke. Wednesday. At Raymond and Sons' sale-yard there was a fair attendance of buyers to meet a supply of 20 fat beasts, 61 calves, 555 fat sheep and lambs, 279 pigs and 114 head of dairy and store cattle, for which the following prices were realised: Fat beasts, from £12 5s to £18; fat calves, 60s to £5 10s; small, 20s to 50s; fat hogs, 60s to £5 2s 6d; fat porkers, 38s to 59s; small, 24s to 36s; stores, 10s to 26s; dairy cows, £8 10s to £20; best Down wethers and ewes, 48s to 53s; ten months' old ditto, 48s to 52s; small ditto, 38s to 45s; cross-bred wether Blackfaced and Cheviot, 40s to 45s; months' old ditto, 48s to 52s; best three months' old sucking lambs, 30s to 40s; rams, 45s to 54s. A short show of fat beasts included a few good two-year-old Shorthorn heifers and Devon steers, which were cleared at an advance on late rates; the remainder of the supply consisted of rough and half fat Devons and Shorthorns, which were unsaleable except at lower figures. The show of fat sheep included a good proportion of choice Down wethers and lambs, for which there was a good inquiry, and prices well kept up and a clearance generally made; small store lambs made up to 36s. With an average supply of dairy cows on offer, slightly lower prices had to be taken all round from previous markets. Store cattle continues a slow trade. Fat calves were cleared at less money. The pig trade, both for fat hogs and porkers, was very firm, highly satisfactory prices being realised. Store pigs also are inquired for. Ruling values:—Best fat beasts, 6½d to 6¾d; secondary ditto, 5¾d to 6d; bulls, cows, and inferior, 4½d to 5d; best fat sheep, 8½d to 8¾d; secondary ditto, 7d to 7½d; old ewes, rams, and inferior, 5½d to 6d per lb; fat calves, 6½d to 7¾d per lb; fat hogs, 9s to 10s; porkers, 10s 6d to 12s per score.

Berwick. Saturday. — Attendance of farmers and buyers poor, and trade slow. Calves, £5 to £6 10s; heifers, £7 10s; stirks, £8 to £10 10s; two-year-olds, £11 10s to £12 10s; three-year-olds, £13 to £14 10s; Shorthorn bulls, £12.

Birmingham. Thursday.—Good supply of pigs; small supply of beasts and sheep. Trade slow. Beef, 4¼d to 6¼d (a few Herefords 6½d) per lb; mutton, 6d to 8¼d per lb; bacon pigs, 9s 6d to 9s 8d per score; cutting pigs, 9s 9d to 10s per score; porkets, 10s 6d to 11s 6d per score; sows, 8s 2d to 8s 4d per score.

Bristol. Thursday.—Beef plentiful, but demand limited, and trade quiet at last week's rates. Mutton offered in average quantity, but little business done, and prices of best qualities declined ¼d per lb. Pigs in greater number than recently, and whilst porkers remained at the high price of 11s per score, baconers advanced from 9s to 9s 6d per score.

Canterbury. Saturday.—An improved trade in Welsh and Irish bullocks, which are cheaper than in recent times. Yearlings are worth from £8 to £9; two-year-olds, from £11 to £12. Sheep in smaller supply; wether tegs, up to 42s; lambs, 22s to 26s.

Calne, Friday.—Present prices for prime pigs, in lots of not less than ten, on rail within 100 miles of Calne.

C. AND T. HARRIS AND CO., LTD.

Carlisle, Saturday.—In consequence of it being hiring Saturday, there was a very quiet market at the Sands. The supply was the smallest seen for many weeks past, and buyers were very scarce, trade ruling dull at £7 10s to £10 for small wintering heifers, and £10 10s to £13 10s for the best descriptions.

Chester, Thursday.—A pretty good show of all descripeions of horned stock. Trade was very slow, and numerous lots remained unsold, though prices closed about the same as last week. Quotations:—Milch cows, £17 to £22; calvers, £15 to £19; barrens, £10 to £13; heifers, £9 to £15; stirks, £6 to £10.

Chichester. Wednesday.—The trade for sheep ruled slow at 1s to 2s less money. There were some very prime fat cattle, and they experienced a much better trade. A A large show of dairy cattle met a good selling trade, and rates were maintained. Quotations:—Prime Devon steers, 4s 4d to 4s 8d; prime Southdown sheep, 6s 4d to 6s 8d; prime West Country sheep, 5s 8d to 6s; fat ewes, 4s 4d to 4s 8d; veal, 4s 6d to 5s; porkers, 4s 4d to 4s 8d. Stock at the market: Cattle 857, sheep 3,178, pigs 893, calves 166, and horses 19.

Chichester. Wednesday.—Messrs. Stride and Son's supplies consisted of about 2,000 fat and store Southdown and other sheep, and 300 fat, dairy, and store cattle. There was the usual large attendance of buyers and farmers present, but trade for sheep ruled slower at 1s to 2s per head less money. There were some very prime fat cattle for sale, and they experienced a much better trade, and late prices were well maintained. There was a large entry of store cattle, and rather more life in the trade.

Colchester, Saturday.—Both trade and supply were good. Grass beef sold at from 4s 4d to 4s 8d per stone; mutton, 5s 6d to 6s; and pork, 9s to 9s 6d per score.

Doncaster. Saturday.—Moderate supply of cattle and sheep. Cattle trade a shade better. Milch beasts, £16 to £22; bullocks, £12 to £16; heifers and drapes, £10 to £15; young stock, £4 to £6. Small supply of sheep and lambs, and quiet trade. Breeding ewes, 42s to 48s; Lincoln lambs, 38s to 44s; Northcountry lambs, 28s to 36s each.

Dorchester. Saturday.—Both Messrs. Duke and Son's and also Messrs. Symonds and Sampson's sales were well supplied in most departments, except the sheep pens, which were only but scantily stocked. Trade generally ruled quiet and prices for some things were disappointing, notably for barreners, which even the best, are back considerably in value, from £18 to £22 or £23 being about the best price for those now coming out; poor class lots are even more difficult to cash. Milch beases are a little more saleable at from £16 to £20, which is the best price now ruling; plenty only making £11 to £14 or £15. Good quality fat steers and heifers a saleable trade from £15 to £20 5s (or 10s 6d to 11s per score for the best); fat cows, £12 to £14 (or 8s 6d to 9s 6d). Mutton trade still keeps slow, wedders to-day making 46s 6d to 51s (or 7½d per lb. and ewes 43s to 52s 6d (or 6½d to 7d).

Dublin. Thursday.—Numbers in market: Beasts, 4,364, increase 615; sheep, 6,262, increase 745; calves, 41, increase 12. Notwithstanding a substantial advance in the numbers exposed for sale, trade and prices showed practically no alteration. There was a well-sustained demand for the choicer descriptions; secondary and inferior sorts tedious to cash, but a fair clearance made. With more favourable weather sheep were in better request at last week's prices. Cattle, live weight (best), 27s 6d to 31s per cwt; secondary and rough sorts, 24s to 27s per cwt. Mutton, dead weight, 5½d to 7¼ per lb.—GANLY, SONS, AND Co.

Edinburgh. Wednesday.—A slow trade for cattle, the quality being moderate, but a good trade for sheep. Coloured bullocks, £11 11s to £12 12s; horned, £13 10s, polled, £13 13s; half-bred hoggets, 32s; Cheviot dinmonts, 37s 6d; black-faced dinmonts, 32s; best Shorthorn cows to £24; crosses, £19 to £23; and Ayrshires, to £17 10s per head.

Exeter. Friday.—Smaller supply of beasts; rather better sale, and late prices well maintained. Maiden heifers and steers, 11s; cows, 10s, and in some cases rather more money; all cleared. Usual number of sheep, but quality not generally so good; all the best sold out at 8½d for small and 8d for large size; ewes, 6d to 6½d; keeping lambs for turnips, 32s to 38s; calves, 7½d.

Glasgow. Wednesday. There was a fair demand for sheep at fully late rates; best hoggs, 9d to 9½d; secondary, 8d to 8½d; best wethers, 8d to 8½d; secondary, 7½d to 8d per lb; Prime cattle in request, but secondary slow owing to the glutted dead meat market; top Scotch, 62s; secondary, 56s to 58s; Irish, 56s per cwt. Dead meat dull; best Scotch beef, 6d; best States, 5½d; best Canadians, 4½d per lb.

Gloucester. Saturday.—Messrs. Burton, Knowles, and Co., report their sales as follows:—A large supply of cows and calves and in-calvers, the best of which sold readily at prices up to £23 2s 6d, £22 15s, £22. The trade was dull for second-class quality. A small supply of store cattle with very little demand.

Hereford. Wednesday.—Both the cattle and sheep trade were unsatisfactory. We had an over-supply of fat beasts, and with a dragging trade there was no recovery from last week's decline, the top price being 6½d. fat cows 5d. Half-fed beasts were in less demand. Store cattle were down. Sheep were not an over-supply, but were of all sorts, and the demand for even the best wethers was very slack, which was surprising so near Christmas. Choicest wethers made 7½d to 8d, fat ewes 6d. There were few store lambs, and they realised 8d per lb. Useful store lambs met with ready customers. The calf trade was slow at low quotations, about 6d per lb for fat calves, and rearing calves being cheaper. We had a much larger supply of pigs. Porks and nice quality bacons experienced a very good demand at 6d, and the store pig trade was also firmer.

Ipswich. Tuesday.—Messrs. Robert Bond and Sons report a short supply of fat cattle, which were mostly rape home-breds of medium weights; trade was keen for all top qualities up to 9s per stone; secondary sorts were slow at last week's prices. There was a large show of grazing cattle, and at the special sale 430 North country Shorthorns, Polled Scots, Red Polls, and Irish calves were penned; there was a large attendance of buyers and a fair demand at rather lower prices, but most of the lots changed hands. Shorthorn steers, two years old, £11 10s to £10 2s 6d, eighteen months £9 10s to £8 10s, sixteen to fourteen months £8 15s to £6 17s 6d, Westmorland calves £5 17s 6d to £5 10s. A grand lot of Polled Scots made from £10 15s to £9, Polled Irish £10 5s to £9 15s, young Red Polls £8 5s to £6 5s, Cumberland heifers, in calf, £10 10s. At the special sale of dairy stock 70 cows and heifers were penned; buyers were numerous, and all the best animals fresh calved or near commanded a substantial advance; half-bred Dutch cows, with calves by sides, £29 to £17 5s, Shorthorns to £22, Polled to £20, Shorthorn heifers to £20, young Dutch heifers to £10 5s. Fat sheep in moderate supply; trade brisk, last week's decline being recovered; the best hoggets realised from 58s to 53s. A large number of grazing sheep were penned, and these were in good demand at higher prices; Suffolk hoggets 40s to 33s, half-breds 45s to 37s. Fat and store swine were more numerous; trade was not so good, and values gave way slightly. Numbers at sales and market: 1,217 cattle, 876 sheep, 1,451 swine, and 111 horses.

Leicester. Saturday.—Full consignments of home-bred stock. Trade ruled rather sluggish at fully 10s to 20s per head decline. Choice milch cows, £26 to £23; good lots, £17 to £19; secondary, £14 to £16; Shorthorn bullocks, £11 to £14; cross-bred Polled bullocks, £12 10s to £15; Welsh runts, £10 to £14; young stock, £5 to £; calves, 12s to 40s per head.

Lincoln. Friday.—About the usual supply of cattle. Yearlings, £8 to £10; two-year-olds, £12 to £15. A small consignment of sheep, with a fair demand. Lambs, 34s to 40s.

Lynn. Tuesday.—An average show of cattle for the time of year, this being well before the cattle fair. Stores met a slow trade £6 to £17 each. Fat beasts 7s, and a few choice up to 8s per stone. Scarcely any store sheep, those sold making 40s to 45s each. Few fat sheep 9s to 10s per stone. Store Lambs 32s to 40s each.

Manchester. Friday.—Beef: First class, 4¾d; second class, 7¼d to 4d; third class, 2¾d to 3¼d. Mutton, first class, Cheviots, Scotch, 7¾d; others, 7½d; second class, 6¾d to 6¾d; third class, 5½d to 5¾d. Veal: First class, 6¾d, second class, 5¾d to 6¼d; third class, 4¾d to 5d. Bacon pigs, First class, 5¾d; second class, 4¾d to 5¼d; third class, 3¾d to 4¼d. Porket pigs: First class, 7¼d; second class, 7d to 7¾d; third class, 6¾d to 6¾d.

Norwich. Saturday.—Stormy weather was not conducive to trade, rain fell heavily, and sales were not numerous. Fat beasts in average supply, and prices easier at 7s to 7s 9d per stone; prices for store animals, which were offered in large numbers, ranged from £5 to £16 per head; store sheep in smaller supply, prices being of a downward tendency; lambs made 30s to 40s per head, while fat sheep met with a brisker demand at 10s to 11s per stone; fat pigs, in limited supply, met with a steady demand at 7s to 7s 3d per stone.

Nottingham. Saturday.—Fair show of milch beasts, with a slower trade. Best milch cows, £15 to £20; in-calf heifers, £12 to £17. Small show of store beasts, with a dragging trade. Strong heifers and steers, £10 to £13; younger beasts, £6 to £9; calves, 25s to 50s. No sheep or pigs.

Preston. Wednesday.—The attendance was much below the average, and trade was very slow. There was an average supply of stock. Cows and bulls, 4d to 5½; heifers and bullocks, 5¼d to 6d; hoggs, 8¼d to 8¾d; lambs, 8d to 8¾d; ewes, 6d to 6¾d; tups, 5¾d to 6d; calves, 5¾d to 6¼d. Numbers at market: 240 cattle, 120 calves, and 1,459 sheep.

Shrewsbury. Tuesday.—Large supply of cattle. Usual number of sheep, calves and pigs. Trade good, and prices a shade better than last week. Quotations: Beef, 5¼d to 6¼d per lb; mutton, 7d to 8¼d per lb; lamb, 6¾d to 7¾d per lb; perket pigs, 9s to 10s 3d per score; bacon pigs, 8s 6d to 9s 6d per score. Numbers offered as follows:—Cattle 1,009, sheep and lambs 699, calves 79 pigs 481.

Thame. Tuesday.—Fair attendance, with average supplies of all descriptions of stock. Best beef maintained late prices; secondary difficult to dispose of. Mutton continues in good demand. Veal, bacon, and pork all disposed of at late rates. Good weaning calves in request. Messrs. Bond and Burrows' sale comprised 73 fat beasts, 126 fat sheep, 145 fat and store pigs, and 119 fat and weaning calves. Fat oxen made from £16 to £19, fat heifers £15 to £17 17s 6d, fat wether sheep 49s to 58s 6d, fat ewes 40s to 53s 6d, fat calves £3 to £5, weaning cow calves 30s to 61s, bull calves 10s to 48s, bacon hogs £3 10s to £5 5s, porkers 28s to 45s, store pigs 14s to 23s.

Truro. Wednesday.—Business fairly brisk, attendance very good. Fat bullocks, 54s to 58s per cwt; barreners and store bullocks, 40s to 45s; cows and calves, £9 to £17 each; rearing calves, 15s to 35s; wethers, 7d to 8d per lb; ewes, 6½d to 6d; lambs, 7½d to 8d; pigs, 9s to 32s 6d each; beef, 6d to 8d per lb; mutton, 6d to 8d; lamb, 6d to 8d; veal, 6d to 8d; pork, 6d to 8d; bacon (uncured), 6d to 7½d; ditto (cured), 7d to 9d; pork (carcases), 4½d to 5½d. Number in cattle market: Bullocks 351, calves 67, sheep 215, pigs 220 and horses 3.

Wolverhampton. Wednesday.—There were fewer animals penned, and business quiet. Quotations:—Beef, 5¼ to 6¼ per lb; mutton, 8d to 8¾d per lb; lamb, 8d to 8¾ per lb; veal, 7½d to 7¾d per lb; bacon pigs, 9s to 10s per score; porkets, 10s to 11s per score; sows, 7s to 8s per score.

Worksop. Wednesday.—Fair supply of stock, with trade brisk owing to an increased number of buyers. Best beef, 6s 9d to 7s 3½; secondary qualities, 6s 3½ to 6s 9d per stone; best Southdown wether and cross-bred Shearlings, 8½ to 9d; ewes, 5¾d to 6¾d per lb.

Yeovil. Friday.—Best quality cows and heifers with calves made from £16 to £18 10s; secondary, from £10 to £15; barreners, from £8 10s to £12; coming two-year-old heifers, £7 10s to £10; in-calf heifers, £10 to £12 10s; store steers, £9 10s to £10 7s 6d; horn ewes, 40s to 45s; horn wethers, 46s to 52s; Down ewes, 35s to 41s; Down wethers, 45s to 50s; cross-bred lambs, 32s 6d to 40s.

York. Thursday.—A very large show of English and Irish store cattle. The latter were chiefly strong old cattle, and the English young sirks from the North-West country. The depression in the store cattle trade continues, and there were fewer purchasers than at the last market. A good many sales were effected, but prices were chiefly in favour of buyers. For three-year-olds with plenty of flesh up to £14 was fetched, two-year-olds £9 to £11, and sirks £7 to £9. A small show of calving and milch cows, with a fairly brisk demand for the better class. Anything with quality made late rates, and in a few cases there was an advance of 5s to 10s per head. Secondary sorts moved off slowly at £14 to £17, while good animals made £20 to £22. A very good show for the time of year of all classes of sheep and lambs. Best twice-crossed Shearlings made up to 46s, Masham Shearlings 42s to 45s, best twice-crossed lambs up to 36s, others 28s to 32s, Masham lambs 21s to 25s, and a few North-country lambs 28s to 34s. There will be a lot of the smaller classes of sheep left on hand, while anything good was fairly easy to sell.

FOREIGN.

Yorkhill. Monday.—Large supplies of cattle were on offer at the usual weekly sales held to-day, 841 head being penned. They were all Canadians, and were delivered in fair condition. Not many buyers were present, and business throughout was very slow. Bullocks were plentiful, and for animals of handy weights and sizes prices ranged from 50s to 52s per cwt dead weight, while a small number of superior description made up to about 54s per cwt dead weight, at which figure a few were sold to weigh. Secondary, middling, and inferior qualities were very difficult to cash, quotations being given at from 48s to 49s per cwt. Bulls made a very poor trade at dead-weight quotations, ranging from 40s to 42s per cwt.

MANURES.

Liverpool. Friday.—Nitrate of soda is firm, but quiet at £10 15s to £11 per ton, according to quality. Large sales have been made of basic slag for forward deliveries, but as yet only a moderate quantity is moving into actual consumption, though inquiries are on the increase, especially for the higher tests; in addition to its aplication to grass lands it is suitable for autumn-sown wheat, etc.; values as below. Kainit is more freely offered, and values are about 1s per ton easier. Present values of feeding stuffs, linseed cakes especially, somewhat retard the consumption, yet holders are firm at the late advance. Fattening cake, prime Liverpool make in bags, £6 12s 6d to £6 15s; feeding or dairy cake, prime Liverpool make, in bags, £6 5s to £6 7s 6d; nitrate of soda, best quality, i.e., guaranteed 95 per cent. pure, in bags, £10 15s to £11; East India bone meal, in bags, £5 5s to £5 7s 6d; kainit, prime 23 per cent. sulphate of potash, in bags, £2 to £2 2s 6d; palm nut cake, prime, in bags, £5 15s; linseed cake, American thin oblong, prime, in bags, £8 5s to £8 7s 6d; ditto English, prime, in bulk, £8 7s 6d to £8 12s 6d; linseed meal (pure crushed linseed), prime, in bags, £14 to £15; cottonseed cage, N.A. decorticated, good, ordinary, in bags, £6 17s 6d to £7; ditto English decorticated, prime, in bags, £7 7s 6d; ditto English undecorticated, prime, in bulk, £4 12s 6d to £4 17s 6d; ditto (crushed), 20 to 25 per cent. oil guaranteed, prime, in bags, £7 to £ 2s 6d; maize germ meal, prime, in bags, £5 17s 6d; corn oil cake 10 to 15 per cent. oil prime, in bags, £6; rice meal, Rangoon, as imported, in bags, £6 2s 6d per ton. Linseed, fine hold feeding, in bags, £2 7s to £2 8s per quarter (416lbs); cod liver oil, cattle feeding, prime, in casks, 4s 6d per gallon; treacle, feeding, prime, in barrels, 4s 4½d to 4s 6d per cwt; D.N.S. brand superphosphate of lime, guaranteed 25 to 27 sol., in bags, £2 to £2 2s; ditto, guaranteed 30 to 31 sol., in bags, £2 5s to £2 7s; superphosphate of lime, guaranteed 35 to 36 sol., in bags, £2 15s to £2 17s; basic slag, prime quality, guaranteed 30 to 35 per cent. phos., in bags, £1 11s to £1 13s; ditto, prime quality, guaranteed 30 to 45 per cent. phos., in bags, £1 19s to £2; finest quality, guaranteed 42 to 50 per cent. phos., in bags, £2 2s to £2 5s per ton, at depots inland.—H. JONES LANGAR AND Co.

FEEDING STUFFS.

Hull. Tuesday.—Linseed: Linseed since last report has continued firm, but at the close the tendency is again in buyers' favour. Red Plate afloat sold offers at 23s 3d, some price asking September-October and October-November, 23s 6d, November-December 23s, January-February 23s 3d, sellers Calcutta, November-December 23s 6d at 23s 3d. Petroleum also made 23s 3d prompt. Cake: A fair business done in Egyptian during the week at 22s 17s 6d spot all ex mill to E.L. ports in first half November shipment at 23s 15s to 23s 16s 3d, same prices being paid November-end November-January; to-day, however, the market has been very quiet, with sellers latter positions at £5 15s. Oilseed cakes. Linseed cakes: A quiet demand with a moderate supply; prices very firm with hardening tendency, foreign spot short cleared, and future arrivals on certain view discussed in Russia. Cotton cakes: Best were firm at late week's prices; Bombay 1s 3d per ton dearer, decorticated cake and meal spot cleared.—KINGSLEY MAYCOCK AND Co.

London. Thursday.—Linseed: With the exception of near, and which maintains its firmness owing to scarcity, the market is easier, owing to free offers of new crop closing steadier. Calcutta London Spot 23s, and afloat 38s 9d, October-November 38s 6d, November-December 38s 3d, April-June 36s 6d. Hull—Dull and buyers very difficult to find. La Plata spot 23s, passage 22s, October-November 37s 9d, December-January 36s 6d, and January-February 36s. Rapeseed: Quiet, inactive, both buyers and sellers show little disposition for business. Brown Cawnpore November-December 39s 6d. Ferozepore 39s 6d. Cottonseed: Egypt having declined, prices are lower here. London—Passage, new, £5 18s 9d; first half November £5 16s 3d, November-January £5 15s, business doing. Hull—Spot and passage £5 16s 3d, November-January £5 15s. Oil cakes.—Linseed cakes: Firm; London-made £7 17s 6d to £8. Cotton cakes: Firmer; London-made £4 17s 6d to £5.—THE PRODUCE BROKERS CO., LTD.

Mark Lane. Monday.—Linseed cake: The amount of business passing is not large, but there is a fairly good consumptive demand, and, with only small stocks and short supplies of foreign, values exhibit a further hardening tendency. Russian may still be bought at last week's prices. American quotations are unchanged. East India seed pures offer at £7 12s 6d ex steamer to arrive. London-made attract rather more attention and made last week's full value. Cotton cakes: Only a moderate quantity of Egyptian is available in warehouse, and for these holders are firm at an advance of 1s 3d per ton. English are also the turn dearer. Decorticated London-made sell freely at £6 17s 6d for cake and meal, and £5 5s for special digestive meal, with American "Open Hand" brand making £7 2s 6d. Rape cakes do not offer. Maize germ meal: Steamer parcels of white American are quoted at 2s 6d per ton more money, at which some business is reported; English is sparingly offered, and 1s 3d per ton dearer. Maize gluten meal is nominal at £5 per ton. Rice meal: The market is almost bare of stocks, and shippers remain firm at £4 16s 3d ex ship terms for steamer parcels to come along. Broken Rangoon rice is cheaply offered at £4 15s per ton. Locust beans are quiet but firm at £5 5s for whole, and £5 15s for kibbled. Nitrate of soda is without change at £10 15s per ton ex quay.

MOLASSINE FEEDING MEAL, packed in bags of 1 cwt each. Price per ton, £6 16s., in ton lots and upwards. £7 10s. per ton in less than ton lots. Free on rail, Liverpool or London. Uniform delivered price for small quantities, 10s. per bag of 1 cwt.

WET GRAINS.

London. Friday.—Wet Grains: There has been rather more pressure to sell, and the tendency, with mild weather and increased brewings, has been easy, and 1s less has been taken on the week, ranging from 16s 6d to 18s 6d, and 13s 3d to 14s 6d porter. Better demand for milk will speedily cause a strong advance. Wet distillers' grains still maintain their prices at 35s to 36s per ton. Pressed white distillery meal 38s 6d per ton. Dried grains: There is still a good demand, and as stocks are closed down an advance may be looked for before long. Prices are: Ale, 100s; mixed, 95s; porter, 92s 6d; and distillers' 115s per ton. Dried distillery meal, containing 45.80 per cent. of oil and albuminoids, 117s 6d per AND Co., 37 and 38 Mark Lane, E.C.
AND Co

POTATOES.

Borough. Saturday.—Supplies were on a good scale, but a slow demand prevailed. Best Scots, 65s to 85s; Blacklands, 55s to 60s; Scotch, 55s to 65s; Dunbars, 80s per ton.

Spitalfields. Saturday.—Light supplies were to hand, but experienced slow support. Round Whites, 65s to 70s; British Queens, 75s to 85s; Blacklands, 55s to 60s; Up-to-dates, 55s to 70s; Scottish Up-to-dates, 95s; Queens, 60s per ton.

Devon Agricultural Society.

Colonel the Hon. C. Byng presided over the council of the Devon County Agricultural Association at Exeter on Friday. Major Tucker said the Finance Committee had invested £710 in the purchase of £800 Consols; they hely a deposit note for £195, so that they were drawing interest on £995 instead of £900, whilst they had also got £200 in the bank.

A letter was read from the Duke of Bedford accepting the presidency of the association for 1906, but stating that owing to the militia training he would not be able to attend the show at Tavistock. Mr. H. Drew reported that the Sites Committee had met the local committee at Tavistock, and inspected two sites. Either of them was exceedingly good. The committee selected the Crowndale site, where the Society previously had a show, it being more popular with the inhabitants of Tavistock. The Committee were unanimous in their recommendation, and he moved its adoption. Mr. Vosper seconded, and the recommendation was adopted.

The meeting considered the report of the committee suggesting alterations in the forms of tender, plans, specifications, etc., for the county shows. They recommended that in the form of requirements of the Society the liability of the local committee to provide a proper entrance and water supply should be more clearly stated; that in the refreshment contract a clause should be added that the contractor should send to the secretary, one month before the show, labelled samples of not less than quarter-pint each of all wines and spirits which he proposed to offer for sale at the show, and that he should sign an agreement to pay a penalty of £20 for any wines or spirits sold of inferior quality and quantity. With the view of effecting a considerable saving in the showyard works, the committee recommended the adoption of a lighter form of shedding and grand stand; also that the show be kept open on the first day of the show until 8 p.m., and that the admission to the show should never be less than 1s. Mr. H. Drew moved the reception of the report.

The council agreed to a suggestion by Major Tucker that the refreshment contractor should also send to the Society the prices to be charged. Mr. Moore-Stephens did not see why wines and spirits alone should be specified. It rather looked as if it was to be a drinking establishment. He suggested that the penalty should be extended to all kinds of refreshments. A great deal of complaint had been made as to the supply of refreshments, and it was invidious to point out that they only looked after wines and spirits. Mr. Perry said they might take what precautions they liked, but they might still, perhaps, be "had." Some little hole might be found in the net to creep out of. It was decided to extend the penalty to all kinds of refreshments. Mr. Bowden: Is it proposed to submit samples of chicken and such like? (Laughter.) The Chairman: Oh, no; it is only the penalty that applies to that.

Mr. Hallett took exception to a recommendation by the committee for raising certain entry fees for stock. Even if an exhibitor came off a winner, he did not do so with much in his pocket, and if he did not get a prize he was considerably out of pocket. In the course of an animated discussion it was suggested that if the fees were raised it would adversely affect the entries. Mr. Loveys proposed that members should pay half the amount of the fees paid by non-members, but this found no support. Mr. Rendell said the objects of members in joining the association should be not to see how cheap they could get their entries, but how far they could benefit the association by their subscriptions. Mr. Hallett complained that there was no exhibitor on the committee. They were all surveyors and land agents. Mr. Michelmore did not think that ought to be thrown in their teeth; they had done their very best in the interest of the Society. Mr. Drew said the committee tried first to look after the interests of the Society, and the interests of its members. The Chairman was convinced that the members of the committee had nothing but the interests of the association at heart. The entry fees as proposed were adopted, with the exception of a slight modification.

The new plans were approved, and Major Tucker said it was hoped to effect a saving of £100. Mr. Gibbings thought it would be detrimental to the show to do away with a sixpenny admission. He moved that that price be charged on the afternoon of the last day of the show. Major Tucker said the committee were guided in their recommendation by the experience of the crush which resulted at the Exeter show through the crowd which waited for the time for the sixpenny charge.

Mr. Gibbings' motion found no seconder.

Australian Industrial Openings.

Oats, Maize, and Barley.

In addition to wheat, the Commonwealth produces large quantities of oats, maize, and other cereals, for the cultivation of which the soil, climate, and other natural conditions are eminently favourable in many districts. Victoria leads in the production of oats, the area under cultivation raising from 175,944 acres, producing 3,299,889 bushels, in 1871, to 433,638 acres, producing 13,434,952 bushels, in 1903, or more than two-thirds the total output of the five other States, as follows:—Tasmania, 1,621,950 bushels; New South Wales, 1,252,156 bushels; South Australia, 902,936 bushels; Western Australia, 258,503 bushels; Queensland, 70,712 bushels; the total production being 17,541,216 bushels, of which only 170,273 bushels were exported beyond the Commonwealth. In the cooler districts oats are cultivated as a grain crop, and for hay in the warmer regions. Oaten hay is much in demand, selling readily at remunerative prices; and, as there is less expense and lighter labour attached to this form of cultivation, the system of growing oats for hay is consequently preferred by farmers in New South Wales and Queensland. Although the capabilities of the Commonwealth as an oat-growing country are enormous, the present total annual output is small compared with the average production in Europe or America, a fact showing the immense possibilities of the future.

The cultivation of maize is most extensively practised in New South Wales and Queensland. It is not only grown as a grain crop, but a small area is also sown for green food for cattle, chiefly on dairy farms. In 1871 the area under cultivation was 142,107 acres, producing 4,556,806 bushels. In 1903, it had become increased to 371,906 acres, producing 9,657,089 bushels, of which only 2,342 bushels were exported. Of the total area under cultivation, 226,834 acres, producing 6,836,740 bushels, were in New South Wales, chiefly in the northern coastal districts; and 133,099 acres, yielding 1,923,623 bushels, in Queensland. The quantity grown, being insufficient, by reason of drought, for local requirements, had to be supplemented by the importation of 1,346,702 bushels, of which 1,258,209 bushels came from the Argentine Republic. In 1904, the quantity imported had declined to 32,757 bushels, of which 28,422 bushels came from the New Hebrides. It is pointed out as being rather curious that the only State which imports maize to any extent is New South Wales, where it is principally grown. In the Commonwealth, this grain does not enter into consumption as an article of food as it does in other countries, and particularly in America, which produces and consumes nearly 80 per cent. of the whole maize crop of the world.

Barley cultivation is limited, the total area devoted to this crop in 1903 being 121,088 acres, producing 2,656,315 bushels, rendering necessary the importation of 731,494 bushels, chiefly from America and New Zealand. The average yield per acre is 21.9 bushels, Tasmania and Victoria furnishing higher averages than the other four States. Owing to the rapid progress of the brewing industry in Australia, increased attention is now being given to the cultivation of barley for malting purposes. Several of the larger malting companies are offering special inducements to farmers to cultivate the crop, and it is expected that the area devoted to it will show a considerable advance in the near future. In Queensland especially, increased attention is being given to the cultivation of barley for malting purposes, the area reaped in 1903 amounting to 22,881 acres, as compared with 430 acres in 1902, and 11,775 acres in 1901. The greater part of the crop was produced in the Darling Downs district, and bulk samples of the grain consigned to the London and San Francisco markets were most favourably commented upon. The minor grain crops are rye, millet, and sorghum, but there is, however, so little demand for these kinds of grain that their cultivation in Australia is very limited, although the suitability of soil and climate for the production of these, as of all other kinds of grain, having become an established fact, there can be no question that should a demand arise, the Commonwealth would be enabled to successfully compete with any of the grain-producing countries of the world.

The President of the Board of Agriculture has intimated to Mr. A. P. Gwynn, clerk to the Stanstead Rural Council, that he will receive a deputation from that body, which desires to point out the hardships inflicted upon farmers living on the borders of two counties by the terms of the Swine Fever Order. Mr. J. A. Pease, M.P., will introduce the deputation.

The King's Fat Stock.—As usual, the King will send all his fat stock on the Royal farms at Windsor to the Slough Christmas cattle show and sale, which this year will be held on Tuesday, December 12. His Majesty's consignment will consist of 282 head—namely, 32 Devon bullocks, 150 Hampshire Down and Southdown sheep, and 100 Berkshire bacon hogs and porkers.

Cruelty to a Cow.—A revolting case of cruelty to a cow was brought before the magistrates at Skipton on Saturday. The defendant was Robert Shuttleworth, of Kelbrook, a well-known Craven farmer. According to the evidence of Inspector Rigg, of the Society for the Prevention of Cruelty to Animals, on October 23 a cow, in the last stage of consumption, and said to be nothing but skin and bone, fell down in the defendant's shippon. It was unable to rise, and the defendant by means of a horse and a chain, the latter fastened round the animal's horns, dragged it across a yard paved with cobble stones, over some asphalt, and along a field to the farmhouse, a distance of 100 yards. Taking a coal hammer, defendant struck the cow over the skull, inflicting several wounds which he believed were sufficient to cause death, but the next morning the cow was found breathing heavily and badly bruised. For the defence it was pleaded that the defendant had been guilty of nothing more than an error of judgment, believing the cow was dead after he had struck it with the hammer. The chairman of the Bench (Captain Preston) said he was afraid the class of men to which defendant belonged thought very lightly of the cruelty they inflicted upon animals. Though the defendant undoubtedly deserved to be sent to gaol, the magistrates had decided to fine him the maximum penalty of £5 and costs.

ADVERTISEMENTS RECEIVED TOO LATE FOR CLASSIFICATION.

BOROUGH OF PADDINGTON.
TO FORAGE CONTRACTORS.

THE COUNCIL of the Borough of Paddington are prepared to receive TENDERS for the supply of FODDER, BEDDING and CORN, for about 90 Horses, alternately for periods of Three, Six, and Twelve months.

Further particulars and printed forms of Tender may be obtained on application to Mr. E. B. B. Newton, Assoc. M. Inst. C.E., F.S.I., Borough Surveyor, Town Hall, Paddington, W., between the hours of 10 a.m. and 4 p.m. (Saturdays 10 a.m. and 1 p.m.) No Tender will be considered unless upon the official form.

Sealed Tenders must be sent in endorsed "Fodder and Bedding," or "Corn" respectively, directed to the undersigned, and delivered on or before Saturday, the 2nd December, 1905, after which day no Tender will be received.

The Council do not bind themselves to accept the lowest or any Tender.

By order,
ARTHUR W. J. RUSSELL,
Town Clerk.

Town Hall, Paddington, W.
9th November, 1905.

NATIONAL POTATO SOCIETY.
GREAT SHOW in the HORTICULTURAL HALL, Vincent Square, Westminster, on THURSDAY and FRIDAY, NOVEMBER 23rd and 24th. Magnificent Cups and other Prizes. Admission 1s. Members Free. Schedules, Guides to the Show, and all particulars post free from the hon. Secretary, WALTER P. WRIGHT, Postling, Hythe, Kent.

AGENTS Wanted by an old-established firm for the sale of their Linseed, Cotton Feeding Cakes, Manures and Seeds. For further particulars apply to JOSEPH ASHWORTH & SONS, Ltd., Oil Cake Mills, Fone and Manure Works, Frodsham Bridge.

LONDON AND NORTH WESTERN RAILWAY.

POULTRY AND PIGEON SHOW,
To be held at the
BINGLEY HALL, BIRMINGHAM,
Nov. 25th, 27th, 28th, 29th, and 30th, 1905.

NATIONAL DOG SHOW,
To be held at
THE CURZON EXHIBITION HALL, BIRMINGHAM,
November 27th, 28th, and 29th, 1905.

The Company have arranged for Through Vans for the conveyance of Poultry and Pigeons, to be run to Birmingham (New Street Station), on Friday, November 24th.

FREDERICK HARRISON,
General Manager.

Live Stock Record.

WINTER FEEDING FOR BACONERS.

At the present period droves of pigs, which in the early autumn were in the fields "stubbling," as Rustics term it, after the corn sheaves had been taken away, and, later, living on grass and acorns, are taken into houses or yards to be fattened. The fruit of the oak will continue to fall for some time yet, so that the brood sows, with their autumn litters, may still be allowed to roam about the fields, where they can get a considerable portion of their food from acorns. In seasons when the latter are very abundant they are often stored for winter feeding. There can be no more suitable food for growing pigs, but if too many are given to fattening ones, hardness of flesh is the result. In olden times very few pigs were fattened without barley meal and skim milk; but owing to the magnitude of the direct milk-supply trade, the majority of dairy farmers within convenient distance of a railway station send the whole of their milk to London and other large centres of population. Even in the remote districts where there are butter-making dairies, more profitable use is found for the separated or skim milk in feeding small porkers, which always realise a higher price than baconers.

The latter can, however, be fed on rations without milk, in which the meal of barley, maize, or wheat, with root pulp or boiled roots, are the chief ingredients. Some people are scrupulously particular about boiling everything they give to fattening pigs, and no doubt these animals relish some things all the more for boiling or steaming. Potatoes are probably nicer than when given raw if cooked with barley meal and seasoned with salt. If maize or wheat be the corn allowed, there would perhaps be economy in boiling either whole to save the cost of grinding. At grist mills millers dislike grinding maize very much, and it makes an admirable hominy when boiled for mixing with cooked potatoes or raw swede-pulp. Swedes and turnips are very nice for porcine taste, if merely reduced to pulp and served with barley meal or some other richer ingredient. If it be deemed essential to comfort the swine-stomach on cold, frosty mornings, any corn-soup would serve the purpose, and pulped roots with meals or pollard could be given as the later-day rations. When swedes are boiled for pigs the odour is very offensive, and it must be mere fancy that pigs fatten any faster owing thereto. Going to needless expense and labour should certainly be avoided in this as well as in every other farming operation. Last year there was no profit whatever to be obtained in feeding pigs, either for bacon or even for porkers. But for several months past trade has been much better.

Many farmers fatten pigs that they may have a large quantity of rich farmyard dung; and there cannot be the slightest doubt that if styes are littered after the old plan, a moderate-sized, or even a comparatively small herd well littered daily soon make a large quantity. But chemical professors would tell the farmer that the excrements of the pigs would be likely to have better preservation for utility if unmixed with straw-litter. And it is very possible for fattening or any other pigs to have warm, comfortable beds of clean straw if the latter be thrown into a heap in one corner of the house. If this plan be adopted the pig or pigs occupying it will not soil the heap of litter, but always go to another part of the house to void urine and excrement. Of course, both can be preserved better by mixture with ashes or powdered earth than would have been the case with straw, owing to the inflammable nature of the latter. And the saving of straw may be a matter of importance to a great many.

STOCK AND SHOW NOTES.

By Herdsman.

On the 10th inst. Mr. J. Jefferson, of Peel Hall, Chester, shipped from Liverpool a very good Berkshire boar and sow to South America.

I am informed that an exceptionally fine Large White Yorkshire boar, from the celebrated prize-winning herd of Sir Gilbert Greenall, Bart., Walton Hall, Warrington, has just been sold at a high price to a customer in Schleswig-Holstein, and was shipped from Grimsby on Tuesday last. The superior merit of this boar fully sustains the well-known reputation of the Walton herd, and his new owner thus makes a valuable addition to his already large herd of swine.

Messrs. Alfred Mansell and Co., live stock exporters, Shrewsbury, shipped per ss. "Civic," of the White Star line, on account of Mr. J. B. Ketchen, fifty beautiful in-lamb Shropshire shearling ewes and one stud ram. Twenty-one of these hailed from the prize-winning flock of Mr. T. S. Minton, sired by such well-known rams as Sensational 11884, Montford Latitude 11,168, Montford Longitude 11,173, Hafodunos Col 11,773, and Montford Omega 11,882; two choice ewes from Sir Walter Corbet, sired by Reynold Baron 11,861; seventeen nice ewes from Mr. Nevett, sired by Newton Choice 11,523, Harrington Gentleman 11,092, Barr's John Bull 11,675, Fortune's Favourite 11,764, and Cardiff Royalist 11,002; also ten very smart ewes from Mr. Raywood, sired by Harley Newton 11,778, Harley Rose, 11,779, and Odstone Ringleader 11,192. These ewes were all in lamb to high-class sires specially selected by the foregoing breeders for use in their respective flocks. The shearling ram which accompanied them was a Montford-bred sheep, owning as his sire that well-known ram Montford Omega 11,882, from a ewe by Montford A. 10,006, and then to the 120-guinea Royal winner Phenomenon 8,680, bred by Mr. A. E. Mansell.

Messrs Garrett Bros., of Buenos Ayres, have advised Messrs. Alfred Mansell and Co. that the ten Shorthorn heifers and one bull despatched to their order in July last have all successfully passed the tuberculine test, and left the quarantine station in good condition. The Shropshire rams, which only have to undergo a fifteen days' quarantine, also arrived at Messrs. Garrett's estancia, safely, and the whole shipment gives unqualified satisfaction.

At the annual meeting of the Renfrewshire Agricultural Society, held at Paisley on Thursday, the financial statement submitted showed the funds at the credit of the Society, exclusive of the M'Phedran of Craighet fund of £100, to be £809 2s. 5d., or an increase of £15 10s. 3d. on last year.

Notes and Jottings.

Milk selling is a business that brings quite a handful of worries to the farmer. The matter of getting his cows milked, the milk properly cooled, and the churns booked and delivered at the station in time to the early morning trains where such have to be caught is quite a business. Then there is the further trouble of keeping up the supply of milk at this time of year and for two or three months onwards, and lastly we may say, perhaps, though not least of the trouble is the annoyance of the analyst questioning the purity of the milk, and the unpleasantness of a magisterial or other inquiry which so often takes place.

Those who are engaged in the business will doubtless have noticed with some degree of satisfaction, that latterly several cases of the kind last mentioned have been dismisssd on the producers proving that the milk was as the cows had given it, though the percentage of fat was very low. So far, the farmer may be congratulated; but as far as the consumers are concerned, it is quite a question, especially where children are concerned, if they would not be wiser to pay a higher price for a better quality of milk. What possible amount of nourishment can there be for a child in, say, a quart of milk that contains but an atom over 2 per cent. butter fat?

The writer, once upon a time, possessed a cow of a certain breed that was troubled with poverty in her milk (this was before the days of the "Gerber Tester" and cream tubes) and as this cow's milk had not been noticed in quality, owing to her being a heavy milker, she was told off to provide new milk for a couple of calves to be fed from the pail. After a couple of weeks' keep upon this milk the calves shrank away so terribly that the milk of another cow had to be substituted, and on the milk from the former cow being set in a pan for creaming, with a view to ascertaining its quality, it was found to be so poor as literally to be creamless. Such milk, it is quite certain, is useless, so far as nourishment is concerned, it is quite certain.

A most remarkable account of butter production from a Guernsey cow is being published in the American papers, to which a few references may be interesting in these days of butter tests and percentages. The total quantities of udder produce recorded from this cow in the twelve months are as follows:—Milk 14,920 lb. 8 oz., the total of butter got 857.16 lb., average percentage 5.75. The total quantity of butter fat, according to the usual calculation of the addition of one-sixth, gives no less a total of commercial butter than 1,000.2 lb., which, for convenience sake, may be said to be 20 lb. butter per week for the year, or to be more exact, over 19 lb.

This cow, called Yellow Sunbeam, thus outdistances all other breeds on the other side of the Atlantic in the yield of her milk and butter. The cow was born in April, 1895, and was therefore nine years and six months old at the beginning of the test. She is described as a large cow, weighing nearly 1,200 lb., and of ideal dairy form, according to American theories: that is a large barrel, deep chest, broad across hips and loin, a fine neck, a clean-cut intelligent head, a rather spare form, still carrying plenty of flesh towards the end of the test, in August when the writer of the account saw her, and in no way indicating

the tremendous work she had been doing. The udder is described as being full of quality and milking away to nothing.

The year's record commenced on October 1, during which month her feed consisted of silage, hay, and 15 lb. of grain of various American classes called bran, gluten feed, oats, and oilmeal. The same feeding followed in November, and the variations in butter-fat was very slight, or milk either. In December the yield of milk decreased slightly from the previous yields, and the quantity of butter-fat increased in percentage, not, however, in the total as compared with October. In January silage was still used with lucerne hay (alfalfa), and 10 lb. roots per day were added to the feed, the corn rations being as before. During this month there was again a very slight reduction in the percentage and total of butter-fats and milk.

During February and March there was little variation either in feeding or produce; also April and May give no change worth mentioning. In June, however, pasture took the place of silage and roots, the pasture being mixed clover, and the grain ration consisted of 8 lb. daily. This change of feeding is rather remarkable in its results, as it increased the milk yield somewhat and reduced the butter percentage, as well as the total of butter-fat, rather considerably, giving the lowest total of butter-fat for the whole of the twelve months. July repaid the total of butter-fat by 14 lb., and August, owing probably to a little green clover being given, as well as a slightly increased grain ration, carried the butter-fat up to over 79 lb., the second best record of the year.

The tests were taken by different supervisors from the Wisconsin experiment stations, which should be a guarantee for their correctness. One note that the publisher of the article makes upon these results is very much worth a place in the brains of those who go in for butter and milk records. It runs thus:—"In the matter of economic production of milk and butter-fat there are three factors—viz., first, the man; second, the cow; third, the feed. If the man can succeed in bringing the cow and the feed together, proper proportions and quality of each, and then have the cow so handled that she and her attendants are in perfect harmony and accord, the great record is no longer a matter of conjecture, it is an assured fact from the beginning.

Another important point to which attention may be called in this important test is "The most important factor in the keeping of the cows, however, was the exceptionally fine clover pastures that were at their disposal. The conditions last summer in Northern Wisconsin, the home of the herd, were ideal in this respect. In this natural clover country crops of three or four tons for the first cutting are not uncommon, if the reports of local parties are not greatly exaggerated, and the second crop yield in favourable weather will be much as the first cut." It has always been maintained by the writer of these "Notes" that clover is one of, if not entirely, the most valuable plant for nourishment to all kinds of animals, that grows in our pastures.

Another point in the above notes that is well worthy of especial notice is that the professor puts the "man" first in the three necessary factors to the production of a great yield of milk and butter, the cow second, whilst the feed only takes a third place. This is simply a repetition of the story the writer heard very recently in one of the Christmas showyards, when one of the most successful attendants was asked by a feeder what he gave his animals to always insure such successes. The answer was very brief and simple, but unquestionably to the point:—"It isn't what you give 'em, it's how you give it 'em." There is very much more in these words, and also in putting the man first in the necessities in success, than there appears at first sight.

Alford Bull Fair.

The fifth annual bull fair at Alford, Lincolnshire, took place on Tuesday, and was the most successful yet held, the entries being numerous and trade good, whilst prices were better than ever, for no fewer than eighty-six bulls were sold at an average of 21½ gs. per head, as against fifty-six at 15½ gs. in 1901, fifty-six at 20 gs. in 1902, ninety-five at 16½ gs. in 1903, and 120 at 19 gs. each in 1904.

Mr. Peter Dunn, of Sigglesthorne, Hull, judged the bulls under fifteen months old; and Mr. John Evens, of Burton, Lincoln, judged the remainder of the bulls and the females and milkers. Class 7, open to the United Kingdom, for best Shorthorn bull not exceeding three years old, for which the £20 champion prize was offered by the townspeople of Alford was adjudicated upon by both of the above judges. Messrs. Chatterton's Stenigot Primate took the champion prize, and first prize in Class 2. He is a splendid bull, and won the first prize at Peterborough, second at the Royal Show, and third at the Grantham Show this year. In the sale ring he came in for keen competition, and was finally knocked down at 165 gs. to Mr. G. H. Kennedy, for Buenos Ayres. The reserve for the championship, Messrs. Dickinson's Bonaby Kinsman, was much admired by many; he took first prize in Class 1, and was subsequently sold to Mr. F. Scorer, Bracebridge, for 50 gs.

Mr. G. J. Brown's Tothby Virtuoso 3rd, which took second prize in Class 1, took first prize at the Lincolnshire Show; whilst Mr. E. H. Cartwright's Miss Calceby 3rd (1898), secured first prize in Class 4.

The second class as a whole were considered to constitute a great improvement on previous years. The first prize winner had the best spring in his ribs, with excellent top. The winner of the second prize had better hindquarters, but did not walk so well, and had gone off since the Lincolnshire Show. It was one of the principal conditions that all prize winners should be actually disposed of in the sale ring; and every entry must have been registered, or be eligible for entry in the L.H.R. or C.H.B. The following were the winners and the prices they realised:—

Class 1. Bulls not exceeding 15 months old: 1, Messrs. T. and W. Dickinson's Bonby Kinsman (50 gs); 2, Mr G. J. Brown's Tothby Virtuoso 3rd (34 gs); 3, Mr. H. C. Raithby; r., the Ormsby Agricultural Association; h.c., Messrs. J. W. Farrow and Son (21 gs).

Class 2.—Bulls exceeding 15 months: 1, Messrs. R. and R. Chatterton's Stenigot Primate (165 gs); 2, Messrs. Chatterton's Stenigot Gwynne (46 gs); r., Mr. T. Bett's Benniworth 38th (51 gs); h.c., Mr. J. Searby's Calceby Marvel (30 gs).

Class 3.—Bull calves not exceeding nine months: 1, Messrs. C. and R. Brooks (28 gs); 2, Mr. G. J. Brown's Tothby Valentine (25 gs); r., Messrs. Farrow.

Class 4.—Cows or heifers in milk, having produced a living calf in 1905, by a registered Shorthorn bull: 1, Mr. E. H. Cartwright's Miss Calceby 3rd; 2, Messrs. J. W. Farrow and Sons' Strubby Red Rose; r., Messrs. Farrow's Strubby Duchesse (28 gs).

Class 5.—Heifers not exceeding two years nine months: 1, Sir A. J. Fludyer's Thistleon Croft (35 gs); 2, Messrs. Farrow's Strubby Pride (40 gs); r., Mr. S. B. Carnley's Norbury Wisteria (22 gs).

Class 6. Cows or heifers in calf or in milk, possessing the best milking qualities: 1, Messrs. Farrow's Strubby Thickflesh (47 gs); r., Messrs. Farrow's Strubby Wideback.

Class 7.—Open to United Kingdom, for best Shorthorn bull, not exceeding three years old, champion prize £20, presented by townspeople of Alford: Messrs. R. and R. Chatterton; r., Messrs. Dickinson.

Proposed Farmers' Union for Notts.

A proposal is on foot for the establishment of a Farmers' Union for Notts, much on the same lines as that now in existence in Lincolnshire. The union is to be formed for the purpose of watching over and defending matters affecting farmers, and to secure legislation and amendments of existing Bills relating to taxation of agricultural land, railway rates in reference to agriculture, fires near railways, licensing vendors of foreign meat, or marking the meat, Pure Beer Bill, boundary fences, sale of milk, and sheep worrying and stray dogs, etc. As the subscription is fixed at the low rate of ½d. an acre, it is expected that a large number of members will be speedily obtained.

Forthcoming Live Stock Sales.

Date.	Stock.	Owner.	Place of Sale.
November 16	Hackney Horses	Messrs. Clark, Clappison and Cliff	Westlands, Patrington, near Hull, East Yorks.
21, 22 & 23	Hunters, Harness Horses, Hackneys, &c.	Various	North Wales Repository, Wrexham.
23	Fat Stock	Miss Alice de Rothschild..	Home Farm Waddesdon, Bucks.
24	Shire Horses	Sir Oswald Mosley and Mr. W. H. Kearns	Derby Repository:
24	Red Polled Cattle... ..	Mr. A. G. Smith	Drill Hall, Ipswich.
30	Farm Stock...	Mr. W. B. Ledger	The Isle Park Farm, near Shrewsbury.
30	Hunters, Harness Horses, Cobs and Ponies	Various	Crewe Horse Repository.

Horse Notes.

"He doth nothing but talk of his horse."
—Merchant of Venice.

Fifteen hundred guineas is a pretty stiff price to pay for a gelding, and especially if that gelding has reached the mature age, for a horse, of twelve. But the purchaser of Mrs. Hartley Batt's famous harness horse, Heathfield Squire, who, according to the rumour of the market place, has been sold to go to America for the season, is by no means likely to regret his bargain. Heathfield Squire was bred by the late Lord Londesborough, and was from the fine mare Ophelia, an Islington champion, and one of the finest movers and most beautifully balanced mares it was ever my lot to meet with.

Heathfield Squire's pedigree is worth a moment's consideration. His dam, Ophelia, was by Denmark 177, dam Jenny Bother 'em by Fireaway 249, grand dam by Sir Charles 768. Ophelia was closely in-bred to Sir Charles, for he was the sire of Denmark. The latter also had a double cross of Ramsdale's Performer 547 on the sire's side through Lund's Merry Legs 449, and another cross through the same source on the dam's side. It is also worth remembering that Sir Charles 768 was third in direct descent from Skyscraper on the sire's side and from the famous Filho da Puta on the dam's side. Friffitt's Fireaway 249, the sire of Jenny Bother 'em, was a grandson of Scotts Fireaway 223, who in his turn was a grandson of Ramsdale's Performer. Scotts Fireaway also was descended from Cockfighter by Overton and Palafox by Delpini, and it is quite possible that his grand dam was thoroughbred, or nearly so. So we see in the pedigree of Ophelia four crosses of Ramsdale's Performer and four crosses of the best thoroughbred blood of the day.

The sire of Heathfield Squire was Wreghitt's Wildfire 1224. He was by Cook's Phenomenon 584, who was by Bay President, a son of President Junior, who was by the thoroughbred Bay President; and other thoroughbred crosses in the pedigree of Phenomenon are Trip and Ponteland by Waxy. Beal's Sir Charles 768 likewise comes into the pedigree, so here we have other two crosses of Ramsdale's Performer. The dam of Wildfire was a famous mare, Polly Horsley, by Triffitt's Fireaway, whose pedigree has already been analysed. Wildfire's grand dam was by Ramsdale's Bay Phenomenon 898.

In one place in the Stud Book Ophelia's pedigree is given as by Denmark 177, or Danegelt 174, but if the latter is taken as her sire it gives another cross of Ramsdale's Performer in Heathfield Squire's pedigree. It will be noticed that this blood predominates greatly, and that Performer himself was fourth in direct descent from the famous thoroughbred Jalap. Thoroughbred blood also is very much in evidence in the pedigree of both Heathfield Squires, and it is pretty evident how he gets both his quality and action.

Heathfield Squire was originally known as Fortinbras, and under that name he took a few honours as a stallion. He, however, never came right to the front in good company till he was "added to the list" and began to make his appearance in single harness classes. He was coming on as Norbury Squire was beginning to go off, and he was a worthy successor of Mr. Carnley's famous single harness champion. The pair are perhaps the best single harness horses that have ever been seen in the ring, and it is not a little singular that Norbury Squire was full of thoroughbred blood as is Heathfield Squire, his dam having been a thoroughbred mare by Hermit. It is said that Heathfield Squire has won something like 700 prizes in his time, and I should think the estimate is not very far from being correct. It seems a pity such a fine harness horse should not have been kept entire, and perhaps if the plan of harness classes for stallions had prevailed he might have been kept entire. If he is lucky, he will win his share of prizes in the

country of his adoption, for he looked remarkably new the last time I saw him.

Of books about horses there is apparently no end at the present time, and Sir James Boucant's "The Arab, the Horse of the Future," and Professor Ridgeway's "Origin and Influence of the Thoroughbred Horse," have been quickly followed by the first divisional volume of Professor Axe's "The Horse, Its Treatment in Health and Disease." It is not my purpose to review this ambitious book in my present article, but as I have recently been writing about the Devonshire packhorse, it may perhaps interest my readers to have Professor Axe's views on this very valuable and, alas! nearly extinct breed.

Professor Axe is of opinion that, as I have pointed out on a previous occasion, the packhorse is descended from a combination of Eastern blood and the old English war horse, i.e., from the Barb and the old English breed of horses, which Professor Axe joins many other authorities in asserting, was not a cart horse or of cart-horse type at all, though it is quite possible that our modern Shire horse is descended from him. Professor Axe points out that, owing probably to the few hands into which the breed has fallen, and the consequent inbreeding, the modern pack horse has not the size and scope of his ancestors. The modern pack horse he describes as having a certain resemblance to the Hackney, being deep chested, with a big level back, well-sprung ribs, and powerful quarters. "But," says Professor Axe, "he differs very considerably from the Hackney in three important points, namely, head, shoulders, and action." The head is more blood-like than the Hackney's, the shoulders are better placed, and the action is of quite the opposite character to the Hackney's. Surefootedness is one of the qualities on which breeders of pack horses prided themselves; and that pack horses were by no means deficient in pace is proved by the fact cited by Professor Axe, that Cottager, a famous horse of the breed, standing 16 hands, not only won a steeplechase at Totnes in the middle of the last century—beating thoroughbreds and cocktails—but that his owner challenged the whole of the West Country to find a horse to trot four miles against him on the road, carrying 14 stone.

I have heard of Cottager's performance before, and I have no doubt that he was a very good horse. At the same time, I should like to have some particulars of the steeplechase he won and the company he met, and I shall be very much obliged to any of my West Country readers if they can obtain me the information I require. A steeplechase is sometimes won very flukily. I do not say this with any wish to depreciate the performance of Cottager, but merely as an unquestionable fact. Cottager's pedigree would also be appreciated by those who take an interest in horse-breeding.

I have heard of Cleveland Bays winning steeplechases, but in the cases which have come to my notice I have not heard the horses' names, nor do I remember where the steeplechases took place. I have, however, known of more than one Cleveland Bay that has been a really good hunter, able to gallop with the best of them and "keep there" all day, no matter how hard hounds ran. I remember hearing of one, bred by Willy Lofthouse, of Gunnergate, near Marton, in Cleveland, that made quite a name in Leicestershire. He was, I believe, by Baylock—a horse that Mr. Lofthouse bred—but of this I cannot be sure. I am, however, certain there was some Baylock blood in the horse; but there were several Baylocks. This was a fine hunting-like horse, full of quality and a rare mover. He was purchased by Mr. Robert Brunton, of Marton, who soon taught him "the way he should go," and he was sold by him to a famous South Country horse dealer for a good figure. After the bargain was concluded, the dealer asked his pedigree, and was told it. "Oh," said he, "that won't do at all, he must have two or three crosses of blood." The horse went into Leicestershire and did well. None of his brothers or sisters were of any use as hunters, and the only way in which I can account for his excellence was that it was a case of reversion to some of the thoroughbred blood which undoubtedly is to be found in the veins of all Cleveland Bays. And, similarly, the fine performances of Cottager in the middle of last century were also, in all probability, due to a similar reversion.

THE LOOKER-ON.

Horse Awards in Dispute.

At the Chelmsford County Court on Wednesday, his Honour Judge Tindal Atkinson gave judgment in the case affecting the Essex Agricultural Society, which was reported in these columns a week or two ago. It will be remembered that an action was brought by Mr. W. B. Tubbs, of Harley Street, London, against Mr. David Christy and Mr. F. W. Taylor (secretary), representing the Essex Agricultural Society, to recover £31, the value of certain prizes awarded the plaintiff at the show at Southend, in June of this year.

In giving judgment, his Honour said it appeared that the plaintiff purchased on May 25 a hackney mare in foal and a hackney stallion, and entered these two for the show on May 26, and the secretary of the society (Mr. Fred Taylor) allowed the entry to be made, although on the certificate of entry it was said that the last day of entry was Tuesday, May 16, but that late entries could be made on Tuesday, May 23, by the payment of additional fees. It having been admitted that the secretary had the authority of the council to accept the entry on the 26th, it must be taken that the application was made to the council of the society, and that it was accepted. The two horses were exhibited, and took prizes to the value of £30 and a medal.

A protest was entered against the plaintiff being entitled to receive the prizes, because it was said he had not complied with the bye-laws and rules. The bye-laws said that every animal to be eligible for competition must be the bona fide property of the exhibitor at the date fixed for the date of entry. It was admitted that the date fixed for the time of entry was May 16, and that there was an extension of the time until Tuesday, May 23, and it was admitted, on behalf of the plaintiff, that on neither of those dates were the horses the bona fide property of the exhibitor.

It was contended that, although the secretary allowed the entry to be made on May 26, and although the certificate said that late entries must be in by May 23, yet it was an act of grace towards the plaintiff, and that he must take that act of grace subject to the bye-laws, rules, and necessary qualifications—that was to say, that the horses should be the bona fide property of the plaintiff either on May 16 or May 23. His Honour, however, held that the plaintiff was entitled to the prizes, and gave judgment for the plaintiff with costs. As the case was an important one, if the defendants wished, execution would be stayed, in order to enable them to appeal.

Royal Commission on Horse Breeding.

A meeting of the Royal Commission on Horse Breeding was held on the 6th inst. at 13, Hanover Square, W. There were present the Duke of Portland, K.G. (Master of the Horse), in the chair. The Duke of Portland moved that a resolution of condolence be sent to Lady Wilson on the death of Sir Jacob, this being the first meeting of the Royal Commission on Horse Breeding since his decease. Steps are being taken to fill the vacancy thus caused on the Commission. The percentage of foals left by the King's premium stallions for the 1904 season of service was read, and the average considered satisfactory. The number of mares served during the past season was also read, and in cases where the stallions had not served the required number of mares the premiums were dealt with in accordance with the rules and regulations. The premium list, with conditions for the Stallion Show for 1906, was arranged, and ordered to be printed, and to be presented to His Majesty and the Treasury for approval.

Mr. Akers-Douglas, addressing his constituents near Canterbury last week, said agriculturists looked for some reform of our fiscal system, considering that they were unduly handicapped by the conditions at present prevailing, which in his opinion were far too favourable to the foreigner. He did not conceal his desire to see a reform of the tariff system. He thought there could be very few true Englishmen who could say they were absolutely satisfied with the present position, and he believed there must be a general consensus of opinion among the agricultural community that in dealing with foreign countries over the renewal of treaties in future we should look after the country's interests more than had been done in the past.

In the "Badminton Magazine of Sports and Pastimes" for November, the Editor commences a new series of articles on "Sportsmen of Mark," the Hon. George Lambton, the well-known Newmarket trainer and brother of the Earl of Durham, being the first sportsman dealt with. The "Unwritten Laws of Sport" for the month is "Football," by G. B. Pollock Hodsoll, and another of the "Royal Homes of Sport" of Germany is described by the gracious permission of His Imperial Majesty the Kaiser. The paper on "Living for Sport on £156 per Annum," which appeared in the "Badminton" some months ago and attracted considerable attention, is continued by the author telling his readers "How and Where to Do It." Major Eustace Loder's "Eyrefield Lodge Stud" is described and illustrated by photographs by Miss Lilian E. Bland.

Notes and Jottings.

The report of the Council meeting of the Royal Agricultural Society conveyed the welcome information that at last registered flock owners had secured just recognition by the Royal. In future all pure-bred sheep exhibited at the Royal Show—where the flock books have been established for five years, must be sheep either registered or eligible for record in their respective books.

Flock masters who are contemplating helping to make the sheep entry at the next show a record one will therefore bear this new condition of entry in mind. Fortunately the progress of registration has been so rapid of late that few, if any, of the leading flocks of the older breeds are still unregistered. Those owners who have not yet taken this essential step should do so at once The urgency of this being done is for the reason stated above, and also because the date is not far distant when registration will only be able to be secured by purchase of registered sheep.

The enormous impetus that registration has given to the export trade in sheep cannot be gainsaid. The Trade and Navigation Returns for the past month fully confirm this. In fact, the month that has just closed is almost, if not quite, a record one in this section, both for number exported and for the declared value.

The number of sheep exported in October last was 1,714 head, an increase of 142.13 per cent. as compared with the number exported in October, 1904, when, however, the average declared value worked out at £20 9s. 9d., as against £16 4s. 8d. for the past month. The diminution of the average of declared value is more than made up by the large increase in the number exported and also by the increase in the aggregate amount paid by the purchasers, which, taking the declared value as the basis, was just 90.76 per cent. more in October, 1905, than in the same month of 1904—the respective totals were £27,832 and £14,590.

The general satisfaction expressed by flock masters, other than the stud sheep breeder, with the results of the past season's feeding and breeding is gratifying. It is also a matter of satisfaction to find the home flock master is able to hold his own and secure a good return for his investment and labour despite increasing Colonial and Foreign supplies. Of course, the notable rise in the price of wool has been a considerable factor in making the profits from the flock larger during the past twelve months; but, in addition to this, in nearly every centre one has found a general consensus of opinion that mutton has sold well all through the year. A moment's thought will show why this is so, and also why it should continue to be so, namely, that whilst the lower qualities of home-fed mutton feel most keenly the competition from the imported article, those of the top grade feel it but little

That the large proportion of the imported mutton is of good quality no one can deny, but when this is compared with the primest home grown and fed there is a distinct and clear difference in favour of the latter. It is in this point that the home-fed mutton secures its preference, and so long as our home breeders and feeders are able to produce a quality so superior to the imported article there need be but little fear for any harm that may accrue from the imported supplies.

So far as regards our imported supplies during the past month, we find that the number of live sheep imported was the smallest on record for that month for many years, they numbered but 16,763 head, or 60.10 per cent. less than in October, 1904.

The mutton supplies, on the other hand, showed a very large increase indeed, amounting to 308,161 cwt., as against 240,904 cwt. for the corresponding month last year, an increase of 27.92 per cent. Australia and New Zealand were the principal sources from whence the increased supplies were obtained.

How rapidly Australasia is recovering from the disastrous effects of the drought is seen by the steady and large increase in its mutton sent to this country; for instance, in October, 1904, 9,700 cwt. were sent, and in last month 27,818 cwt., or nearly three times as much.

The renewed prosperity of the sheep industry in those colonies is a matter of interest to our stud ram breeders because there is every indication that, under the present conditions, a very much larger proportion of the sheep in that country will be kept with the dual object of both wool and mutton production, and this means a much larger demand for British stud rams of the mutton breed. The probability of this increased demand for stud sheep from these colonies renders it imperative that every effort should be made to secure a reduction of the period of quarantine on arrival there, and also a reduction in the official fees and expenses incurred, both previous to and after shipment.

From a table before us as we write, we find that the aggregate expenditure for live sheep and mutton during October, taking the declared value as the basis, has varied the last ten years from £445,462 in October, 1897, to £598,449 in the month just ended, a month in which we have received a larger amount for export stud sheep, on one hand, and expended more for the result of such exportations on the other—imported in the shape of live sheep and mutton from those countries to which these were sent.

Intending exhibitors of sheep at the Christmas shows must not forget that sheep are wanted at their best on the show day, and not before. Gentle exercise will be found most beneficial right up to the time to leave home. Pens of three need being well matched; have a uniform pen rather than a pen of two and one in order to secure a bit more weight. Another important point to be remembered, particularly in those breeds where excess of colouring still continues, is that no judge will take the same pains to thoroughly examine an entry when to do so he has to pull about a mass of wool smothered all over with preparations, many of which are far from being agreeable, either to touch or smell.

Contagious Diseases of Animals.

Summary of Returns issued by the Board of Agriculture for the week ending Nov. 4, 1905:-

NOTE.—The figures for the current year are approximate only.

General Booth and His Critics.—In the course of an address to a large gathering at Preston, General Booth dealt with the critics of the Army's emigration scheme, who claimed that the country was being depleted of its best labour. General Booth, in reply, asked what farmer with a large flock of sheep would hesitate to remove them to other pastures on his farm, when they had eaten one pasture bare and were dying and starving. How could any harm be done by removing starving labourers to another portion of our dominions where there was food and work in plenty?

FORTHCOMING SHOWS.

Norwich Fat Stock Show.

The twenty-ninth annual Exhibition of the Norfolk and Norwich Christmas Show Association opens on Thursday next, the 16th. A very large entry in all departments has been received, and live stock are coming from very long distances to compete for the honours of the first Christmas fat cattle show of the season. His Majesty the King (the patron of the Association) is honouring the show with several entries from Sandringham.

The following is a comparative statement of entries received each show since the commencement of the Association:—

Year.	Owner of Champion Beast.	Breed of Champion Beast.	Sex.	Age y.	m	w
1878	Thomas Bond	Shorthorn	Steer	4	6	0
1879	Robert Worthley	Hereford	Do.	5	2	0
1880	J. J. Colman	Shorthorn	Do.	4	3	0
1881	C. Stephenson	Cross-bred	Heifer	2	8	2
1882	Robert Worthley	Red Polled	Steer			
1883	C. Stephenson	Aberdeen Angus	Heifer	2	7	3
1884	Robert Worthley	Cross-bred	Steer	3	5	3
1885	Robert Loder	Do.	Do.	2	10	0
1886	John Cridlan	Shorthorn	Do.			
1887	Robert Wright	Do.	Do.	2	6	0
1888	J. J. Colman	Cross-bred	Heifer			
1889	J. J. Colman	Red Polled	Steer	3	10	0
1890	John Cridlan	Shorthorn	Do.	2	11	0
1891	H.M. Queen Vict.	Devon	Heifer	3	2	0
1892	J. J. Colman	Cross-bred	Steer	3	6	0
1893	C. Stephenson	Aberdeen Angus	Heifer	2	9	3
1894	H.M. Queen Vict.	Hereford	Steer	3	9	2
1898	J. J. Colman's Exrs.	Cross-bred	Heifer	2	8	0
1899	H.M. Queen Vict	Hereford	Steer	2	11	0
1900	W. E. Learner	Cross-bred	Heifer	2	8	0
1901	Mrs. L. H. Holland	Do.	Steer	3	9	0
1902	Miss A. de Rothschild	Do.	Do.	2	6	2
1903	R. W. Hudson	Do.	Heifer	2	10	33
1904	R. W. Hudson	Do.	Do.	2	10	

The winnings of the best beast in the show will amount to the handsome sum of £100, and it may perhaps interest our readers to give a description of the winners of the championship for the last ten years:—

Year.	Beasts.	Sheep.	Pigs.	Roots, Grain, &c.	Poultry, Butter, &c.	Seeds men's Prizes.
1896	120	93	24	26	92	179
1897	111	114	24	33	111	216
1898	119	81	51	33	106	205
1899	123	93	24	35	151	167
1900	90	105	48	31	161	208
1901	113	97	*	42	145	207
1902	98	63	27	47	157	202
1903	120	84	36	43	158	221
1904	107	96	15	58	159	215
1905	122	96	33	61	164	219

* No show of Pigs in 1901, in consequence of Swine Fever Regulations.

It will be observed by the above that the cross-breds have won 12 times, Shorthorns 6, Herefords 4, Red Polled 3, Aberdeen-Angus 2, and Devons 1.

The prize list comprises 17 classes for cattle, and prizes of £10, £5, and £2 are offered in each, 6 classes for sheep, and prizes of £8, £4, and £2, 4 for pigs, with prizes of £5, £3, and £2. There are nearly 60 classes for roots, grain, dairy produce, dead poultry, etc. In addition to the class prizes very valuable champion and special prizes are offered:—

The Patron's prize of twenty guineas, presented by His Most Gracious Majesty the King, for the best beast in the show. To this the Society adds a sum so that the total winnings of the best beast amounts to £100. The President's prize of £20, presented by the President of the Association (Col. Henry T. S. Patteson, D.L., V.D.), for the best ox or steer in the show. A prize of £15 for the best cow or heifer in the show. The Members of Parliament's prize of £15, presented by the Members of Parliament for the county of Norfolk and the City of Norwich, for the best Red Polled beast in the show. A special prize of £15 (£10 of which is presented by Messrs. Barclay and Co., Limited), for the best beast bred and fed in Norfolk. Special prizes of £15 (£10 of which is presented by Sir R. P. Beauchamp, Bart.), £5 presented by the Chairman of the Council (Hugh G. Barclay, Esq.), for the best and next best beast exhibited by a Norfolk farmer, whose income is mainly derived from the cultivation of land. A special prize of £10 10s., presented by Mr. R. W. Hudson, for the best small beast. A silver challenge cup, presented by the "Eastern Daily Press," for the best beast in show, exhibited by a Norfolk farmer, and which has been bred by the exhibitor, to be won three years by the same person before becoming the property of the winner.

The special prizes in the sheep section include: A champion prize of £15 for the best pen of sheep. The Duke of Norfolk's prize of £5 for the best pen of lambs. Prize of £5 for the best pen of shearling wethers. A special prize of £5, presented by E. Mann, Esq., for the best pen of sheep, exhibited by a Norfolk farmer.

In the pig section, the Norwich and District Butchers' Association are offering a prize of £5 5s. for the best pen of three pigs, of any breed or age most suitable for the butcher, bred in Norfolk.

The following gentlemen have promised to judge in the various departments, viz.:—

Cattle.—Mr. William Wright, Scamblesby House, Horncastle; Mr. J. Sturley Nunn, Little Welnetham Hall, Bury St. Edmunds.

Sheep.—Hon. A. E. Parker, The Cottage, Doveridge, Derby; Mr. W. D. Little, Middleton Stoney, Bicester.

Butchers' Beasts and Pigs.—Mr. Fredk. Able, High Street, Lowestoft; Mr. P. M. Kett, Sprowston Road, Norwich.

Roots and Grain.—Mr. William Case, Tuttington Hall, Aylsham; Mr. Charles Waters, Postwick, Norwich.

The demand for stand space from exhibitors of implements, animal medicines, cattle foods, seedsmen and others, has greatly exceeded the accommodation available, and a large number of applicants have had to be refused space and their entry fees returned. Each year the demand for space increases more and more, and the Norwich Fat Cattle Show has now attained such popularity and usefulness that were the Agricultural Hall as large again the Executive would experience no difficulty in filling it. In fact, if the Agricultural Hall were larger, this would enable the Society to add fresh classes and widen the scope of operations. It is only the limited accommodation which prevents a larger show; as it is, the Council have had to consider at various times the question of "cutting the garment according to the cloth"—for instance, a few years back the Society's root and grain classes were open to all England, but as the entries were so large a difficulty was found in finding room to exhibit them, and the classes had to be confined to the county. Three or four years ago there was no restriction as to the number of cattle; an exhibitor could enter in each class, but this has now been restricted to not more than 2 entries in a class, in consequence of the limited accommodation.

"Show week" always brings a very large influx of visitors to the city of Norwich, and the Great Eastern and Midland and Great Northern Joint Railway Companies are running excursions and special trains at cheap fares, full particulars of which may be obtained at all railway stations. The show opens at 10 a.m. on Thursday (at which hour catalogues may be obtained), and the admission each day will be as follows:—Thursday, from 10 a.m. to 2 p.m., 2s. 6d.; from 2 p.m. to 9.30 p.m., 1s. All day Friday from 10 a.m. to 9.30 p.m., and Saturday 10 a.m. to 5.30 p.m., 1s,

Hampshire Down Sheep Breeders' Association.

A meeting of the Council of the Hampshire Down Sheep Breeders' Association was held in London on Monday, the President, Mr. A. F. T. Drake, being in the chair, when thirty-one new members were elected. The annual meeting was fixed for December 6 at the Agricultural Hall, Islington, and Messrs. J. Flower, C. Coles, and H. Lambert were appointed delegates to the National Sheep Breeders' Association, Mr. Flower to act as vice-president. The reports of the Editing and Finance Committees were received and unanimously adopted. It was resolved to continue the shepherds' prize competition as before.

An important resolution was passed, on the motion of Mr. Chalker, to the effect that on and after December 1, 1906, the bye-laws shall be so altered that no flock, unless composed entirely of registered sheep, shall be eligible for entry in the Flock Book.

A letter from the secretary of the Bath and West Society was considered, asking if this association would be willing to contribute prizes for two-shear rams, and on the motion of Mr. Lambert, seconded by Mr. White, it was resolved to give two prizes of £7 and £3, provided, as stated in the secretary's letter, that the Wilts and Gloucester Agricultural Societies provide prizes for ewe lambs.

An Annual Dinner for Members.

A representative meeting of members was held at Salisbury, on Tuesday, at which it was resolved to inaugurate an annual dinner for members and their agents in London on the Wednesday of the Smithfield week, December 6, invitations to which will be issued, and full information may be obtained of the hon. secretary, Mr. J. G. Kerr, Cholderton, Salisbury. From the attendance at this meeting and the numerous letters in its favour received by the President of the Association (Mr. A. F. T. Drake), the success of the dinner appears to be practically assured.

Preston Horse Fair.—Despite complaints of general trade depression, some good prices were realised at this fair on Wednesday, when a large number of well-bred Shires were placed under the hammer. Dealers were present from all parts of the North of England. Mr. R. Charnley gained the first prize in the heavy horse class, Mr. J. Turner being second; while in Hackneys Mr. J. Stuttard and Mr. E. Poole, respectively, gained premier honours. The prices realised ranged from £40 to £65.

THE ROYAL SHOW.

Enthusiastic Support from Derby—Sir Walter Gilbey on the "Ruinous Expenses of the Migratory System"—Mr. R. P. Cooper's Reply.

A meeting was held at Derby on Friday afternoon for the purpose of making local arrangements in connection with the visit of the Royal Agricultural Society to that town in June next, and also of inaugurating a fund to cover local expenses. The Duke of Devonshire presided, and there was a large and influential attendance, amongst those present being the Mayor of Derby (Alderman Ann), Lord Scarsdale, Lord Burton, Sir Alfred Haslam, M.P., Sir Thomas Roe, M.P., Sir Oswald Mosley, Sir Henry Bemrose, Sir A. Heywood, Mr. Victor Cavendish, M.P., Mr. J. Gretton, M.P., the ex-Mayor of Derby (Councillor Hart), Mr. G. H. Strutt (chairman of the Derbyshire County Council), Mr. John Pakeman (chairman of the Derbyshire Agricultural Society), the Hon. F. Strutt, Major-General Talbot Coke, Colonel Cavendish, Colonel Woodforde, Colonel Gascoyne, Major Peacock, etc.

Such a good attendance must have been gratifying to the conveners of the meeting, but they issued a very strong appeal, and it met with the desired success. The appeal, which was signed by the Duke of Devonshire, Lord Lieutenant of Derby; Reginald Chandos Pole, High Sheriff of Derbyshire; William Hart, Mayor of the Borough of Derby; G. Herbert Strutt, Chairman of the Derbyshire County Council; and John Pakeman, Chairman of the Committee of the Derbyshire Agricultural Society, was as follows:—

"As you are doubtless aware, an invitation has been given to the Royal Agricultural Society to hold their annual show in Derby next year, and the Council of the Society have cordially accepted the invitation. The honour thus done to our town and county is great, and it is earnestly hoped that all classes of the community will unite in giving the Society a hearty welcome.

"The Midland Railway Company have placed at the Society's disposal at Osmaston Park in Derby an area of ground which it is understood will meet the requirements of the show, and being within a short distance from the principal railway station and on the line of the Corporation's electrical tramways is also most conveniently situated for the general public.

"In addition to the provision of the site other work has to be undertaken, and £2,000 in cash has to be paid to the Society towards the expenses of the meeting.

"The last time the Society visited Derby was in 1881, and on that occasion about £5,500 was raised for similar purposes. That show was in every way one of the best in the history of the Society.

"The fact that the show is to be held in their midst must be a matter of great interest to Derbyshire and the neighbouring counties, and the special benefits which the district will derive must be apparent.

"The work of the Society is so well known that it is hardly necessary for us to point out the great educational advantages which agriculturists and others must derive from such an exhibition.

"We hope, therefore, that you will endeavour to be present at the meeting, and will give the local effort your valuable patronage and hearty support, and thus assist in making the show that great success which in the national interest such an institution so well deserves.

Duke of Devonshire's Speech.

The Duke of Devonshire opened the meeting and made a most effective speech. He said the Royal Agricultural Society during the last sixty years had done splendid work for English agriculture. (Applause.) It had, by means of its annual exhibitions, led the way in the vast improvement which had been effected in agricultural stock, an improvement which had brought the cattle, horses, sheep, pigs, and poultry almost to the point of perfection. It had also been instrumental in bringing to the attention of practical agriculturists all those mechanical improvements in agricultural implements and machinery which had been produced during the last half-century, and it had in various other ways been instrumental in bringing to the agricultural community a knowledge of all that was most important in the discoveries which science had brought to bear upon the practical work of agriculture. But whilst the Royal Agricultural Society had achieved a great and undoubted success in its work it had unfortunately not succeeded in making its own financial position altogether satisfactory. The annual exhibitions of the society involved expenditure of a very large sum of money, and he was sorry to say that in many of the centres in England which had been visited comparatively small local interest had been excited, with the result that many of the shows had not proved financially successful.

The most disastrous and unfortunate experiment of all in which the society had engaged was the acquisition a few years ago of a site in the neighbourhood of London, where it was proposed that the annual exhibitions should be permanently held. For some reason which it was unnecessary to discuss, the vast population of London and the surrounding districts had shown themselves singularly indifferent to the attractions of an agricultural exhibition, and the two or three shows held at Park Royal had consequently proved to be altogether a financial failure. That was a very unsatisfactory state of things. But the Royal Agricultural Society was composed of Englishmen who did not admit that they were beaten, and did not intend to be beaten. (Applause.) They had looked their difficulties fairly in the face, and had resolved to effect drastic reductions in the expenditure of the society in its central offices and its staff, and they had resolved once more to try the experiment of holding their shows in certain centres where experience had proved that there was a fair expectation of the exhibitions being remunerative, or at all events that they would not be too heavy a burden on the funds.

He thought the council of the society were wise in accepting an invitation, which had been provisionally given them, to visit Derby next year. (Applause.) Twenty-five years ago the Royal Show was held at Derby, and the financial results were very satisfactory. (Hear, hear.) Derby ought to regard it as an honour that the town should be selected for next year's show, for he had no doubt the visit of the society would be not only to the advantage of the agriculturists in the county but the inhabitants of the town and neighbourhood. They could not enjoy that honour and those advantages without making some payment for them. A large amount of expenditure would be involved, and in its present financial position the society could not run the proposed exhibition entirely as a matter of pure speculation. The Council were fairly entitled to think that in return for the great advantages which would be conferred upon the town and district by the exhibition the county should make some contribution in aid of the expenses. (Hear, hear.) Twenty-five years ago between £5,000 and £6,000 was raised. He hoped Derby and the neighbourhood had not become poorer since then; he was quite sure, from experience, the people were not less liberal.

An excellent start had been made by the offer of a suitable site for the show by the Midland Railway Company. In order to prepare that site for the exhibition considerable expense would be necessary, and the society also required £2,000 towards their expenses. He trusted there would be no difficulty in raising the money, for whether the show was a success, as he hoped it would be, or whether it was a comparative failure, as some had been, it would certainly attract a large number of people to the town to the advantage of the trade and the community. Not only that, but other towns in the neighbourhood, such as Sheffield, Leicester, Nottingham, and Burton, would receive a stimulus to their trade by the visit of the society to Derby, and he hoped, therefore, those districts would co-operate with Derbyshire in the endeavour to make the show a success. (Applause.)

£5,500 Wanted.

The Mayor of Derby then moved: "That the invitation of the Royal Agricultural Society of England to hold their next annual country meeting at Derby be heartily approved and confirmed, and that a cordial welcome be given to the society. That this meeting pledges itself to make every effort to promote the success of the show and to raise the funds necessary for defraying the local expenses." He said that a certain gentleman had offered to guarantee the society against any loss which might be sustained in connection with the show, but that did not apply to the local expenditure. The £5,500 raised twenty-five years ago was spent on local matters, and as much money would be required now. They had to give £2,000 to the society, and the other £3,000 or £4,000 would be required for levelling the ground and other incidental matters. (Hear, hear.)

Mr. G. H. Strutt seconded the resolution, saying the county had always taken an intelligent interest in agriculture, and he hoped every effort would be made to ensure the success of the exhibition. One feature of that exhibition would be a horticultural show, which would be an attraction to all classes of the people. (Hear, hear.)

Sir Oswald Mosley said he was always afraid the Royal shows would be a failure in London, where there were so many attractions. What with the shops, the theatres, the music halls, and all the rest, how could they expect country people visiting London to go to an agricultural show? (Laughter.) He pointed out that the Derbyshire people would have their local attractions at the show, and said it was the duty of all in the county to subscribe to the local fund, so that nothing might be wanted at Derby to ensure success. It was a national sorrow to think that such a fine old society as the Royal should be in financial difficultics, and he trusted that more of the agriculturists of the country would now become subscribers to its funds. (Applause.)

Mr. Victor Cavendish, M.P., Mr. John Pakeman, and Mr. R. Finney also supported the resolution, which was carried unanimously.

A Big Committee Appointed.

Mr. J. Oakes, Deputy-Chairman of the County Council, proposed that a committee representative of every district in the county should be appointed to collect subscriptions and make the arrangements for the show. He said that 168 gentlemen had already been selected, and they included the Duke of Devonshire as President, the Members of Parliament for the borough and county, and the Members of Parliament for the divisions adjoining the county. At the first meeting sub-committees would be formed so that they could begin work immediately. It was hoped that £5,500 would be raised in subscriptions as on the last occasion. (Applause.)

Mr. Thomas Roe, M.P., seconded the resolution, which was carried.

On the motion of Lord Scarsdale, seconded by Lord Burton, a vote of thanks was accorded the Duke of Devonshire for presiding.

In reply the Duke said he would do what his father did when the Royal Show came to Derby twenty-five years ago, namely, head the subscription list with £200. (Applause.)

The meeting then terminated.

Sir Walter Gilbey on the Migratory System.

TO THE EDITOR.

SIR,—The recommendations of the Special Committee appointed to investigate the position of the Royal Agricultural Society of England have been adopted by the Council in their entirety; and, as the aim of these recommendations was to place the affairs of the Society on a sound financial footing, it is perhaps worth while looking into the situation with the view of discovering what measure of increased stability may be looked for under the new régime.

Park Royal is to be sold, and the migratory system, which had been abandoned because of its ruinous expense, is to be resumed. As those responsible for this decision appear to have overlooked the vitally important fact that the migratory system was given up because the resources of the Society could no longer meet the annually recurring expense, it will be well to set out a few figures (taken from the Society's Journal) showing the net outlay to the Society of the various migratory shows held in each of the ten years preceding the establishment of Park Royal:—1893 (Chester), £16,030; 1894 (Cambridge), £15,824; 1895 (Darlington), £15,959; 1896 (Leicester), £16,140; 1897 (Manchester), £23,479; 1898 (Birmingham), £21,165; 1899 (Maidstone), £19,131; 1900 (York), £19,548; 1901 (Cardiff), £19,316; 1902 (Carlisle), £18,258.

These figures of themselves would seem to furnish an argument sufficiently strong to convince anyone that the road to restored solvency does not lie through a return to the migratory show system; but they by no means represent the total outlay involved in the holding of such shows. Each Local Committee of the district in which the Royal Show has been held has had to raise a considerable sum—for contribution to the Society's funds, for local prizes, providing and preparing the showground, and the like.

During the last ten years of migratory shows the total amount thus raised in the districts was over £65,000. Adding the £184,850 shown above to be the net outlay in ten years to the Society itself, we arrive at a total of a quarter of a million sterling in ten years, or an average net outlay—in order that a Royal Show may be held—of £25,000 per annum. And this with an income from the subscriptions of members of only £6,000 a year!

How, in the face of these figures, is it possible to reconcile the policy of resuming the migratory system with the avowed object of restoring the Society's financial affairs to a condition of solvency?

Derby has been chosen as the scene of next year's show, and there is every reason to think

that in all probability it may be a success, as, thanks to the generosity of a private individual, the undertaking has been guaranteed against loss.

Thus the "Royal" is made secure for next year; but can we hope, is it reasonable to hope, that this National Society will have the good fortune to find in 1907 and future years guarantors who will, at their own cost, maintain the Royal Show in its representative character?

To assume that such guarantors will come forward is surely to go beyond the bounds of probability. To project an annual show on such a basis is to adopt a "hand to mouth" policy which cannot fail to bring about early disaster.—Yours faithfully,

WALTER GILBEY.

Elsenham Hall, Elsenham, Essex.
November 2, 1905.

Mr. R. P. Cooper's Reply to Sir Walter Gilbey.

Mr. R. P. Cooper, of Shenstone Court, Lichfield, the well-known stockbreeder, in the course of a letter to the *Birmingham Daily Post*, replies to the criticisms of Sir Walter Gilbey in the above letter. Mr. Cooper says:—At a time when the nation is watching with a keen interest the endeavour that is being made by the new council to put the society and its annual show on a sound financial basis, all just and useful criticism should be gratefully received by the council and be helpful. Sir Walter's do not come under this head, but are on the other hand misleading, and calculated to undermine the confidence that many now have, that the society will in future be successful. As he is a member of the council and was present at the meeting when next year's arrangements were unanimously approved of, why did he then remain silent, and why does he criticise in the press what he should in duty to the society have done at the meeting? If all members of the council took the course he has chosen to do, how could any business be transacted? It must be admitted by him that the new members of the council have, so far as they possibly could, studiously refrained from criticising what has been done in past years, and with this line of policy I am in entire sympathy, for such criticisms could not have been helpful to the society or brought back money that has been lost. The deductions he makes from the figures he quotes are entirely misleading, and it has not yet been proved that the migratory shows under judicious management necessitate "ruinous expense."

Up to the meeting held at Windsor, when the extravagant management of the Society began, so successful had been the migratory system that a large reserve fund had been amassed. That has all been spent, and the past three years' shows at Park Royal and every previous show held in or near London have resulted in such heavy losses that future shows must be migratory or given up altogether.

We must at least give Sir Walter and those who have worked with him credit for having carried on the Society in the best manner, according to their convictions. This being so, it cannot be expected that they can approve of the present policy, which is to put the Society and its shows on a sound financial basis. It would be inconsistent.

Surely the Council of the Society and the members will feel that Sir Walter's criticisms are the best indication they could possibly have that we are off the old disastrous lines upon which the Society has been running.

Sir Walter's concluding remarks are based on the certainty that next year's show at Derby will be a financial failure, and that future shows can only be held if a guarantor can be found each year. Whether Derby is to be a success or failure remains to be seen, but it cannot be a financial loss to the Society. Given fine weather, the show will, I believe, make large profits, but not so large as if the Society was free from contracts entered into prior to this year, as, for instance, the contract for supplying canvas for the shedding, upon which we could now save several hundreds of pounds if we were free.

But to remove all uncertainty I am willing to guarantee the Society from loss upon the shows over the next five years, taking one year with another, upon the following conditions:—

(1) That the shows are conducted upon the lines now laid down by the Council.

(2) That where no alterations have been made by the Council the old rules and regulations prevail, but where alterations are found necessary they be made as the Council of the Society thinks fit.

(3) That the supply of refreshments in the show ground be let by tender, and not given away as in recent years.

(4) That Sir Walter undertakes to pay any society or institution in this country, named by the Royal Agricultural Society, a sum equal to the profits, if any, made during those five years.

This will show what my convictions are, and I know that they are shared by others. We firmly believe the Society will be able to continue not for one year only, but for many, to carry out as fully as ever the good work it has done in the past.

Shire Horse Society.

Mr. J. P. Cross (president-elect) occupied the chair at a meeting of the Council of the Shire Horse Society, held at 12, Hanover Square, on the 31st ult.

Finance Committee.

Mr. W. Cecil Salt (vice-chairman) reported that the balance on the current account at the Society's bank was £638 11s. 9d., with £500 on deposit; arrears of subscriptions £239 8s., accounts for payment £840 0s. 7d. This report was adopted.

Editing Committee.

Mr. J. T. C. Eadie (vice-chairman) submitted applications for seventy-one prefixes and four affixes, which the Committee recommended should be registered. These were:—

Prefix.	Applicant.
Agardsley	William Harris
Arkesden	Charles Beadle.
Arleston	C. J. Exley.
Ashbeach	Berry Bros.
Ashmanhaugh	Herbert Mason.
Aughton	Thomas Woodcock.
Bankside (and affix)	George F. Ogle.
Bartestree	R. P. Haden Cope.
Benham	A. J. Bingham.
Bergholt	G. G. Bowcher.
Bescaby	David Ward.
Bircham	R. Mendham.
Blofield	William Harker.
Capponellan	James Delany.
Claydon	Mrs. H. J. Tomes.
Colney (and affix)	C. Morris.
Crickheath	Robert Williams.
Cutacre	James Morgan.
Cymric	William Rowlands.
Dagworth	J. A. Lankester.
Dedham	F. W. Cottee.
Edgeley	Brigham Carlton.
Faindon	Albert Lowe.
Farnhill	Frank E. Sligsby.
Fota	Lord Barrymore.
Gamston	John Swinglehurst.
Garton	Richard Hack.
Gelliniog	Thomas Jones.
Granville (and affix)	James Hay.
Grimsargh	John Turner.
Haddon	R. Purseglove.
Hawkeswell	R. S. Potter.
Hogsnaw	John B. Hughes.
Hollings	R. Lawrence.
King's Hill	Nathaniel Drackley.
Langstone	D. A. Thomas, M.P.
Londesborough	Walter B. Walmsley.
Londonderry	Thomas Middleton.
Londonthorpe	Albert Wadsley.
Malltraeth	C. F. Priestley.
Marcle	J. H. Walker.
Milwich	Martin and Son.
Moulsford	J. Lay.
Nostell	John Helliwell.
Poling	Thomas Dare.
Pytin-du	David Jones.
Radcliffe	J. H. Tilburn.
Rainworth	John J. L. Evans.
Ridware	Exors. of W. Done.
Rob	Capt. Oliver-Bellasis.
Rossington	George Pennington.
St Andrews	Herbert B. Whetstone.
Saltmarsh	J. G. Kirkbride.
Sawddle	John G. Harries.
Sedgeford	T. J. S. Brown.
Shillington	George Brown.
Shustoke	Walter King.
Slackfield (and affix)	John Hill.
Station	H. Clixby.
Stoneleigh	J. Davies.
Streethay	John Cartmail.
Swinfen	Col. Swinfen-Broun.
Theale	W. Cumber.
Thorns Green	John Wright.
Undy	B. Phillips.
Walesborough	W. B. Harris.
Whittington	W. J. Baskerville.
Willow Row	Charles Jones, jun.
Wincham	Arthur Platt.
Winchendon	F. Payne.
Wissington	A. J. Keeble.

They had to refer back one which, in their opinion, did not come within their definition of a prefix. They had decided to register in the next volume of the Stud Book the mare Flower, dam of Harold 3703, whose entry had been received for Volume 27. The meeting of the Committee for the revision of the Stud Book proofs for Volume 27 was fixed for November 14, at 9.30 a.m. The Committee recommended that no alteration should be made in the conditions of entry for Volume 29.

This report having been adopted, Mr. Edward Green gave notice that at the December meeting of the Council he would move that all mares having produce registered or eligible for registration in the Stud Book should, in consequence, be eligible for registration and a number.

A letter was read from the Natural History Department of the British Museum intimating that the Director was anxious to add to the collection of domestic animals, which included statuettes of Persimmon and Zinfandel, a similar model of a champion Shire stallion. It was resolved that the Secretary should obtain some further information as to the size and cost, etc., of the proposed statuette, as with this information at their disposal some member of the Society might wish to take advantage of this opportunity to have a stallion modelled for presentation to the collection.

County Horse Shows.

Lord Hothfield (vice-chairman) presented a statement showing the numbers of gold and silver medals awarded at country shows and Cart Horse Parades during 1905. This indicated that thirty-nine gold medals had been awarded at thirty-two shows, the breeders receiving £150 in connection with this scheme. At 207 affiliated shows 218 silver medals had been awarded, the sum of £151 representing the breeders' prizes in this section.

At Cart Horse Parades the awards had been as follows:—London.—Thirty-five silver medals and nine premiums of £1. Provincial.—Fifty-three silver medals and nineteen premiums of £1.

The various schemes of gold and silver medals and premiums at the county and affiliated shows and at the London and Provincial Horse Parades were renewed on the same conditions.

London Spring Shows.

The date of the next London Spring Show would be February 27, 28, and March 1 and 2. The foaling qualifications of mares in classes 12, 13, and 14, introduced in 1905, would be retained at the coming show, while the suggestion by Mr. Farnsworth to allow the words "For sale privately" and for stallions "To let for the season," (to appear under the Catalogue entry) was favourably entertained, provided the cost of such addition be fixed at 5s. per entry. The Committee also fell in with a suggestion from Messrs. Sexton, Grimwade, and Beck to re-arrange the classes to be offered for sale by auction, as they proposed that the sale of stallions should be restricted to the Thursday morning from 9.30 a.m. to 1.30 p.m., and that the sale of the mares and geldings should take place on the Friday.

The letter from the Royal Agricultural Hall Company, referred to the Committee by the Council, and relating to sawdust, forage, etc., blocking the gangways, and to other details connected with the show, had been very carefully considered, and they recommended that notice should be sent to all exhibitors that no sawdust or hay would be allowed to be brought into the Hall; that smoking in the Hall would be strictly prohibited after 6 p.m., the room provided for the grooms being available for this purpose, and that no groom would be re-admitted to the Hall after 12.30 a.m.

The Committee recommended no alteration in the schedule of prizes for stallions and mares, and they also recommended the retention of the classes for geldings, subject to the condition that, in the event of the total entry of the 1906 show exceeding the accommodation at the disposal of the Society, these classes should be cancelled. The consideration of further means of keeping the entry of the next show within the limit fixed by the Royal Agricultural Hall Company, viz., 700 horses, would be again considered and reported upon to the Council at their meeting in December.

On the presentation of this report, Mr. James Forshaw desired to submit a strong objection to that section prohibiting an exhibitor bringing in any sawdust, which the Royal Agricultural Hall Company undertook to provide at cost price. A great deal of sawdust would be required and of a special kind. Let them go on as before, each exhibitor bringing his own sawdust.

The Chairman explained that the matter was not in their hands. The letter came from the Royal Agricultural Hall Company as the result of representations from the London County Council, drawing attention to the large number of sacks, boxes, etc., which, being brought into the building by exhibitors, blocked the gangways, and they now requested steps to be taken by the Society to mitigate the evil.

Mr. E. Snow Fordham strongly supported Mr. Forshaw's protest. He thought that if the matter were properly put before the London County Council they would modify their ruling in the matter.

Lord Hothfield said that this matter was not the seeking of the Committee; action was forced upon them by the letter referred to in the report. The Hall Company proposed to supply the sawdust, which he understood would be fine white deal sawdust. The use of this by all exhibitors would put them all on an equality.

Mr. Lawton L. Moore foresaw many difficulties. How were they to gauge the necessary quantity? Each exhibitor knew his own requirements. Could not arrangements be made to stack the exhibitors' boxes, etc., in a reserved portion of the Hall away from the gangways? He would like to refer the question back to the Committee.

Mr. Edward Green urged that the men's boxes and sacks of corn were equally an obstruction, and yet these were absolutely necessary. Each groom now would have to fetch his sawdust from the central store, and this would entail confusion. Could not the Society, to relieve the gangways, set aside a number of boxes and stalls in which the boxes, etc., could be stored.

The Secretary explained that with their accom-

modation limited to 700 horses it was impossible to divert a single box or stall from the purpose of accommodating horses.

Mr. J. Sturley Nunn and Mr. James Forshaw thought that the Council could agree to exhibitors bringing in their sawdust, provided their bags and boxes were kept in the horse-boxes.

After some further discussion the report of the Committee as presented was adopted with eight dissentients.

Judges Selection Committee.

The Chairman reported that the Committee had met that morning, and from the list of nominations received from members of the Council they had drawn up a list of three gentlemen to whom they recommended invitations should be sent to officiate as judges at the 1906 Spring Show. This report was adopted.

Prizes at the Royal.

It was unanimously resolved to offer two gold medals, value ten guineas each with the accompanying Breeders' Prizes of £5, for the best Shire mare and the best Shire staillion respectively exhibited at the 1906 country meeting of the Royal Agricultural Society of England.

The Council then adjourned till Tuesday, December 5, 1905.

Highland.

A meeting of the directors of the Highland and Agricultural Society was held on Wednesday at Edinburgh, Mr. Alex. Gordon, of Newton, Aberdeenshire, presiding. On the motion of the chairman the meeting accorded the Earl of Mansfield a hearty vote of thanks for his services as chairman of the Society during the past year, and Dr. Wilson, of Carbeth, was unanimously chosen chairman for the ensuing year. It was reported by Mr. Macdonald, the secretary, that it was expected when the accounts were fully adjusted there would be a credit balance of about £1,200 on last year's show at Glasgow. The stewards, he also mentioned, had found very much less in the transfer of admission tickets going on than was the case a few years ago.

A letter was submitted from the Glasgow Agricultural Society asking for an allowance on account of the loss of rent sustained through the Highland Show being held in the show-ground at Scotstoun. The Shows Committee recommended that, in view of the arrangements with the Glasgow Society, it was not thought desirable or within their power to recommend that an additional sum should be paid. Mr. Alex. Cross, of Knockdon, in moving the adoption of this recommendation, said the arrangement was that there was to be no rent for the ground at Scotstoun. They were to pay the Glasgow Agricultural Society certain sums for the use of the showyard equipment. These sums were adjusted with due regard to the fact that nothing was asked in the name of rent; and were undoubtedly larger than they would have been had a rent been payable in addition. The business having been carried through on that footing, it did not appear that the directors would now be justified in making an additional payment for rent. The payments made reached the large sum of £450, and anyone who would take the trouble of looking into the details would see that all through the arrangements the Glasgow Society had been met not only fairly, but most liberally. As a matter of fact, it was found that this large payment to the Glasgow Society showyard was the most costly the Highland Society had ever to pay, with the single exception of the great show in Edinburgh in 1899. The recommendation was adopted.

Dr. Gillespie drew the attention of the Board to the increasing difficulty in finding sites for the shows of the Society in consequence of the very large dimensions of the implement department. No one wished to discourage the implement department in the slightest degree, but what he particularly wished to emphasise was the unnecessary duplication of the same implement. The difficulty of the Royal Agricultural Society of England had been the size of the showyards, and that difficulty had been aggravated by this same system of duplication of exhibits. He hoped some means would be devised that would be reasonable and fair to implement manufacturers, and in the interests of the Society and convenience to the public.

Special prizes for the Peebles Show next year were intimated as follows, and the donors thanked:—

There was submitted a letter from the County Clerk of Mid-Lothian intimating that his County Council had unanimously agreed to levy a voluntary assessment on owners of lands and heritages in aid of the funds of the Edinburgh Highland Show of 1907, and a letter from the County Clerk of West-Lothian intimating that his County Council did not see their way to impose a voluntary assessment in aid of the funds of the Edinburgh Show.

Sir Archibald Buchan Hepburn also intimated that the County Council of East-Lothian had resolved unanimously to impose a voluntary rate. He expressed the hope that West-Lothian would yet see its way to join with the other two counties. (Applause.)

The Committee on the subject of overdressing of barley reported through the secretary that buyers of barley for malting had discovered a marked improvement in the barley on the whole. Very much less damage had been done in the dressing. The Committee was not quite sure that this improvement was due to the attention that had been paid to the subject this year, or to the goodness of the season giving a crop of barley that did not require to be closely dressed. Samples, however, had been shown where as much deterioration as 4s. a quarter had been caused by inattention. The Committee did not propose to conduct any trials, but to watch over the matter, and report again. Mr. Ferguson thought the fact of barley deteriorating 4s. by overdressing showed gross mismanagement. The report was adopted.

Shorthorn Society.

Meetings of the Committees and Council were held at the Society's rooms, 12, Hanover Square, W., on the 31st ult.—Mr. E. W. Stanyforth (President) in the chair.

The President, in reporting the deaths of Col. Sir Robert Gunter, Bart., M.P., and Mr. Philo L. Mills, past presidents of the Society, said that death had dealt heavily with the Society during the last few months. He moved that letters of condolence and sympathy be sent to the families of Sir Robert Gunter and Mr. Mills. The motion was unanimously agreed to.

Editing Committee.

Lord Moreton reported that the Committee had examined and passed the list of pedigree exportation certificates issued by the secretary since the last meeting of the Council, viz., Australia 8, South Africa 6, South America, 276, Canada 5, France 5, Germany 6, New Zealand 1, Russia 1, Spain 1, U.S.A. 1; total 310.

The Committee recommended the registration of the following names:—

Name.	Owne.
Billing	... A. Britten.
Derwent	... W. Snowball.

Applications having been made for the Society's prizes for 1906 by the Highland, etc., Agricultural Society and the Bath and West of England, etc., Agricultural Society, owing to the early publications of their prize-sheets, the Committee recommended that two champion prizes of £25 each be offered at the Highland Agricultural Society's Show as last year, and a champion prize of £10 for the best Shorthorn bull at the Bath and West, etc., Agricultural Society's Show, also as last year, and that a complete list of the prizes recommended by the Committee for 1906 would be presented at the next meeting.

This report was adopted.

On the motion of the President a unanimous vote of thanks was passed to Mr. A. S. Gibson, Ruddington, for the very interesting communication which he had addressed to the Council with reference to his visit to the Argentine to judge the Shorthorn cattle at the Palermo Show of the Rural Sociedad Argentina.

Conference on the Tuberculin Test.

A letter was read from the Devon Cattle Breeders' Society with reference to the conditions applying to the application of the tuberculin test to cattle exported from this country. At the present time animals are tested in this country before shipment and again after quarantine abroad, and it was desired to have the final test in the exporting country. It was therefore suggested that a conference of breed societies should be held with this object, and that the Shorthorn Society would be the proper authority to take the initiative in convening the meeting.

Mr. R. Stratton thought it was a very proper subject to take up, as its adoption would facilitate business. Some arrangement, he thought, might be possible by which, under the care of a representative of Argentina and the Board of Agriculture, such final test might be made in this country.

The suggestion of a conference was a good one, as there were other matters which would be well discussed. He moved:—"That this Society is favourable to the suggested conference, and will call a meeting of the various cattle societies."

Mr. Victor C. W. Cavendish seconded the motion.

After some discussion Mr. B. St. John Ackers moved, and Mr. C. H. Jolliffe seconded, the following amendment:—"That this Council is favourably disposed towards a conference, but does not wish at the present moment to take the initiative in calling together the other breed societies."

On being put to the meeting the amendment was declared carried and adopted.

The next meeting of the Council was fixed for December 5, 1905.

Dairy Shorthorn Association.

At the first Council meeting, held on the 1st, inst., Mr. C. R. W. Adeane occupied the chair.

The rules and bye laws of the Association, as drawn up by the Committee appointed for that purpose, were approved of, subject to a few alterations; and the following conditions, applying to prizes to be given by the Association, were unanimously agreed to, viz.:—

All cows and heifers competing in any class in which this Association offers all or part of the prize money shall be clean milked out to the satisfaction of the stewards at 6 p.m. on the evening previous to the show.

On the first morning of the show all cows and heifers are to be milked in the ring in the presence of the judge, who shall also see each animal's milk weighed; and any animal that does not yield up to the following standard when milked in the ring shall not be awarded a prize.

STANDARD.	If she has Calved within Three Calendar Months of the First Day of the Show.	If she has Calved more than Three Calendar Months before the First Day of the show.
Cows, 4 years and upwards, not less than	25 lbs. of Milk.	20 lbs. of Milk
Cows, 3 years old and under 4, not less than	20 ,, ,, ,,	15 ,, ,, ,,
Heifers, under 3 years old, not less than	15 ,, ,, ,,	10 ,, ,, ,,

Judges, in awarding prizes, are also to pay great regard to the size, shape, and general appearance of the udder, both before and after milking, as the prizes are only intended for animals suitable for dairy purposes.

And it was also agreed that a list of gentlemen who the Council consider qualified to act as judges of Dairy Shorthorns be printed and sent to all agricultural societies, who must agree to select one of these gentlemen to judge any classes to which "The Dairy Shorthorn (Coates' Herd Book) Association" contribute prize money.

Mr. F. N. Webb, of Babraham, Cambridge, who has been acting as honorary secretary, consented to undertake the duties of secretary for a time, and all applications for membership of the Association should be sent to him at the above address.

Polo and Riding Pony Society.

Sir Gilbert Greenall, Bart. (President) occupied the chair at a meeting of the Council of this Society, held at 12, Hanover Square, London, W., on 2nd inst.

Editing Committee.

Mr. C. Howard Taylor (Chairman) informed the Council that the entries received for the 1905 Supplement numbered 42 colts and 44 fillies. Five entries of mares lodged for Volume 9 of the Stud Book had been presented for their consideration; three had been accepted, one referred to a member of the Society for inspection, and the fifth held over for further inquiry.

The convener of the Dartmoor section, Mr. T. H. Ormston Pease, in forwarding the reconstitution of that Committee, had informed them that at its meeting on September 23, the Dartmoor Committee had decided to restrict the height for mares to 13 hands, leaving the stallions at 13h. 2 in. as before.

Show Arrangements.

Sir Gilbert Greenall (Chairman) reported that the dates of the 1906 Show would be March 16 and 17. The schedule of prizes and programme of arrangements adopted by the Council at their meeting on July 6 had been submitted to the Committee, who recommended the acceptance with thanks of the following donations, viz.:—From Sir Gilbert Greenall (the President), the prizes (£25) in the class for stallions not exceeding 14 h. 2 in.; from Mr. C. Howard Taylor, the prizes (£10) in the class for polo-bred riding ponies.

Mr. Everard R. Calthrop, with a view to prevent the cancellation of the class for Eastern sires, had intimated his willingness to contribute towards the prizes of this class, and the Committee suggested that he should offer a silver cup, or organise a class for the best Eastern stallion or colt, registered or entered in the Polo and Riding Pony Stud Book, to be judged by a gentleman specially conversant with Arab horses. Further, they recommended the inclusion of two classes for Shetland ponies, stallions, and brood mares, towards which the Society would be prepared to contribute the two first prizes of £5, if the Shetland Pony Society or Shetland breeders contributed the remainder of the prizes. The definition of brood mares, viz., "a mare in foal, or having produced a foal in 1906," to apply to the Shetland pony brood mares. The proposal to transfer the prizes for Mountain and Moorland pony brood mares to the district shows had met with general acceptance; but the Committee were anxious that a note should be added to the prize list in Classes 6 and 7 for mares not exceeding 12 h. 2 in. and

13h. 2 in. respectively—that these classes were specially provided in the London Show for mares of these breeds, in addition to the prizes which the Committee proposed should be offered locally for each recognised breed.

Taking into account the prizes offered by the President and Mr. Howard Taylor, and the class for Eastern sires suggested by Mr. Everard Calthrop, the total amount of prizes to be offered at the 1906 Spring Show would amount to £480.

Shows in 1906.

It was again resolved to continue the schemes of silver and bronze medals in 1906, and to offer the Royal Agricultural Society of England two gold medals for award at their 1906 meeting, viz., for the best polo pony stallion, and for the best polo pony brood mare or filly, respectively.

Smithfield Club.

A meeting of the Council was held at 12, Hanover Square, W., on the 1st inst.—the Right Hon. Lord Tredegar, President, in the chair.

The noble chairman announced with deep regret the death of Mr. Clare Sewell Read, a Vice-President of the Club and a member of forty-two years' standing.

Selection Committee.

Mr. C. W. Tindall presented the report of the Committee recommending the twenty-two names to be submitted to the members for election therefrom of eleven names to serve on the Council in place of the eleven gentlemen who retire by rotation at the end of the current year, and who are not eligible for re-election until the expiration of one year.

This report was adopted.

Implement Committee.

Mr. J. Harold Howard (Chairman) reported that the Committee had considered the applications for space in the implement department at the forthcoming show, and had allotted the same.

This report was adopted.

Carcase Committee.

Mr. W. Haydon (Chairman) presented the report of the Committee recommending the acceptance of estimates for the work in connection with the carcase competition at the forthcoming show, which was adopted.

Mr. Samuel Kidner submitted the report of the stewards recommending that Mr. Cary Coles and Mr. Reynard G. Adams be appointed assistant stewards to assist on the judging day at the forthcoming show, which was adopted.

Railway Rates.

A circular letter from the Board of Agriculture with reference to the desirability of holding local conferences between agriculturists and representatives of railway companies in cases of differences was read.

Mr. W. Coggan mentioned the cost of the carriage of sheep from Scotland by boat and by rail, and compared them with the charges by the railway companies for conveyance of sheep from Yorkshire. These were detrimental to the agricultural interest. He thought the Club should interest itself in the delivery of meat at the market. The meat conveyed by the L. and S.W. Railway arrived, as a rule, three or four hours late, after the trade of the market was over, and this was a serious loss to the agriculturist.

Mr. G. Adams mentioned the rough usage of his milk churns on the G.W. Railway; they often arrived with the loss of the lids, and handles knocked off, and he could get no redress from the company.

Mr. Garrett Taylor suggested that they should form a committee and ask for an interview with the President of the Board of Agriculture, and state their grievances, and he moved that a committee be formed for this purpose.

This was seconded by Mr. C. W. Tindall, and the Stock Prize and the Carcase Committees with Mr. W. Coggan were appointed a committee to collect evidence to be submitted to the President of the Board of Agriculture by a small deputation.

The next meeting of the Council was fixed for Tuesday, December 5, 1905.

Lincolnshire Longwool Sheep.

At the last meeting of the Council of the Lincoln Longwool Sheepbreeders' Association the secretary laid before the Council 25 new applications received since the last meeting, and inspectors were appointed to see the several flocks referred to and report on November 24.

Upon the proposal of Mr. Pears, it was decided that from and after December 31, 1905, no sheep shall be accepted for the Lincoln flock book which has not been bred by a member and which does not bear the registered flock number of a member of the Association.

It was also agreed that no member be allowed to bring Lincoln ewes that have been put to a ram other than a registered Lincoln for the purpose of lambing on the same farm as that upon which his registered Lincoln flock be kept.

NOTES AND NEWS OF AGRICULTURAL SOCIETIES.

Bucks Chamber.

At the last meeting of the Buckinghamshire Chamber of Agriculture, Captain J. W. Smith-Neill moved "That this Chamber views with great regret the apparent inability of the present Government to carry through any Bill really beneficial to agriculture, and calls upon the Central Chamber to take such action as will bring pressure to bear on all members representing agricultural constituencies to ensure more attention being given to the requests of their constituents and especially to the passing of the 'Butter' Bill." One or two thought that the motion should be confined to the passing of the Butter Bill, in view of the renewal of the Agricultural Rates Grant.—Mr. Weston said it was a subject he had frequently brought before the Central Chamber, and he now seconded the motion as it stood. Mr. Landon and Mr. Prosser supported it, and it was carried unanimously, with an addition proposed by Sir Edmund Verney, that the opinions of the members for the county and the candidates aspiring to that honour should be solicited and published on the question, so that the farmers might know who to support at the coming election.

Canterbury Farmers' Club.

A short discussion in regard to the estimates of the hop crop, and also of the acreage, took place at the last meeting of this club, and in the course of it Mr. Hammond said he believed that the estimated yield of 659,000 cwt. was much too large. Mr. A. Collard said if the planters did not fill up the forms sent to them, they could not blame the Board of Agriculture if any errors occurred. A communication was received from the Central Chamber in reference to the question of weighbridges at stations. The members unanimously decided to recommend that weighbridges should be placed at various stations now unprovided with them, and that a standard charge of a penny per ton should be made.

Cheshire Chamber.

The Cheshire Chamber of Agriculture discussed the subject of the damage done to farmers' crops by birds. Mr. Thomas Parton said rooks invaded the young turnip and mangold crops, and did fearful havoc. Mr. Stokes (Runcorn) said that enormous damage was done to the wheat crop by sparrows. They used to offer a reward of so much per dozen for the heads of sparrows; but that was not done now. One farmer advocated the extermination of rooks and sparrows throughout the country. Several gentlemen expressed a doubt whether rooks were so destructive as they were described; but nobody had a word to say in favour of the sparrow. Eventually a resolution was passed in favour of the extermination of sparrows, and landowners who are owners of rookeries are to be asked to largely reduce the number of rooks on account of the increasing damage which farmers suffer from their depredations.

Cleveland Chamber.

At the annual meeting of the Cleveland Chamber of Agriculture held at Guisborough, Mr. Herbert Samuel, M.P., was elected president for the ensuing year. A discussion took place on the subject of wild birds, and as usual there was a considerable difference of opinion as to which birds were the farmers enemies or friends. Then followed a discussion on the Redistribution of Seats Bill, and a resolution to the effect thot no measure of redistribution would be satisfactory which reduced the representation of agricultural constituencies was carried unanimously, and copies of it ordered to be sent to the Central Chamber of Agriculture and to the Member for Cleveland. Finally a hearty vote of thanks was passed to Lord de Lisle for the way in which he had presided over their meetings during the past year.

East Kent.

In the report presented at the annual meeting of the East Kent Agricultural Society the Council stated that next year they hoped to increase their offer of medals, as they considered it good policy to encourage agricultural implement makers to exhibit. The report was adopted on the motion of Sir George Collard, who said that in increasing the number of medals for the implement exhibitors he believed the Society was going on the right lines. A letter was received from the Ashford Chamber of Commerce inquiring upon what terms the Society would be prepared to hold their show at Ashford next year. After some discussion, it was decided that the Society could do no better than ask the same terms when they went to Ashford on a previous occasion, and a sub-committee was appointed to meet a committee of the Ashford Chamber to discuss the matter.

East Sussex Farmers.

A credit balance of £6 7s. 5d. was the financial result of the year's working as shown by the balance-sheet presented at the annual meeting of the East Sussex Farmers' Club, whilst the year altogether was a most successful one to the Club. Votes of thanks were accorded the officers, the Chairman referring especially to the ability and zeal with which Mr. Lintott had carried on the duties as Secretary. Mr. W. F. Ingram was re-elected Chairman; Mr. Albert Wadman was elected to the vice-chair; and Mr. Walter Lintott was asked to continue as Secretary and Treasurer.

Leicestershire Chamber.

At the meeting of the members of this Chamber of Agriculture, held on the 4th inst., it was agreed to support a resolution sent to the Central Chamber by the Liverpool District Farmers' Club urging upon Parliament the necessity of relieving agricultural land of all rates connected with the Education Acts. The Chairman, Mr. W. Glover, reported upon the meetings of the Agricultural Federation at Darlington that he attended as a delegate. The objects of the Federation were, he said, to urge farmers to take a greater interest in their calling. It was suggested farmers should have a representative in Parliament. If they wanted to bring people back to the land they must make the land profitable, and have a representative in Parliament to look after agriculturists. Mr. Glover was thanked for his report.

Mayfield Farmers' Club.

At the annual meeting of this club Mr. J. B. Powell was again unanimously elected president, Mr. F. Piper as vice-president, and Mr. Rufus T. Lade as hon. secretary and treasurer. A strong committee was also elected. It was decided to hold the usual annual dinner on January 17 next, and also that during the present session lectures should be arranged (if possible). From the agenda of the Central Chamber, for meeting to be held on the 31st inst., two items were dealt with—viz., "Birds and Agriculture" and "Rural Building Bye-laws Committees' Report," and the following resolutions were passed thereon: "That the Mayfield Farmers' Club are of opinion that the depredations of birds are the cause of serious loss to growers of various products of the soil, and that an inquiry and report should be made as to what means should be adopted to effectually prevent such losses as may be possible"; "That the Mayfield Farmers' Club have resolved to support an amendment of the present rural building bye-laws so as to enable those desirous of obtaining cottages to do so at a reasonable cost, due regard being exercised as to the necessities for such cottages." A letter and copy resolution passed by the Canterbury Farmers' Club and East Kent Chamber of Agriculture strongly upholding Mr. Chamberlain's policy and to do their utmost to protect the British hop industry was read, and the meeting also favoured this resolution.

Newcastle Shire Horse.

The report presented at the annual meeting of the Newcastle and District Shire Horse Society, held at Newcastle-under-Lyme, recorded that financially the Society was gradually making headway, and with the continued liberal support of the honorary members might in a few years be placed on a sound basis, and able to extend its operations. The Society commenced its year's working with a credit balance of £69, and closed with a balance in hand of £102. The report was adopted, and the officers re-elected as follows:—President, the Duke of Sutherland; Chairman, Mr. R. C. Trigger; Hon. Treasurer, Mr. J. Q. Lamb; Secretary, Mr. E. W. Jones. A considerable list of offers of horses for next season was read, and a selection committee appointed to visit several studs and make a recommendation to the committee.

Staffordshire Chamber.

The effect of birds on agriculture was one topic of discussion at the meeting of the Staffordshire Chamber of Agriculture. Mr. R. G. Patterson, who opened the discussion, said that certain birds did a great deal more harm than good from the farmer's point of view, and he classed rooks, wood pigeons, sparrows, and larks as being the greatest nuisance. The outcome of the discussion was that the secretary was directed to write to landowners and other persons asking them to be good enough to keep the rookeries they maintained within reasonable limits. The law of trespass as it at present exists was also discussed. Mr. Lamb, who introduced the question, said that while it was admitted that a great deal of damage was done on farms by trespassers, there was no remedy unless the amount of the damage was

proved, and that, at times, was a very difficult matter. Unless such products of the soil as mushrooms and watercress were specially cultivated, the trespassers under the existing law, had as much right to them as the occupier of the farm. Moreover, the stock on the farm was not sufficiently protected, and he argued that there ought to be better and more frequent police supervision. A motion was passed to the effect that it was most urgent that the law of trespass should be altered so that the owners and occupiers of agricultural land should have the sole right to all the products of the soil both natural and artificial, and also adequate protection for their stock and crops.

Totnes Union.

The Council, in their report, presented at the annual meeting of the Totnes Union Chamber of Agriculture, held on Tuesday, stated that they had considered the question of co-operation for the purchase and sale of agricultural commodities, and whilst fully recognising that organised co-operation among farmers would be of great benefit to the industry, they considered it outside the province of the Chamber to promote a society for trading purposes. In July last the Council strongly protested against the Government's Redistribution proposals, pointing out that if they were carried such agricultural counties as Devon would not be properly represented. The Central Chamber had adopted a resolution similar to that passed by the Council of the Local Chamber. The Council were pleased to announce that the Hon. A. E. Fellowes, M.P., President of the Board of Agriculture and Fisheries, had expressed his willingness to address a meeting of agriculturists in Devon early in the coming year, and the Secretary had put forward the claim of Totnes for the place of meeting. Many new members had joined during the past year. At the annual meeting Mr. G. Hutchings was thanked for his presidency during the past twelve months, and Mr. M. Henry Hill was unanimously elected to occupy the position during the ensuing year.

Worcestershire Chamber.

A letter from the Board of Agriculture impressing upon the chamber the value of periodical conferences between agriculturists and representatives of railway companies upon the question of carrying rates for agricultural produce, was read at the last meeting of the Worcester Chamber of Agriculture. The Board invited information of cases where farmers experienced difficulty in transmitting produce or excessive freightage. The Canterbury Farmers' Club invited support for their protest against the increasing importation of foreign hops, duty free, which threatened the English growers with ruin. The chamber approved the proposal to tax imported hops. The Liverpool District Farmers' Club urged the chamber to press upon the Government the necessity for relieving agricultural land of all rates in connection with the Education Act, and it was decided to support the Liverpool Club's proposal. A recommendation to the Central Chamber urged the necessity for the amendment and consolidation of the Agricultural Holdings Acts, and a resolution was passed with special reference to the failure of the Government to pass the Pure Butter Bill, urging the Central Chamber to bring pressure to bear upon members of Parliament representing agricultural constituencies to ensure more attention being given to the requests of their constituents.

Worcestershire Farmers.

A resolution protesting against the recent prosecution of parents for the absence of their children from school during the hop-picking, and asking the County Councils of Worcestershire and Staffordshire to arrange that the holidays in districts from which hop-pickers are drawn should begin on September 1 instead of August 1, was passed unanimously at a meeting of the Worcestershire Farmers' Association. The Education question was also considered, and a resolution passed condemning the working of the Education Act, which cast upon the rates of agricultural districts a large portion of the burden of the cost of education in urban districts.

Kendal Horse and Cattle Fairs.—The opinion has been expressed in recent years that the old-fashioned country cattle fairs are dying away. Such is not the case at Kendal, judging from the very large show of stock on the occasion of the annual Martinmas cattle fair on Thursday. There was an excellent attendance of farmers and cattle dealers. Bullocks were forward in large numbers, and there was a fairly good show of stock cows. Quotations were as follows:—Geld cattle £8 to £14, strong bullocks £9 to £12, stirks £6 to £8 10s., calves £2 10s. to £5 each. At the annual horse fair there was a large gathering, and a fairly good trade. Good heavy horses sold from £25 to £50, light horses £20 to £40, unbroken animals £15 to £20, foals and good young stock from £5 to £15.

By Lupulin.

Beer and Hops.

A lengthy discussion was carried on a short time ago in the columns of one of our leading daily newspapers on the causes of the dwindling in the consumption of beer. It originated in an article headed "A Plea for the Hop Grower," which was speedily followed by numerous and voluminous letters, each of which contained arguments that satisfactorily explained to the several writers the reasons why we are, as a people, drinking less of the liquid which has for generations been accepted as our national beverage. Some of the arguments were wise and true, and some were foolish and misleading. Nearly all were more or less speculative, therefore I will not attempt to handle them, or to touch upon mere matters of opinion, in referring to a subject which seriously affects the English hop-growing industry The facts and figures with which I propose to deal are culled from official reports, and may be accepted as correct indications of the trend of affairs. I will leave my readers to draw their own inferences or conclusions therefrom, only premising that I consider them of sufficient practical importance to be worthy of their careful consideration.

For the present purpose I have taken the four years from 1900-1 to 1903-4 inclusive. The first fact that faces us is that the production in the United Kingdom of beer of standard gravity has been lowered during this period from 37,217,880 to 36,054,657 barrels, a reduction in four years of no less than 1,163,223 barrels. The number of licensed brewers is also reduced from 5,968 to 5,353, and the number of licensed victuallers and sellers of beer from 145,861 to 144,548. At the date of the last return there were therefore 1,828 fewer persons or firms engaged in this business than when the census was taken four years earlier.

These traders are marshalled in two classes, viz., those who manufacture beer from barley-malt and hops alone, and those who, in addition to these simple ingredients, use rice, maize, etc., sugar, glucose, and saccharine, with some substitutes for hops. The pure beer brewers at present number 2,414, and the substitute or mixture brewers 2,939. The average consumption by the pure beer men seems to be nearly 2½ bushels of malt and 2¾ lb. of hops per barrel, whereas the others only give their clients less than 1½ bushels of malt and about 1¾ lb. of hops the balance of necessary saccharine being supplied by about 9 lb. of sugar or glucose, etc. The point that is most interesting to us is clear. In proportion as substitutes for barley-malt are used, the quantity of hops is reduced. The pure beer brewers are manifestly the best supporters of our industry, and should, therefore, be recognised and supported.

But another stiking fact arises out of this investigation. The reduction of the output of beer has reduced the total annual demand by brewers for our produce from 654,636 cwt., which is the return for 1900-1, to 601,597 cwt., at which it stands in the latest official record. We have thus lost in four years the outlet for 53,039 cwt. This is not only due to the smaller output of beer, but to the lowering of the average consumption per barrel, which has, on the whole, been lessened from nearly 2 lb. to 1.87 lb. The mixture brewers are actually responsible for the whole of this barrel loss, as the returns from the pure beer breweries, which have also suffered with respect to total production, have rather raised than lowered their average barrel consumption.

These are the main points to which I desire to direct the attention of English hop-growers. Whatever may be the causes, the effects, as far as we are concerned, are evident. The consumption of hops is decreasing in the United Kingdom. The reduction is apparently not due to any sudden collapse, nor does it seem to be affected by variations in value, but it has been gradual and steady, and is therefore the more expressive. Hops will certainly be wanted as long as beer is recognised as a necessary part of the sustenance of the people, but unless we can secure legislation similar to the three-centuries-old Bavarian law, we must be prepared, I fear, for still further limitation. It appears to be an opportune moment, when our planters are wincing under the results of an abnormally heavy crop, for us to look at our prospects calmly, and make such arrangements with regard to the future as may best fit the circumstances. I have no desire to pose as a pessimist, but I have learnt that "facts are stubborn things," and it appears to be foolish to proclaim "peace when there is no peace." Therefore, I trust that my object in thus speaking of things that must, I know, be somewhat unpleasant to my friends, may be estimated at its honest value, and that favourable consequences may follow.

Imports and Exports.

The Board of Trade returns for October show that we have received from the U.S.A. 1,221 cwt. of hops, and 12,944 cwt. from other countries. The total imports for the month, 14,165 cwt., compare very favourably with the corresponding month of 1904, in which we imported no less than 65,530 cwt. Our exports during October last were 4,433 cwt. of English and 579 cwt. of foreign hops, so that the balance against our market is reduced to 9,153 cwt., as compared with 62,912 cwt. in October last year. The figures for the first two months of the hop year are for 1905:—Imports 18,871 cwt., exports 6,236 cwt., balance 12,635 cwt.; and for the previous season, imports 93,647 cwt., exports 3,365 cwt., balance 90,282 cwt.

These results abundantly demonstrate to what extent our trade with foreign countries is influenced by the English crop. Last year our yield was short, and our market prices were high, therefore foreign shippers were induced to send large quantities into our open ports, our shipments to the colonies and elsewhere being correspondingly small. This season we have grown quite sufficient to supply our home requirements for the year, and foreign supplies are not needed. The panic created by the reports of the world's crop has unfortunately induced our growers to sell their produce at abnormally low rates; therefore our market is practically closed to our competitors, with the result that the difference in our foreign trade between the first two months of the seasons of this year and last is seen in the great net reduction of 77, 47 cwt. We are certainly thus far keeping foreign competition at arm's length, and shall doubtless continue to do so as long as the currency for our own produce remains at such an unsatisfactory level. But English growers are paying dearly for their independence, and it is, I think, open to question whether a more moderate English output would not on the whole provide our industry with better financial results, even though the unwelcome accompaniment of enlarged imports became inevitable. The ultimate settlement of our future is undoubtedly closely associated with our fiscal policy. I know there are some shrewd planters who are content to "let well alone." They have made money out of hop growing, and are satisfied with the results of the present position. But are not these good men exceptions to the general rule? Is their experience applicable to the industry at large? Looking at the general course of events, I think it must be admitted that this section of English agriculture has not made profitable progress during the past decade. It his certainly progressed in methods of production and manufacture, and this fact partially explains the narrowing of our hop acreage. But if we could sum up the total issue, I am convinced that no satisfactory profit has accrued to the general body of our planters. Therefore it appears essential for the preservation of this industry, so valuable to us from a national point of view, that serious consideration should be given to the fiscal aspect of the case, and the need for legislative protection.

English Jersey Cattle Society.

A Council meeting of this Society was held at 7, Princes Street, Hanover Square, on the 30th ult., Mr. Arkwright in the chair.

Mr. Ernest Mathews, on behalf of the General Purposes Committee, reported that they had examined the statement of funds; the balance at the bank amounted to £210 0s. 6d.

Printed proofs of the Butter Test Reports for the year 1905 were laid on the table.

Attention having been called to the heavy task of judging single-handed at shows where Jersey entries are numerous, a communication was directed to be sent to the secretaries of shows where, in the opinion of the Society, it was desirable that two judges should be appointed.

The question of the award of medals and prize-money for the year 1905 was discussed, several new suggestions being brought forward. It was agreed generally to enhance the value of the prizes offered for butter tests at the various shows, subject to certain modifications.

Finally, as this subject was one that required further thought and discussion, it was resolved to hold a special meeting of the Council to consider the proposition, and other suggestions connected therewith, on Monday, December 4.

Table Poultry.

Poultry for the table is one branch which has interested many, and will do even more largely in the near future, for we are convinced that there is much to be accomplished yet, and this branch has not been fully taken up in the way we should like to see it worked. We hear much about foreign competition, and the many advocates of keeping at home the sums now sent out of the country to the industrious foreigner know very little of the subject about which they write.

First of all, we are more than ever convinced that to do this would be a great injustice to the many thousands who would not be able to indulge in poultry as an article of food at all, if they were compelled to pay the price for their fowls which English producers are obliged to charge in order to make it remunerative to them to rear their birds, and why we should have any desire to interfere with the foreigner; we have yet to learn when the demand for home-reared fowls is not even catered for—leaving out of the question altogether the adequate supplying of this demand.

When we, as English poultry farmers and keepers, are able to fill this demand well, then will be the time to consider whether it will be advisable to enter into competition with the foreigner. We have recently spent some considerable time with some of the principal fatteners, and it has given us much pleasure to compare notes with those who cater for the wealthy in our cities, and we have been able to compare results with those obtained in former years, and we are glad to be able to record that prices are not only well maintained, but that the supply is still entirely inadequate to the demand.

The fattening industry has made rapid strides during the last four or five years, and we are glad to be able to speak of the great improvement in the quality of the birds. At one time, not so very long ago either, numbers of yellow-legged birds were found in the fattening coops, but these are disappearing, and their places are taken by good white-legged birds with the accompanying white skin, which is so much in request amongst poulterers and those who handle the finished article.

There are very few poultry breeders in Sussex who go in for pure fowls altogether—but after going round the yards of those who bred the fowls, and through the fattening pens of those who "fleshen" the birds for the London markets, we have no hesitation in saying that two-thirds of the male birds used in producing them are pure Buff and White Orpingtons. We found the larger number in the Heathfield district, and a good many in the surrounding places. We found, on inquiry from the hucksters, that the rearers have been so satisfied with the increased prices they had received for the Orpington crossed birds that they have determined to continue to breed them.

In a number of cases we were sorry to find that the cottagers and farmers have been making the mistake so many have made before, to their own loss—having found their birds do well they have inbred them, mating the cock from which they have bred one year with the pullets reared, thus breeding from father and daughter; and in many cases where this inbreeding has been carried on for several years there was marked deterioration in the progeny. To breed strong, vigorous chickens, which are easy to rear, it is absolutely necessary to mate totally unrelated stock. It is not economical to avoid the expenses of the introduction of fresh blood.

In Sussex there are more birds fattened than in any county, and poultry rearing for the fatteners is very general amongst those who live in East Kent and all parts of Sussex. This leads to the circulation of a good deal of money in these counties by this industry; for, after they are reared, the hucksters find employment in collecting them, then the fatteners in fattening, the pickers and stubbers are kept busy, and this is not all, for their are many millers' waggons which are engaged in carting the foods to those who rear and fatten.

Readers may be inclined to ask whether the farmers produce the grain to feed their fowls. Most of them have grass, but those who grow corn do not produce nearly enough for the needs of their feathered flocks, so that it is necessary to buy. Recently we asked the fatteners whether they could obtain birds for fattening all the year round, and they told us unfortunately not. In February, March, and April they will give from 3s. 6d. to 4s. each for birds weighing 1¾ lb. to 2¼ lb. each, because at that period of the year they are not able to get nearly enough chickens to fatten to supply the demand.

The smaller fatteners are, in many cases, producing a better class of bird than the larger ones, which can easily be explained, as they rear a good many birds themselves and pick up some good ones, and only fatten as many as they can with the help of the members of their own family, with, in a few cases, the assistance of a couple of young girls. These fatteners get in the early season from 5s. 6d. to 7s. 6d. each for their birds, and during September and October from 2s. 6d. to 4s. each, when everybody has birds to sell.

We consider there is a good opening for this industry to be taken up in many parts of the country, as the demand is so much in excess of the supply. Producers should aim at getting birds when the prices are highest, and this can be easily done by careful management and selection of stock. We may say that the Sussex people generally have good stock hens, and they save over some of the early pullets for breeding from—but these are frequently not as good layers as might be found. They do not select them on their merits as layers, but for their frame and flesh. Were they to study the laying qualities more, they would produce many more chickens in the year. Where the matter has received careful consideration they are never without eggs and early chickens, which are so particularly valuable to the fatteners.

It must be remembered that it requires a great deal of care to select birds which are good layers and table birds. At one time it was believed—and we still find that there are some who adhere to the belief—that those who reared table birds had only to consider the frame of their stock birds; and provided that they had long breast bones with plenty of firm flesh on, and this with a good white skin, success in rearing chickens for the table was assured.

Undoubtedly these qualities should be sought in birds from which table fowls are required to breed, because they are essential points in the produce, but many have found to their sorrow that they are insufficient to secure sure success, because in order that table birds may be really profitable it is imperative that they be ready for sale just when the prices are the most remunerative on account of being higher than in the season.

In order that the young birds may be ready in time for the sale of good-class table poultry, which is required in London when the season is on, it is necessary to hatch the chickens in December, January, and February, and it is, of course, an impossibility to do this unless the eggs are forthcoming for incubation, and as everyone who keeps poultry knows, eggs cannot be produced unless the fowls are in full lay, and only those birds which are bred from very carefully selected laying strains can be be relied on to lay well in the months mentioned, so that it will be easily seen, even by those who have not had experience in the production of table poultry, that the study of laying qualities is necessary when table birds are wanted, in order that the eggs may be produced at the time when they are most profitable, on account of the purpose for which they are required—viz., hatching.

We have many times in the past seen those who have put down a flock of birds for the production of table poultry in great trouble on account of their being unable to get either eggs for hatching or broody hens to sit on eggs which it would have been possible for them to have bought, could they but have obtained the hens for sitting purposes. In order that our readers who cater for the table-poultry markets may not be in a similarly unhappy position during the coming winter, we take this opportunity of emphasising the necessity for the selection of really good laying hens and pullets, combining also the points necessary to breed table birds of the required quality for their stock pens for the coming season.

The days when these subjects could be ignored have passed, and it has become absolutely necessary, in order that the best possible results may be obtained, to take the greatest care to obtain birds which will give their owner eggs when most required.

We take this opportunity of stating that it is not possible to get really good results from fowls which are kept for utility purposes, unless the greatest care is taken to breed from those fowls which are really good layers and from those alone. We cannot imagine a more trying position for poultry keepers than to have spent capital in procuring an apparently good stock of fowls, with the object of breeding and rearing a number of chickens for the early markets, and then when the sitting season arrives to be without eggs, and, as the weeks pass, to be under the conviction that the time lost cannot be regained.

In order that any branch of poultry keeping may be made a success, no matter whether the fowls are kept merely for egg production for the home or for sale, or for table purposes, or good-class birds are bred, or exhibition fowls are kept, it is absolutely necessary that the right class of stock be obtained first of all, and then, when this has been done, that they receive exactly the right treatment to get the best possible results from them.

Many good birds are spoilt by the wrong treatment, and the successful poultry keeper, no matter whether he is only keeping fowls for the production of eggs for his own house, or for the purpose of hatching and rearing table birds, or for better class fowls which are well up to the requirements of the standard, requires to know the best methods for the treatment of his fowls for that individual purpose.

The question of breeds is one which must now be considered. The progeny from the first cross between Buff Orpington hens mated with Dorking cockerels are very fine table birds indeed. We consider them second to none, and have seen some good specimens of this cross exhibited in the table poultry classes at some of our leading exhibitions, and we have every confidence in recommending the cross to those who want large table birds of excellent quality.

We do not advise anyone who is thinking of going in for Dorking cocks to produce the cross, to buy their birds unless they are from really hardy strains, as, unfortunately, there are a good many people who breed Dorkings who are not careful to introduce fresh blood into their birds each season, and, as a result of in-breeding, the progeny deteriorates very much, and lose that stamina which is so essential to growth and development, and which tells when the birds are mated early in the season.

We still find it necessary to emphasise in these columns that it is not always safe to be content with obtaining the breed one sees recommended for any particular purpose, because the strain is of even more importance. As it is very generally known, Leghorns are very good layers taken as a whole, but there are some very bad layers to be found among them, so much so that a great many people have given them up in disgust, when they have been unfortunate enough to get birds from one of these bad-laying strains.

Selection tells in breeding, and when eggs are set from fowls, in a haphazard fashion, without any regard being paid to the utilitarian qualities of the birds, it frequently happens that the worst layers are propagated. There are a good many people who are breeding fowls for sale, to those who rear for the markets as well as for laying purposes, and those who are conscientious, sacrifice hens which are poor layers rather than circulate stock from such birds, as they only cause annoyance and loss to those who are unfortunate enough to get any of them. Those who want to produce hardy, useful stock should not purchase their cockerels from exhibition-bred birds, as these are bred with a view to the production of the most perfect specimens of standard type without any regard being paid to their useful qualities.

It will thus be seen that they are not likely to be profitable to the utility poultry keeper, as it is a well-known fact that at the present time many of the exhibition bird strains are very much inbred in order to get uniformity and symmetry in shape and colour, and as a result of this the "culls" (or mis-marked birds) which frequently find their way to the yards of small poultry keepers, who are endeavouring to make their poultry pay, have poor constitutions, and are a great loss and disappointment to their owners.

It is a much better plan for those who want their poultry to pay (and who does not?) to buy their birds from those who have made a special study of the utility qualities of their birds in order that they may get the best possible results from their purchase.

"PAYING POULTRY"
is the book you need if you would make your poultry keeping a success.

"FARM FIELD & FIRESIDE,"
1, ESSEX STREET, STRAND, W.C.

The news of the very sudden death of Mr. Samuel Green, of Hadley Farm, Ombersley, near Droitwich, which took place at Wychbold, near Droitwich, on Thursday night, was received with great regret in Worcestershire agricultural circles. Mr. Green was a well-known and widely-respected agriculturist, and was also a prize winner at most of the agricultural shows in the Midlands; whilst his land invariably competed with success at the local farmers' club competitions.

SOCIETIES & NOTICES.

ROYAL AGRICULTURAL SOCIETY OF ENGLAND.

APPOINTMENT OF SECRETARY.

The Royal Agricultural Society of England desire to enlarge the field of competition for the Secretaryship of the Society. They therefore invite applications without age limit. Candidates for the appointment are requested to apply to the Offices of the Society, at 13, Hanover Square, W., for the necessary printed form, without which no application will be considered. Salary £600 per annum. The form of application must be filled up and returned (addressed to "The President, Royal Agricultural Society of England, 13, Hanover Square, London, W.") not later than Wednesday, November 29th, 1905. Candidates who have already applied need make no further application. Personal canvassing of any Member of the Council of the Society will be deemed a disqualification.

13th November, 1905.

THE BIRMINGHAM CATTLE AND POULTRY SHOW.

The Fifty-seventh Great Annual Exhibition will be held in BINGLEY HALL, Birmingham, on SATURDAY, MONDAY, TUESDAY, WEDNESDAY, and THURSDAY, NOVEMBER 25th, 27th, 28th, 29th, and 30th, 1905.

Excursions to Birmingham on all the leading railways.

AUCTION SALES.

IMPORTANT SALE OF PURE-BRED SHORTHORNS.

JOHN THORNTON & CO. will SELL by AUCTION on:—

THURSDAY, December 7.—Mr. W. E. Balston's choice entire herd of SHORTHORNS, at Barvin, Potters Bar, Middlesex.

Catalogues may be had of JOHN THORNTON AND CO., 7, Princes Street, Hanover Square, London, W., who will execute commissions.

HOME FARM, WADDESDON, BUCKS.

HIGHLY IMPORTANT ANNUAL SALE OF PRIME FAT STOCK.

Messrs. BOND & BURROWS are favoured with instructions from Miss Alice de Rothschild to SELL by AUCTION, on the Premises, on THURSDAY, NOVEMBER 23rd, 1905, at One o'clock precisely.

90 GRAND FAT POLLED ANGUS, SHORTHORN and JERSEY BULLOCKS and HEIFERS, very ripe, of exceptional quality, and nice weights, several fit for show; **170** FAT DOWN THEAVES, EWES and TEGS of choice quality.

The Auctioneers particularly invite the attention of Butchers, Dealers, and others, to this important Unreserved Annual Sale. The Cattle are fully up to the usual high standard, many of great weights, very ripe and of excellent quality, including Five Grand Show Beasts.

Luncheon from 12 o'clock.

Conveyances will run from Thame, Aylesbury and Manor Station, for the convenience of buyers.

Catalogues with Train Service may be obtained of G. A. Sims, Esq., Winchendon; or of the Auctioneers, Thame, Oxon.

AUCTIONEERS, AGENTS, &c.

COLQUHOUN'S

Scotch Tweeds & Knitting Yarns.

To the Public.

Scotch Tweeds mean value, and Colquhoun's Ladies and Gentlemen's Scotch Tweeds, Knitting Yarns, Blankets, &c., mean perfection of value. Their wear is magnificent. All goods are made in my own Mills under my own supervision, and nothing is sold as wool that is not pure wool. Any length at Mill price and carriage paid. Self-measurement forms sent, and Suits made up if desired.
400 Patterns, post free. Write for them.

To Wool Growers.

What do you do with your wool? Do you make the most of it? One thing is quite certain. You cannot do better than send it to my Mills and have it made into woollen cloth, blankets, or other goods. I have 400 patterns to select from, and pay carriage on wool sent to me for manufacture. Write for booklet, which tells you all you want to know, and receive patterns, so that you may say what you want made and the patterns you prefer.

SILCOCK'S FATTENING CAKE

Made Specially for Fattening Purposes.

We have made this claim for 12 years, and each year it has been more thoroughly established and confirmed by thousands of farmers.

YOU MAY DOUBT, but test it for yourself as others have done; you will make money by the experiment—we will gain a customer.

It is guaranteed by analysis and practical feeding tests.

We make one cake do one thing well. One cake for all purposes means waste and inefficiency.

SILCOCK'S FATTENING CAKE LIVERPOOL

YIELDS BETTER RESULTS

READ THIS !

Mr. HERBERT LAKE, Credition, Devon, writes :—
September 4th, 1905.

"I was a great believer in Linseed until I proved that your Fattening Cake is much superior; as a test, I fed one lot of Steers exclusively on your Cake, and another lot on English Linseed (weight for weight), and I was very much surprised to find that the result gave a much greater weight of beef in favour of the Fattening Cake. I can thoroughly recommend your Cake to every farmer as the best (including Linseed) that can be used. Please send me two more tons, ex contract, at your earliest."

We respectfully Solicit a Trial Order.

Our manufactures include Fattening, Rearing, Dairy, and Universal Cakes & Meals, Cotton Cakes, Soluble Calf Meal, &c.

We invite Inspection of Samples exhibited at the London (Smithfield), Scottish National, Dublin, Birmingham, and Leeds Fat Stock Shows.

For particulars apply to Local Agents, or to
R. SILCOCK & SONS, Stanley Hall, Union St., LIVERPOOL.

WM. COLCHESTER & CO., GOLD CUP FERTILIZER WORKS, IPSWICH.

THE
"BIBBY" CAKE *v.* LINSEED CAKE.

In out-of-the-way districts, amongst farmers who perhaps do not often see the Agricultural papers, there are some few feeders who still fatten bullocks and other cattle on Linseed Cake.

To all such we venture to suggest that the present high price of Linseed Cake affords an opportunity for putting the "**BIBBY**" **CAKE** to a competitive test.

Consider the saving! At the relative prices the cost of "**BIBBY**" is something like 30s. per ton less than the cost of any good brand of English Linseed Cake, so that on a four-ton truck of Cake a saving of £6 is effected.

But this is not all; we maintain that cattle can be fatted more expeditiously on "**BIBBY**" **CAKE**, which effects a saving of both time and other keep.

But let us waive the latter point, for the money saving alone is well worth the feeder's attention.

We supply the whole Cakes, or in the form of Cakettes, as may be desired.

We also supply our famous **DAIRY CAKE** in Cakettes, Whole Cake or Meal, and we believe better value for Dairy Cows is not to be obtained than we are now giving in our well-known **DAIRY CAKE**, **CAKETTES**, and **MEAL**.

BIBBY'S QUARTERLY.

The new number of BIBBY'S QUARTERLY, edited by our Mr. JOSEPH BIBBY, is now out, and can be had during this month at all Smith's Bookstalls, price 1/-.

There be those who say that BIBBY'S QUARTERLY is the best periodical which comes into the farmhouse, but there be also gainsayers who affirm that if it dealt more with live stock, and less with high ethics, it would be more acceptable to the average farmer; and we are rather of that opinion ourselves, but the Editor tells us that he edits BIBBY'S QUARTERLY to please himself, and we have to leave it at that; should, however, any reader of BIBBY'S QUARTERLY make a purchase at Smith's Bookstall, and is afterwards doubtful that he has got his shilling's worth, we undertake to make matters straight with him if he apprise us of his dissatisfaction within the present month.

NOXIOUS NEIGHBOURS.

Given the existence of a nuisance on adjoining land, it is sometimes a nice question whether the remedy lies against the owner or the occupier of the land on which the nuisance exists, or whether it may be pursued against both of them. Broadly speaking, the owner of real property is not responsible for a nuisance committed and continued thereon by the tenant in possession, unless the nuisance existed at the time of the letting, or the owner is himself a party to it. He is not liable for subsequent nuisances which did not originate with himself, and which he can not prevent.

The latter proposition has been carried a long way by a case which has been described by one of the judges as a decision of "excessive refinement." The owner of what was originally a greenhouse converted it into a house and shop, with chimneys on a level with his neighbour's first-floor windows, and let it to a tenant from week to week, who proceeded to light fires in the ordinary course. When the wind was in a particular direction the smoke was driven into the neighbour's drawing room. After the lapse of several weeks, during which the owner took no steps to determine the weekly tenancy, the aggrieved neighbour commenced an action against him to restrain the nuisance. But the former occupier of the premises had used coke, and so caused no smoke which could be injurious; and, it being quite possible for the tenant to occupy the shop without making fires, and quite optional on his part to make them or not, or to make

them with certain times excepted so as not to annoy his neighbour, or in such a manner as not to cause any quantity of smoke which could be deemed a nuisance, the Court thought it was impossible to say that the tenant was in any sense the servant or agent of his landlord in doing the acts complained of. The utmost that could be imputed to the landlord was that he enabled the tenant to make fires if he pleased, and the fact that he refrained from terminating the tenancy when he might have done so did not make him a party to the nuisance which was being carried on by the tenant. But a judge of wider views, commenting subsequently on the decision, remarked that the building was built for a coffee-shop, and a chimney was erected over the fireplace in the shop, and he should have thought that the building, with the fireplace and chimney, was let for the purpose of its being used in the ordinary way, and for burning ordinary fuel in it.

In another case, however, the owner of a field let it to a tenant for the purpose of being worked as a lime quarry, and authorised the quarrying of stone and the erection of lime-kilns in the field. The ordinary way of getting the limestone was by means of blasting, and the tenant, with the consent and authority of the owner, opened a limestone quarry, and erected limekilns in which he burnt the limestone. The smoke and vapours arising from the kiln spread over adjoining land, and injured the herbage and lessened the value of it, and, in the process of blasting, quantities of dirt and stone were thrown on to the adjoining land, endangering the safety of those employed there. The occupier of the adjoining land brought an action against both the owner and the occupier of the quarry. There never was any doubt as to the liability of the tenant, but the landlord demurred on the ground that he was not liable for the acts of his tenant, and quoted the case of the smoking chimneys as an authority in his favour.

But the Court did not hesitate to distinguish the cases, and whilst they treated the earlier decision with due respect, they held that it did not apply to the facts disclosed in the case before them. There could be no doubt that where a person authorised and required another to commit a nuisance he was liable for that nuisance, and if the authority be given in the shape of a lease he was not the less liable. If the injury complained of arose from the natural and necessary consequence of carrying out the very purpose and object for which the field was let, the landlord was undoubtedly liable.

Seasonable Topics.

Whether a labourer's cottage for £150 is possible is a question which for some time past has been occupying the minds of landowners; and while some contend that the scheme is feasible, others are disposed to take an opposite view. There are one or two points, however, in connection with this matter, worthy of consideration, which may have been overlooked. The prime idea of building a cottage for £150 seems to be that of the revenue from it paying interest on capital. It is obvious that if a large sum is spent on building a labourer's cottage, the rent which the tenant can afford to pay is not sufficient to pay interest on the capital outlayed. But should the erection of labourers' cottages be looked upon, purely and simply, as a financial investment, without taking other things into consideration? Let us remember that labourers' cottages are part of the stock-in-trade of the agricultural industry, and just as essential as barns and cowsheds; and farms, therefore, should be expected to pay part of the interest on the capital spent on the erection of labourers' cottages. No one puts up a hay-barn and expects it to pay 5 per cent. directly on the outlay, though it does it indirectly, and cottages, being just as necessary as hay-barns, they should be treated in the same light. Again, is the cheap cottage really the cheapest in the end? Many people have suffered through the shortcomings of the jerry-builders, who may thrive in suburbia, but we do not want him in the country. It is not only a question of what a cottage costs, but the time it will stand, and everyone knows that good work is lasting work. There are hundreds of cottages to-day which have stood for generations, and are as sound now as ever they were. These bear tribute to the value of good work at the beginning, and if a cottage costs, say, £150 to erect, and a repairer is everlastingly hanging about the place afterwards, we fail to see the economy of so-called cheap cottages. As a matter of fact, very cheap things are often the dearest in the end, and cottages are no exception.

Cheap Labourers' Cottages.

❦ ❦ ❦

The person, by the way, who seems to be the least interested in the cheap cottage movement is the person who will have to live in the structure—i.e., the labourer himself. Our friend Hodge likes a comfortable house to live in, just the same as other people, and he appreciates respectable sanitary arrangements when he can get them; but he does not need anything elaborate, and troubles himself not one jot about building bye-laws, regulation air space, and all the rest of it. Hodge likes a cottage with thick walls, because it is warmer, and he is aware that a lot of air space means additional firing to keep it heated, and fuel is an item to be considered. Moreover, the labourer cannot afford to pay much rent. We know people who have taken suburban ideas into the country with the idea of raising Hodge to a sense of the kind of house he ought to live in, but they have found that he could by no means afford to pay the rent that it was necessary to ask for them, so, instead of benefitting the labouring fraternity they became convenient retiring-places for town tradesmen. It is urged that many labourers' cottages are unfit for human habitation. Alas! it is too true, but they must not all be condemned because they look a little old-fashioned outside, for in country cottages, having thick walls, but failing in matters of air space, a race of men is reared which for vigour and sturdy physique will compare very favourably with the rising generation of suburbia, which is brought up under the shadow of stringent building bye-laws.

From Hodge's Point of View.

❦ ❦ ❦

Sad, indeed, is the condition of the hedges and ditches in rural Britain to-day. Many of the former have ceased to be fences in the accepted sense of the word, and scores of the latter no longer play the part of waterways. The whole story is one of continued inattention and neglect. When the strain of bad times was first felt, and what is commonly known as agricultural depression asserted itself, the things that could most readily be neglected felt the pinch first, and hedges were amongst them. One farmer let his fences go down, another followed, and walked in his footsteps, and in this way the whole story of neglect is made up. From a game-preserver's point of view it may be all very well to have fields divided by thickets which bear the name of hedges, but what a lot of wasted land the farmer has to pay rent for! It may be urged that great, over-grown thorn hedges act as a shelter, and make little meadows warm. Just so, but would they not perform this duty just as well if they were close and tall, instead of being yards through, thin, and rambling? No one realises the importance of shelter more than the Kentish hop-grower, and round many of the gardens there are hedges as tall as the hop poles, but through systematic clipping they are impenetrable, though their thickness is little more than that of a stone wall. As a matter of fact, hedges on a farm should be treated somewhat in the light of a crop. That is to say, they should be cultivated and looked after, and be trained, when young, in the way they are to go. If more attention had been paid to this in the past many of the thickets we see to-day would be hedges in the true sense of the word, and farmers would have less need for patching and mending, and continually worrying their landlords for fencing material.

Hedges and Ditches.

❦ ❦ ❦

Potato growers are in a bit of a quandary just now over the low price the cosmopolitan tuber is fetching. Shall they sell or shall they hold? are the questions under consideration. In view of the ravages of disease this year sound potatoes ought to sell well; but doubtless many people, afraid lest the disease should spread amongst the stored tubers, have rushed their stocks into the market, and the inevitable glut is the result. That prices will be better later on is a natural deduction, but, in the meantime, we have to ask what the foreigner is doing. If imports of foreign potatoes remain on a small scale, doubtless higher quotations will be seen in due course; but the foreigner is fairly wide awake, and is perhaps only waiting to see some improvement in the price before he rushes his potatoes into the market. We agree with the wisdom of growers in holding their potatoes during the present overdone state of the market, but if the foreigner is playing the same game, and has got his stuff all ready for when the price goes up, it is possible that things will not turn out so well as we hope they will.

The Potato Trade.

❦ ❦ ❦

The dull, damp, month is true to its reputation this year, for low-lying districts are getting fogs, and rain has fallen copiously in most places since November came in. It is amusing how intensely human people are over matters of weather. The other day we found a hill farmer rejoicing over the rain; he wanted more and more of it, because his well is empty and of late he has suffered through the water famine. Different was the story told the same day by a man who farms in a vale on a land that is retentive, and where water is plentiful. He agreed that we had had a long dry time, but he thought that rain enough had fallen to last for a bit, and he wished the weather would take up fine again, as he had some more wheat to get in, and it is quite impossible to get on to his land for some days after rain. We could not help thinking what a good thing it is that farmers, above all men, do not have the ordering of the weather or the country would soon be in an open state of revolution or civil war. Fortunately the clerk of the weather has a happy knack of serving every one in turn.

November.

❦ ❦ ❦

Recent heavy rains have had the effect of saturating manure heaps in farm yards and other places, with the result that it is now a common sight to see streams of rich brown liquor trickling away from the above heaps, and passing on to strengthen the roots of the docks and nettles in the adjoining ditches. In this liquor we have the very essence of plant food and its waste is a loss to the farmer. The scientist would say that the manure should be kept under cover to prevent any loss of plant food, which is an excellent idea in theory, but comparatively few farmers have got the means of keeping their manure under cover, and many of them have difficulty in persuading the landlord to do necessary repairs, to say nothing of providing facilities for the above purpose. We certainly agree, however, that every farmstead should have a sewage tank for storing the drainings from cowsheds, stables, and dung-heaps; but scores of places are without this accommodation, and liquid manure of the best quality goes to waste. Liquid manure tanks fill up quickly at this time of the year, but there need be no trouble in knowing what to do with the contents, for its virtues will not be lost if it is merely poured on the grass in the meadows. There is an orchard attached to most farmhouses, and in too many cases the fruit trees are simply pining for manure to support and strengthen them. The trees are at rest now and growth is dormant; but that matters not, and if liquid manure is poured over the roots plant food will be supplied to the ground that the roots will take advantage of in due course. There is no excuse for waste of liquid manure on a farm where tank and chain pump are provided, but where this accommodation is not at hand it is often possible, by a system of gutters and a pool, to conserve a valuable product and prevent it going to waste. Experience teaches us that it is worth all the trouble, and the men who are the most successful in these days are those who let nothing go to waste that can possibly be avoided.

A Wasted Product.

The Farmers' Dinner.

The President of the Board of Agriculture, the Right Hon. Ailwyn Fellowes, M.P., has accepted an invitation to be present at the agricultural dinner which, under the auspices of the Farmers' Club and the Central and Associated Chambers of Agriculture, will be held at the Trocadero Restaurant on December 5, during the Smithfield Club Show week. Lord Derby will preside, and it is expected that a good number of M.P.'s and others interested in agriculture will be present.

Agricultural Politics.

BY A LOBBYIST.

The very language which Mr. Balfour employed at Newcastle, at the annual Conservative Conference, means, of course that the Election cannot be long delayed. The phrases, "may be very close," "can in no case be long deferred," and "may be imminent," preclude any suggestion of serious delay. When, however, will it take place? I see that the assertion is made that Mr. Chamberlain has himself fixed the middle of February for the appeal. I cannot credit this. Mr. Chamberlain is one of the most astute and sagacious electioneerers in this country; and such a suggestion on his part would mean that he refuses to attribute to the official Conservative leaders the slightest strategic ability. It is no secret now that the last registration, more particularly in the southern counties, the Midlands, and East Anglia, went badly against the Conservatives. I have heard one distinguished Conservative electioneerer declare that a fight on the new register would mean a loss of half a score of additional seats by the party. Why should the Conservative leaders penalise themselves in this fashion when by expediting the election by a couple of months they can avert the penalty? It may be urged that to fight an election on an exhausted register is an act of political chicane. Frankly, this assurance does not much affect me. In love and war the rivals have the inherent right to each make his dispositions in his own interest. To neglect this would be a defiance of the friendship of the gods. I do not believe that the Conservative organisers will neglect the undeniable advantage which they possess in being able to fix the date of the fight. My view is, therefore, that Mr. Balfour's phrases mean that we are to have the fight almost immediately. 'Twould not indeed, surprise me to learn on the morrow of the publication of my article that the country is in possession of Mr. Balfour's manifesto. What will he have to offer the farmers? How will he explain the unsympathy of his past?

• • •

Undeniably one part of Mr. Balfour's criticism of the Liberal reticence in explanation of their policy is more than justified. Who can tell what the Liberal purpose is in regard to the land? Of course, we often hear such fine resounding platitudes as that "the landless man must be brought to the man-less land." We are often told that "it is a crime that the land is not made to yield its natural fertility." The ecstatic assurance is given us that the Liberal party will remove "the shackles that render so much of our soil fallow and barren." The more enthusiastic of the Radicals tell us, too, that the land is meant for the sustenance of the people—"for the sustenance of peasants rather than the growth of pheasants." Other politicians of the same school inform us that the Radicals will see that "this land of ours is made something more than a hunting-field for the luxurious wealthy." All this is very fine, and has a sweet sound to the ear of sympathetic audiences; but we have a right to demand that it should be translated into prose, and that we should be informed as to its actual meaning. Some time ago, at a meeting of the Land LawReform Association, SirHenryCampbell-Bannerman certainly outlined the details of a Liberal land programme. Few men have repeated that programme since—few men have given it more than a lay acquiescence. Oh, my dear sirs, it was ambitious enough. As a fact, that was its fault. It was so ambitious as to be impossible. The Kalends would have arrived ere it could be realised. Since that exposition on the part of C. B., we have been vouchsafed nothing but dithyrambic denunciations of existing conditions and ecstatic prophecies of what Liberalism would accomplish. This and nothing more. Yes, Mr. Balfour was justified in his reflections. Why doesn't Sir Henry Campbell-Bannerman frankly adopt the purpose embodied in Mr. Channing's two Bills? This purpose is both practical and realisable. It may not be feather-headed enough for certain audiences; but the quality of sanity is sometimes as valuable a political asset as adjectival impossibility.

• • •

Well, the *Daily Mail* is a Job's comforter to its friends. It is an enthusiastic Chamberlainite. In its leading articles it is eternally pronouncing maledictions against the Tory politicians who will not go the whole hog of the Sage of Birmingham. The fate 't prophecies for them is something more than defeat—it is eclipse. Their future will be not Paradise, but Gehenna. In its epitomised predictions of the probable result of the General Election a very different tale is told. It is the possibility of a rise in the price of food which is therein declared to be an assured factor in winning Liberal victories. Rural constituences, held hitherto to be impregnable—constituencies like that of Sir Alexander Acland-Hood, the chief Conservative Whip—are declared to be very shaky in their allegiance because of this fear. What is more—and this I take to be the evidence of the awakening of the agrarian conscience to the possibilities of a grim danger being invoked by the new economy—antagonism to the principle of preference is held in more than one instance to be an advantage to the Conservative candidate. The prospect of an increased competition under the most favoured conditions on the part of a rival enjoying advantages in regard to rent, rates, transit, and fertility, which are withheld from the British farmer, is not — in this contemplative hour of the movement, in which the imagination is not so inflamed by a natural patriotic emotion—so alluring as it once was. I do not associate authority with these electoral prognostications, but the *Mail's* assurance that they are the result of definite inquiries by men of electoral prescience attach a significance to them which it would be folly to disregard. At all events, these are not altogether a consolation to the out-and-out whole-and-whole-hoggers.

• • •

Undeniably, Mr. Austen Chamberlain has adopted the frank and manly course in freely stating that "he does not think a small tax on foreign corn would give any substantial benefit to the British farmer." Of course, Mr. Austen Chamberlain does not in this accept the reflection, so often advanced in this column, that the taxable area would be so restricted—that is, if the colonial anticipation of practically usurping the British markets were realised—that the influence of the tax would be really infinitesimal. Mr. Chamberlain's contention is that the tax would have so small an effect in heightening prices that no direct benefit to the farmer would follow. Of course, the sequel to this contention is that for a direct advantage to be secured for the farmer the tax would have to be much higher. I deny that. Even then, with the vastly increased preferenced Canadian competition, this result would accrue. However, the point is, as to whether any of the authorised exponents of the Chamberlain faith will agree that the two shilling tax, which is now suggested as the maximum infliction to be placed upon foreign corn, should be regarded as but the basis of the real, final tax. Will Mr. Chamberlain say this when he addresses his Canterbury meeting? The right hon. gentleman will not say this, for he knows full well that such an admission would revive the suspicion he has wisely and properly done so much to allay that a small tax upon corn would have any effect upon that sacro-sanct meal, the poor man's breakfast. Logic, then, reduces us to this conclusion—Mr. Austen Chamberlain declares that the small tax on corn, officially advised, will not be any direct benefit to the farmer; and no authoritative Chamberlainite dare officially advise that that tax should be increased. And this logical deduction is really in the nature of a warning.

Why not a federation of agricultural reform organisations? This question was put to me by the Conservative representative of a southern constituency, who, sorely disturbed at the last ten years' Parliamentary neglect of agriculture, is anxious that some organised power should be brought into existence which may affect the Parliamentary mind. This politician believes that the existence of a number of detached reform bodies, each of which might have an independent programme, though moved by the one common purpose, would mean the defeat of the anxiety animating the movement. It would be, for instance, so easy to play off one organisation against the other, and to utilise each individual programme as a justification for delay. We have in existence already a southern and a northern organisation. The Darlington platform does not go so far as the Callington platform. It is not so affirmative in its economic ambitions. Here in this divergence is the justification of the statesmen's policy of indifference. "Come to me," they have thus accepted statement of grievances and desires, an opportunity of saying, "with a generally and I will consider your claims. While you yourselves are unable to concentrate upon a common scheme of reform I am impotent." And with the existence of a separate Midland and a separate East Anglian organisation—and both are promised us—this contention would have a ten-fold significance. Yes, what we need is a federated body. As a fact, it is a necessity of the situation, born of the emboldened reformative spirit now prevalent in agricultural areas.

• • •

What has become of the Welsh land-reform movement? Well, I can prophesy that you will hear little of it in the coming General Election. Anxious to discover without direct interrogation the attitude of the Welsh Members in reference to this matter, I put several suggestive questions at the end of the session to the Welsh legislators as to the electoral programme of the party. Many sympathised with Sir A. Thomas's resolve to make Disestablishment the supreme issue in the Principality; all were united in the determination to give reform of the Education Act a grave part in the campaign; most were for a reform of the Licensing Act; and a few declared their resolve to more definitely advocate Home Rule for Wales. One or two mentioned the land question and spoke of the desirability of calling into existence land courts for the fixing of fair rents, but this was only in an academic, unemotionel fashion. As a fact, there is none of that pulsating enthusiasm belonging to this proposal that was associated with it in the days of Tom Ellis. No lineal descendant of the Parnell of Wales has made his appearance. Perhaps this is partially due to the fact that the proposal never really touched the heart of the most serious of the English land-reformers. Not even Mr. Channing himself or Mr. George Lambert has made it a part of their programme or their Bills. Evidently regarding such a purpose as out of harmony with the Saxon temperament, they have not cared to advocate it. It was different in Tom Ellis's day. Fascinated by the glamour of the idea, the sympathy of the English Radicals was really the nutriment of the propaganda. The idea has lost that glamour; hence the supply of nutriment has ceased. No, in the coming fight in Wales, the land question will play but a very modest part. 'Twill not have even an echo of the electoral moment it possessed twenty years ago.

A case of anthrax was certified at White Hall, Little Bodworth, the residence of Mr. J. H. Stock, M.P., on Thursday. The animal attacked was a dairy cow of good breed, and it was found dead in the stall. Six other cows which were in the same building have been placed in quarantine. Sporadic outbreaks of the disease are causing anxiety in Cheshire.

As a sequel to the poisoning of five Shire horses, worth £600, the property of Mr. Robert Crowe, a farmer, of Reighton Manor, a waggoner in his employment was at Filey, on Friday, fined £3 and costs. The defendant, contrary to orders, but no doubt with the object of making the horses have glossy skins, gave them a quantity of wheat intended to be used for seed purposes, with which arsenic had been mixed. Mr. Crowe said he was convinced that the man did not know that the wheat was poisoned, and remarked that the prosecution was really brought by the Bridlington Agricultural Society as a warning to other farm servants against the most dangerous practice of feeding horses with wheat.

Devon Apple Growers and the Cider Industry.

In connection with the Devon County Education Committee, prominent agriculturists from Devonshire, interested in cider making and fruit growing, on Wednesday paid a visit to the National Fruit and Cider Institute at Long Ashton, near Bristol. Most of the visitors left Exeter at 10.15, whilst a few from North Devon joined the main body at Taunton. Arriving at Bristol shortly after twelve, the party were driven to Long Ashton, a village some four and a half miles away on the Somerset side. The drive, though a pleasant one, was made in a cold November wind, and the members of the party were not sorry when, at one o'clock, they arrived at their destination. Here they were cordially welcomed by Professor F. J. Lloyd, F.S.C., F.I.C., analytical chemist to the Bath and West and Southern Counties Society, and a director of the Cider Institute; Mr. B. T. Barker, resident director; and Mr. A. E. Brooke-Hunt, one of the governors nominated by the Board of Agriculture, who showed them round the premises and explained in detail the interesting and valuable work which is being carried on.

The visitors were first of all shown over the adjoining land by Mr. Brooke-Hunt, who explained the work being done. A large field, rather more than four acres in extent, has been planted as an orchard, and here some valuable experiments are in progress. Two systems of apple-tree rearing are being tried, viz., the Hereford and the Somerset systems. Under the former a tree, grafted with the particular variety of apple desired, is planted straight away (the disadvantage being that the particular variety used may not necessarily make a good standard tree). The Somerset system is one whereby a stock worked at the bottom with a variety which is known to make a good standard is planted, and when the head is sufficiently grown, grafted with the cider variety desired. The disadvantage in this case is a loss of some time at the beginning. In all, some 200 trees have been put in, comprising from eighteen to twenty distinct varieties.

Experiments are also being made to ascertain the most profitable amount of ground round the stems to be left bare for the first six or eight years, it being an undoubted fact that the trees grow better in arable than in grass land. Some three or four different ways of fencing against stock are also to be seen. In the adjoining field a nursery plantation has been established, in which experiments in the raising of various kinds of stocks, including a number of pear stocks, for the production of perry pears, are being conducted.

These stocks, it was explained, were being worked with a selection of the best known varieties, and it is hoped in time to raise a large quantity of carefully selected stock, absolutely true to name, which may be available as grafts for nurserymen and farmers throughout the district. It is also hoped, by comparison and experiments, eventually to be able to give farmers valuable advice as to the selections to be made to suit the soil in their own particular districts. In the same field there is also a fruit plantation, where experiments in the most profitable manner of fruit growing are to be seen.

The deputation afterwards witnessed the process of cider-making, which was of very great interest. The latest machinery for pressing the apples into pulp and extracting the juice is employed at the institute, and the visitors closely watched the demonstration given. The whole of the machinery is driven by a steam engine. The apples are shovelled into the crusher from a loft above, and, after being reduced to pulp, are conveyed by means of a shoot to the table below. Here the pulp is wrapped up ready for crushing in the adjoining press, and the juice is carried by an ingenious contrivance of wooden aqueducts to specially provided pits. It is pumped to an upper story, where it goes through the first stage of fermentation, and it is afterwards most carefully filtered and tested before being finally placed in casks for ripening. Professor Lloyd fully explained the filtering and testing process, and was able to give the deputation several valuable hints with reference to the manufacture of the cider.

The impression made on the minds of the majority of the deputation appeared to be a very favourable one, and it was felt that the visit could not but be productive of much good.

In a comment on the visit, the *Western Morning News* said: "The visit of prominent Devon agriculturists interested in cider-making to the National Fruit and Cider Institute at Long Ashton, near Bristol, under the auspices of the Devon County Education Committee, should stimulate an intelligent interest in an occupation for which Devonshire has always enjoyed a distinguished name. It is not sufficient in these days to try to exist upon the ashes of a past reputation. We have enterprising competitors abroad, who invade our home markets with considerable success, and will do so even more completely in the future if our home producers do not "wake up" and bestir themselves in defence of their interests.

Far too many orchards in Devon are full of trees which are, commercially speaking, wasters, and not only is it necessary to weed out old and unprofitable trees, but also to plant new ones of the best and most prolific varieties, and then, when the crop has been carefully garnered in, to manufacture the cider in such a manner as to suit the popular taste of the day. Where these operations are carried out in a skilful and business-like manner there is no reason to complain of the public reception of the product.

The old-fashioned, sleepy way of doing things can no longer, however, be profitably persisted in, and hence the labours of the National Institute may be of the highest value in experimenting and indicating the true path of improvement. All who visited Long Ashton were deeply impressed with the admirable work that is being done by the experts connected with it, and we trust that all Devonshire farmers who are interested in fruit-growing and cider-making will from time to time make opportunity to visit the institute and reap the benefits of the researches and experiments carried on there. The result could not fail to be a great enhancement of the reputation of Devon as a cider county.

Gates Leading to Railway Lines.

Companies' Liability Question.

The question of the liability of railway companies for the repair of gates in the fences bordering on their lines, came before Sir Shereton Baker, at the Boston County Court, on Monday, when John Todd, farmer and valuer, of Kirkby Green, sought to recover from the Great Northern Railway Company £80 for the loss of a Shire colt, killed on defendants' railway, on which it had strayed through a gate in a fence bordering the line.

For the plaintiff it was contended that the gate sagged at one end, and did not swing clear. The horse was fastened in the field securely in the afternoon of May 29, and a little later was found dead on the adjoining railway line. Mr. Page, of Lincoln, for the plaintiff, quoted Section 68 of the Railway Clauses Consolidation Act, which provides that railway companies should make and maintain sufficient fences and gates, with a view to preventing trespass by cattle.

Evidence was given to show that the gate was locked by the plaintiff when the horse was left in the field.

Mr. B. Watson, barrister-at-law, for the defendants, submitted that if the owners of land adjoining the line were not satisfied that the gates were sufficient, they could go to the justices and force the railway company to make sufficient gates, or could themselves make the gates, and charge the railway company with the expense; but if they failed to do it within five years of the company opening the line, they were absolutely without any recompense.

His Honour said that was not the case. The Section quoted by Mr. Page said that the company should make and maintain for all times.

Evidence was given on behalf of the company to show that the gate was in a proper state of repair.

His Honour, in giving judgment, said the case was a very curious one, and he had not had one like it before him in that court. He found that the company had done their duty, and that the applicant ought to have built another fence of his own. He found for the defendants, with costs.

Changes in the Value of Land.

In the course of his inaugural address, at a meeting of the Surveyors' Institution, on Monday, Mr. Charles Bidwell (president) dealt with the changes which had taken place in connection with landed property since the sixties. He quoted Inland Revenue statistics to show that the annual value of land has decreased 50 per cent. from 1875 to 1894, and 54 per cent. from 1875 to 1904. The gross amount of income arising out of the ownership of land, he said, has decreased on an average by nearly 7 per cent. during the last ten years, the greatest decreases occurring in Norfolk, Kent, Suffolk, and Essex, which range from 15.5 to 20 per cent.; whilst farmers' profits have decreased in England 8.2 per cent. and in Scotland 6.7 per cent. The chief factor in these decreases is the reduced value of all agricultural produce. In his opinion, however, bottom has now been touched; landowners and farmers are rapidly adapting themselves to the changed condition of affairs; and, in place of the old-fashioned lease, with its restrictive clauses, tenants are now given yearly agreements, with fairly liberal covenants.

The slight upward tendency since 1900 in the value of the tithe rent charge is another indication that agricultural depression is decreasing. The Agricultural Holdings (England) Acts, 1883 and 1900, have worked beneficially in the interests of both the owner and the occupier, and, he thought, are sufficiently comprehensive if properly administered. But, he noted, as weak points in their administration, the want of uniformity and system in the allowance for unexhausted improvements, and the too frequent absence in tenant right valuations of due consideration in respect of claims for dilapidations and deterioration.

He suggested that the Board of Agriculture should lay down a scale of compensation for unexhausted improvements, and appoint an official arbitrator for each county. In many parts of Norfolk and Suffolk there were large tracts of heath and light land which would not pay to farm, and had, therefore, gone out of cultivation. These had become the chief source of income for shootings, realising 4s. and 5s. per acre, and with the advent of the motor many of these places were accessible now, and they were taken up by syndicates. He favoured the "growing" of partridges and other game crops in districts where the soil is too poor to make wheat growing remunerative. Game crops would prove a way out of the landowner's difficulties.

A very serious question affecting the value of landed estates is

The Increase in Imperial and Local Taxation.

The Finance Act has been successful from the financier's point of view, but the death duties have in many cases had a crippling effect upon estates. The increase in local taxation has been extraordinary, and the present system of valuation and assessment is most unequal and unsatisfactory. He trusted the time is not distant when the whole question of assessing real estate, for both Imperial and local taxation, will be dealt with by Parliament on the lines of the majority Report of the Royal Commission on Local Taxation. With regard to the cost of roads, Mr. Bidwell suggested that a system should be initiated whereby the owners of motor cars and motor bicycles should be made to contribute some quota towards the cost of maintaining main roads and bridges.

As to rural schools, the boys and girls should be taught what would interest them in their after life work, and thus check the exodus to the towns. Children should be employed at the time when labour was most needed on the farm; what the country needed was not so much a cheap class of cottage as cheap money to erect decent cottages, and the Small Holdings Committee of the Government would deal with this aspect of the question in their report.

The National Granaries Question.

At the Conference of the National Union of Conservative Associations, held at Newcastle-on-Tyne, last week, Mr. W. E. Riley (North-West Suffolk) moved the following resolution:—

"Inasmuch as the rapid decline in the growth of wheat in the United Kingdom during the last thirty years, together with the meagre stocks of foodstuffs generally held by merchants and traders in this country, have become a source of danger which, may at any moment develop into an appalling national calamity, this conference urges upon the Government the imperative necessity of introducing such measures during the next Parliamentary Session, as shall lead to a large augmentation of the wheat stocks normally held and thereby insure the nation against panic and famine prices in the event of a sudden stoppage of the supplies of sea-borne grain and flour."

He said that, thirty years ago, this country had 180 days' food supply for its 31 millions of inhabitants. Last year it grew only 70 days' food supply for its 42 millions of inhabitants. When they came to this year, the last supplementary estimates showed a slight spurt in the crop of wheat, and the result was that during the two months of September and October, because of the additional English wheat thrown on the market, the farmers were compelled to take 10 per cent. less for their wheat than in the previous year. We could not look for any considerable increase of wheat in the coming year.

His proposal was that they should guarantee to every man, woman, and child in this country twelve months' food supply in advance, which should be the common property of every person, rich and poor.

The question came: What would be the cost? And where was the money to come from? He suggested that the Government should proceed to erect fifty national granaries—("No")—each capable of storing 500,000 quarters of wheat. This would give a total storage of 25,000,000 quarters; and this, with the 7 million quarters which we produced in our own land, would give us the supply we needed—30,000,000 to 32,000,000 quarters. What would it cost? Fifty granaries at £80,000 each would cost £4,000,000. Wheat, at 35s. a quarter, 25,000,000 quarters, would cost £37,500,000. This gave a grand total of £41,500,000. The annual cost, interest on the granaries at 3 per cent., would be £120,000, the interest on the wheat purchased would be, at 3 per cent., £1,250,000. Depreciation on the buildings, at 1½ per cent., would be £60,000; stores and coal would be £15,000; and salaries would be £25,000. The total annual charge would be £1,470,000; and this would guarantee to every man, woman, and child food supply for twelve months.

Where was the money to come from? Fortunately, they had a tax all ready to hand—the Corn Tax, which was wantonly and recklessly abandoned three years ago. This would give them ample means. He hoped it would have the support of the leonine fiscal reformer and the free food lambkin. He proposed that the granaries should be stocked half with Colonial wheat and half with English wheat. Every year 6,000,000 of this should be released automatically, in the months of May and June, throwing the English wheat in the market, at a time when many of our mills had to be stopped for want of English wheat to grind. The granaries should be refilled, after the harvest, with English and Colonial wheat.

A discussion followed, and on being put to the vote, the resolution was lost by 39 votes to 28, several representatives refraining from voting.

Messrs. Webb and Sons' Root Competition.

The awards in the annual competition for the valuable prizes offered by Messrs. Webb and Sons, the King's seedsmen, Wordsley, Stourbridge, for root crops grown from their seeds, and with the aid of their special manure, have just been made by the judges, viz.:—Mr. W. H. Hickman, Red Hall, Broom, Stourbridge; Mr. Thos. Amphlett, Brookhampton, Worcester; Mr. H. Wilson, Gatacre Park, Bridgnorth; and the following is a copy of their awards. The quantity sown was five acres unless otherwise stated.

District 1.—Salop, Stafford, Montgomery, Warwick, and Leicester—Swede: 1, Mr. J. S. Billington, Balterley Hall, Crewe (46 tons 14 cwt. 1 qr. 4 lb. per acre); 2, Mr. S. B. Foxley, Chatcull, Eccleshall, Staffs (41 tons 7 cwt. 0 qr. 16 lb. per acre); 3, Mr. A. E. Chadderton, Upper Heamies, Eccleshall (38 tons 11 cwt. 1 qr. 4 lb. per acre). Mangold (three acres): Mr. S. B. Foxley, Chatcull, Eccleshall, Staffs (63 tons 1 cwt. 1 qr. 20 lb. per acre).

District 2.—Hereford, Monmouth, Brecon, Glamorgan, Carmarthen, and Pembroke—Swede: 1, Exors. of the late Mr. P. Price, Howick Farm, Chepstow (34 tons 1 cwt. 1 qr. 20 lb. per acre); 2, Mr. David Jenkins, Flemingstone Court, Cowbridge (33 tons 15 cwt. 2 qr. 24 lb. per acre). Mangold (two acres): Mr. J. J. Corbishley, Eccleswall Court, Ross (63 tons 15 cwt. 2 qr. 24 lb. per acre).

District 3.—Oxon, Berks, Bucks, Wilts, Hants, Surrey, Worcester, and Gloucester—Swede: 1, Mr. W. L. Anson, Iverley, Stourbridge (35 tons 4 cwt. 1 qr. 4 lb. per acre); 2, Mr. H. W. Scilgoe, The Grounds, Adderbury, Banbury (28 tons 18 cwt. 2 qr. 8 lb. per acre). Mangold (three acres): Mr. Alfred Brown, Wimpson Farm, Southampton (70 tons 4 cwt. 1 qr. 4 lb. per acre).

District 4.—Gloucestershire—Mangold (two acres): Mr. J. M. Scott, Crooke's Farm, Newent (25 tons 17 cwt. 0 qr. 16 lb. per acre.

District 5. Yorkshire, Swede: 1, Mr. Fred Scott, Stockton-on-Forest, York (22 tons 18 cwt. 2 qr. 8 lb. per acre); 2, Mr. T. Inman Earle, Kirkbridge, Aldboro', Darlington (21 tons 17 cwt. 0 qr. 16 lb. per acre). Mangold (three acres): Mr. C. M. Wormald, Cawood Castle, Selby (63 tons 14 cwt. 1 qr. 4 lb. per acre).

District 6.—Norfolk, Suffolk, and Cambridge—Swede: Mr. S. Smith, Villa Farm, Thurne, Great Yarmouth (30 tons 18 cwt. 2 qr. 8 lb. per acre). Mangold (three acres): Mr. J. E. Moxon, North Fen, Ely, Cambs (62 tons 18 cwt. 2 qr. 8 lb. per acre).

District 7.—Bedford, Cornwall, Cumberland, Cheshire, Derby, Devon, Dorset, Durham, Essex, Herts, Huntingdon, Kent, Lancaster, Lincoln, Middlesex, Northumberland, Notts, Northampton, Rutland, Somerset, Sussex, Westmorland, Cardigan, Carnarvon, Denbigh, Flint, Merioneth, and Radnor—Swede: 1, Mr. S. S. Raingill, The Grange, Ringway, Altrincham (49 tons 14 cwt. 1 qr. 4 lb. per acre); 2, Mr. Thomas Parton, Weston Hall, Crewe (43 tons 15 cwt. 2 qr. 24 lb. per acre). Mangold (two acres): Mr. T. E. Griffith, Gallt y Beren, Pwllheli (64 tons 14 cwt. 1 qr. 14 lb. per acre).

District 8.—Roxburgh, Haddington, Berwick, Edinburgh, and Linlithgow—Swede: 1, Mr. John Meikle, Groughfoot, Linlithgow (46 tons 7 cwt. 0 qr. 16 lb. per acre); 2, Mr. Robt. Henderson, Craigie, Cramond Bridge (38 tons 4 cwt. 1 qr. 4 lb. per acre).

District 9.—Perthshire—Swede: 1, Mr. R. W. G. Cameron, Drumbarnie, Gask, Auchterarder (39 tons 12 cwt. 1 qr. 24 lb. per acre); 2, Messrs. J. and D. Morton, North Muirton, Perth (39 tons 5 cwt. 2 qr. 24 lb. per acre).

District 10.—Forfar, Fife, and Kinross — Swede: 1, Mr. William Arnot, jun., Ballinshoe, Kirriemuir (41 tons 7 cwt. 0 qr. 24 lb. per acre); 2, Messrs. J. and W. Meiklem, Begg, Kirkcaldy (35 tons 2 cwt. 3 qr. 12 lb. per acre.

District 11.—Aberdeen, Banff, Kincardine, Inverness, Moray, and Elgin — Swede: Mr. Peter Stuart, Longhill lock, Alves, Morayshire (40 tons 2 cwt. 3 qr. 12 lb. per acre).

District 12.—Dumfries, Kirkcudbright, and Wigton — Swede: Mr. Alexander Allan, High Balcrays, Whithorn (47 tons 18 cwt. 3 qr. 20 lb. per acre).

District 13. Stirling, Dumbarton, and Clackmannan — Swede: Mr. Jas. Todd, Blackdub, Bridge of Allan (34 tons 13 cwt. 1 qr. 16 lb. per acre).

District 14.—Ayrshire—Swede (three acres): Mr. J. K. Murdoch, Burnton, Dalrymple (40 tons 1 cwt. 2 qr. 10 lb. per acre).

District 15.—Lanarkshire—Yellow turnips: Mr. D. B. Easter Happrew, Stobo (33 tons 17 cwt. 0 qr. 16 lb. per acre).

District 16.—Lanarkshire—Yelow turnips: Mr. D. B. Fate, Wester Tofts, Douglas (41 tons 10 cwt. per acre).

Martinmas Hirings.

Carlisle.

The Martinmas hirings of farm servants for the half-year ending Whitsuntide next were held at Carlisle, in front of the Town Hall, on the 11th inst., in dull and unpleasant weather. There was a large gathering of all classes of male servants, but farmers requiring them were not so numerous. Owing to farm work being very forward, many farmers are able to do with less labour until Candlemas, and this enabled them to stand out against high wages. Generally speaking, to obtain places, men and boys had to be content with less money, and the hirings were very slow.

Whilst farmers had paid up to £18 for the half-year to experienced men who were continuing in their employment, the highest wages obtained at the hirings by the best men present ranged from £14 to £16; second-class men obtaining £12 and £13; strong youths £9 to £11; and boys £5 to £8, according to age and experience. Female servants were scarce, and commanded good wages, experienced women obtaining £10 to £12, and more in exceptional cases; whilst less experienced women were hired at about £8 and £9, and girls at from £5 upwards. The wages include board and lodgings in the farmhouses

Cockermouth.

The Martinmas Hiring Fair at Cockermouth is the principal fair for agricultural labour in West Cumberland, and at that held on Monday there was an average attendance of both masters and servants. The hiring, however, was slow, and wages, as at the Whitsuntide fair, showed a drooping tendency. Experienced men obtained from £15 to £17; ploughmen from £12 to £15; strong lads from £9 to £12; and boys from £3 to £9, according to age and ability, board and lodging being included. Girls stood out for their terms, and generally got them, being hired at from £8 10s. to £11, and younger girls from £4 to £8 10s.

Doncaster.

At the annual statutes for the hiring of farm servants held at Doncaster on Wednesday, there was a very small attendance of farmers and servants, and very little hiring took place, whilst wages were no different from last year, and were as follows:—Young lads £7 to £12, second lads £15 to £18, waggoners £20 to £24, head men £25 to £27. The hiring of females was almost nil.

Driffield.

The annual hirings at Driffield took place on Monday, when, unfortunately, rain fell continuously, but there was a large attendance of farm servants of both sexes. Employers, however, were not so numerous, and engagements were not eagerly entered into on account of work on the land having been pushed forward through the early harvest. It was only among known men that hiring took place, and in many cases rather less money was reported as being given. The run of wages was as follows:—

Foremen, £24 to £30 per year; shepherds, £24 to £28; beastmen, £16 to £23; waggoners, £18 to £24; third lads, £12 to £17; young lads, £7 to £12. Female servants did not avail themselves much of the Corn Exchange, preferring the registry offices. They held out for full late wages. Cooks, £20 to £22; housemaids and generals, £16 to £18; kitchen girls, £12 to £16; nursemaids, £10 to £12; and young girls, £8 to £10 per annum.

Durham.

Wretched weather was associated with the first of the November hirings at Durham on the 11th inst., but there was a good attendance of servants. Engagements were reported not to be so numerous as usual, and while lads received up to £7 and £8 for the winter half-year, girls were paid from £4 10s. to £5.

Hexham.

The weather was also very disagreeable for Hexham Hiring Fair on the 11th inst., rain falling with slight intermission until late in the afternoon, but, notwithstanding that, there was a good attendance of both masters and servants. There was a plentiful supply of good men, perhaps more so than for some years past, and servants were hired at reduced rates, the reduction varying from 10s. to 30s. Men were engaged at from £12 to £14 and £15, and in some exceptional cases good known men received £16 for the half-year. Young lads got from £5 to £9. There was a brisk demand for lads who were able to do milking, and those able to milk would get a little extra wage. Experienced women got from £9 to £12, and girls £5 to £8.

Penrith.

The hirings at Penrith on Tuesday were regarded as the slowest for many years past. There was a good attendance of servants, who were more reasonable than in recent years, but the masters were not present in any great number, while those who needed assistance were inclined to dictate their own terms. Best men and lads proved most in request, but even they had in the majority of cases to accept from 10s. to £1 less for the half-year than the figures which prevailed last Martinmas. Female servants were more plentiful than usual. Wages generally paid: Head men, £15 to £16 16s.; strong men, £14 to £16; youths, £10 to £12; boys, £6 to £9 10s.; experienced women (farmhouse), £12 to £14; useful women, £9 10s. to £11 10s.; and girls, £6 to £8 10s.

Stockton.

A large number of servants attended at the Stockton hirings, which took place on Wednesday, when wages were slightly lower. Foremen obtained £15 for the half-year, ploughmen £12, lads £5 to £8, women £6 10s., and girls £4 10s.

Teesdale.

The first of the Teesdale statutory hirings for the Martinmas term were held at Barnard Castle on Wednesday, when there was a fair attendance of masters and servants, despite the fact that the day was cold, the surrounding hills being thickly covered with snow. There was a slight fall in wages, and the engagements made were not very numerous. Married men, with such perquisites as a cottage, garden, potatoes, milk, and coal leading, asked up to £30; good managing men up to £25; good ploughmen and horsemen ranged from £18 to £20; second hands, £14 to £16; while farm lads asked a graduated scale of 18s. for every year of their age for twelve months. Female servants were comparatively scarce. Head girls, £20; second, £16; cooks for towns, £20; general servants, £13 to £15, with board and lodgings.

Thirsk.

The first important Martinmas Hiring Fair in the North Riding was held at Thirsk on Monday, and, in spite of the unpropitious weather, the Market Place was crowded. In consequence of the forward state of farm operations, wages may be quoted for male agricultural servants from £1 to £2 for the twelvemonths lower than last Martinmas. Hinds, with cottage, garden, etc., obtained up to £30; good managing farm men, £25; first plough and horsemen, £18 10s. to £20; second hands, £14 to £16. Farmhouse female servants obtained advanced wages, head girls obtaining £20; second girls, £16 10s.; cooks, to £20; general servants, £13 to £15 for the year.

Ulverton.

There was quite a surplus of hands at the hiring fair for farm servants at Ulverston on Thursday. Work is well advanced on the farms, and a contributing cause is the slackness of work at the mines and quarries, so that a further reduction in wages of about £1 for the ensuing half-year was experienced all round. Head men obtained £18 to £19; first-class men, £16 to £17; second class, £14 to £15; third class, £12 to £13; boys, £5 to £8; dairymaids, £14 to £15; first-class women, £12 to £13; second class, £10 to £11; third class, £8 to £9; girls, £5 to £6.

Wigton.

There was a large attendance at the Wigton Hiring Fair on Tuesday. With a surfeit of servants seeking situations and a comparatively moderate company of employers, wages were brought down appreciably for male servants, and even the hiring of women and girls was slower than usual. Men, best class, secured up to £16 for the half-year; second class, £10 to £12; youths, £8 to £10; and boys, from £4 upwards; experienced women, to £13; second class, £8 to £10; and younger girls, from £6, the latter being most sought after.

Plea for the Owl.—With the object of preventing the total extinction of owls in the Eastern Counties, Lord Lilford a short time ago liberated on his Cambridgeshire estate some fifty specimens of the *strix passerina* variety, which appear to have bred sucessfully. A number of the birds have, however, lately been killed, and his Lordship has issued an appeal to farmers to protect the birds, which, so far from doing them any harm, are really the farmers' friends, and are of great use in keeping down sparrows, mice, etc.

NORTHERN NOTES.

Martinmas Day—the Feast of St. Martin, old reckoning—is close at hand, and on Thursday evening the contracts between masters and their yearly servants on the farms in the North determines by effluxion of time, and the servants take their annual holiday from November 25 to December 1. During this week they follow their own devices, seek new engagements, and spend the wages just received. It is a week of noise, and sometimes of riot, although less so than in the good old times.

A few years ago farmers and their servants all attended some one or more of the statutory hiring fairs or "mops" institutions which had their origin in the very paternal labour laws enacted in the Middle Ages and engagements were made for the ensuing year. These "hirings" were held from ten to twenty days before Martinmas Day, and the greater part of the contracts for the ensuing year were made before the completion of the current year. At some of the principal hiring fairs upwards of 1,000 masters and servants would meet, and business concluded about noon, when the masters returned to their farms and the servants devoted the afternoon to amusement and dissipation.

These contracts were merely verbal, but were understood to be binding after the hiring-penny or fastening penny, or "fest," had been given and received, and no bargain was ever concluded without the "fest" being given. Some time in the earlier seventies farm servants began to learn that these verbal contracts were not binding, and were not enforceable because of the Statute of Frauds, which enacted that "no action shall be brought upon any contract which is not to be performed within one year from the making thereof, unless the agreement on which such shall be brought, or some memorandum or note thereof, shall be in writing and signed by the party to be charged therewith, or some other person by him thereunto lawfully authorised." Hence a mere verbal agreement, made on the 22nd day of November in any year, for service from the 1st of December following to the 23rd day of November in the ensuing year, was not enforceable; because, although it was only a contract for fifty-one weeks' service, that service would not terminate until a little more than a year from the day on which the contract was made. It became quite usual for a servant to make a contract for the following year and then, if he found an opportunity, to enter into another engagement with a third party on more favourable terms, returning to the farmer who first engaged him the fastening penny previously given.

This caused annoyance and trouble, especially when the return of the fastening penny, and consequent notice of annulment of the contract, was not made until the last of the local hiring fairs was over; but later on some farm servants came to the conclusion that it would be wiser not to return the fastening penny, nor even to inform the farmer who had given it of their intention not to observe the contract. A few years ago one large farmer engaged his usual staff of yearly servants, and expected his arrangements were satisfactory, but to his great disgust eight of them never entered upon their service, and only one of the eight returned his "fest"—the other seven never troubled to inform the farmer that they declined to fulfil the contracts they had made with him.

An attempt was made to cope with the difficulty by procuring "hiring-books," books containing memoranda of hiring or simple forms of contract, with counterfoils, the intention being that a contract in duplicate should be signed by both parties, and the duplicate given to the servant. But the farm servants would have none of it, and farmers who produced hiring books were hooted and taunted with being slave drivers, while servants who were known to sign such agreements were taunted with having given themselves to slavery.

Some farmers accordingly ceased to frequent hiring fairs, and engaged their servants privately or at hiring fairs held during Martinmas week, and such contracts were binding, although verbal, because they were to be performed within a year from the day on which they were made. There were but few who did this, although from time to time efforts were made to secure concerted action in the matter.

During the last two or three years the subject has engaged the attention of farmers' clubs in those localities where yearly servants have been especially prone to repudiate their engagements, and as farm work is particularly forward this year farmers in those districts have avoided the pre-Martinmas hirings, and will not enter into verbal contracts until after the 23rd inst.

Old customs die hard, but, although the servants will doubtless still claim the "hiring-day," and will attend in force at the old places of resort, there is good reason to think that next year farmers in other districts where it is customary to engage servants by the year, will abstain from attending the pre-Martinmas hirings, and a few years hence these riotous and demoralising institutions may perhaps fall entirely into desuetude.

November 18, 1905. M. Y.

Gold Cup Fertiliser Competition.

For several years now Messrs. W. Colchester and Co., of Ipswich, have offered a handsome gold cup, of the value of £20, for the best sample of barley grown by the special manure known as "The Gold Cup Barley Fertiliser," and the fortunate exhibitor adjudged to have the best sample becomes the possessor of the coveted trophy forthwith. In addition, silver medals and diplomas are offered. No previous winner of the gold cup can compete again until after a lapse of three years, but he may compete for the medals and diplomas every year. Of course, the competition is open only to the users of the Gold Cup Barley Fertiliser (Griffin Brand), every ton entitling the purchaser to enter one sample of barley grown with the aid of this manure. The fertiliser, however, may be used with or without farmyard manure, as circumstances may require, but an essential condition would naturally be that no form of chemical manure, other than Messrs. Colchester and Co.'s manufacture, should be used in the growth of the sample.

Messrs. William Colchester have been encouraged to continue this competition by a gratifying increase in the number of the competitions, each year samples coming, too, from a wider area, and this year—the eighth of the series—the entries were again on a large scale the counties from which samples were sent including Oxfordshire, Buckinghamshire, Lincolnshire, Northamptonshire, and other more distant places, as well as from Suffolk, Essex, Norfolk, and Cambridgeshire, the varied character of the samples serving to add to the importance and interest of the collection, an object-lesson being afforded from the specimens grown under different conditions and from the same fertiliser.

Mr. T. S. Damant, of the Ipswich Malting Company, and Mr. Frank Flinn, Bishop Stortford (chairman of the Board of Jurors, Malting Barley Section, Brewers' Exhibition, London) again acted as judges, and after a careful examination of the samples, awarded the gold cup to Mr. William Nisbit, Bendysh Hall, Radwinter, Essex, whose barley was bright and regular, with an exceptionally fine skin, grown upon a clayey soil after barley. The reserve went to Mr. G. Smith, South Weston, Oxon, and was a very good second, but it was not quite so clean as the winning lot, grown on a gravel and chalk soil after oats. The silver medals and diplomas were awarded as follows:—

Buckinghamshire, Mr. J. H. R. Horwood, Manor Farm, Drayton Beauchamp; Cambridgeshire, Messrs. R. T. Morris and Son, Oakington; Essex, Mr. William Nisbit, Bendysh Hall, Radwinter; Hampshire, Mr. H. H. Myers, M.P., per Mr. E. H. Molyneux, Swammore House Farm, Bishops Waltham; Kent, Mr. H. S. Bass, St. Nicholas, Birchington; Norfolk, Mr. E. W. Cooke, Sutton Stalham; Northants, Mr. J. House, Kingscliffe, Wansford; Oxfordshire, Mr. G. Smith, South Weston; Suffolk (East), Mr. W. D. Pratt, Well Farm, Witnesham; and Suffolk (West), Mr. F. Isom, Kingsbury, Cornard.

The quality of the exhibits was, on the whole, very good, though the season can hardly be described as being a good one, many of the samples having unripe kernels, though, on the other hand, there were some very fine. Suffolk contributions were decidedly below the average, the best counties being Oxfordshire, Northamptonshire, Kent, and Essex, there being some fine consignments from the latter county.

The Royal Agricultural Society.

SIR,—Doubtless many of your readers will have been much struck with the complete dissimilarity in tone of the two letters on the Royal Agricultural Society of England which have recently appeared in your columns, the first from the pen of Sir Walter Gilbey, the second written by Mr. John J. Cridlan. The former relates more particularly to the past, and reads more like the touching and pathetic of a fond parent whose hopes and aspirations concerning a favourite child have not materialised, whilst the latter breathes that spirit of determination and firm belief in the justice of his cause which is certain to result sooner or later in victory—a victory, too, which will be won without serious loss to anyone save those who, for reasons which are not on the surface, object to the removal of an injustice.

For the life of me, I fail to see who is one penny the worse for the change to the first of December instead of the first of January as to the date from which the age of Polled Angus exhibited at the Royal Shows shall in future be reckoned.

For some forty or fifty years the breeders of this particular breed of stock are said to have considered the first day of the last month of the year as the commencement of another breeding year. The reasons for this course of procedure may be good, or they may be bad, but that is not now the question. The point now to be considered is, would the Council of the Royal be acting unjustly to the exhibitors of other breeds of cattle if they assented to the prayer of the breeders of Polled Angus cattle? No one can for one moment seriously contend that such a result would follow. Most fortunately there is not offered for competition at the Royal Shows one of those bones of contention, champion cattle prizes, whilst as to the assertion that an undue advantage would rest with the exhibitors of Polled Angus cattle since some of the cattle might be some three or four weeks older than some of those of other breeds of cattle in the various classes, or, in other words, that the buying public would be unable to compare the merits of a bull one year and six months old with a second bull of a year six months and three weeks old.

Again, we are to be asked to consider that the councils or committees of all the other agricultural societies have gone wrong, and that the Council of the Royal are alone sensible on this question. Time will prove that very shortly, or I mistake the signs of the times, but I need not labour this point; it will suffice if I ask why it should be proper to allow the breeders of Dorset horned sheep to reckon the age of their sheep from the first of November the previous year, and to refuse to allow the breeders of Polled Angus to reckon the age of their cattle from the first of December? I had hoped that common sense had asserted itself sufficiently and that the future action of the members of councils of the reformed Royal was to be consonant with sound business principles.

I am inclined to think that Sir Walter Gilbey will at an early date, if he has not already, consider that his action in pouring cold water on to the efforts of the Council of which he is still an honoured members is in marked contrast to the promptitude and business energy, if not prescience, which he displayed when he warmly embraced the suggestions of Mr. Frederic Street that a society should be formed to register the breeding of heavy draught horses, alias Shires, and also that a parade of draught horses should be established each spring in London. The memory of both these gentlemen will always be associated with the successful outcome of these ideas.

Please excuse the abnormal length of this letter, because I have not for a long time asked you to allow me to air my views. The evenings, too, are now long, and time is plenty, as they say in Norfolk.

SAUNDERS SPENCER.

Holywell Manor, St. Ives, Hunts.

November 11, 1905.

All Sorts and Conditions of Eggs.

SIR,—Prices asked for genuine new-laid eggs at this season, which will increase considerably later in the present month, indicate that we have entered upon the scarce period of the year for this important article of food. It is not too much to say that the supply is but a very

small moiety of the demand. Traders on all sides find the greatest difficulty in meeting but a part of the requirements of their customers, and consumers have to put up with inferior quality, or, as is generally the case in households where the value of a first-class egg is understood, dispense with boiled eggs altogether. In spite of the increasing number of depots of the National Poultry Organisation Society, and of other sources of supply, the deficiency becomes annually more evident, owing to growing consumption. That a measure of attention has been given to this question is indisputable, as shown by the demand for the leaflet published by this society on "Winter Egg Production" (No. IV.), embodying the methods conducive to increase of supplies (which leaflet will be sent to applicants on receipt of stamped and addressed envelope), and by the stimulation of production in some districts. From the poultry-keeper's standpoint, no encouragement should be needed, as the returns obtainable for eggs from October to January is twice and often three times as great as from March to June, and the hens cost no more to keep, whether they are in lay or not. But the result cannot be achieved without forethought, and systematic preparation, as indicated in the leaflet just mentioned.

The prime factor in determination of value in eggs at all seasons of the year is their freshness, which, so far as traders and consumers are concerned, can only be secured by an expeditious system of marketing. It is here where home methods break down, due to the prevalence of the practice throughout the greater part of the country of taking eggs into the local market once a week. Under such conditions they pass the first stage of their progress to the breakfast tables when they no longer deserve the term of "new-laid," and when they cannot command the best prices. Where producers and consumers are near together, as in residential or manufacturing districts, these remarks do not apply; but in the agricultural counties, more or less distant from the great centres of population, prices are low by reason of want of a system in accordance with modern requirements. The work of awakening the minds of farmers and others to the importance of organisation for marketing their supplies is very difficult, as they are so wedded to their antiquated methods. But the proved results wherever trade in rural centres has been thus organised has meant increased returns to producers, due to improvement in quality. It is in this way we can hope to most successfully stimulate the poultry industry of this country.

At the present season, the question is frequently asked, whether eggs may not be preserved in the cheaper periods of the year, and kept until they are scarce. That this can be accomplished is within the knowledge and experience of many of your readers. The greater part of the supplies now received from abroad, more especially from distant countries, such as Italy, Austro-Hungary, the Balkan States, and Russia, are preserved or "pickled," as it is called. In many cases, these can easily be discerned by roughness and dulness of shell, and by the shell cracking when they are boiled. But for these supplies, eggs would be unattainable in the great majority of households for three or four months of the year, and the prices for the few obtainable would be prohibitive. They would be like certain species of fruit, worth their weight in silver. It should be recognised that preserved eggs ought not to be employed for table purposes; but used as cookers, in which direction they meet a real need. No preserved egg is fit for anything else. Apart from all questions as to methods adopted, which may be learnt from a leaflet issued by the Board of Agriculture and Fisheries (No. 83), one of the determining factors is that they shall be preserved as speedily as possible after they are laid, whilst in absolutely fresh condition, which is impossible unless the process is carried out near to the point of production. It is here where foreign countries fail, as the supplies are collected over wide areas, sent to given centres to be pickled, and, consequently, they are not fresh. Hence, they cannot possibly emerge as anything but of third or fourth quality. As an indication of the extent of this trade, last autumn I visited an establishment in Southern Hungary, where there were upwards of five and a half million eggs contained in thirty-eight cement tanks filled with the preserving fluid, and specially built underground for that purpose. The great bulk of these were ultimately placed upon the London market. In order to protect the consumer against any attempt to sell preserved or stale eggs as new-laids, we have adopted a trade-mark known as the "Rose Brand"—to be used only on guaranteed fresh eggs of home production. Many of the best traders welcome such a sign mark: but there are others who refuse to sell the N.P.O.S. egg because when supplies are short, they cannot substitute foreign. English preserved eggs should always be of finer quality than foreign; but no English is equal to the fresh product. In America, vast quantities of eggs are kept in cold storage. For reasons which it would take too long to enumerate, these are unsatisfactory, as they rapidly deteriorate when taken out of the cool chambers, and must be consumed immediately.

Until home production in the winter season more nearly approaches the requirements of our markets, it is desirable that consumers should require and be willing to pay for new-laid eggs for the table, and ensure that they are not accepting preserved, which should be used for cooking purposes.—I am, yours faithfully,

EDWARD BROWN, Secretary.

National Poultry Organisation Society,
12, Hanover Square, London, W.

Prospects in Suffolk (Ipswich).

SIR,—Everything is nice and forward, the beet all off, and most of the land ploughed ready to put the spring corn in when the time arrives. The beet crop is the largest I have ever known, but turnips are very poor in most parts, so no doubt we shall soon make a start on the beet, which, I fear, very few have sufficient stock to eat up what they have grown this year.

Pigs and sheep continue to sell well.

Crops in Essex (North-West).

SIR,—We have had a most favourable autumn for all farming operations, and are well forward with our winter work. The beans and wheat appear to be a good plant where sown early. The rains of the past fortnight have been welcome, as water in our ponds was becoming scarce. We have lifted a good crop of mangolds, which are mostly now in clamp, the swede crop not promising quite so well. Potatoes have suffered from disease, although a heavy crop.

Threshings have been proceeding briskly, wheat rising fairly well, though barleys have been disappointing in many places, the samples coming out unevenly, with some unripe corns, and consequently the value depreciated.

Stock have been very healthy, sheep and lambs doing well, and we have been able to buy our store beasts at a reasonable figure; though fattening beasts, even when bought well, show a very poor return, as we are in everything, as producers, entirely swamped by foreign competition.

Swine fever restrictions are extremely vexatious, and add still further to the many difficulties with which we, as agriculturists, have to contend. The Board of Agriculture maintain that by these restrictions swine fever is decreasing, but there is no doubt that the red-tape methods they employ tend to prevent the stock-keeper from reporting outbreaks; and we have yet to learn what swine fever is, and it is a great question whether the vast sums spent on this disease are not an unnecessary burden on the already over-burdened taxpayer.

A. W. R. B.

November 17, 1905.

Crop Prospects in Westmeath (Ireland).

SIR,—The past summer and autumn have been chiefly remarkable for, in this country, the very small rainfall.

This has been the cause of the very low average yield of both old and new meadows, though farmers benefited by the hot and dry weather in the small amount of labour which was necessary to save the hay, and its superior quality when saved—though, in apparent contradiction to the small yield, the price of hay is unusually low.

Oats, the staple corn crop in this district, is below the average, both in the yield of straw and grain. The quality of the latter is small and bad, and in many cases of little or no value—partly the result of the drenching it received when in the stooks, as much of the grain sprouted in spite of the farmers' constant attention.

Potatoes are an abundant crop, the tubers being of excellent size and quality; the prices for same have seldom been as low as at present.

Turnips and mangels are very scarce. This is caused by the drought at the time of sowing; though, where farmers used artificial manure to force a start, the crops are far above average, as much as 44 tons per acre being recorded. The redeeming feature of the past year from a grazier's point of view has been the excellent profits from sheep; both fat and store lambs have brought prices unheard of in past years.

The grazier has had a disastrous year; cattle did not thrive until too late, owing to the scarcity of feed on pastures, and eventually, in many cases, had to be sold half fat at prices little more than their cost last spring.

Pastures were bare all this summer; there was a fine growth after the autumn rains, and there is now an abundant stock of grass for winter consumption.

In comparison with the very low price of beef, store cattle are still far too dear, their scarcity being partly the cause, and, with no prospects of a rise in the price of beef, graziers are not looking forward to next year with many hopes of being able to recoup themselves for the present year's almost general and heavy losses.

November 16, 1905. R. R.

Crops in East Dorset.

SIR,—The past season has been too dry to suit farmers in this district; water has been a great trouble, and there are not many roots for the sheep. The crop of corn varied very much. Wheat a good crop and good quality, with plenty of straw. Barley not much grown; average crop and quality. Oats very bad. Wheat sowing is nearly finished and gone in remarkably well. Farm work much forwarder than usual, the most we have to complain of is the low price we have to take for corn and meat, except store sheep and best quality mutton. Beef is a disappointment to the grazier; many of them kept the whole summer for no profit. Store beasts are plentiful and a drug in the market. Hay is plentiful and good, worth very little in the market; and we may say the same of straw. I say it is mainly through the motor taking the place of the horse, and fed with oil instead of oats, hay, and straw.

November 18, 1905. EAST DORSET.

FOREIGN CROP PROSPECTS.

FOREIGN.—Rainy weather prevailed in the earlier part of the week, with a rise in the temperature. Agricultural work was, however, pushed forward, and threshing becoming greater in bulk, provincial markets were afforded an opportunity of recouping their stocks. Sowings both in the North and East have been completed, and seeds are stated to be germinating satisfactorily. Generally speaking, the situation for crops is considered better than at this time last year.

HUNGARY.—Changeable weather, alternating between sunshine and rain, with mild temperature, has had a favourable effect upon field work, which is reported to have made good progress, and by recent advices was approaching a finish. Heavy rains which previously fell had made the roads very heavy, and consequently arrivals of home-grown cereals were on the decline.

ITALY.—Recent rains throughout this country interrupted sowings, but proved beneficial, or at least favourable, to the germination of the cereals already in the ground, and also materially assisted in the work of preparation in the fields.

MOROCCO.—The winter season has begun well, and after a prolonged drought there has been a week's rainfall of between five and six inches. The result has been to start all the farmers at work ploughing.

CANADA.—Frost has put in an appearance early this season, and, according to advices from Winnipeg recently, in Manitoba and Saskatshewan the ground was frozen. Consequently but little fall ploughing has been got through. Last year ploughing was not stopped until about a fortnight later, and it is affirmed that such early frost will prevent so large an increase in acreage as would otherwise have been the case. Hard spring wheat is of fine quality this year, and appears likely to fulfil expectations of a yield of 90,000,000 bushels, compared with 55,000,000 last year. The elevator capacity and transportation facilities will, it is stated, have to be considerably enlarged in the near future.

UNITED STATES.—The *Cincinnati Price Current* of yesterday says there is little new development in information as to the crops. The wheat crop remains in an excellent position, and the disappointment as to the maize yield continues.

INDIA.—The Viceroy's telegram, dated November 13, gives grain prospects as follows:—At Madras they are satisfactory, and in Bombay, although rain is still urgently needed in parts throughout the Presidency, the prospects are not considered serious. There had been no rain for a week in the United Provinces, where it was badly required for the standing crops and spring sowings. The situation was as last reported in Rajputana, except that, owing to famine and distress, relief arrangements were being made. The crops in Central India are in want of rain, but elsewhere the prospects were fair or good.

AUSTRALIA.—Although our special correspondent at Sydney wrote, under date October 10, that rain was urgently needed over a large portion of the State, subsequent cable advices showed that good general rains had fallen, and record wheat crops were probable. Advices recently received show the season's wheat exports of the Commonwealth up to date as 29,500,000 bushels, as against 36,117,000 bushels at the corresponding period last year.—*Dornbusch* (November 17).

CORN MARKETS.

LONDON.

Mark Lane. Wednesday.—There was a moderate attendance of buyers, and a steady feeling was apparent as a rule, though business proceeded rather quietly. English wheat, in light supply, was very steadily held. Whites, delivered up, range from 31s to 34s; and reds, 30s to 33s per quarter. Imported wheat steady. No. 1 Northern Manitoba, 34s 6d ex ship; Australian, ex store, 34s 6d; and Russian, as a sample, 32s to 35s 6d per quarter. Flour market underwent no appreciable change from Monday. No 1 town households, 27s delivered in; country patents, 25s to 27s; Iron Duke, 25s 6d ex store. Grinding barley steady; Azoff quoted 20s 3d to 20s 6d ex quay. Imported oats quiet, but fully supported in value; 38lb Russian, 16s 6d to 17s ex quay, as to sample. Maize firm.

Mark Lane. Friday.—The market here a passive aspect all day, but, considering conditions, every section maintested a good tone, while the price list has been little altered since Monday last. Attendance moderate. English wheat continues in small compass, threshings just now being rendered backward through intermittent periods of damp and wet weather. Town millers begin to adopt reserve, the present high limits imposed being above their views. Delivered up whites, 31s to 34s; reds at 30s to 33s per qr. 504lb. Eastern Counties continue better favoured than southern districts. Reds in the former are readily saleable at 30s 6d to 31s; but in Surrey and Sussex buyers are not bothcoming at asking prices, 30s being usually named to sample. Imported descriptions are in some cases rather firmer since Monday, apart from shortage. American flour retains its value, while remaining in narrow compass on spot, and fresh arrivals, as they come up, are wanted; a good deal already sold. Town households, No. 1, 27s per sack delivered in Country flour continues very firmly held; Hungarian best, 32s 9d to 33s. Whole meal, first quality, 23s, and No 2 21s per ton. Of feeding stuffs, Russian oats 3d dearer, while influenced by America. Trade inactive, with holders indifferent; 38's are not offered below 16s 9d to 17s ex quay, subject to sample. Grinding barley maintained. English malting quiet, unaltered, and cheap types continue wanted chiefly qualities between 26s to 28s. Maize 3d dearer on the week.

COUNTRY.

Ashford. Tuesday.—Wheat slow of sale, at a reduction of 1s; oats a little dearer; beans and maize cheaper. Wheat, 27s to 30s; malting barley, 27s to 30s; oats, 17s to 21s; Mazagan beans, 28s to 29s; tick beans, 30s to 32s; peas, 29s to 30s; foreign grinding barley, 23s to 24s; maize, 27s to 28s per quarter. Flour: Whites, 31s; seconds, 28s; sealing, 26s per sack.

Banbury. Thursday. Wheat, red (new), 28s to 29s; barley, 24s to 30s; beans (new), 30s to 31s; ditto (old), 33s to 34s; oats, 17s to 21s; peas, 27s to 30s per quarter.

Berwick. Saturday. Owing to the continuous wet weather threshing operations have been interfered with, and supplies of grain were small. Barley and wheat firm at late rates. Oats dull sale. Wheat, 27s to 29s. Barley, 24s to 28s. Oats, 19s to 20s.

Birmingham. Thursday.—There was about an average attendance, but business generally was rather quiet. Foreign wheats met with rather a poor inquiry at last week's prices. English wheats a fair supply, and made from 30s to 31s per quarter (496lb) delivered Birmingham. Plate maize was 3d lower, flat being unchanged. Grinding barley was unaltered in value. English oats and beans at last week's prices.

Bristol. Tuesday.—There was a fair attendance on our market to-day. English wheat in moderate supply, making fully late rates. Foreign wheats unaltered. Maize, barley, and oats are also unchanged in values. Flour slow to sell, prices remaining firm. GRACE BROTHERS.

Bury St. Edmund's. Wednesday. The supply of wheat is smaller, and the late bad weather for threshing has affected the condition of some of the samples offered. In spite of this, prices are fairly maintained at 28s to 30s 6d. Barley supply below average; demand not brisk, but trade on the whole steady at 27s to 32s per quarter for ordinary to useful malting runs. Maize about steady at 26s 6d per quarter. Other feeding corns, oil cakes, and milling stuffs all very firm at fully last week's prices.

Brighton. Thursday. Quiet trade and small attendance. New white wheat, 29s to 31s; new red ditto, 28s to 30s; barley, 28s to 33s; grinding ditto, 22s to 24s; oats, English, 18s to 20s; peas, 28s to 30s; beans, 30s to 31s.

Cambridge. Saturday.—During the week the wheat trade has been firmer, with less offering. Spring corn in fair supply. At this market there was a smaller supply of wheat; trade firm. Red wheat, 29s to 31s; and white up to 31s per 504lb. Beans rather dearer. Oats unchanged. Barley in less supply, and prices quite as dear.

Canterbury. Saturday.—The demand for seed wheat is nearly over for milling; values are firm, 64lb. samples are worth 31s 6d and 65lb. 32s. delivered. Barley in improved demand, at from 28s to 31s. Oats firm, 39lb. black malting 19s, and some fine 46lb. white 23s.

Carlisle. Saturday.—Small supply of oats in our market to-day. Good demand at full prices. 16s 6d to 19s 6d per 312lbs. THOMAS ROBINSON.

Chester. Saturday.—The values of all descriptions of grain were fully maintained, the finest samples of oats being 1d per bushel dearer. Indian corn, notwithstanding smaller shipments, barely maintained last week's prices. Quotations: Wheat, 4s 4d to 4s 7d per 75lb; barley (grinding), 3s to 3s 2d per 64lb; beans (old), 5s 9d to 6s per 80lb; oats (new), 2s 3d to 2s 7d; ditto (old), 3s 3d to 3s 6d per 46lb; Indian corn (old), 13s 6d to 13s 9d per 240lb; River Plate (new), 12s 9d to 13s per 240lb.

Colchester. Saturday. Unsettled weather has prevented threshing this week, and the market was scantily supplied with grain to-day. Wheat firm, at fully last week's prices. Barley in demand, and some qualities sold at a slight advance. Beans, strong trade. Oats from Essex. WILLIS AND SON, LTD.

Chicester. Wednesday.—Small quantity on offer, but sold at following prices. Within attendance. New white wheat, 28s to 31s; new red ditto, 29s to 30s; barley, 28s to 32s; grinding ditto, 21s to 24s 6d; oats, English, 17s to 19s; peas, 27s to 29s; beans, 31s to 33s; maize, 25s to 26s.

Coventry. Friday. Wheat in moderate supply, and sold about last week's figures. Wheat, old, 11s to 11s 6d per 496lb; new, 10s 3d to 10s 9d per 496lb.; barley 27s to 30s per 448lb.; oats, old, 23s to 24s per 312lbs.; new 19s to 20s per 256lb.; beans, old, 12s 6d to 13s per 496lb.; new 11s 9d to 12s 6d per 496lb; peas, 12s 6d to 14s per 496lb.

Dorchester. Friday. Wheat in small supply and quiet in demand last week's rates. Spring corn unchanged. New white wheat, 30s to 31s; red, 29s to 31s; malting barley, 26s to 28s; beans, old, 35s to 38s; new, 30s to 31s; oats, old, 23s to 24s; new, 19s to 20s.

Devizes, Thursday.—We had a very small supply of corn. The condition of wheat was excellent, all the best lots making last week's prices. Barley was of very poor quality, without any alteration. Oats in good demand, and best quality were easily sold at a slight advance. The following were the quotations:—New wheat, 14s 6d to 16s; secondary, 13s to 14s; best barley, 26s to 28s; secondary, 20s to 24s; rye, 22s to 24s; old black oats, 20s to 23s; new ditto, 16s 6d to 19s; malting barley, 26s to 32s; beans, 16s to 18s; fine flour, 24s to 26s; extra fine, 27s to 30s.

Doncaster. Saturday. Small attendance of buyers and market rather quiet. Meagre supply of English wheat, which was firm at last week's prices. Foreign wheat slow at late rates. Good demand for fine barley; secondary and inferior sorts neglected. All feeding stuffs unchanged, with a moderate demand.

Dorchester. Saturday. Owing to a heavy fall of snow in the early morning, which was in some places from four to six inches deep, there was only a limited attendance at the corn market, which was still further lessened by the annual great harvener sale at the agricultural repository. Samples also came sparingly to hand, but in the face of a restricted inquiry the offer proved quite equal to the demand. Home-grown wheat met a firm sale at fully late rates, but foreign was a much quieter sale. Both malting and grinding barley ruled firm, the only change to note being that secondary maltings were rather easier. Oats brought full prices. Feeding stuffs generally strong consequent on the inclemency of the weather.

Dublin. Friday.—Wheat, 17s 6d to 19s; malting barley, 14s 6d to 15s 3d; grinding ditto, 12s 9d to 14s; malt, 18s 6d to 20s; oats, 10s 3d to 15s 3d; oatmeal, extra pinhead, 12s 6d to 14s 6d; flour, 10s to 12s 6d; pollard and bran, 6s to 6s 6d.

Exeter. Friday.—Fairly good attendance; trade slow. English wheat firm and unchanged. English barley showed a tendency for higher prices; grinding barley and maize firm. Best quality oats 6d dearer. Flour strong at last week's prices. English wheat, 3s 9d; English barley, 3s 3d to 4s; superfine flour, 25s to 28s; flour, 23s to 24s.

Glasgow Wednesday.—There was the usual attendance. Wheat and flour firmer, but with little business passing. Maize and corn unchanged. Barley a quiet trade, and unaltered on the week. Oats steady, but without change. Beans and pease 3d per boll dearer respectively since last Wednesday. Bran and thirds firmer, but not quotably altered in value. Oatmeal quiet. GIBSON AND CLARK.

Glasgow. Friday. Wheat unchanged, and demand quiet. Flour also slow of sale, and previous prices are quoted. Mixed American maize continues scarce and in small demand, and holders again ask 15s per 280lb.; Plate steady at 14s 6d. Beans, barley, and oats are quoted as formerly; sales are moderate.

Gloucester. Saturday.—A fair attendance, but business was very dull. English wheat was in moderate supply and unchanged in value. Foreign wheat was also without alteration. Barley nominally unaltered. Maize 3d. cheaper. Oats firm.—WAIT, JAMES AND CO.

Grantham, Saturday. — An average attendance. Wheat was in fair supply, and a slow trade prevailed, the quotations being slightly down on the week. Business in barley was also quiet, though prices were maintained. White oats showed an advance of 6d per qr. Beans and blue peas unaltered.

Hereford. Wednesday.—Moderate attendance. A quiet tone pervaded generally. English wheats were practically lower. Barleys very difficult to move. English oats remain very firm at last week's figures. Wholesale quotations:—Wheat, 3s 4d to 3s 7d per 62lb; barley, 3s to 3s 9d per 56lb; oats, old, 2s 6d to 3s per 40lb; new, 2s 2d to 2s 6d; beans, old, 4s to 4s 6d per 65 1 3lb; new, 3s 8d to 3s 10 1 per 65 1 3lb; vetches, 5s 6d to 6s 6d per 65 1 3 lb.

Ipswich. Tuesday.—Wheat was in short supply; good samples were worth about last week's prices, but the condition of some others was affected by the late foggy weather, and for these samples rather lower prices were accepted. Reds or whites, 30s to 31s per quarter, delivered. Barley: Smaller supply, and the average quality of samples rather lower; demand for useful malting qualities remains steady, at 27s to 32s per quarter; not so many fine parcels offering. Feeding corns all very firm, at fully last week's prices. Feeding stuffs also firm.

Leeds. Tuesday.—Conflicting influences keep the trade in a state of tension, the upshot no being distinctly firm. The shipments this week are liberal, the Continent continuing the chief recipient. Fresh business, especially from Russia, is almost impossible, shippers' limits being prohibitive, and nobody caring to buy with the "strike" clause. Foreign wheat is unchanged on the week, but home-grown can be bought 6d cheaper, and the demand is limited. Malting barley quiet. Maize, beans, and oats unchanged.—DUNNS AND CO.

Leeds. Friday.—English and foreign wheats were rather lower than on Tuesday, except American, which was the turn dearer. There was no change in beans, peas, oats, barley, maize, and flour, all of which were firmly held.

Leicester. Saturday.—Good attendance of buyers and dealers, with fair supplies of home-grown wheats. Trade steady. Red wheats, 29s to 30s; white wheats, 30s to 32s per 35 st. Barley, 25s to 28s per 32 st. Beans, 34s to 36s per 38 st. Fine oats, 19s to 22s per 25 st.

Lincoln. Friday. Very good attendance, but a moderate show of English wheat, which met with a ready sale at the prices of last week. Oats and beans fully as dear as a week ago. Common barley lower, but best qualities firm at unaltered rates.

Liverpool. Friday.—Wheat: There has been a good attendance at to-day's market, and wheat meets a better inquiry generally, and holders are firm at an occasional 1d advance from last Tuesday. Flour: A fair inquiry for foreign at about late currencies. The price for Liverpool mill flour having been somewhat irregular of late, the minimum limit for the bakers' grade has now been fixed at 24s; demand quiet. Maize: Mixed is steady at 1d decline, but there is a moderate trade passing. Plate is in better demand at last market day's currencies. European grades quiet, unchanged. Barley: Malting steady. Feeding in fair request at unchanged quotations. Beans steady but quiet, with no alteration. Peas still very firmly held owing to great scarcity; demand quiet. Oats firm for English, but little doing. Foreign quiet, without quotable change. Oatmeal firm, occasionally the turn dearer, with few offers; demand slow. Oilcake: A fair trade at late rates for all makes. SEGAR AND TENNICLIFFE.

Maidstone, Thursday.—Moderate attendance at the Corn Exchange to-day. The wheat trade steady at last week's rates. Barley: Business quiet, and a slightly drooping tendency. Oats firm. Beans and peas cost more than recently. Maize rather easier. Other grain no change.

Manchester. Thursday. On English wheat, notwithstanding the comparatively small quantity offered, there was a reduction of 6d per quarter. Foreign was unchanged. Flour quiet, and Indian corn unchanged. Barley was in buyes' favour. Oats generally scarce at unchanged rates, and thirds met with a good demand.

Newark, Wednesday.—Wheat 6d per quarter less money on the week. Barley repeated previous prices. Oats and beans unchanged. Quotations:—Wheat, 29s to 30s; barley, 24s to 30s; oats, 18s to 20s; beans, 28s to 31s per quarter.

Newcastle-on-Tyne, Saturday. — A slow demand for wheats, at barely late rates. Maize steady and unchanged in value, oats favouring buyers. Peas and beans steady at last week's prices. Barley unaltered.—JOSEPH FOLLARD AND CO.

Norwich. Saturday. There was no alteration in the wheat trade of our market to-day, business ruling firm, with a small supply. Barley was in moderate supply at about last week's quotations. Foggy weather has prevailed during the week, with night frosts. Wheat, red, 30s to 31s per quarter, weight 63lbs. per bushel imperial. Corn inspector's return for the week ending November 4, 1905: Wheat, 1,940—28s 10½d.; barley, 1,689—24s 5½d.—J. A. MILLS.

Nottingham. Saturday.—Wheat in good supply; fair trade at about 6d. decline. Barley, fine samples inquired for, and made full rates. Common sorts neglected. Oats but few offering, and full rates maintained.—ROBERT HUDDLE.

Oxford. Saturday.—The attendance was fair, and a moderate amount of business was done at about the recent level of prices. English wheat was offered in fair quantities and buyers operated moderately at former rates. Feeding stuffs were in limited request at late values.

Peterborough. Saturday. Wheat in small supply; trade steady at last week's prices. Barley firm and fully as dear, not much offering. Oats made last week's extreme figures.—THOMAS HILL AND SON.

Preston. Saturday.—To day's market was moderately attended. Farmers' wheat and other grain unchanged from a week ago, with little business passing. Flour, Indian meals and offals unaltered. Quotations:—Wheat, white, per windle of 220lb, 12s 9d to 13s 6d; ditto red, 12s 6d to 13s; oats, new, white, per bushel, 2s 9d to 2s 10d; bran, 10s 6d to 11s; beans, per windle, 16s to 16s 6d.

Reading. Saturday.—There was an average attendance and rather better supply, whilst there was a noticeable improvement in trade. Wheat fetched 29s 6d to 31s 6d; malting barley sold at 27s 6d to 32s; and grinding barley, 24s 6d to 26s; fair quality oats changed hands at 19s 6d to 21s; and poorer quality realised 17s to 18s 6d.

Retford. Saturday.—Moderate supply of wheat, and a fair business was transacted, without quotable change in prices, which remained at 28s to 29s 6d per qr. Trade for malting barley was only dull; the best qualities on offer realised 26s 6d to 28s; secondary sorts, 24s 6d to 26s; and grinding, 24s to 24s 6d per qr. No at maize on offer; round Plate maize was worth 26s to 26s 6d. English beans, 17s to 18s; and white oats, 19s to 20s per qr.

Ripon, Thursay.—A good attendance and a quiet trade. Prices:—New wheat, 28s to 29s 6d; foreign wheat, 33s to 35s 6d; grinding barley, 23s to 24s; malting barley, 25s to 28s; new oats, 18s to 20s; round maize, 26s to 26s 6d; flat maize, 25s 6d to to 26s 6d per quarter.

Shrewsbury, Saturday.—Wheat, 12s 6d to 12s 9d per 225lb; oats, old white 15s to 16s, new 11s 6d to 12s 6d; peas, 11s 6d to 12s 6d; beans, 13s 6d to 14s per 240lb; barley, 14s to 19s per 280lb.

Stamford, Friday. — A very large attendance of farmers and dealers. Trade was busily carried on, purchasers taking the opportunity of the concessions offered by holders. Wheats were 1s down on the week, at 34s to 39s per qr.; malting barley, 30s to 31s; ditto grinding, 22s 6d to 24s; oats, 18s to 20s; beans, 29s to 31s per qr.

Sunderland. Saturday.—Small show of grain. Wheat steady at late rates. Barley and oats unchanged in value. Arrivals nil.—E. AND F. RICHARDSON.

Tunbridge Wells, Friday.—New white wheat, 31s to 31s 6d; new red ditto, 32s 6d to 31s; barley, 27s to 32s; grinding ditto, 19s to 23s; oats, English, 18s to 20s; rye, 23s to 24s; peas, 31s to 35s; beans, 32s to 36s; tares, 48s to 56s; maize, 24s to 28s.

Warwick. Saturday.—Small supply of wheat, which sells at fully last week's prices. Few samples of barley on offer; good qualities in rather better demand. Oats and beans scarce and rather dearer. Feeding stuffs unchanged.

Winchester. Saturday.—English week quoted at last week's prices, and a very limited supply. Foreign a shade dearer. Barley and oats unaltered. Maize 3d. easier. Flour, a quiet trade at late rates.—FEAR, COLEBROOK AND CO.

Wisbech. Saturday.—A limited supply of grain at market. Wheat ruled firm at the full prices of last week. Reds, 30s to 30s 6d. Oats in demand at 18s to 20s. Barley, 24s to 28s.—JAMES FLETCHER.

Worksop. Wednesday.—Good attendance, and fair show of grain with prices varying very little from late rates. White wheat, 28s to 30s 6d; red ditto, 26s 6d to 28s; best malting barley, 28s to 30s; secondary qualities, 26s 6d to 28s; grinding barley, 22s to 24s; white oats, 17s to 18s 6d; black oats, 16s to 17s; maize, 25s to 27s per quarter.

Yeovil. Friday.—For home-grown wheat last week's values were scarcely maintained; foreign firm and unchanged. Oats, 31s per qr dearer. Barley quiet and unchanged. English wheat of best quality sold at from 31s 6d to 32s per qr; secondary, 28s to 30s 6d; foreign, 33s 6d to 35s 6d; mating barley, 31s to 33s; feeding, 21s to 23s 3d; foreign, 21s to 21s 6d; oats, black, 12s to 20s; white, 17s to 20s; Irish black, 17s to 17s 9d; beans, 32s 6d to 32s; maize, 24s 6d to 26s; rye, 22s to 24s; rape, 46s to 49s 6d; vetches, 6s to 7s per bushel. A good trade passing in flour, fine making from 25s to 28s 6d per sack, and extra fine 27s to 27s 6d. Meals and malting offals favoured sellers.

York. Saturday.—Farmers are offering very little wheat, partly owing to the unsettled weather. Good dry samples still steadily at last week's prices; white, 32s to 31s; red and mixed, 29s to 30s per qr of 35 st. Malting barley slow and in average quantity; best 27s to 29s, good 25s to 27s, feeding 23s to 25s per qr of 32 st. Oats scarce and dear; white Tartary 17s to 18s, black 18s to 19s, white Garton 19s to 20s per qr of 24 st.; rye, 22s; beans, 30s to 33s per qr. of 36 st.

FOREIGN.

Hamburg. Saturday. Weather seasonable. The improved feeling reported last week has given way to a quiet tone, the brisk inland demand for forward delivery having a little subsided, and prices in general are the term in buyers' favour; prompt delivery remain till in good demand. Transactions in wheat were restricted to a few local requirements, but as offers are not pressing prices are not materially altered. Fine red German is held at 3/8s 6d to 3/8s per 56/4lb. f.o.b.; American Hard Winter, No. 2, at 31s 9d; 80 Ko. River Plate, at 32s to 32s 6d per

480lb. c.i.f. Hamburg. Rye quiet; 9 15 20 South Russian is offering at 27s 9d to 28s per 180lb. c.i.f. Stocks of malting barley in the growing districts are much reduced, and good quality is firm in value; fine very scarce. Good Bohemian is held at 34s 6d to 35s 6d; Odenbruch and Silesian, at 29s to 33s; Danish, at 29s to 30s per 448lb. Feeding barley on the spot maintains its value; 20s 3d to 20s 6d per 400lb. being paid for 60-61 Ko South Russian; 46lb. American is held at 19s 3d to 19s 6d per 400lb. American mixed maize quiet at 25s.; River Plate, 24s 6d per 480lb.—JOHN TAYLOCK.

THE BALTIC.

The London Corn Trade Association reports a very great scarcity of Indian wheat. For cargoes on passage it is only able to quote White Calcutta at 33s. 6d. per 492 lb. and Choice White Kurrachee at 33s. for the like weight. Sorts not now obtainable are Red Calcutta, Red Kurrachee, and also the sorts from Delhi and Bombay, as well as Central Indian wheat, such as Atbara and Jubbulpore. Either there is (what we do not at all believe) a strong "corner" for holding back Indian wheat, or else the holders of this grain, whether on hand or on passage, are in a very favourable position.

After five very dull days wheat cargoes (other than Indian) closed firm, and for Russian and Argentine 3d. more money was paid on Saturday. Sales included Walla Walla at 33s. per 500 lb., Russian Winter at 34s. 3d. per 492 lb., Hard Taganrog at 31s. 3d. per 492 lb., Australian at 33s. per 480 lb., and Argentine at 31s. 3d. per 480 lb. Sales of maize cargoes have been difficult owing to the high prices asked, but four cargoes of Argentine on passage have found buyers at 24s. per 480 lb., and two cargoes of American for December shipment have been placed at 22s. Other cargo sales of the week included Azoff barley at 20s. 3d. per 400 lb., White Clipped American oats at 16s. 9d. per 320 lb., and Egyptian cottonseed at £5 15s. per ton.

The arrivals of grain and seed-laden vessels at Ports-of-Call for the week were 1 wheat (Melbourne), 1 maize (Rosario), 1 linseed (Parana)—Total 3.

The sailings of grain and seed-laden vessels from Ports-of-Call for the week were 1 wheat (Belfast).

Since January 1, 1905, the total arrivals have been 297 wheat, 2 flour, 2 wheat and oats, 1 wheat and linseed, 1 flour and wheat, 13 barley and wheat, 10 barley, 11 maize, 1 beans, 4 locust beans, and 52 linseed—Total 394.

Last year during the same time the arrivals were 277 wheat, 1 wheat and maize, 37 barley and wheat, 17 barley, 11 maize, 6 beans, 4 locust beans, 1 rye, 40 linseed, and 1 canaryseed—Total 395.

Friday.—Altrincham: 1s 3d to 1s 4d. Ashburton: 1s 1d to 1s 2d. Barnstaple: 1s 4d to 1s 5d. Chester: 1s 3d. Congleton: 1s 3d. Crewe: 1s 3d. Camelford: 1s 1d. Dartmouth: 1s 3d to 1s 5d. Derby: 1s 4d. Helmsley: 1s 1d to 1s 2d. Knutsford: 1s 3d. Leyburn: 1s 3d to 1s 9d per 24 oz. roll. Lincoln: 1s 1d to 1s 2d. Lostwithiel: 1s 1d. Macclesfield: 1s 2d and 1s 3d. Northwich: 1s 3d. Nantwich: 1s 3d. Otley: 1s 3d to 1s 9d per 24 oz. roll. Redruth: 1s 4d. Runcorn: 1s 3d. St. Austell: 1s 3d to 1s 4d. Stamford: 1s 2d to 1s 4d. Stockport: 1s 3d. Tavistock: 1s 2d to 1s 4d. Totnes: 1s 2d to 1s 3d.

Saturday.—Appleby: 1s 0½d to 1s 2d. Bridgnorth: 1s 1d to 1s 3d. Carlisle: 1s 3d to 1s 4d. Doncaster 1s 2d to 1s 3d. Grantham: 1s 2d to 1s 3d. Howden: 1s 2d to 1s 3d. Ipswich: 1s to 1s 2d. Lancaster: 1s 2d to 1s 3d. Malton: 1s 1d to 1s 3d. Pontefract: 1s 2d to 1s 3d. Retford: 1s 4d. Richmond (Yorks): 1s 3d. Shrewsbury: 1s 2d to 1s 3d. Skipton: 1s 1d to 1s 2d.; Stokesley: 1s 3d. Whitby: 1s 3d. Worcester: 10d to 1s 3d. York: 1s 2d to 1s 4d.

EGGS.

(Number per 1s., except where otherwise stated.)

Thursday.—Axminster 1s 2d to 1s 3d per dozen. Birmingham: 6 and 7. Brigg: 8. Devizes: 7 and 8. Driffield: 9 and 10. Evesham: 10d to 1s 0½d per dozen. Kidderminster: 7. Penzance: 1s 6d to 9d per dozen. North Tawton: 7. Penistone: 8 and 9. Plymouth: 6. Ripon: 6 and 7. Scarborough: 6. Wetherby: 6.

Friday.—Altrincham: 5 and 6. Ashburton: 1s 9d to 1s 10d per dozen. Barnstaple: 8 to 10. Camelford: 9. Chester: 6. Crewe: 6. Congleton: 6and 7. Dartmouth: 1s 8d per dozen. Derby: 6. Helmsley: 7. Knutsford: 6 and 7. Leyburn: 7. Lincoln: 7 and 8. Lostwithiel: 8. Macclesfield: 6. Nantwich: 6 and 7. Northwich: 6. Otley: 6 and 7. Redruth: 1s 4d per dozen. Runcorn: 6 and 7. St. Austell: 9. Stamford: 6 to 8. Stockport: 5 and 6. Tavistock: 6 and 7. Totnes: 1s 9d to 1s 10d per dozen.

Saturday.—Appleby: 6 and 7. Berwick: 1s 6d to 1s 7d per dozen. Bridgnorth: 8. Carlisle: 5. Doncaster: 6 and 7. Grantham: 7 and 8. Howden: 7 and 8. Ipswich: 6 and 8. Lancaster: 5 and 6. Malton: 6 to 8. Pontefract: 7 and 8. Retford: 2s 10d to 3s per score. Richmond (Yorks): 6 and 7. Shrewsbury: 6 and 7. Skipton: 7 and 8. Stokesley: 6 and 7. Whitby: 6 and 8. Worcester: 6. York: 6.

CHEESE.

Newport. Wednesday.—A good supply and a fair demand. Quotations:—Caerphillies, 48s to 57s per cwt.; fancy dairies, 52s to 61s; truckles, 56s to 63s; Derbys, 52s to 68s; and Cheddars, 58s to 66s.

Glasgow. Wednesday.—Arrivals were liberal. There was not much trade passing. Holders did not give way, as they believe that values will keep firm for some time. Cheddar, 58s to 62s; Dunlops, 56s to 60s.

GAME AND POULTRY.

Smithfield, Saturday.—Good supplies, but only a moderate demand. Prices: Ducks, 2s to 3s; geese, 5s to 6s; Surrey fowls, 2s 6d to 3s 6d; Lincolnshire fowls, 2s to 2s 6d; Essex fowls, 2s to 2s 9d; Irish fowls, 1s 9d to 2s; Russian fowls 1s 9d; blackgame, 1s 6d; wild ducks, 1s 6d; woodcock, 1s 9d to 2s; quails, 3d to 1s 3d; snipe, 6d to 9d; feathered pigeons, 7d to 9d; Bordeaux pigeons, 10d to 1s 2d; English hares, 2s 9d to 3s; leverets, 1s 9d to 2s; Scottish hares, 1s 4d to 1s 6d; tame rabbits, 1s 2d to 1s 6d; wild rabbits, 8d to 11d; live hens, 1s 9d to 2s 3d each; Australian rabbits, 6s to 7s 6d per dozen; pheasants, 3s 6d; young grouse, 4s; old, 3s; young partridges, 3s to 3s 6d; old, 1s 6d per brace.

FRUIT AND VEGETABLES.

Covent Garden, Saturday.—The supplies on offer were equal to the demand, business being rather poor. Quotations of English produce are as follows:—Apples, 8s to 12s per bushel; peaches, 5s to 12s 6d per dozen; grapes, 8d to 4s; tomatoes, 2s 6d to 4s 6d; celery, 6s to 12s 6d per dozen reils; artichokes, 1s 6d to 2s; Brussels sprouts, 1s 3d to 1s 9d per half-sieve; cucumber, 2s to 4s 6d; endive, 9d to 3d per dozen; cauliflowers, 5s 6d to 9s; cabbages, 2s 9d to 4s per tally; onions, 5s to 6s per cwt.; turnips, 3s to 3s; potatoes, 1s 5d to 2s; leeks, 1s 6d to 2s; radishes, 5d to 1s; carrots, 2s to 3s per dozen bunches; beetroots, 2s to 2s 6d per bushel; horseradish, 8s to 11s 6d per dozen bundles; turnip-tops, 9d to 1s 3d per bushel; parsnips, 2s to 3s per bag; mushrooms, 8s to 12s per 12lb.; potatoes, 60s to 80s per ton.

Review of the British Corn Trade

DURING THE PAST WEEK

Written exclusively for the Mark Lane Express.

The weather has not favoured farm work, but sowings have been by no means stopped, and market deliveries have been up to a full average, a fact which argues that the threshings are going on steadily on the actual farms. The good demand for straw is some mitigation of low prices for wheat. Even barley straw moves off with less difficulty than usual. We hear of a good area being sown with winter oats.

Early-sown wheat in France is up and looking much better than farmers had anticipated. The weather in France since September has been cold, and it was feared that the wheat had suffered. It seems, however, to have germinated satisfactorily, and has made quite a good start. Heavy rains in Austria-Hungary have made local roads impassable in so many cases that market deliveries of new crops have been much reduced.

Winter has now set in all over Canada and the American North-West. The wheat yield this season is put at 10 to 15 per cent. beyond that of 1904, run by the most cautious of the Canadian journals. The final official estimate of the U.S. wheat crop is 683,311,000 bushels, of which 424,400,000 is winter and 258,911,0000 bushels spring wheat. The crop works out at almost exactly 14½ bushels to the acre, or 1½ bushels per acre above the average. The Russian Government, on the 17th, published an estimate of the winter wheat crop in that empire, but the greater proportion of Russia's production is of spring wheat, the severe climate limiting the possibilities of winter wheat growing. The winter wheat are thus returned:—

	Quarters.
1905	27,400,000
1904	25,690,000
1903	24,970,000

The Board of Trade inquiries—results of which were published on the 17th inst.—show conclusively that English wheat and flour are not now cheap by reason of foreign competition, but that foreign wheat and flour, when introduced into England, are kept down in price by the heavy deliveries of English produce. This is what we have been saying for two months past, but there are always a good many people who like Government confirmation of their journals. Here, then, are the Board of Trade figures, reduced to the common denomination of the ton:—

CEREAL YEAR, 1905-6.

Per Ton.	September.	October.
English wheat	125s. 5d.	126s. 3d.
Foreign wheat	142s. 6d.	144s. 7d.
English flour	195s. 10d.	200s. 0d.
Foreign flour	199s. 0d.	206s. 8d.

The English farmer is selling his wheat at least 18s. 4d. per ton too low, the English miller, largely coerced by the English farmer in this respect, is selling his flour 6s. 8d. per ton too low. But it will be seen that the miller is making much the most effective stand.

Despite an advance in flour of from 3s. 2d. to 6s. 8d. per ton on the month, bread has declined an amount equal to 32s. per ton at Bristol and the Potteries, and is dearer nowhere. Bread was held in September for too high price in proportion. At Ipswich and Cardiff it is still too high, and is also unduly dear in both Scotland and Ireland.

English wheat now averages 30s. 3d. at Reading and a few other Thames Valley markets. In Kent 29s. 8d. is averaged at Canterbury, but in Sussex prices are not so good, 27s. 10d. at Chichester being a disappointing value. Cambridge with 28s. 8d. quoted, and Norwich with 28s. 5d., show prices to be fairly well maintained in East Anglia. Salisbury's 28s. 5d. is a fair price for a Western market.

English barley is now fetching over 27s. at Canterbury, Chichester, and several other places in the Home Counties, but it is down to 22s. 7d. in Yorkshire, and 25s. is not exceeded at Cambridge, Lincoln, Norwich, Nottingham, or Peterborough.

English oats are dearer on the week at several country Exchanges of the first rank. At Canterbury 18s. 4d. is averaged, at Reading 18s. 11d., and 18s. 4d. is paid at Salisbury, a proverbially cheap market. The lowest markets for oats seem to be Ipswich (17s. 1d.), Norwich (17s. 3d.), and Peterborough (17s. 1d.). The East Anglian grower should hold more firmly. In the North value is unsettled.

English rapeseed shows good quality this year, and 54s. is paid for fine new Black, 416 lb. to the quarter, 55s. where the weight is 424 lb. Ordinary Brown or Reddish rapeseed makes 48s. per qr. English Winter beans are now in request at 32s. per qr., and should fetch more, foreign competition being for the moment all but extinct. Peas make 35s. for good new Dun, and 35s. is the country price for new Maples.

The sales of British wheat at the statute markets since harvest have been large, and prices have been sadly reduced as a consequence of pressure of new grain on sale.

	Per Qr.
This season, 966,000 quarters, at	27s. 2d.
Last season, 522,000 quarters, at	30s. 2d.

The sales of British barley at the statute markets have been rather larger than in the same period of last season. The price has been somewhat lower, but this is more to be attributed to discoloration and scarcity of mellow samples than to depreciation in the value of fine, bright barley. The latter is in more request than ever.

	Per Qr.
This season, 1,507,000 quarters, at	24s. 4d.
Last season, 1,473,000 quarters, at	25s. 2d.

The sales of British oats have been small, and the price has been enhanced by the comparative scarcity.

	Per Qr.
This season, 307,000 quarters, at	16s. 5d.
Last season, 395,000 quarters, at	15s. 11d.

Imports of the United Kingdom last week were:—

Wheat, 364,000 quarters; a full supply.
Flour, 103,250 sacks; a small supply.
Barley, 129,000 quarters; an average importation.
Oats, 48,000 quarters; an extremely small supply.
Maize, 128,000 quarters; much less than usual.
Linseed, 12,000 quarters; a small arrival.

French prices show a rise of 7d. per quarter on the month for wheat at country markets, but only 1d. advance in Paris. Apparently, the urban demand for bread is weak. France is prosperous, and the working classes who are earning good wages in Paris probably are eating more meat. The price of barley in France has fallen 2d. in the country, but is stationary in Paris. Oats in France are 2d. up in the country, and 7d. dearer in the capital. The advancing tendency in oats is a result of colder weather. Latest averages in France are 38s. 7d. for wheat, 23s. 10d. for barley, and 20s. 2d. for oats.

German prices show a slight advance on the month for wheat at Berlin, but a substantial decline at the great rural centres, of which Breslau is taken as a type, somewhat as one might take Norwich or Ipswich, if we did not have our Government returns of 190 statute markets. This difference between Berlin and country parts is still more marked in the meat and provision trades, and would seem to indicate that Germany by no means escapes those freight and transit difficulties which are the bane of English rural districts. The price of barley in Germany has advanced 1s. 3d. per quarter on the month, there is no dearth of fine bright malting samples, and, at the same time, demand from brewers is larger than ever. Oats in Germany are 4d. up on the month. German average latest returns are in English money and weights: Wheat 35s. 1d. per qr.; barley 25s. per qr.; and oats 19s. 2d. per qr.

Supplies of wheat on passage show an increase on the week, but they are still very much smaller than usual:—

	Quarters.
Californian	180,000
American	380,000
Russian	376,000
Indian	226,000
Argentine	400,000
Australasian	50,000
Various	50,000
Total	1,662,000

Supplies of flour on passage have fallen to 288,000 sacks.

Of spring corn, expectations are as follows:—

Qrs.	Barley.	Oats.	Maize.
American	250,000	100,000	300,000
Argentine	—	15,000	305,000
Russian	250,000	165,000	5,000
Various	50,000	10,000	3,000
Total	550,000	290,000	608,000

Shipments last week were more liberal from America than they had been for a long time. Totals were: Wheat 326,000 qr.; barley 50,000 qr.; oats 132,000 qr.; maize 102,000 qr.; and flour 136,000 sacks. Argentina sent off 177,000 qr. of wheat, 261,000 qr. of maize, and 89,000 qr. of linseed.

OIL SEEDS.

Finest	48 to 52
Ordinary	40 to 44

TO-DAY'S MARKETS.

MARK LANE, MONDAY, November 20.

FIRST REPORT.

English wheat to-day commanded full prices, both for white and red sorts. Fine types from Manitoba were in request by reason of their strength. Prices ranged from 32s. 9d. to 34s. 9d. Argentine and New Zealand sorts favoured holders, 34s. and 32s. respectively being paid for good samples. No Bombay or Calcutta wheat was on offer off stand, but Kurrachee was obtainable at about 32s. 6d. per quarter. Russian wheat was a little firmer, but this branch of trade just now varies daily with the political telegrams. English barley was steadier, with rather more purchasing, both on the part of brewers and on that of buyers of feeding barley. Russian sorts were in fair request at 20s. to 20s. 6d. per qr. Persian barley was 6d. dearer on the week. Indian dun peas are 1s. dearer on the week. Oats have again rallied, and to-day prices were in sellers' favour for sound American and Russian. Beans were 1s. dearer for the chief foreign sorts, all of them being scarce, and some hardly obtainable at all. English rapeseed advanced 2s. per qr. on the week. English rye was rather dearer, 23s. to 24s. being paid. Maize on spot was dear, and buyers showed reserve. The high price asked for linseed cake was a feature of the market; about eight guineas per ton being paid for the finest. Cottonseed cake was firm in sympathy, but not always quotably dearer.

CLOSE OF THE MARKET.

THE MARKET CLOSED RATHER FIRMER THAN IT OPENED.

THE FLOUR TRADE.

MARK LANE, MONDAY, November 20.

LONDON FLOUR.

Household flour today receded 3d. per sack and carried with it, in its decline, Town Whites, No. 2 Households, and the two grades of home meal. Country flour was in good retail request and maintained the currencies of the 13th. Russian and Argentine flour samples have been getting scarcer every market since October; at last the whole supply seems exhausted so that quotations are no longer possible. There were no changes today in the price of American flour of good bakers' quality. For cheap feeding flour known as "Red Dog," the improved demand of an approaching winter led to 6d. per sack more money being obtainable. The market for bran and pollard middlings and barley meal appeared to be hardening. There is a steady increase in the supply of flour from the Canadian and Manitoba mills. Fine patents made 28s. per sack, and are quoted 27s. 6d. cost, freight, and insurance for December shipment.

LONDON TERM MARKET.

This market is open to elected members only and is held at the Baltic Club, St. Mary Axe. No business except for future delivery is done, and the smallest quantity that can be purchased is 1,000 quarters, or 4,800 cental.

Prices quoted on Saturday at the close of the week's trade were as follows:—

WHEAT (per cental).

No. 2 American Red	7s. 3d.	Nov. delivery.
,, ,,	7s. 0d.	Dec. ,,
,, ,,	6s. 11d.	Jan. ,,
,, ,,	6s. 11d.	Mar. ,,
,, ,,	6s. 11d.	May ,,

MAIZE (per cental).

American	4s. 0d.	Dec. delivery.
,,	4s. 1d.	Jan. ,,
,,	4s. 4d.	Mar. ,,
,,	4s. 4d.	May ,,

Prices to-day were unchanged from Saturday. The American telegram was rather a weakening influence, but futures were not offered at any quotable reduction here.

HOPS

Canterbury. Saturday.—A good trade continues, and prices have advanced several shillings for the best qualities, large lots being sold at an average of 65s per cwt. for which hitherto only 52s has been offered.

London. Monday. — W. H. and H. Le May, 67, Borough, London, report: There is a continued demand for all classes of English hops, and the market is being cleared.

GRAIN AND FLOUR FACTORS REPORT.

Offals.—Bran continues in good demand; prices unchanged, but firm. Flour.—The tone of the market has been quiet, buyers holding aloof and purchasing only for immediate requirements; prices, upon the whole, rather easier.—GREENHILL BROTHERS (Belfast).

Flour.—Demand keeps pretty fair, and prices are steady. Grain. Indian corn continues scarce, but, of course, the high price makes the demand very small. Plate maize is dull at 14s. 6d. Scotch oats are offered more freely, and the poorer qualities are cheaper. Indian grains have all been actively traded in at advancing prices. Beans firm, both for foreign and English. Oilcake scarce. Oatmeal steady. Mill Stuffs.—Bran and thirds very scarce. MCKINNON AND MCDONALD (Glasgow).

Flour.—Trade to-day has been quiet but steady, and last week's prices are fully maintained.—T. S. MEDILL AND SONS, LTD.

Arrivals of wheat and flour are moderate. Trade is firm, and prices of last Monday are fully supported. Maize and barley unchanged. Oats 3d. per quarter dearer.—COVENTRY AND SHEPPARD.

Milling Offals.—There is no change to record in the trade for Offals, which remains very firm, with prices against buyers.—JOHN BAWCOMB AND CO.

FEEDING STUFFS.

London, Monday.—Linseed cake: Though trade is not as good as it should be at this period, demand has been fair, and with an advancing linseed market, coupled with the Continent purchasing Americans from the U.K., prices are firm and advancing. Undecorticated cotton cake: Compared with other feeding stuffs these must be relatively very good value at so low a figure. Trade good and values inclined to advance. Linseed: Buyers have been purchasing very freely, especially for feeding purposes, and market is strong and advancing.

English Linseed Cake	ex mill	8 — 2	6
American Calcutta Linseed Cake	ex quay

ROBERT AND JOHN HEWETSON.

THE BALTIC. 1 p.m.

STATE OF TRADE.

There were no particular changes in cargoes this morning. The market is fairly confident for all futures. All Indian cargoes may be called decidedly firm. Argentine linseed cargoes and cargoes of Egyptian cottonseed are perhaps a little weaker from Saturday.

BUSINESS DONE.

WHEAT.—Odessa Ghirka, 32s 9d per 492lb., prompt shipment; No. 1 Manitoba, 32s 9d per 480lb., on passage; No. 3 Manitoba, 32s 3d per 480lb., on passage; Red Walla, 32s 6d per 500lb., December shipment.

BARLEY.—Kustendje, 20s 9d per 400lb., prompt shipment; Odessa, 19s 9d per 400lb., prompt shipment.

OATS.—American, 16s 6d per 320lb., prompt shipment.

PEAS.—White Indian, 28s 9d per 504lb., May shipment.

MAIZE.—American, 21s 3d per 480lb., January shipment.

LINSEED.—Calcutta, 40s 3d per 410lb., on passage; Libau, 37s 9d per 416lb., prompt shipment; Argentine, 38s per 416lb., arrived; Bombay, 41s 9d per 416lb., on passage; Bombay, 39s 6d per 416lb., April shipment.

RAPESEED.—Ferozepore, 38s 9d per 416lb., February shipment; Yellow Guzerat, 43s 6d per 416lb., December shipment.

POPPYSEED.—Calcutta, 42s per 377lb., December shipment.

COTTONSEED.—Egyptian, £5 15s per 2,240lb., December shipment; Bombay, £4 18s 9d per 2,240lb., on passage.

LOCUST BEANS.—Portuguese, £5 per 2,240lb., prompt shipment.

PROVISIONS.

London. Monday.—Bacon: The arrivals of bacon last week were from Ireland 2,592 bales, and from foreign ports 11,659 bales. There was a very steady bacon market last week, and, in view of shorter supplies, Danish was advanced 1s to 2s, and Irish fat stout 6s to 2s. Quotations ranged:—Irish, 60s to 64s up to 66s; Danish, 56s to 60s up to 66s; Canadian, 54s to 58s up to 60s. Butter: The butter market was steady: French, 98s to 112s; Danish, 124s to 125s; Russian, 94s to 106s; Argentine, 110s to 114s; American, 82s to 106s; Irish, 100s to 115s; Canadian, 100s to 110s; Australian, 96s to 114s. Lard: The lard market was steady: Irish, 56s to 64s; Danish, 52s to 58s; American, 38s 6d to 38s 9d.

SEEDS

London. Monday.—There is a fair trade passing in clovers and grasses at firm prices all round. New English reds are coming out extremely slowly; prices consequently not yet fixed.—JOHN PICARD AND CO.

CATTLE.

Metropolitan Market, Islington.

	Monday, Nov. 20, 1905. British.	Total. Nov. 21, 1904.	Monday,
Beasts	1,190	1,190	1,069
Sheep and Lambs	6,490	6,490	6,920
Calves	10	10	5
Pigs	—	—	39
Milch Cows	60	60	30

Quotations per 8 lb. (sinking the offal):—

ENGLISH

	Inferior.	Second.	First.
Beasts	2s 10d ... 3s 8d	3s 9d ... 4s 6d	4s 6d
Sheep	3s 10d ... 4s 8d	4s 8d ... 5s 10d	5s 10d

Milch cows, per head, £16 to £22.

British arrivals include as follows: Scotland, nil; Eastern Counties, 38; Midland, Home and Western Counties, 1,050; Devon, 35; Ireland, 67.

We note to-day an increase of 320 head in the number of beasts offered for sale compared with Monday last. The majority of the supply, as usual at this season of the year, was drawn from the Eastern Counties and Ireland, the latter supply consisting of 35 Waterfords and 12 Dublins, trade for anything choice, ruling firmer, late rates being well upheld. Trade for both prime and second quality English cattle was firmer, the tendency in regard to value being an upward one. Fat butchering cows and bulls were in larger numbers and met a firm trade at an advance of 2d. per 8 lbs. in value. A clearance will be effected to-day.

The following are top quotations per 8 lb. (sinking the offal):—

	To-day.	Monday, Nov. 21, 1904.
Devons	4s 4d to 4s 6d	4s 4d to 4s 6d
Herefords	4s 4d to 4s 6d	4s 4d to 4s 6d
Runts	4s 0d to 4s 4d	4s 0d to 4s 4d
Lincolns	3s 10d to 4s 0d	3s 10d to 4s 0d
Irish	3s 8d to 4s 0d	3s 10d to 4s 0d
Fat Cows	3s 6d to 3s 8d	3s 6d to 3s 8d

ex 4s 6d

ex 3s 8d

There was an increase of 1,090 in the number of sheep offered for sale to-day, compared with Monday last. For both wethers and ewes, trade was of a slow but firm nature, late currencies being well upheld. Scotch sheep met with a slight upward tendency in value, although not quotably so. Irish sheep showed a falling off in regard to numbers; nevertheless, late rates governed all transactions. The supply included 200 Scotch, 1,000 Irish, and 978 from the Eastern Counties. A clearance is not expected to be made in this part of the market.

Undermentioned quotations are at per 8 lb. (sinking the offal), and are for the best of each class penned:—

	To-day.	Monday, Nov. 21, 1904.
7½ to 8 st Downs	5s 8d to 5s 10d	5s 10d to 6s 0d
9 st Downs	5s 6d to 5s 8d	5s 6d to 5s 8d
10 st Half-breds	5s 4d to 5s 6d	5s 4d to 5s 6d
10 st Irish	5s 4d to 5s 6d	5s 2d to 5s 4d
10 st Down Ewes	3s 10d to 4s 0d	4s 0d to 4s 2d
11 st Half-bred ditto	3s 8d to 3s 10d	3s 10d to 4s 0d

Calf trade nominal.

No pigs on the market.

St. Ives (Hunts), Monday.—Beasts, 626; sheep, 399; pigs, 403. Beef, 7s 3d to 8s; mutton, 7s 7d to 10s 6d; pork, 6s to 7s. Fat and store cattle, fair trade; fat and store sheep and pigs, good demand; milch cows, short supply, prices £15 to £22.

London (Central), Monday. — Fair supplies. Slow demand. Beef: Scotch, 3s 10d to 4s 4d; English, 3s 2d to 3s 6d; American, 2s 9d to 3s 4d. Mutton: Scotch tegs, and wethers, 4s 4d to 4s 10d; ewes, 3s 4d to 3s 8d; English wethers, 4s 2d to 4s 8d; ewes, 3s to 3s 6d; New Zealand lamb, 2s 8d to 2s 10d; veal, 3s to 4s; pork, 4s 2d to 5s per 8lb.

FOREIGN

Deptford, Monday.—Beasts, 1,060. To-day's supply of beasts, compared with Monday last, showed an increase of 90 head, and consisted of 375 from the United States and 685 from Canada. Trade was of a fairly steady nature; besides the above 300 more Canadians were withheld for Wednesday. Best States were quoted at from 4s to 4s 2d; seconds, 3s 10d to 4s; Canadians, 3s 8d to 3s 9d; seconds, 3s 7d per 8lb. (offal given in). On Saturday 1,020 beasts from the United States and 150 from Canada were offered for sale, and with a firm and steady trade made from 4s to 4s 2d for the former; seconds, 3s 9d; Canadians, 3s 8d to 3s 10d; seconds, 3s 6d.

Liverpool, Monday.—There were a few more cattle in market to-day; demand rather better, but prices unchanged. Sheep supply also larger, trade slow; finished handyweights made about top quotations; strong and rough sorts against sellers. Beef, 5¾ to 4¾d; mutton, 9d to 6d per lb. At market—1,405 cattle and 5,658 sheep. Christmas market will be held Monday, December 11.

MANURES.

Liverpool, Friday.—Fertilisers are only in moderate demand for autumn deliveries, and values are unchanged. Feeding stuffs are in quiet consumptive request at late rates. Fattening cake, prime Liverpool make, in bags, £6 12s 6d to £6 15s; feeding or dairy cake, prime Liverpool make, in bags, £6 5s to £6 7s 6d; nitrate of soda, best quality, i.e., guaranteed 95 per cent., pure, in bags, £10 15s to £11; East India bone meal, in bags, £5 5s to £5 7s 6d; kainit, prime 23 per cent., sulphate of potash, in bags, £2 to £2 2s 6d; palm nut cake, prime, in bags, £5 15s; linseed cake, American thin oblong, prime, in bags, £8 5s to £8 7s 6d; ditto English, prime, in bulk, £8 7s 6d to £8 12s 6d; linseed meal (pure crushed) linseed., prime, in bags £14 to £15; cottonseed cake, N.A. decorticated, good ordinary, in bags, £6 17s 6d to £7; ditto English decorticated, prime, in bags, £7 7s 6d; ditto English undecorticated, prime, in bulk, £4 12s 6d to £4 17s 6d; ditto (crushed), 20 to 25 per cent. oil guaranteed, prime, in bags £7 to £7 2s 6d; maize germ meal, prime, in bags, £5 17s 6d; corn oil cake, prime, in bags, £6; rice meal, Rangoon, as imported, in bags, £6 2s 6d—per ton. Linseed, fine boiled feeding, in bags, £2 7s to £2 8s per quarter (416lb); cod liver oil, cattle feeding, prime, in casks, 4s 6d per gallon; treacle, feeding prime, in barrels, 4s 4½d to 4s 6d per cwt.; D.N.S. brand superphosphate of lime guaranteed, 25 to 27 sol., in bags, £2 to £2 2s; ditto, guaranteed, 30 to 31 sol., in bags, £2 5s to £2 7s; superphosphate of lime, guaranteed, 35 to 36 sol., in bags, £2 15s to £2 17s; basic slag, prime quality, guaranteed, 30 to 35 per cent. phos., in bags, £1 11s to £1 13s; ditto prime quality, guaranteed, 38 to 45 per cent. phos., in bags, £1 19s to £2; ditto finest quality, guaranteed, 42 to 50 per cent. phos., in bags, £2 2s to £2 3s—per ton, at depots inland.—H. JONES LANGAR AND CO.

LIVE STOCK AND MEAT TRADE REVIEW

(Written Specially for the "Mark Lane Express.")

Trade in London.

In reviewing the past week's cattle trade, we notice at Islington a rather smaller supply, the majority, as usual at this season being drawn from the Midland, Home, and Western counties. Irish were in shorter numbers, and consisted entirely of Waterford cattle. Trade on the first market day of the week, though slow, was fairly steady in regard to value; salesmen both asking and obtaining late currencies. On Thursday a small consignment of Shorthorns and Runts—viz., fifteen, were offered for sale, but met with absolutely no inquiry. On Monday, fat butchering cows and bulls were slow of sale, rates favouring the buyer to the extent of 2d. per 8 lb.; on Thursday the demand was steadier at late rates.

At the Foreign Cattle Market, Deptford, trade throughout the week was of a firm and steady nature, with an advance of from 1d. to 2d. per 8 lb. in value. The supply consisted of shipments from the United States and Canada. The total number on offer at both markets was 4,010, as against 4,597 during the preceding week, consisting of 950 British (decrease 80), and 3,060 foreign (decrease 507). The latter comprised 2,623 States and 437 Canadians. The following were the top rates obtained per 8 lb. (sinking the offal):—80 to 90 stone Devons, 4s. 4d. to 4s. 6d.; 90 to 95 stone Herefords, 4s. 4d. to 4s. 6d; 95 stone Runts, 4s. to 4s. 4d.; 100 stone Shorthorns, 3s. 8d. to 3s. 10d.; 90 stone States, 3s. 10d. to 4s. 1d.; 95 stone Canadians, 3s. 6d. to 3s. 8d; 90 stone fat cows,, 3s 4d. ex 3s. 6d.; 95 stone Irish, 3s. 8d. to 3s. 10d.

The sheep trade at Islington, with a considerable decrease in the supply, opened on Monday briskly, but, owing to the heavy downpour of rain, fell off later in the day; the tendency, however, in regard to value was an upward one. Irish sheep met a firm trade at an advance of 2d. per 8 lb. Scotch also shared in the generally better trade, middling quality were very little sought after. On Thursday, owing to the marked absence of retail buyers, trade was practically at a standstill; no decline in value, however, can be recorded. The total number penned at both markets was 5,410, as against 6,476 during the previous week, consisting of 5,410 British (decrease 800). No sheep were offered for sale at Deptford. Best pens made per 8 lb. as follows (sinking the offal):—7½ to 8 stone Downs 5s. 8d. to 5s. 10d.; 8 stone Scotch, 5s. 8d. to 5s. 10d.; 9 stone Downs, 5s. 6d. to 5s. 8d.; 10 stone Irish, 5s. 4d. to 5s. 6d.; 10 stone Half-breds, 5s. 4d. to 5s. 6d.; 10 stone ewes, 4s. to 4s. 2d.

Calves numbered five; trade nominal.

Pigs 40; trade slow, but firm; all cleared. Best beasts were quoted at from 4s. 4d. to 4s. 6d. per 8 lb.

Trade in the West.

Trade still continues very unsatisfactory all round, with no immediate prospect, as far as we can gather, of any great improvement. This cannot be ascribed to excessive supplies, which during the week have kept within moderate bounds, but arises no doubt from more remote causes, one of the chief being the general scarcity of money, which is having its effect not only on store things, but equally alike on butchers' stock. The only branch in which stores are commanding anything like attention is in milch beasts, which are steadily recovering from the depression which for a while seriously affected sales of this particular class of stock, which, as recently as a month since, declined to a very low ebb, without even then attracting buyers, though at the time we opined that this depression would only prove of a temporary character; and we are glad to find that the opinion we then expressed is being justified by the steadily improving prices milch beasts are now making, they having again crept up to £20 or £21 apiece, but this, we think, does not yet represent the limit, though evn now it takes an exceptionally good milcher to bring £21, there being any number of ordinarily good heifers, as well as cows, that can be acquired from £16 to £18 or £19. In barreners the depression is as acute as ever, and, where a few good, fresh-conditioned graziers are selling here and there at from £24 to £28 apiece, there are any number of plainer animals offering from £16 to £22 without attracting buyers. This is anything but encouraging, seeing that the barrener season may be said to have begun, one of the most extensive sales of the kind having been held at Dorchester on Saturday. But with beef down to such a disappointing level, no extraordinary high prices were anticipated by sellers to begin with, though it is hoped that an improvement may result as the season advances. This, however, will depend very largely upon whether beef in any way recovers or not, which is a very doubtful matter in the opinion of many. The closing sales of sheep for the present season continue to exhibit the satisfactory features to which we have previously referred, one of the most striking of which is that the inquiry continues as good as ever, and that many of the culls are making quite as much money as the bettermost drafts realised earlier in the season, draft ewes at this late period making 45s. to 48s. 6d. apiece; grazing ewes, 30s. to 38s.; chilver lambs, 32s. to 41s.; wether lambs, 35s. to 49s. 6d.; and mixed lambs, 29s. to 45s. 6d. And there is a quick sale for the sheep on the terms quoted.

In butchering stock, the best fat bullocks are holding their price very well, the best steers and heifers bringing from £15 to £21 10s. each (or about 10s. 6d. to 11s. per score for well-finished lots); cows and secondary qualities are difficult to sell at less money from 8s. 6d. to 9s. 6d. being the best price for this class of meat, purveyors being indifferent purchasers at the price. Calves are, from scarcity, keeping fairly firm, though we hardly consider even the best as dear as they were, it being only occasionally as much as 8½d. per lb. is made for ripe vealers, 8¼d. to 8d. being a more average quotation for prime qualities. Sheep, too, are not making the money they were, if we except a few picked lots of wethers of special quality and weight—which in some instances bring 8d. per lb., if not over. From 7½d. to 8d. is a more average figure for good, useful weights; but coarse sheep are much neglected, and plenty can be bought at 6d. to 6½d., it being a very good ewe that makes 7d. The sheet-anchor of the stock-owner, just for the time, is the small-weight porker, which commands more attention, and at a better price than almost anything else, from 10s. 6d. to 11s. per score being regularly made, and 10s. is a common figure; baconers selling at 9s. to 9s. 6d., and heavier weights, with a greatly restricted inquiry, not more than 7s. 6d. to 8s. 6d.

Trade in Scotland.

The number of fat cattle on offer this week has been rather smaller, but the general quality better. A slightly improved demand has been experienced for the best qualities, and, on an average, higher prices obtained. Secondary descriptions still continue to make very low prices. A very small supply of fat cows, and they made more money. There was a full supply of sheep, and a much larger proportion of the best quality on offer. These met a satisfactory demand, and previous week's prices easily obtained. Ewes scarcer, and 1s. a head dearer. Calves in average numbers, but the general quality not nearly so good. The best class sold dear. A smaller supply of fat pigs met a decidedly better trade. This being "Hallow Fair" week there have been large numbers of store cattle offered. The increased supply, combined with the exceedingly bad weather, caused trade to rule slow throughout, with the exception of the best class of cattle, which, owing to the bad grazing season, were shown in much smaller numbers than in past years. Notwithstanding the large supply, a wonderfully good clearance was effected, with the exception of poor-conditioned two-year-old cattle. For the time of year there was a fair supply of store sheep, and anything of a good class got readily and well sold. Milch cows of the best class made more money. Top price of cattle per live cwt., 38s.; current, 35s. 6d. to 37s.; Irish to 33s. Mutton, 7d. to fully 9d. per lb.—John Swan and Sons, Limited.

Trade in Ireland.

They say, "It is a long lane that has no turning," and apparently the "turning" came to the "long lane" of bad markets that Dublin has had on Thursday last; but whether it is only a temporary improvement or not remains to be seen. The very bad wet weather of Tuesday and Wednesday last week was probably the cause of there being such a big shrinkage in the supplies of both cattle and sheep, the former numbering only 3,654, or 710 of a decrease, and the latter 5,446 or 816 less on the week. The attendance of buyers was good, particularly of exporters, who were much more in evidence than for some weeks past. For some months, business in Dublin Market had not so healthy a tone as it had last Thursday. Trade opened well in the morning, and continued so till the close of the day, when very little was left unsold, and without the higgling which has been the rule of late. Prime cattle sold very freely, and for rough and inferior beasts there was decidedly improved buying. Best ox and heifer beef made from 48s. to 52s. 6d., and extra good lots up to 54s. per cwt.; second quality beef, from 45s. to 47s.; and inferior do. from 42s. to 44s. per cwt. It was calculated that prime beef, suitable for the English and Scotch markets, had advanced fully 10s. per head, ruling from 28s. to 30s. per cwt. live weights, while 1s. more might be got for very choice stall-feds. Medium-weight heifers of good finish were much looked for. The mutton market shared with the beef market in the improved trade. There was little or no change in the value of heavy sheep; but light-weight mountain wethers were in great deand. The inquiry for sheep for the London market was much more active, chiefly on account of the shortage in the supply of live foreign sheep during the week. Coarse sheep were prastically unchanged, and did not clear. Best wether mutton was worth from 6½d. to 7d. per lb.; ewe, 5½d. to 6½d; and inferior sheep from 5d. to 5½d. per lb. Large, heavy hoggets, suitable for the London and South of England markets, made from 44s. to 56s. each, and small to medium hoggets from 32s. to 42s. Prime veal in good demand at from 7d. to 8d. per lb.; but rough calves a slow trade at from 5d. per lb. upwards. Store cattle in the market were in small supply, most being entered in the large sales being held during to-day outside. For the best milch cows there was a good inquiry, prime springers and freshly-calved cows fetching from £17 to £21. In the pig market supplies were small in the early hours and the attendance of exporters large, resulting in a brisk competition which sent prices up about 3s. per cwt. over last day; but as the day wore on a good many lots came in, and prices went down to about the old level. Choice light-weight pigs sold at from 50s. up to 54s. per cwt. for very choice lots, coarse pigs from 36s. per cwt. upwards.

LONDON.

Islington, Thursday.—Supply of beasts, compared with last Thursday, showed a decrease of 20 head, majority consisting of fat butchering cows and bulls, which met slow but steady trade, with upward tendency in value, but not sufficient to quote. Fifteen prime quality beasts offered, but met absolutely no demand, consequently rates are unquotable. Top prices, fat cows, 3s 4d to 3s 6d; fat bulls, 2s 8d to 3s 2d per 8lb. Increase of 30 in number penned in sheep market, supply consisting entirely of Downs and half breds, trade for which was practically at a standstill, though no quotabe decline in value can be noted. Best pens made per 8lb as follows: 8 stone Downs, 5s 10d; 9 stone ditto, 5s 8d; 10 stone ditto, 5s 6d; 10 stone half-breds, 5s 4d to 5s 6d; 10 stone Down ewes, 4s. Calf trade not worth noting. Pig trade slow, but steady, at late rates, best breeds being quoted at 4s 6d per 8lb. Quotations per 8lb, sinking the offal:—Beasts, 2s 8d to 3s 6d; sheep, 3s 10d to 5s 10d; pigs, 2s 10d to 4s 6d. Total supply: Beasts, 80; sheep, 100; calves, 6; pigs, 40; milch cows, 5.

London (Central), Friday.—Supplies were on a heavy scale, but a quiet demand again prevailed, at about late prices. Arrivals of beef included 70 tons Scotch, 360 Liverpool sides, 3,800 hindquarters, and 2,000 forequarters American refrigerated; also 1,000 Argentine chilled hindquarters and forequarters. Quotations:—Beef: Scotch shortsides, 4s to 4s 4d; longsides, 3s 10d to 4s; English, 3s 2d to 3s 6d; American Deptford-killed, 3s to 3s 4d; Liverpool sides, 2s 9d to 3s 1d; American refrigerated hindquarters (best), 3s 3d to 3s 6d; forequarters, 2s 2d to 2s 4d; raucher hindquarters, 2s to 2s 4d; forequarters, 1s 9d to 2s; Argentine chilled hindquarters, 2s 2d to 2s 6d; forequarters, 1s 10d to 2s. Mutton: Scotch tegs and wethers, 4s 6d to 4s 10d; ewes, 3s 6d to 3s 8d; English wethers, 4s 2d to 4s 8d; ewes, 3s to 3s 6d; New Zealand, 2s 4d to 2s 8d. Lamb: New Zealand, 2s 8d to 2s 10d. Veal: English and Dutch, 3s to 4s. Pork: English, 4s 2d to 5s; Dutch, 4s 2d to 4s 8d per 8lb.

COUNTRY.

Ashford, Tuesday.—Beef dull, at last week's rates, best making 4s 2d to 4s 4d per stone, and cows 3s 8d to 4s. Small half-bred and Down mutton made 5s 2d to 6s; neat Kent, 5s to 5s 8d; large wethers, 4s 6d to 5s; and barrens, 3s 8d to 4s per stone. Veal cheaper, nothing reaching 5s per stone. Pork still dear, roasters making up to 4s 8d.

Basingstoke, Wednesday.—At Raynbird and Sons' sale-yard there was a very good attendance of buyers to meet a supply of 45 fat beasts, 69 calves, 402 fat sheep and lambs, 93 head of dairy and store cattle, 292 fat and store pigs, for which the following prices were realised:—Fat beasts, Shorthorn steers up to £19 10s, two-year-old heifers £15 5s, cows £13 10s, bulls £15 5s, Devon steers, three-year-old, up to £25 15s, two-year-old up to £20; the three prime Devon steers from W. Cory, Esq., made £21 10s, £24 10s, and £25 15s; fat calves 70s to £5, small 20s to 50s, fat hogs 65s to 87s 6d, porkers 38s to 55s, small 26s to 35s, store pigs 8s to 18s 6d, Down wethers and young ewes made from 48s to 56s, Ten months' old ditto at 50s to 56s, small 40s to 48s, sucking lambs 28s to 37s 6d, cross-bred Cheviot sucking lambs 28s, old ewes 30s to 38s, old rams 38s to 48s, Down ram lambs 40s to 60s. Good quality small finished fat beasts met a good inquiry, and were cleared at full prices; half-fat and inferior beasts were difficult to realise upon at low prices. The show of fat sheep and fat lambs consisted chiefly of choice quality Downs, for which there was a brisk demand both from local and distant buyers, the fancy lots making an advance, with a satisfactory clearance. A short entry of milch cows, which sold well, with an advance on last week's; store cattle a dull trade. Fat calves were cleared at late rates. Fat hogs and porkers met a brisk sale, and were easily cleared at late quotations. Fat sows also are in demand, and store pigs meet a steady sale. Ruling values:—Prime Devon beasts, 6½d to 7d; Shorthorn ditto, 6d to 6½d; bulls, cows, and inferior, 4½d to 5d per lb; best fat sheep, 8½d to 9d; secondary ditto, 7½d to 8d; old ewes, rams, and inferior sheep, 6½ to 6¾ per lb; fat calves, 6½d to 8d per lb; fat hogs, 9s 6d to 10s 6d; porkers, 10s 6d to 12s 6d per score; fat sows, 7s 6 to 8s 6d.

Berwick, Saturday.—A total of 793 beasts, and many were in superior condition. Attendance of farmers and buyers fair, and trade good. Calves, £4 17s 6d to £6 5s; stirks, £7 10s to £10 15s; two-year-olds, £11 5s to £14; three year olds, £13 5s to £16; Shorthorn bulls, £8 to £13.

Birmingham, Thursday.—Fair supply of pigs; small supply of beasts and sheep. Trade fair for pigs, but slow for beasts and sheep. Beef, 4½d to 6½d per lb; mutton, 6d to 8¾d per lb; bacon pigs, 8s 9d per score; porkets, 11s 6d to 11s 8d per score; cutting pigs, 10s to 10s 3d per score; sows, 8d to 8s 3d per score.

Bristol, Thursday. Beef, which was in fair supply,

was in limited demand, and trade dull at late rates for best quality and an advance of 1s per cwt. for secondary. Sheep were fairly numerous, but business slow at current rates for all grades except ewes, which realised 1s per lb more. Pigs were more plentiful, and porkers declined 3d per score.

Canterbury. Saturday.—Halfbred tegs were selling at 42s, and old ewes from 33s to 40s. Bullock trade slackening off, yearlings making from £8 to £9; two year old heifers, £11 to £12; and cows and calves, £14 to £19 10s.

Calne, Friday.—Present prices for prime pigs, in lots of not less than ten, on rail within 100 miles of Calne.

Prime Stores.	Thickness of fat in any part of Back.	Price per Sc. s. d.
6sc. 10 lb. to 9 sc. 10 lb...	2½ in. and under	9 6
Under 10 sc. ...	...Not exceeding 2½ in. ...	9 6

Under 12 sc.	3 in. ...	8 6

C. AND T. HARRIS AND CO., LTD.

Carlisle. Saturday.—The supply on the Sands consisted of 150 head, all of which were wintering cattle. Buyers were few, and a very slow trade resulted at £7 10s to £10 10s, and up to £14 for heifers; Polled bullocks made £7 10s to £10 10s.

Chester, Thursday.—Supplies were good, and the attendance of buyers fair, but business was slow and disappointing to sellers. As a result, prices were somewhat irregular except for the choicest lots, which maintained their values. Milch cows realised £18 to £22, calvers £14 to £19; heifers, £9 to £14; barrens, £10 to £13; and stirks, £6 to £10.

Colchester. Saturday. Grass beef sold at from 4s 4d to 4s 6d; mutton, from 5s 6d to 6s; and pork, 9s to 9s 6d. There was a want of mutton, but otherwise the supply was good, as also was the trade.

Doncaster, Saturday.—Very large supply of cattle, but only a moderate attendance, and trade rather limited. Milch beasts, £16 to £22; bullocks, £12 to £16; heifers and drapes, £11 to £15; stirks, £7 to £9; young stores, £6 to £8 each. Small show of sheep and little doing. Hoggs, 38s to 44s each.

Dorchester. Saturday.—Today was a very busy time at the cattle market, this being Messrs. T. Ensor and Sons' annual county barreners sale. In proof of the extensive character of the sale we may state that there were over 300 head of barreners stalled, to say nothing of the usual supplies of other cattle. In spite of the heavy snowstorm, which somewhat interfered with business, there was a very large attendance, including many outside buyers from all the adjacent shires, especially from Somerset and Devon. There had been serious misgivings of a poor trade, but these were conclusively belated, as all the best things in the way of graziers met with an exceptionally brisk demand, and mediums also sold very well; in fact the huge entry, with one or two previous selections, was effectively cleared. Devons made £18 to £24 per pair; Herefords, £22 to £28; shorthorns, £28 to £31 10s; and others from £16 to £25. Milch beasts sold more freely at from £15 to £20 5s each; and in-calvers from £9 to £12 15s. Fat beasts sold steadily, choice grades bringing full late rates, £16 to £20 10s.; fat cows a quicker trade. Very little doing in mutton, which is making late rates.

Dublin, Thursday.—Numbers in market: Beasts, 3,654, decrease 710; sheep, 5,446, decrease 816; calves, 30, decrease 11. More animation in the demand for cattle, but prices still continue at the lower levels, reached during the last few markets. Choice qualities scarce, and were briskly competed for; secondary and inferior sorts made an early clearance. The sheep trade also presented a healthier tone all round, with prices on a firmer basis. Cattle, live weight (best), 27s 6d to 31s per cwt.; secondary and rough sorts, 24s to 27s per cwt. Mutton, dead weight, 5½d to 7¼d per lb.—GANLY, SONS, AND CO.

Edinburgh. Wednesday.—There was a moderate show of store sheep, which met a good trade at former rates; Cheviot ewes, 22s to 28s; Cheviot dinmonts, 25s to 29s; black-faced dinmonts, 22s to 30s each. Cattle met a slow trade; Polled bullocks, £14; horned to £13 5s; stirks, £8 10s; Shorthorn cows to £26; Ayrshires to £19; crosses to £24 each.

Exeter, Friday.—Large supply of beasts; good quality and brisk demand. Best steers and maiden heifers, 11s; cows, 10s to 10s 6d. All the best were cleared. Smaller supply of sheep; indifferent quality, and slow demand. Hogs, 8½d; wethers, 8d; lambs, 32s to 36s; many unsold; ewes, 6d; calves, 7½d.

Glasgow, Wednesday. — Prime cattle in request; others hard to sell; prices steady. Top Scotch cattle, 63s; secondary, 56s to 58s; top Irish, 55s per cwt.; top hoggs, 9d to 9¼d; top wethers, 8d to 8½d; ewes, 5½d to 7d per lb. Dead meat met a quiet sale, but values were steady; best Scotch beef, 6d; best States, 4¾d; best Canadian, 4½d; best hoggs, 7¾d per lb.

Gloucester, Saturday.—Bruton, Knowles and Co., report their sales as follows: 90 cows and calves, with improved trade, the highest prices being £22 10s, £21 15s, and £21 5s. A shorter supply of store cattle, with practically no demand.

Hereford. Wednesday.—Beef trade showed no recovery over the month; supply large and sales none too brisk. Bullock and maiden heifer, 6d to 6½d per lb. top price; fat cows, 4½d to 5d per lb. A large supply of store cattle, which met with a slow trade, although there was more inquiry for useful strong cattle for Northamptonshire and Leicestershire. There was a slight improvement in the sheep trade, the supply being of a better class than of late. Fat wethers, yearling ewes, and fat lambs made up to 8d per lb., fat ewes, 6d to 6½d per lb. There were not so many store lambs, but there was a fair demand for them. Calves in small supply, fat ones 6d to 7d per lb.; small rearing calves slow. Pigs in good demand; porks and bacons up to 6d per lb., and stores remaining firm.

Ipswich. Tuesday. Messrs. Robert Bird and Sons report a large supply of yarded cattle, but the season for grass-grazed cattle is nearly over, and numbers are falling off considerably. All well-finished yard cattle of medium weights sold freely from 8s 9d to 8s 3d per stone; other descriptions were slow at from 8s to 7s 6d. A large show of grazing cattle. At the special sale over 500 were entered, including heavy consignments of North-country Shorthorns of choice quality, Polled Scots, Highland Scots, and Irish. There was a large attendance of buyers and a fair selling trade at the low rates which have been current the last few weeks. Polled two year-olds to £12 5s; Shorthorns, 12 months old, £12 2s 6d to £8 10s; 16 months, £8 5s to £7; Westmorland calves, £6 7s 6d to £5 17s 6d; Polled Scots, £9 10s; Highlanders, £5 7s 6d to £7 7s 6d. Cows and heifers were well represented; the best calved animals were in good demand, but secondary sorts were dull and cheaper. Cows to £23 15s, heifers to £21. Fat sheep were scarce and dearer; half-bred hoggets to 52s, Suffolks to 55s. Grazing sheep met a good trade, one lot of two-score Suffolk hoggets making 51s to 43s 6d. Fat and store swine in strong demand, values quite firm. Number at sales and market: 1,253 cattle, 1,267 sheep, 1,372 swine.

Leicester. Saturday.—Full consignments of home-bred stock for the season. Buyers were well represented, and trade ruled steady at very low rates for store stock. Milch cows of choice quality were scarce, and made £20 to £24; good lots, £17 10s to £19; secondary, £15 to £16; Polled bullocks, £13 to £15; Irish Shorthorns, £11 to £13; Welsh cattle, £9 to £12; young stock, £4 to £7; and calves, 15s to 40s each.

Lincoln. Friday.—At the Store Stock Market there was a large show of beasts, which sold at £8 to £10 for yearlings, £12 to £16 for two-year-olds, and £10 to £12 for drape ewes. Trade was slow. The sheep pens were not well filled, but those shown met with a quick sale, hoggs making 38s to 43s.

Lynn, Tuesday. Rather larger show of fat beasts, trade slow, 7s to 8s per stone. Average show of stores, this being fair day. Trade slow; £6 to £17 each. Short show of fat sheep made late rates, 9s to 10s per stone. Very few stores, 40s to 45s each. No lambs.

Manchester. Friday. Beef: Firsts, 4¾d; seconds, 3¾d to 4¼d; thirds, 2¾d to 3¼d. Mutton: Firsts, Cheviots, Scotch, 7¼d, and others, 7d; seconds, 6d to 6¼d; thirds, 5d to 5½d. Veal: Firsts, 6¾d; seconds, 5¼d to 6¼d; thirds, 4¾d to 5¼d. Bacon pigs: Firsts, 5¾d; seconds, 4¾d to 5¼d; thirds, 3¾d to 4¼d. Porket pigs: Firsts, 7¼d; seconds, 6¾d to 7d; thirds, 6¼ to 6¾d per lb.

Norwich, Saturday.—Business transacted in dense fog. Fat beasts, which were in good supply, met a fair trade, prices averaging 7s 6d to 7s 9d per stone. Trade slow for store animals, which, considering the late period of the year, were penned in large numbers, and prices ranged from £6 to £17 per head. Short supply of store sheep, for which there was a fair demand, hoggets making 35s to 46s per head; best descriptions of fat sheep realised 10s to 10s 6d per stone. Ready demand for fat pigs at 7s to 7s 3d per stone; supply limited.

Nottingham. Saturday.—Trade in milch beasts was slow, best realised £18 to £20; in-calf heifers to £18; strong heifers and steers, £10 to £14; young beasts, from £6 to £9.

Preston, Wednesday.—There was an all-round improvement in trade and a good supply of cattle. Cows and bulls made 5¼d; bullocks, 5d to 5¾d; country heifers, 6¼; hoggs, 8¼d to 8¾d; tups, 5¼d to 6d; ewes, 6d to 7d; lambs, 8¼d to 8¾d. The show of sheep was rather less than usual, but there was an improved demand.

Retford, Saturday.—First-class milch beasts in good demand, but scarce, and worth £18 to £20; secondary sorts, £14 to £16; steers and heifers, £12 to £13; yearlings, £5 to £7; and calves, 40s per head.

Romford, Wednesday.—Average supply of fat beasts, trade better. Best animals, 4s 2d to 4s 4d; middlings, 3s 10d to 4s per stone. Calves scarce, trade better, at 5s 2d to 5s 4d per stone. Sheep scarce, trade better; best, 5s 10d to 6s; middlings, 5s 4d to 5s 6d; ewes, 4s to 4s 2d per stone. No store beasts offered. Pig trade unchanged.

Shrewsbury, Tuesday.—Usual supply of store, but smaller of fat cattle. Moderate attendance of buyers, and prices were well maintained. Quotations:—Beef, 5¾d to 7d per lb.; mutton, 7¼d to 9¼d per lb.; veal, 8d to 9¾d per lb; porket pigs, 10s to 10s 6d per score; bacon pigs, 8s 9d to 10s per score. Cows with calves up to £24 17s 6d.

Thame, Tuesday.—There was a capital attendance of buyers from all parts. Beef was a decidedly better trade; choice quality sells readily at advanced prices; secondary quality moved off rather better, but half-fat beasts were unsaleable. Sheep continue scarce, and are easily disposed of, late rates being maintained. Veal and pork maintains late high prices. Bacon hogs slightly lower; store pigs in request. Messrs. Bond and Burrows' sale comprised 72 fat beasts, 84 fat sheep, 141 fat and weaning calves. Fat oxen made from £15 to £20 2s 6d, fat heifers £15 to £20 5s, fat wethers 55s to 60s, fat ewes 40s to 50s, fat calves £3 to £4 10s, weaning cow calves 25s to 60s, bull calves 10s to 50s, bacon hogs £3 10s to £5 porkers, 26s to 55s, store pigs, small 10s to 18s, large 26s to 40s.

Truro, Wednesday.—Business fairly brisk, attendance very good. Fat bullocks, 5s to 5s 6d per cwt; barreners, 40s to 45s per cwt; store bullocks, 20s to 45s; cows and calves, £10 to £17 each; rearing calves, 20s to 35s; wethers, 7d to 7½d per lb; ewes, 6½d to 7d; lambs, 7½d to 8¼d; pigs, 8s 6d to 35s each; beef, 6d to 8d per lb; mutton, 5d to 8d; lamb, 6d to 8d; veal, 6d to 8d; pork, 6d to 8d; bacon, uncured, 6d to 7½d; cured, 7d to 9d; pork carcases, 4½d to 5¼d. Number in cattle market: Bullocks, 290; calves, 43; sheep, 227; pigs, 147.

Wolverhampton, Wednesday.—Moderate supply all round; fair trade for best. Quotations: Beef, 5½d to 6¾d per lb.; mutton, 6d to 8¼d per lb.; veal, 6¼d to 7¾d per lb.

Worksop, Wednesday.—Short supply of stock, with beef up a trifle. Best beef, 7s to 7s 6d; secondary qualities, 6s 3d to 7s per stone; best Southdown wethers and crossbreds, 7¾d to 8¼d; ewes, 5¼d to 6¾d per lb.

Yeovil, Friay.—Cows with calves made from £14 10s to £16 for secondary, and £17 10s to £21 for best; heifers with calves, £15 to £19 10s; incalvers, £13 10s to £15 10s; barreners, £10 5s to £14 10s; yearlings, £5 5s to £7 10s; steers, £8 10s to £10 10s; ewes, 34s 6d to 40s; wethers, 35s to 42s; lambs, 30s to 33s.

WET GRAINS.

London. Saturday.—Wet grains: There has been no particular change during the week, and prices range from 16s 6d to 18s ale, and 13s 3d to 14s 6d porter per ton. Wet distillers' grains still maintain their price at 33s to 32s 6d per ton. Pressed white distillers' meal, 32s 6d per ton. Dried grains: There is still a good demand, and, as all factories are closed down, an advance may be looked for before long. Prices are:—Ale, 100s; mixed, 95s; porter, 92s 6d; and distillers', 115s per ton. Dried distillery meal, containing 45.80 per cent. of oil and albuminoids, 117s 6d per ton. All the above are free on rail London.—HAMLYN AND CO. 37 and 38, Mark Lane, E.C.

WOOL.

Halifax. Saturday.—The position of the wool market is generally firm and unchanged. English and home-grown wools command a ready sale, with prices in some cases slightly improved.

London. Saturday.—English per pk. of 240 lb.—Fleeces, S Dn. Hogs, £14 to £14 10s; halfbred hoggs, £12 10s to £13 10s; wethers, £12 10s to £13; Kent fleeces, £12 10s to £13; South Down ewes and wethers, £13 10s to £14 10s; Leicester ditto, £12 to £12 10s. Colonial—per lb.: Vic.—Fleece super, 1s 11d to 2s 1d; scoured good, 2s 1d to 2s 2d; scoured average, 1s 11d to 2s; greasy average to fair, 1s 1½d to 1s 2½d; N.S.W. Scoured, aver., 1s 2¼d to 1s 2½d; greasy average, 11½d to 1s.; S. Aus., greasy average, 9d to 9½d.; N.Z. Scoured average, 1s 0¾d. to 1s 10d.; greasy aver., 10¾d to 11½d.; Cape, scoured super, 1s 10d to 1s 11d; fleece average, 10d to 10½d; greasy average, 7½d to 8½; Natal—Scoured, 1s 5d to 1s 6d; greasy average, 8¼d to 9½d. Crossbreds—Urs.: Vic. good to super, 1s 2d to 1s 3d; New Zealand fine, 1s 2d to 1s 3d; medium, 1s 0½d to 1s 1½d; coarse, 11d to 1s.

FEEDING STUFFS.

Hull, Tuesday.—Linseed: Linseed has ruled quiet, with an easier tendency throughout the week. River Plate is offered at 27s 6d spot and up to November-December; new crop, January-February, sold at 26s 6d to 26s 9d. Cottonseed: There has not been much doing during the past week, the market for Egyptian remaining quiet, on spot, occasional sales of old crop made at £5 13s 9d, and new at £5 16s 3d, passage done at £5 15s, and £5 14s 9d accepted November, also December-January, whereof offers to-day, value £5 16s. Linseed cakes: A quiet demand, but prices keep firm, with no undue pressure to sell in view of the present poor crushing margin. Russians are practically cleared spot, while, to arrive supplies remain very uncertain. Cotton cakes: Deliveries good, but fresh sales are not, at the moment, numerous. Prices very firm. KEIGHLEY MAXSTED AND CO.

London, Thursday.—Linseed: The market has been strong this week owing to the absence of sellers from India, and unfavourable crops reports from the Argentine. Calcutta London, spot, none; afloat, 46s. October-November 39s 9d, November-December 38s 6d, April-June 37s 6d. Hull: Firm but inactive. La Plata spot 38s, passage 38s 3d, October-November 38s 3d December-January 37s 6d and January-February 37. Rapeseed very firm, as India has not been offering lately. Brown Cawnpore November-December 40s. Ferozepore November-December 40s. Cottonseed has had a small decline both in Egypt and here. London, passage £5 16s 3d; November-January £5 13s 9d; Hull, spot and passage, £5 13s 9d; November-January, £5 11s 3d. Oil cakes.—Linseed cakes: Firm. London made £7 17s 6d to £8. Cotton cakes firm. London made £4 17s 6d to £5. —THE PRODUCE BROKERS CO., LTD.

Mark Lane, Monday.—Linseed cakes: There is a continued upward movement in prices, regardless of the very small demand, but with seed fully 4s per qr dearer English crushers are compelled to raise their limits, while on the other hand the Continent is still absorbing all foreign descriptions. Russians may be bought at last week's prices. American are obtainable without alteration in value. East India seed pures unchanged, London-made, being in small production, command extreme value of 5s per ton more money. Cotton cakes: Egyptian are scarce on spot and holders remain firm at 1s 3d per ton more, but in November-April positions there are sellers at rather less money. English move off steadily at a rise of 2s 6d per ton. Decorticated attract considerable attention, being exceptionally good value at £6 17s 6d for cake and meal and £5 5s for special digestive meal. Rape cakes: Nothing offering. Maize germ meal: A steamer parcel of white American shortly due offers at £5 17s 6d ex ship, while English makes maintain their prices of £5 17s 6d to £6. Maize gluten meal remains nominal at £6. Rice meal: Landed lots of Rangoon are available at £5 to £5 2s 6d, but some steamer parcels for arrival in second hands are quoted at £4 16s 3d to £4 17s 6d ex ship terms. Broken Rangoon rice in bags is cheaply offered at £4 15s per ton. Locust beans are fully as dear at £5 5s per ton for whole and £5 15s per ton for kibbled. Nitrate of soda is without change at £10 15s per ton ex quay.

—PINNOCK BROS., 30, Mark Lane, E.C.

MOLASSINE FEEDING MEAL, packed in bags of 1 cwt each. Price per ton, £6 15s., in ton lots and upwards. £7 10s. per ton in less than ton lots. Free on rail, Liverpool or London. Uniform delivered price for small quantities, 10s. per bag of 1 cwt.

HAY AND STRAW.

Birmingham, Friday.—Small supply; trade quiet. Quotations:—Hay, £3 10s to £3 12s 6d per ton; clover, £3 17s 6d per ton; straw, 2s 4½d to 2s 5d per cwt.

Derby, Friday.—Best clover, 80s to 90s per ton; straw, wheat, 60s to 70s per ton; pressed, 80s to 85s per ton; oat, 50s to 60s per ton; peat moss litter, 35s to 40s.

Manchester, Friday.—Hay, 3¾d to 4¼d; over, 5¼d to 6d; straw, wheat, 3¾d; oat, 3¾d per stone.

Whitechapel, Saturday.—Fair supplies met a continued quiet demand at late rates. Best clover, 72s to 80s; inferior ditto, 60s to 70s; specially picked hay, 75s; good ditto, 65s to 72s; inferior ditto, 45s to 60s; mixture and sainfoin, 67s to 72s 6d; straw, 27s to 36s per load.

POTATOES.

Borough. Saturday.—A good supply was to hand, but trade ruled slow. Best Scots, 60s to 65s; Blacklands, 50s to 55s; Scotch, 60s to 70s; Dunbars (grey seed), 90s to 95s per ton.

Goole. Wednesday.—Fairly good attendance, but very little business being. Plenty of potatoes on offer. No alteration in prices. In the retail market potatoes are still selling at 4d to 5d per stone.

Spitalfields. Saturday. — Supplies of English and Scotch are heavier, and met a very quiet sale. Royal Kidneys, 60s to 65s; British Queens, 55s to 65s; Blacklands, 55s to 60s; Up-to-Dates, 65s to 70s; Scotch Dates, 65s to 70s; Queens, 60s to 65s per ton.

Midland Notes.

Winter is upon us again; to-day one has seen just an occasional flake of snow, and the temperatures at night are very low. The change is an agreeable one, for the damp air and sodden ground have been chilling and depressing, and the flocks have suffered discomfort from wet fleeces for many days together. Let us hope this sharper and more bracing atmosphere will stimulate the markets, as it does man and beast; they need it badly enough.

Another familiar figure will be missing from the Birmingham Cattle Show this year that of Sir Henry Wiggin, whose funeral took place yesterday. The owner of Metchley Grange was not generally associated with agricultural pursuits, but he had been a useful member of the Birmingham Agricultural Exhibition Society's Council ever since 1853, and in 1893 he was its president. For many years he spent all the time he could spare from business and Parliament on the Lea End Farm, near Alvechurch, which he farmed as a hobby; and he helped to set on foot the Midland Farmers' Club, which was afterwards absorbed into the Warwickshire Chamber of Agriculture.

The site of next year's Warwickshire Show still remains undecided, the one thing that seems certain being that the fixture will not be held at Rugby. The local Association has never recovered its financial position since it gave all its funds to the County Association on the occasion of the visit of ten years ago; and, while local opinion is averse from an abandonment of the Rugby Show another year, until it has made up its lost ground, a clashing of two fixtures would be still more unfortunate. Rugby, however, is the only town in the county with an agricultural show of its own, so that the County Society need fear no such difficulty in any quarter.

Co-operation in one way or another is so common in the county and round about that Mr. Yerburgh, M.P., had an easy task yesterday to persuade the agriculturists of the Tewkesbury district to adopt the principles of combined effort in buying and selling. Mr. Yerburgh had a specially cordial greeting as a distinguished relative of Canon Yerburgh, the vicar, who is known and respected by all in the quiet and ancient little riverside town, and his way was made clear for him by the Earl of Coventry, whose assistance in such a movement is an assurance of success. Lord Coventry carried his hearers with him in his complaint of the effects on agriculture of "a superabundance of red tape and a multiplication of local authorities and officials with increasing salaries." No doubt, as he says, the affairs of the country were administered quite as well thirty years ago, and at far less cost; but having installed all our officials and taught them to rely on one another, how are we to the simpler practice of our fathers? To show the way would be to earn the gratitude of every rural ratepayer.

Staffordshire adds its tale to the growing list of County Council complaints anent the cost of motoring. In Staffordshire, the Roads and Bridges Committee reports, there are 602 miles of rural highways, and 601 of them are so constructed as to be liable to injury by heavy motor traffic. The repair of 8½ miles which were badly damaged cost £1,350, of which only £695 could be recovered from those who owned the locomotives, the rest, of course, coming mostly from the pockets of Staffordshire farmers; and, considering their much greater number, and the manner in which the pneumatic tyres act on the binding of macadamised roads in wet weather, it seems not unlikely that more injury is caused to the surface of thoroughfares by the ordinary cars of every-day use than by those which are legally recognised as heavy.

The sugar bounties are gone, but the benefit to farmers which was prophesied for their abolition is not yet in sight, for beet sugar manufacturing enterprise hangs fire. The indefatigable Mr. Sigmund Stein, of Liverpool, has been at Kidderminster this week to urge the venture upon the Local Chamber of Commerce, and a resolution in favour of a local sugar factory being built was passed, though £60,000 was named by Mr. Stein as the sum necessary to start one on a sufficiently large scale to be profitable. The Midlands can grow the roots well enough, as Lord Denbigh's experiments at Newnham Paddox show, and the report of the Kidderminster Committee, which is to consider and report on the question of putting up a factory, will be awaited with interest.

November 16, 1905.

Sheep and Cattle Feeding Experiments.

A report has been issued by the Edinburgh and East of Scotland College of Agriculture on sheep and cattle feeding experiments conducted in 1904-1905 under the superintendence of Mr. W. Bruce, the senior lecturer in the county work department of the college.

Sheep Feeding Experiments.

These experiments were carried out on the farm of Mungoswells, near Drem (Mr. Riddell), during the winter 1904-05 for the purpose of re-testing the results obtained in an experiment which was conducted the previous winter at Pathead, Cockburnspath. In the first experiment 228, and in the second 132, sheep were divided into six lots. The sheep used in both cases were "half bred" hoggets. The chief objects of these experiments were to discover the most profitable feeding-stuff to use along with hay and turnips for sheep feeding, and to test whether their use effected any saving of turnips. The second experiment had practically in every respect confirmed the first. Bombay cotton cake at £4 6s. 8d. per ton in the first experiment and £4 12s. 6d. in the second had turned out the most profitable feeding stuff. A striking feature in both years had been the quality of the mutton produced by this cake. Excepting lot one, it secured the highest price in the London market. Similarly, linseed cake at £7 6s. 8d. and £7 9s. 7d. came next to Bombay cotton cake. This feeding stuff had given the greatest increase in both years, but not at the least cost per unit. A mixture of equal parts of Bombay cotton cake and dried distillery grains had in both years been a successful feeding stuff. But, nevertheless, the substitution of dried grains at £5 1s. 8d. for Bombay cotton cake in the first experiment reduced the profit as compared with the Bombay cotton cake itself. The same happened this year with dried grains at £5 7s. 1d. At current prices this popular feeding stuff seemed to be dearer than either Bombay cotton cake or Linseed cake. A mixture of equal parts of decorticated cotton cake and dried grains had in both years done indifferently, and taken only the fourth place. The monetary difference between this mixture and Bombay cotton cake had amounted to about £1 per acre of turnips consumed. In the first experiment a mixture of wheat, cotton cake, and seed, blended to imitate the composition of linseed cake, did so badly that it was not continued. In the second experiment Egyptian cotton cake was used instead. This cake, at £5 4s. 7d. per ton, had been the least profitable of the feeding stuffs tested in the experiment. The difference between it and Bombay cotton cake at £4 12s. 6d. was £1 6s. on a consumption of 15 cwt. of each feeding stuff along with about 13 tons of turnips. Liveweight increase being produced by the Bombay cotton cake at £1 3s. 1d. per cwt., against £1 6s. 7d. by the Egyptian. The superiority of the Bombay cotton-cake over the Egyptian cotton-cake had been upheld by a contemporary cattle-feeding experiment. In all cases comparison of the lots which received concentrated feeding stuffs with the one fed on turnips and hay alone showed a profit on their use The use of concentrated feeding stuffs had effected no saving in the consumption of turnips. In fact, it seemed to have stimulated the appetites of the sheep for more turnips in some cases. These experiments showed that in the winter feeding of half-bred hoggets liveweight increase per cwt. could be produced for a gross outlay of about £1 12s. for food, or, when manurial residue was deducted, £1 5s.

This calculation allowed 10s. per ton for turnips and £3 10s. for hay. These and other contemporary experiments conducted by the College showed that sheep feeding in both years had left a much better rent for turnips than cattle feeding. If a comparison might be instituted between the two experiments, it seemed a doubtful policy to force on sheep of this class by increasing the allowance of concentrated feeding stuff much beyond ¾ lb. per day. But, of course, with the present demand, for light sheep the feeding should commence sufficiently early, and be controlled so as to have the sheep fat before they were too heavy. Finally, it might be observed that a mixture of two or more feeding stuffs was likely to do better than one. In the meantime a mixture of Bombay cotton cake and linseed cake seemed eminently suitable as a concentrated food for the winter feeding of hoggets. At the commencement the Bombay cotton cake should either predominate or be used alone, but later a gradual change should be made to a mixture of equal parts of both feeding stuffs. The results obtained last winter with another lot of about 200 sheep fed experimentally, under the auspices of the College, supported this conclusion. These experiments indicated that this would be true generally so long as Bombay cotton cake could be bought at less or even the same price per unit as dried grains, decorticated cotton cake, and Egyptian cotton cake. Linseed cake seemed to be worth about 1½d. more per unit than Bombay cotton cake. In these conclusions a careful endeavour had been made to turn experimental results to useful account without unduly straining them. The amount of helpful data that could be derived from other sources was limited, as few experiments in the feeding of farm stock had been conducted in this country, and fewer still on the scale to inspire confidence. Those dealt with in this report were by far the largest known to them. But it was hoped that they were only forerunners of a long series of experiments providing data that would be valuable for the guidance of the practice of feeding.

Cattle Feeding Experiment.

This experiment was carried out at Pitskelly, near Carnoustie, during the winter 1904-05, for the purpose of testing the relative merits of Bombay cotton-cake, Egyptian cotton-cake, and decorticated cotton cake by feeding equal weights of them to lots of eight two-year-old Irish cattle. It was conducted during winter, when the cattle were receiving turnips and straw ad libitum. The cattle were about 9¾ cwt. at the commencement of the experiment. They cost £15, or 30s. 6d. per live cwt. During the twenty weeks it lasted they increased fully 2½ cwt., at a net cost of £2 2s. 6d. per cwt with decorticated cotton-cake, £2 0s. 9½d. with Egyptian cotton-cake, and £1 18s 6d. with Bombay cotton-cake. At the termination of the experiment the cattle were fat, and realised 34s. per live cwt. These results showed that with this class of cattle it took fully £2 per cwt. to produce liveweight increase, and that at the present range of prices store cattle were too dear. In order to have a reasonable profit the feeder would require to buy his store cattle at about 5s. less per cwt. than he sold them at when fat. Bombay cotton-cake had turned out more effective per unit than Egyptian cotton-cake. This result was corroborated by the results of the contemporary sheep-feeding experiment conducted at Mungoswells. These experiments showed that for feeding cattle and sheep Egyptian cotton-cake was not worth more per ton than Bombay cotton-cake. Bombay cotton-cake had been found a cheap, safe, and suitable food for starting the winter feeding of two-year-old bullocks which were receiving a liberal ration of turnips. About 6 lb. per head per day, however, was probably about the maximum quantity it was advisable to use. When the feed of concentrated food rose above this quantity the Bombay cotton-cake should be supplemented by a food containing more oil—e.g., linseed-cake. The experience of feeding-stuffs purchased for them in the ordinary way for these experiments and those of the previous year, indicated that there was considerable variation in the quality of the samples on the market, and that purchasers should pay far greater attention to their composition than they commonly did when purchasing them. A comparison of the results of the experiments conducted during the past two years in the feeding of cattle and sheep showed that sheep feeding had paid much better than cattle-feeding. Last year the sheep left £1 14s. more than the cattle per acre of 20 tons of turnips, and in the previous year the difference was considerably greater than this.

A scheme for providing Skipton with public slaughter-houses has been approved by the Urban Council. The site adopted is in the Dockyard, which is well adapted for the purpose. In all six new slaughter-houses are to be erected at an estimated cost of £3,000. It is proposed to provide for three only at present.

ADVERTISEMENTS RECEIVED TOO LATE FOR CLASSIFICATION.

VALE OF AYLESBURY FAT STOCK SHOW, AT AYLESBURY, DECEMBER 13th, 1905. Entries close December 2nd, 1905. F. J. BROWN, Secretary, Aylesbury.

BLACKBURN AND DISTRICT FAT STOCK SHOW, AT BLACKBURN CATTLE MARKET, DECEMBER 18th, 1905. Entries close December 14th. JAS. LORD, Secretary, Revidge Fold, Blackburn.

ALL INTERESTED in POTATO growing should not fail to pay a visit to A. J. SOLE'S Stand at the National Potato Society's Exhibition at the Horticultural Hall, on NOVEMBER 23rd and 24th.

STRATTON, RICHARD, The Duffryn, Newport, England. Large Herd combining milk with flesh.

THE SHEEPCOTE HEREFORDS, property of Peter Coats: Established 1900. This herd has, in 1904, won more first and champion prizes than any other in England. Headed by those celebrated bulls Holmer, Emdale, and Page-Protector. Young stock on sale. Inspection invited. Apply, J. K. HYSLOP, Estate Office, Sheepcote, Clifford, Herefordshire.

Live Stock Record.

THE FIRST CHRISTMAS FAT CATTLE SHOW.

Our Christmas fat stock shows are heralds of the festival and holiday season observed in the closing week of the year. Norwich is the first, coming in the middle of November, but a truthful harbinger, nevertheless, of the good cheer and carousals to be enjoyed six weeks later. The show is twenty-nine years old, and has swelled to dimensions so large that the City of Norwich has no building of sufficient size for its accommodation. Owing to the numerous visitors, who invariably flock thither, there is great anxiety to get stands, a considerable number of applicants for which, like Noah's dove, could get no resting place for the soles of their feet last week, and their entry fees for exhibits had to be returned.

Cattle to the number of 122 were entered, an over-average count said to have been only twice exceeded, but the excess consisted of Redpolls, Irish and local animals. Shorthorns were few, although of considerable merit, and the same may be said of the Aberdeen-Angus cattle. The Herefords and Devons, which, in former years, have been known to be among the best, were missing; but cross-breds were to the fore quite as much as ever, and, in fact, gave chief merit to the bovine display. Mr. E. T. Learner won the champion prize with a Shorthorn-Aberdeen-Angus heifer, bred by Mr. John Ross, and Mr. Hudson's Danesfield Midnight, of the same cross, was best steer or ox. Both these, as well as H.M. the King's first-prize Shorthorn steer, were highly appreciated as yearlings at Smithfield Show last year, and will be sure to be high in the prize lists of Birmingham and Smithfield, if, as is most likely, they appear in these future competitions. The latter, which was reserve for the best steer or ox premium, is noteworthy for his wealth of flesh and heavy weight, being nearly a ton. Indeed, he scaled 15 cwt. 1 qr. at rather under twenty-two months old when he won second prize at Islington. Since the establishment of the show, cross-breds have won the champion prize thirteen times, Shorthorns six, Herefords four, Redpolls three, Aberdeen-Angus twice, and Devons once.

Sheep appear to have been a remarkably good collection, and we may certainly expect to see most of the winning pens again. H.M. the King won the championship with Southdown wethers. Mr. Herbert Smith's Suffolk wethers made, however, close competition, and the cross-breds of Mr. T. Rush, and the Hampshires of Sir T. F. Buxton, were deemed high in merit. Likewise, Mr. Rush has once more brought out some magnificent lambs of the Oxford-Hampshire cross, which won the special prize for best lambs exhibited, Sir T. F. Buxton's Hampshires being reserve. H.M. the King won another first prize for Southdown lambs.

Norwich, like Birmingham, in addition to cattle, sheep, and pigs, has departments for live and dead poultry, and also for corn and roots. Fat turkeys and geese bring to the minds of visitors anticipations of Christmas quite as much probably as over-fed, obese beasts, sheep, or swine. The inclusion of roots and corn has always imparted a pleasing, educational variety to both exhibitions, and the same character may be given to those features of the Norwich Show which are purely original in association with a Christmas fat stock show, namely, dairy-products and seedsmen's prize classes. That this excites great interest appears certain, as there were 164 entries of the former, and 219 of the latter.

STOCK AND SHOW NOTES.

By Herdsman.

The fifty-seventh Birmingham Cattle and Poultry Show will be held in Bingley Hall, Birmingham, on November 25, 27, 28, 29, and 30. The entries compare with those of the last five years as follows:—

	1900	1901	1902	1903	1904	1905
Cattle ...	176	170	180	211	201	198
Sheep ...	56	58	62	51	58	61
Pigs ...	54	70	54	74	53	70
Corn ...	62	83	67	58	70	67
Roots ...	141	117	118	120	123	111
Potatoes ...	80	89	66	55	79	71
Poultry ...	2,635	2,839	2,998	2,695	2,690	2,624
Eggs ...	36	42	50	36	20	30
Pigeons ...	1,017	1,094	1,092	1,047	1,086	1,052
	4,157	4,562	4,687	4,347	4,392	4,324

His Majesty the King is the largest exhibitor of cattle, showing Herefords, Shorthorns, and Devons from the Royal Farms, Windsor, and four pens of Southdowns will be sent from Sandringham. The challenge prizes, value £105 each, given by Messrs. Elkington and Co., Mr. J. Thorley, and Messrs. Webb and Sons, will again be competed for. There are also two £50 challenge cups, the gift of the proprietor of the *Birmingham Daily Post* and Mr. J. J. Cridlan respectively. In the sheep section there is the Cooper challenge cup, and the one offered for pigs is provided by the hotel and innkeepers of Birmingham. The Board of Agriculture have passed a special order which will again allow swine to be exhibited. There will be the usual good show of corn, roots, and potatoes, and the large number of attractive stands, implements, etc.

The annual show of the Smithfield Club will be held at the Royal Agricultural Hall, Islington, on December 4 to 8 inclusive, the president for the year being Lord Tredegar who also filled this position twenty-five years ago. The interest in the show is universal, breeders and exhibitors throughout the United Kingdom vying with each other for the valuable prizes offered by the Club, but more especially for the possession of the magnificent challenge cups presented by His Majesty the King, H.R.H. the Prince of Wales, and H.R.H. Prince Christian of Schleswig-Holstein. The total value of the prizes offered is £4,153, which is allotted to the various sections as follows: — Cattle, 2,060; sheep, 1,185; pigs, £490; carcase competition, £296; and table poultry, £122.

As it is possible for the champion beast to win £260 and the King's Challenge Cup, the best pen of sheep £110 and the Prince of Wales's Challenge Cup, and the best pen of pigs £70 and Prince Christian's Challenge Cup, it is natural that the finest animals in the United Kingdom should compete, including the champion animals from Birmingham, Edinburgh, and Norwich.

The entries for the general section of the Show exceed those of last year, the numbers being 301 head of cattle, 163 pens of sheep, and 107 pens of pigs; a total of 507 entries comparing with 550 last year. In the carcase competition the entries number 24 cattle, 60 sheep, and 57 pigs, and the table poultry section 187 entries. The carcases and table poultry will be sold by auction on the Thursday of the Show. In addition to the magnificent collection of live stock, a great portion of the Hall and all the galleries is set apart for the exhibition of engines and agricultural machinery of every kind and of the newest type with fine displays of seeds, etc., and collections of feeding stuffs, all of the greatest possible interest to agriculturists and others.

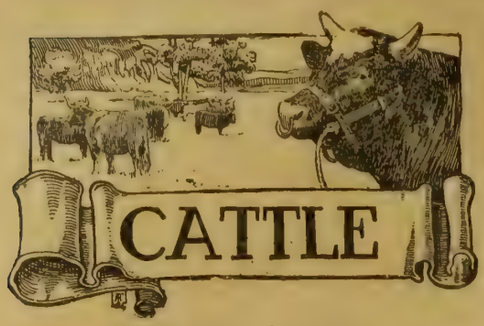
The twentieth peripatetic show of the German Society of Agriculture will be held at Berlin on June 21 to 26, 1906, and will be known as the Berlin-Schöneberg Show. Entries for the show will close on February 28, for horses, cattle, sheep, pigs, and goats. The various sections will comprise horses for breeding purposes and draught horses, cattle of various breeds, sheep, and pigs. Section II. for agricultural produce, seeds of all kinds (potato culture), corn, fodder, brewers' barley, potatoes, hops, flax, hemp, hay, manure, etc., scientific representations of land culture, experimental stations, societies, etc. Section III.: Agricultural implements and machinery together with test competitions of machinery.

The members of the Rugby and Dunchurch Agricultural Association were asked if it was thought desirable that the Warwickshire County Agricultural Society should hold their show at Rugby next year, and, at a meeting held last week, they came to the conclusion that it was not desirable. It was pointed out that Rugby was the only town in the county that held an agricultural show of its own, and that ten years ago, when the county show was held at Rugby, the local society gave all its available funds up to the county society, and that it had never recovered itself financially since. It was further decided that in the event of the county show being held at Rugby next season the association would not hand over any of its funds.

At a meeting of the council of the Leicester Sheep-breeders' Association, held at Driffield on Thursday, a letter from Sir Ernest Clarke, secretary of the Royal Agricultural Society, was read, enclosing the recommendation of the stock prizes committee, as affecting Leicester sheep at the Derby Show of 1906. Prizes are to be offered of £10, £5, and £3 each in four classes, namely:—For shearling ram, three-lamb ram, three shearling ewes, and three ewe lambs. A resolution was passed thanking the R.A.S.E. for this classification.

The council of the Wirral and Birkenhead Agricultural Society have resolved to hold the society's next show at Bebington on Wednesday and Thursday, July 18 and 19, 1906.

Messrs. Alfred Mansell and Co., Live Stock Exporters, Shrewsbury, have recently shipped to New York, per the White Star line, a choice consignment of Shropshires and Dorsets to the order of Mr. F. S. Pearson. The Dorsets included the Royal winning ram Court No. 19 (1594), bred by Mr. James Attrill, winner of 1st and champion at the Royal Isle of Wight Show, 1904; also 2nd at R.A.S.E., 1904, 1st at Royal Counties' Show, 1905, and 2nd at Park Royal, 1905, and successfully used by his breeder this season. The Dorset ewes comprised a choice selection of shearling ewes from the prize-winning flock of Mr. F. J. Merson, including the two best ewes in the 2nd prize pen at Park Royal. In Shropshires, Mr. Pearson was equally fortunate in securing a beautiful bevy of shearling ewes from Sir Walter Corbet's prize-winning flock, sired by Montford Lucerne 11174, Thorpe Reynold 11921, Reynold President 11573, and Reynold Baron 11861. All these ewes were breeding to Sir Walter's rams of this season. The famous Shawardine flock (Mr. Alfred Tanner's) supplied a typical ram in a son of King's Knight 11483 (a son of the 175-guinea Diamond King 9442, twice 1st R.A.S.E.) from a ewe by Diamond King 9442. It will be observed this ram has blood of Diamond King through his sire and sire of dam, and, therefore, should prove a most impressive one.



Notes and Jottings.

From an approximate estimate of the number of cattle in the United States, a vast increase appears to have taken place during the last few years. A live stock census is not yet established there, as with us, but the figures are based upon carefully compiled statistics, and show that on June 30 last the approximate number of cattle in the United States was 84,563,277. Just upon one-fourth of these are estimated as being milch cattle, the remainder coming under the general classification of "other cattle." It is said that the receipts of cattle in the principal Western markets indicate an enormous increase in production everywhere. In the year 1900 the country was estimated to contain 59,438,758 cattle, of which 18,112,707 were supposed to be milch cattle.

It is stated that in these States, since so much territory was converted from ranches into farms, its cattle output has quadrupled, and the same changes are taking place generally in other parts. Production has exceeded consumption, as indicated by glutted cattle markets everywhere, and if this phenomenal development is to continue a wider outlet must be secured. Seeing that general trade on the other side the Atlantic is reported to be most satisfactory, it would appear that the above statement, so far as production exceeding consumption is concerned, is quite correct, and that the glutted markets, with lower prices, are not the result of bad trade and lower wages earned by the working classes. The attempt to obtain access to German markets for States beef therefore appears quite opportune.

Though at present there is an enormous area of land in the United Kingdom that is not producing half as much meat, or even other food, for our population, as it is capable of doing, still, there is every probability that as time goes on the production of beef, especially, in these islands will yearly become less. The vast reduction in the area of land for farming purposes that takes place every year through the increase of building, both of dwellings and factories, as well as the enormous extent taken away each year for new railways and other purposes, cannot possibly be without considerable effect upon the quantity of land used for farming purposes; and an important point, too, in this respect, is that a large portion of the increased area taken for building railways, etc., is taken from our most productive land.

In addition to the above circumstances, there is also a much greater tendency to go in for other branches of farming, rather than beef production. The great increase in dairying for supplying our large towns and cities with milk has done away with beef production on hundreds of farms. Sheep, too, now that wool is realising better prices, as well as mutton selling dear, will have more attention paid to their breeding; so that, all things considered, there seems likely to be somewhat of a decline in the quantity of beef produced in our own country as time goes on. That England will always be a great beef-eating country there is little doubt, and that a supply will be provided from somewhere is also pretty certain, but whether foreign countries will be able to breed, feed, and ship beef to this country at lower prices than are now prevailing remains to be seen.

One or two very successful sales of Aberdeen-Angus cattle appear to have taken place in the States recently, quite showing that this breed is beginning once more to look up on the other side of the Atlantic. At one of these sales over 400 dols. was reached in two instances, whilst 300 dols. and over were given in a number of instances, and scarcely any low prices ruled, the average for thirty-seven head at the above sale being 205 dols. This is encouraging, though the figures do not compare well with the averages of some Shorthorn sales; still, the average of some 40 gs. per head need not be complained of, and proves that interest is being taken in the breed. The season for these cattle to make their mark with the public is now coming on, and will be in full swing for the next few weeks.

Lincoln Red Shorthorns appear to have made very sure though not rapid or great progress in the way of prices during the last five years, if we are to take the results of the Alford Bull Fair last week as our guide. The number of bulls sold in 1901 was fifty-six, at an average of 15¼ gs. In 1902 the same number averaged 20 gs. each, 1903-4 increased the number sold to 95 and 120 respectively, the average upon these occasions being 16½ gs. and 19 gs., whilst this year 88 bulls reached the fairly respectable average of 24 gs. Lincoln Reds at present suffer from want of uniformity in quality. Their classes at the shows contain invariably two or three animals of what may be called extra quality and symmetry, and, in the case of the females, with milk also. Lower down the classes, coarseness and want of symmetry and milk prevail; high averages will not rule till there are more good ones.

The new Dairy Shorthorn Society has now made known something of what is to be expected from one of these animals if she is to become eligible for prizes offered by the society. The conditions under which the cows are to be tested, however, are a little vague. The cows are to be milked out clean to the satisfaction of the stewards at 6 p.m. on the evening prior to the judging, and on the first morning of the show are to be milked out in the ring in the presence of the judge, who shall see each animal's milk weighed. The standard to which the cows have to attain in order to be eligible for prizes is a very stiff one. If the cow has calved within three calendar months of the first day of the show she must yield not less than 25 lb. milk. Cows for this standard must be four years old and upwards.

There is one item omitted that makes a great deal of difference to things, and certainly ought to be included in the conditions, namely, at what time the following morning this judging and milking in the ring is to take place. It will make a vast difference whether the milking that is to decide the award of these prizes takes place punctually at 9 a.m., or whether it is dallied off; as is usually the case, till ten or half-past. The scale should be adjusted to so many pounds of milk per hour, or some such regulation. The quantity of milk (25 lb.), if allowed to run till 10 a.m. or later, does not give an excessive yield, and would be very fair to expect, otherwise, at first sight, it would appear that the quantity looks too great if the animals are to be milked at nine or earlier.

A very necessary and important paragraph follows, namely, that the judges in awarding the prizes are to pay great attention to the size, shape, and general appearance of the udder both before and after milking. This is very important, as a well-shaped udder is half the battle in a milking cow, either for selling or retaining in the dairy to milk and for breeding. Another paragraph, however, would appear to be necessary in these instructions, that some attention or points should be allowed for the cow, otherwise the thing drifts into the breeding of a milking machine only—a policy that would be ruinous alike to the Shorthorn and her owner, as, if a man is to make a living profit, he cannot afford to sacrifice a single point. And milk only from any animal is but a one-sided production, achieved in most cases at a loss.

The Hereford as a milker is causing a good deal of writing and discussion just latterly, and has been noticed, also, in these notes upon one or two previous occasions. Mr. J. S. White, whose herd has been referred to on account of its milking tendency, mentions that three parts of his herd are descended from a famous cow purchased from Mr. J. Judge, that yielded no less than seven gallons of milk per day. The Judges have for years been possessed of, and exhibited, some marvellous Herefords as regards aptitude to produce beef, but I have never noticed any great show of milk with these. This circumstance points to the fact that milk may be cultivated in them, as there is no doubt the cow that gave this great yield was of the same strains, more of less, as the animals above referred to as beef-producers.

Herefords crossed with Shorthorns have, in the writer's experience, been proved to be, in many instances quite exceptional milk and butter cows, the fat in their constitution doubtless assisting in the yield of butter. There is one thing, however, usually noticeable in these beef herds of cattle when taken for, and fed for, milking purposes, namely that it is not often that they are especially persistent milkers, their period of lactation usually being somewhat brief. On this account they have many times proved very profitable for cheese-making purposes, being easily and cheaply kept during the resting period, which most frequently runs from the end of November or beginning of December to the following March. Their calves, too, make very valuable feeders, the steers especially.

Herefords appear to well hold their own amongst other breeds for export purposes, and also at home in the ordinary course of things. The best steers for grazing purposes have been making quite remunerative prices, and it is also noticed that at a sale of pedigree stock of this breed in the States, a list consisting of fifty-seven head of the breed produced an average of £43 per head. £280 was reached in one instance, and over £100 in two others. These prices must be looked upon as highly satisfactory for stock bred on the other side of the Atlantic, and prove both that the demand is good, as well as that the Hereford is well retaining his character in that country of his adoption.

Transactions in Store Stock.

(Reported to the Department of Agriculture and Technical Instruction for Ireland.)

At the fair held at Killarney, Co. Kerry, on Monday there was an average supply of cattle, which met a fair demand at the following prices:—Calves, second class, £3 12s. 6d. to £4 5s.; third class, £2 15s. to £3 5s.; yearlings, second class, £6 to £6 15s.; third class, £4 to £5 10s.; two-year-olds, second class, £7 2s. 6d. to £8 10s.; third class, £4 10s. to £6 10s.; springers, second class, £11 to £12; third class, £7 10s. to £9 10s.

Blessington fair, Co. Wicklow, held on Monday, was an average sized one, and a good many buyers were present, but demand was slow at very low prices, and a clearance was not effected. Prices:—Calves, first class, £4; yearlings, first class, £9 5s.; second class, £6 10s. to £7 7s. 6d.; two-year-olds, second class, £7 15s. to £10; springers, second class, £15 5s.

Contagious Diseases of Animals.

Summary of Returns issued by the Board of Agriculture for the week ending Nov. 11, 1905:—

Horse Notes.

"He doth nothing but talk of his horse."
—Merchant of Venice.

It is a curious thing, and one well worth the attention of horse owners, that horses which are prone to mischief and vice—which may be regarded as an advanced form of mischief—have chiefly had their bad habits taught them by their attendants. There is not a more reprehensible practice than petting or teasing horses, and both are indulged in to a great extent by those who should know better. It is not a little strange, too, that though most people will agree in theory about these bad practices, they seem to have an idea, when it comes to practice, that the horses they have are something exceptional, and will not learn the bad habits they take such pains to inculcate.

One remarkable instance of how bad habits can be taught was that of a Cæsarean mare. Her dam had been an especial favourite, and in her forlorn condition she became everyone's pet. A quieter, better-disposed foal it would be impossible to find. Foalhood over, she would come to anyone she saw for the sugar or apple she was so partial to, and for the petting which she had come to look for as her right. But the days of liberty came to an end, and she was introduced to the serious business of life. She took to the saddle kindly enough, but she was more adapted for harness. Harness, however, she would not have at any price. Neither kindness nor coercion were of any avail, and after she had kicked herself clear of the traces three or four times she was not persevered with. Had she not accidentally shown that she was a remarkably fine jumper, and, though slow, still a serviceable hunter, probably she would have been tried again. But her breaker, a fine horseman and a very intelligent man, always insisted that she would never have been to trust, and he blamed the petting, of which she got such an undue share, for the vagaries of her temper. For though she developed into a steady, trustworthy hunter, and taught several aspirants to fame to ride to hounds, she was a "fiend" in the stable, and the sight of a brush made her kick before she was touched with it.

Another very remarkable instance was with a child's pony. The pony was purchased young—as a foal, indeed—and was, of course, a children's pet. Frequently when it was a yearling, a two-year-old, and a three-year-old, and before it was broken in, foolish nursemaids or nursery governesses would put a child on its back and lead it about halterless, and loud were the praises sung of the pony's quietness. But when the pony was broken in there was another tale to tell, and of all the stupid, perverse tempered brutes it ever was my lot to handle it was, I think, the very worst. It was conquered eventually, of course, but it was never what it would have been had it not been for the course of teasing and petting—an ideal children's pony.

A frequent source of mischievousness in horses, and it should not be lost sight of that light-heartedness which ends in a vigorous round of bucking is, for all practical purposes, the same as vice, though it is more easily eradicated—is due in a great measure to injudicious treatment on the part of grooms. A horse is easily taught a trick, and it is unfair to punish a horse for what he has been taught to do. A groom, probably to show off his own horsemanship or want of it—teases the horse into kicking. He is prepared for the kicking, and no harm is done. But a stranger involuntarily makes the same signal as the ignorant groom has done, with the result that the horse starts buck-jumping, and his rider, not being on the look out for it, may very easily be put down. Let this happen once, and the moment the horse is over-fresh he will resume his antics, probably with the same result.

The most extraordinary horse for bucking I ever came across was an Irish chaser. He was a big, upstanding horse with immense shoulders and very powerful back, and a finer hunter or pleasanter ride, when he was in the humour, I never sat on. Whenever a stranger got on him he always laid his ears back and arched his back, and then woe to his rider if he did what most men would do under such circumstances—i.e., instinctively take hold of his head and sit tight. The old horse would go on quietly for a short distance till all suspicion of mischief was lulled to rest. And then, all at once, and without the slightest warning, would come a series of "bucks" so full of energy that if the first did not send the rider into the next parish the second did. Yet, curiously enough, if the rider left the reins alone and did not attempt to sit tight, if he trusted the old horse's honour, as it were, he would give a little squeal and jump about six inches from the ground, and then walk on as sedately as any one could wish.

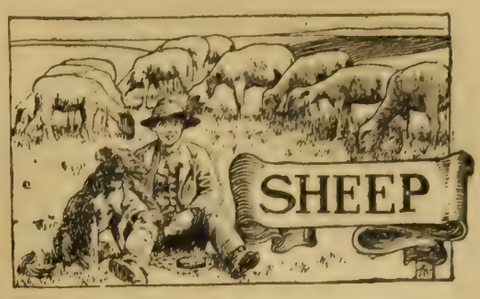
Another very constant source of trouble is too much corn and too little work. Horses that are hard fed must be hard worked. A very fresh horse begins to play; he feels a little chilly, perhaps, or the delight of being out without a lot of clothing on is quite sufficient to set him off. His rider is not prepared for it, and perhaps gives a tug at the bridle which he would not do under other circumstances, and a battle royal begins, or the horse gets the best of it on the first occasion. Whichever it may be, one thing is certain, and that is that he never forgets it, and the next time he is a little above himself there is sure to be a repetition of the circumstances.

I once had rather a narrow escape from a bad accident because of this indiscriminate feeding. I bought a horse who was a hard puller, and though he certainly took hold, I thought there was no difficulty about holding him. I rode him hunting, and he carried me well enough. But he had a fortnight's rest and then I rode him again. He was simply unrideable; ran away with me and fell. Luckily there was no wire in front of us, for it was absolutely as impossible to steer him as it was to pull him up. I thought so much of the horse and thought him such a good one that I would have tried him again, but the man from whom I bought him persuaded me not to do so. Some months afterwards I saw him again. He was not "so fair to look upon" as when I had him, but he was easy enough to ride. "You kept him too well when he was not hard worked," said my friend, "that is the secret. As soon as he misses his turn, or is likely to miss his turn for any reason I always reduce his corn." This is a course it is almost impossible to make grooms adopt. They like to see their charges looking well and fresh, but they do not discriminate between a horse being fresh and too fresh. Many, at any rate, of the bad falls I have had and seen have been from riding a too fresh horse.

I was pleased to see a letter in Monday's "Sheffield Daily Telegraph" in which attention was drawn to a matter which is too frequently ignored by local authorities, and that is that horse-drawn waggons, etc., are at a great disadvantage in streets where trams are laid. The trams not only take up a great deal of the road, but they take up the best of the road, and horses have to draw huge rollevs and waggons on the sides of the roads, where the draught is considerably heavier than it is in the middle of the road. Small wonder then that the driver should, when an opportunity presents itself, try to avail himself of the few minutes when the tram road is clear. There is not the slightest doubt that trams are driven at a much greater speed than is necessary, or than is consistent with safety; and the "Sheffield Daily Telegraph's" correspondent has done well to draw attention to the disadvantages under which horse traffic labours in towns. The trouble is increasing, of that there is not the least doubt, and it is high time that something was done to make horse traffic safer than it is.

THE LOOKER-ON.

At Manchester Assizes, on Monday, John Towers, a carter, was sentenced to ten years' penal servitude for arson. Prisoner was alleged to have set fire to no fewer than five haystacks in the Bury district, and the total damage caused by the fires was estimated at £1,100.



Notes and Jottings.

The satisfactory prices being made of mutton at the present time show how well the home-grown article is appreciated. Were it not so, with the huge quantity imported, prices must have fallen to a far lower level. A reference to last week's notes will show how large the imported mutton supplies have been during the past few weeks, and, despite this, there has been no material decline in the prices realised for home-grown mutton. Were it not for the imported supplies one cannot well estimate what the range of prices would be for mutton. To put the matter briefly, it is evident that the increased consumption keeps a fairly even pace with the larger supplies. All facts point to one conclusion—i.e., that the public taste for mutton has grown enormously during the past ten or twenty years. It is true that the home supplies are not so large as they were, but even making full allowance for this, the available quantity for consumption was never larger than at the present time.

A point worthy of consideration is, what will the result be in the future, because unless something unforeseen occurs, there is every prospect that the imported supplies will be still larger in the future? It is hardly to be expected that the increase of consumption will keep pace with the increased supply in the future, and there appears but one likely result—namely, a lower range of value for that class of mutton that meets with the keen competition of the imported article.

Admitting this, the object before our home breeder and feeder is to produce mutton of that quality, etc., that ranks above the imported article. There is no question that this in most instances can be done; but will it? is the question.

Leaving out of consideration those flocks that are generally looked upon as stud flocks, and some few of the best of these flocks, which are not generally considered ram breeding flocks, what does one find, taking the country as a whole?

In more cases than not the so-called flocks consist of collections of sheep, of all shapes and sizes, with little or no general type or character, and having neither uniformity nor symmetry of carcase. These kinds of flocks are those from whence comes the largest proportion of our home-grown mutton, and hence to any one who is practically acquainted with the carcase of mutton there is no need for surprise at the gradually increasing demand for the higher class of imported mutton.

Without doubt, unless our general flockmaster takes far more care in the selection and mating of his flocks the preference the home-fed mutton now enjoys will soon be very much reduced.

To maintain preference for home bred and fed mutton our home breeders must produce symmetrical and neat carcases. There must be no unshapely nor narrow-chested sheep kept for breeding, for like produces like. What does it matter how ill-shaped a sheep may be its flesh cannot be any the worse. Quite so! But its carcase will neither sell as readily nor give the same satisfaction as one of good shape, and in a well, not to say over, supplied market, it is extraordinary how great a difference in value such small

Forthcoming Live Stock Sales.

DATE.	STOCK.	OWNER.	PLACE OF SALE.

24	Shire Horses	Sir Oswald Mosley and Mr. H. W. Kearns	Derby Repository.
24	Red Polled Cattle... ...	Mr. A. J. Smith	Drill Hall, Ipswich.
30	Farm Stock...	Mr. W. B. Ledger	The Isle Park Farm, near Shrewsbury.
Nov. 30 & December, 1	Hunters, Harness Horses, Cobs and Ponies	Various	Crewe Horse Repository.

details make. Some of my readers may ask why write so much upon this subject?

The reply is because no subject has greater or more direct interest to the flockmasters as a whole than a ready market at full prices for all mutton sent there. Further, when an alteration is required, there is no better way to bring it into effect than by some indirect means at first to draw attention to it. Many who will read these notes will probably at first put them lightly aside; but more than one will return to them again, and, probably, more than once, to find out the reason why particular stress is being laid upon the fact that a larger proportion of our ordinary flocks are badly matched, uneven, unshapely, and not uniform.

It may be urged that it is too late to alter this, for the present season, quite so; but it is not too late for the next. Let all who own flocks of the character mentioned above, if they have any spare moments, just go carefully through their flocks, and draw them into separate lots, putting those nearest alike together; a few such examples as this will bring home more clearly than any other means how woefully below the standard they should be are many of the flocks of this country.

Having to attend flock inspections on behalf of one of our breed societies, and to visit and inspect many other flocks in the course of every year, for either the purpose of purchase or report for the Press, has afforded opportunity to the writer to see flocks of many breeds situated in nearly every section of the country. The experience thus gained fully confirms the views mentioned in the foregoing paragraphs.

The store stock markets and sheep fairs also afford excellent opportunities to test the conclusions arrived at. Take any one of the larger sheep fairs, and go carefully through the lots offered for sale, the difference that will be observed between the several lots, not to mention individual sheep in the same pen, will still further emphasise the great need there is at the present time for the exercise of far more care in every direction of flock management. To put it shortly, what is wanted is far more of the master's interest and personal attention than the flocks generally secure.

A fine lot of rams have this week been despatched from Mr. Arthur Finn's flock at Westhoke, Lydd, Kent, by Mr. W. W. Chapman for a client in the Falkland Islands.

The reports of sheep sales in the Argentine have been most meagre this season, and only a very few of the results secured at the auction sales held in that country have appeared in the Argentine Press.

Last week's mail brings over but one sheep sale report, namely, one held in Buenos Ayres, of thirty-five Lincoln Long-wooled rams shipped to that country by Mr. J. E. Casswell, of Laughton, Folkingham. These rams realised an average of £27 2s. 6d., with prices that ranged from £76 2s. 2d. to £21 17s. 6d.

Concerning Essex and Sheep.*

It is far more difficult than it was a few years ago to find a new subject of direct usefulness to discuss with farmers, as they have so much awakened their interest in farming, whether it is in the mere businesslike management of the farm, or in the application of what a few years since was called theory. However, they read more; and the agricultural Press has much advanced; and their views have broadened, and their prejudices have lessened. Moreover, times and conditions are always changing, and the cocksureness of yesterday may seem possible of less certainty to-day. Moreover, the best effect of a lecture is in giving rise to thought; and a discussion, though antagonistic, is most helpful. It is for these reasons that I have chosen the homely and ancient topic of sheep, to-day especially, as I think there is no section of farming so interesting and none in which we can continue to learn more; none which through bad times has better kept its balance-sheet on the right side.

Essex men, and men who have left Essex to farm in other counties, have expressed to me their fears that there is a great danger of a declining market for oats, hay, and straw, with more difficulty in obtaining stable manure, through the withdrawal of horses from London and other places by the substitution of mechanical motive power. This, of course will also affect breeding. If there is to be the exclusion of the use of motors that many predict it cannot fail to have some effect on Essex, and another product must be developed. It is natural and right for a county so near London to cater as much as possible for special markets, but special markets have narrow limits and are easily overdone. It seems to be the special mission of many whose agricultural experience is not great to urge poultry-keeping as a sort of sheet anchor to farming; but while poultry may be a useful adjunct to the farm, outside Sussex few make much of a living from it. It is said that Rome was saved by geese, but I am quite sure that England and English farming will never be saved by old hens.

It is not an original idea to urge more sheep, but it is a sound one. The better price for wool has made us recognise the fact that the world has a very short stock of sheep, Mr. Gooddall brought the fact home to you last year, and when we know that ewes readily fetch 24s. a head in New Zealand, in the place of a very few shillings a few years since, we cannot but recognise that here in England, with the best breeds, the best climate, the best sheep management, the greatest freedom from and control of diseases, and the best market on the spot, however narrow other branches of English farming may have become, there is great scope the greatest there has been for a long period—for the development of sheep, and Essex is by no mens full of sheep. Stock Essex with sheep and it will not materially lower the price of mutton; therefore if changes must be made the position is not by any means a hopeless one.

In Ireland the excuse for anything one does not want to do is always the climate. In Essex there is a tendency to put it down to the land, the heavy land, and it is to the heavy land to which I am mostly going to direct my remarks. The lighter soils have their remedy, and the whole requires no physician. I will tackle the heavy land problem, because it is regarded as the most difficult and hopeless, and it will also give you better scope in the discussion which I hope will take place, of giving one from outside the county a bit of a roasting for tackling the Essex clays. If we can get warmth outh of cold Essex clay, we may do some good—of course, I mean its soil, not its occupiers.

Sheep on clay or heavy soils are not popular; I contend not so popular as they should be. I think, however, that much of this arises from failure to fatten sheep on roots or arable land in winter, which I certainly do not advocate, but would leave it to the lighter soils. There is no mutton so cheaply made as summer mutton, and where there is a reasonable extent of pasture it is quite easy to keep a ewe flock. I am not throwing this out as an unproved theory, as I have done it on the poor wet clays of Sussex, and w Southdown sheep, which might ordinarily be regarded as the least likely to be successful in such conditions, and the Sussex clays are quite as bad as the Essex.

Ideas formed of the suitability of sheep on heavy land date back generally to the days of four and five course rotations, in which corn predominated, and where any extensive system of sheep farming, and especially summer sheep farming on arable land outside the clover land was and is practically an impossibility. Nor can it be done with a mere patchwork makeshift of these rotations. If sheep are to form a more important section of the farm, then the working and cropping of the farm must be more adapted to sheep.

We have to remember that all improvement of sheep has gone with improvement of farming; in fact, the two have never been independent since systematic improvement of sheep started some 150 years ago, and turnip culture was instituted; then clover, mangels, and catch cropping gave additional assistance. The main improvement in sheep has been made within the past century, and some twenty years ago a well-known sheep breeder, himself then well over eighty, recounted to me his experience of sheep in Beds. He could remember when the native heath sheep was mainly kept. This gave way to the Leicester; the Leicester to improved Leicester; this was largely crossed with Cotswold; then the Oxford pushed them aside; the Oxford was then crossed with the Hampshire. "Oh, there," he said, "my son has just started a pure-bred Hampshire flock." I may say that the pure Hampshire soon broke away from its type, and his son had to be content with the Oxford-Hampshire crosses, as the soil would not carry the pure breed; in fact, like all soils on the oolite, a dash of Cotswold was necessary. This old gentleman's experience dated from the wheat, bean, fallow system, which gave way to the four course, and to the break up of the four course, permitting more catch cropping. Such an experience can never occur again in the history of sheep breeding. During these years many crops, such as mangels, kohl rabi, crimson clover (T. I.), were brought into cultivation, and made it possible to carry a higher type of sheep—that is one with great powers of early maturity, and it must not be forgotten that early maturity and catch-cropping absolutely go hand in hand.

There is far too general idea that catch-cropping is only adapted to the lighter lands, but this is a mistake. It is a residual curse of those rigid rotations which were compulsory up to within the last twenty years. Rigid rotations were required at one time when there was little chance of getting additional fertilisers, and when produce fetched high prices, but that time is passed, so far as they are concerned one little hears of them outside agricultural text books. A farmer who cannot farm without a strict rotation is not going to farm long in these days. He has to work his business well enough to adapt circumstances to his ends.

I am not, therefore, going to suggest a rotation which is to fit everybody, as no two persons are exactly similarly placed—a rotation is like a ready-made suit, will fit very few.

It will depend, of course, much on the proportion of arable to grass, capital available, and the nature of the sheep to be kept. There are a few points which may generally be found desirable: (1) Ample catch-cropping; (2) an extensive area of mangels; (3) a ewe flock, as fattening animals are wasteful and ewes scavenge profitably; (4) ample spring food for lambs; (5) a good summer and early autumn food; (6) on heavy land a double root crop, that is the land in roots for two years, so as to render dead fallows less necessary; (7) single-feed crops to allow bastard fallows.

There are various ways in which these can be secured, as, for instance, take land after wheat, in quantity according to needs.

Wheat (first portion).—Rye fed in spring followed by cabbages or kale drilled.

Second portion.—Trifolium followed by turnips autumn fed.—

Third portion.—Tares, followed by kale maur planted, failing which mustard.

Fourth portion.—Mangels, swedes, kohl rabi on the lighter land, kale or rape drilled.

Fifth portion.—The foulest land dead fallowed; if season dry enough to effect full influence of fallowing six week turnips or mustard may follow.

The same might follow any other corn crop, but as Italian rye grass comes very early, and is excellent for young lambs, it is well to put in a quantity as a first run over for lambs: to run a hay crop and then lie bastard fallowed. Space is desirable for two or three acres of winter barley, as it is such an excellent corrective in case of scour in lambs.

The above, in proportion to needs, while taking mangels as the sheet anchor in the food supply to last through spring and June, will supply food in the following order:—March: feed rape, or turnip tops, kale; April: rye, Italian rye grass; May: trifolium; May onwards: seeds (clovers, etc.); June: tares; July: kale, early cabbages; August: late cabbages, rape; September: turnips; October: mustard; November: swedes; December: kohl rabi; February, March, onwards: mangels; these, with pasture and clover leys to turn on in very wet times, will tide the sheep along.

In respect to using the land twice for a root crop, it is best to keep the turnip and cabbage land alternating with the mangel land, and to alternate the land fed off with that from which the crop is carted off.

Apart from the dead fallow, there is ordinarily not enough work done on heavy land in summer, when tillage is much more effective. It is the frequent corn cropping and absence of summer work which makes dead fallowing necessary so much more often. On light land, which does not want opening so much vastly more work is done in summer time. Heavy land farming, most unsuitably generally throws the work on the land in the wet season, so that the subsoil is pounded in a wet condition, requiring dead fallows to correct it.

It may be urged that there is difficulty in getting a plant in summer time. So there is on all land, and on the chalk soils, where most catch-cropping is done, there are difficulties; but it must be borne in mind that heavy land produces much heavier crops than those light soils, so that compensation is got there.

(To be continued).

* A Market Day Lecture recently read by Mr. W. J. Malden at Colchester

The Leicester Sheep Breeders' Association.

At a meeting of the Council of the Leicester Sheep-Breeders' Association, held in Driffield, Yorks, on Thursday, Mr. E. F. Jordan presided. Messrs. James Snarry and James T. Barnby, of Eddlethorpe Grange, Malton, were elected to membership. A list of the prizes proposed to be offered at the Derby meeting of the Royal Agricultural Society was received from Mr. Ernest Clarke, the secretary, and the classification was gratefully accepted and a resolution of thanks passed.

NORWICH FAT STOCK SHOW.

The annual show of this society was held on Thursday, Friday, and Saturday of last week, under favourable conditions as regards weather, which was cold and seasonable—quite in accordance with ideals for the best condition of Christmas fat stock. The general quality of the animals was highly satisfactory throughout, the majority being good weights and well finished. As regards breeding, a very large portion of the cattle at this show have always been cross-breds of one kind or other with a number of capital Irish bullocks, and the present occasion emphasises the state of things very considerably, as, apart from the native breed of Red Polls, there were very few pure breds. The overwhelming demand that has been experienced for two, at least, of the leading breeds (Shorthorns and Herefords) for export as well as for home breeding, has naturally had a great effect upon these breeds, as no breeder would think of sacrificing a bull calf for a fat stock show that was likely to grow into hundreds of pounds for breeding purposes; neither would females be consigned to such a fate unless they had proved sterile, therefore it was not surprising that the pure-bred classes, as far as the breeds above mentioned were concerned, were very light. The class for various pure breeds of bullocks consisted mainly of Angus, one Hereford being shown and two Devons, which were not, for the reasons above stated, of extra show class, though good beef. The weights of the adult animals gave cause for much satisfaction, for though one often hears the cry that small joints are needed most, purchasers when in the market invariably run after the big cattle, knowing that they get more money, and also that a small beast fattened to excess is pretty certain to cut up wastefully fat to a much greater extent than the large one. Judging at this show was once more left too late in the day to be pleasing, at least, to visitors, as finishing the championships by gaslight is not to be commended; yet this had to be done last Thursday, otherwise the judges went through their duties agreeably, apparently, and with, for the most part, general satisfaction.

The Champion Beast at the Norwich Fat Stock Show.

Our Illustration above is of the Crossbred Cow, "Luxury," a black and white, by a Shorthorn out of an Aberdeen Angus—Shorthorn Dam," bred by Mr. J. Ross, Meikle Tarrel, Fearn, Ross-shire, and exhibited at the Norwich Fat Stock Show last week by Mr. E. T. Learner, Burgh, Aylsham. "Luxury" was first in the Class for cows of any breed other than Shorthorn and Red Polled (including cross and mixed) that has produced at least one live calf, or heifer of any breed not exceeding 4 years old; was awarded the Special Prize for the best cow or heifer in the Show, a Special for the best beast in the Show exhibited by Norfolk Farmers whose incomes are mainly derived from the cultivation of land, and finally the Championship of the Show. "Luxury's" age last week was given as 2 years 8 months 3 weeks, and her weight 14 cwt. 0 qr. 14 lb., her average daily gain thus being 1·59 lb.

Cattle.

The county breed Red Polls, as it should be, take precedence in the catalogue, and these made a more favourable impression than for several years past. The weights of them were not big for such a breed, but very few of them were over fed, and there is generally in them a little weakness or lack of flesh behind the shoulder, which was the case this year. Steers under two years old came before the judges first, and were a very neat and well brought out lot. Sir Walter Corbet had the best of these, bred and fed in his herd in Shropshire, and sired by Rattler, a beautiful steer at both ends as well as the middle, ripe, and pulling up the beam at 11 cwt. 3 qr. 25 lb. at a year and ten months; this steer was eventually awarded reserve as best of his breed. Lord Amherst had a very pretty steer in the second place of a year and seven months old, and good in quality. The Hon. A. E. Fellowes had also a weighty steer placed third.

Steers above one and under two years were four in number, and were not as good as the juniors, proportionately. The Hon. A. E. Fellowes had the best of them, weighing just over 13 cwt.; Mr. John Hammond and Sir Walter Corbet followed. Females of this breed mustered some seven very good entries, both of fair weights and good in their feeding. The judges selected Mr. R. P. Cooper's Ashlyn's Gravel for the first place, a very neatly shaped heifer with good beef, and pulling up the beam at 11 cwt. 1 qr. 20 lb. at two years and nine months; she was also accounted champion of this breed, though many ring-siders would have preferred the reserve (the steer) for that honour. Sir Walter Corbet also had a very good heifer of greater weight and good at both ends, that must have been very close to her companion, and secured the second prize. The Hon. A. E. Fellowes had also a remarkably ripe heifer in the class.

Shorthorn steers above two and under three years were next judged, and, as intimated, above, were very short in numbers, only two animals competing. H.M. the King's white steer, by Carlyle, that won in the juniors last year was easily first, he has grown and laid on flesh wonderfully, and handle well. His fore-end and top, too, are most satisfactory, at the stern, however, he loses ground; his weight now is just under a ton. Mr. T. B. Earles' Coral Prince was the other bullock, and a very useful one, too. Female Shorthorns, like the steers, were only two in number. Mr. Earl this time easily led with Rockfield Lady 6th, a Northern-bred heifer scaling 15 cwt. 0 qr. 24 lb., and very good in her symmetry, style, and quality all round. Captain J. P. Meade owned the other heifer, a good commercial one.

Steers of any other pure breed consisted of four Angus, two Devons, and a Hereford. The Angus, however, were decidedly the best of these—indeed, two of them or three of them were quite able representatives of their breed. Mr. E. P. Alexander, from Wilts, obtained first with a very sensible steer weighing 17 cwt. 1 qr. 22 lb., shapely, and handling well; he was bred in the North, and is a likely steer to give the buyer satisfaction as well as the seller. Mr. T. B. Earl was second with another lengthy, well finished, and level bullock of Mr. Bridge's breeding, and Sir F. E. S. Adair had a remarkably ripe and heavy bullock, that stood next.

In the junior mixed class of steers, Mr. R. W. Hudson was accorded first honour for a blue grey of deep, massive, and level proportions, and, like all the entries from this feeder, capitally brought out; his weight, 14 cwt. 2 qr. 2 lb.; breed, Angus and Shorthorn cross. H. M. the King came next with a younger beast of pure Shorthorn blood of very good symmetry and quality, that looks like doing better another year. Mr. Steward and Sir F. E. Adair had also very good animals in this class. Cross or mixed steers above two and under three years were a famous class, and brought out the champion ox or steer in the show. This was Mr. R. W. Hudson's Danesfield Midnight, an Angus and Shorthorn cross bred by exhibitor, and pulling up the beam at 16 cwt. 1 qr. 24 lb., a wonderful-backed steer, wide, and fed to the turn, covered evenly with the best of roasting beef, and showing well. Mr. T. B. Earle followed with another of similar cross, that has done well since last year, now scaling 16 cwt. 2 qr. 16 lb., and is well filled along his roasting parts and good in his symmetry. Mr. Alexander and Sir F. E. Adair had also very good bullocks.

The entries of this section were, perhaps, if anything, the best class in the hall, and one or two quite worthy of substantial honours had to be content with very little. Mr. E. T. Learner's Luxury headed the class. She was first in the junior heifer class at Smithfield last year, and reserve for the cross-bred cup. She is now remarkably symmetrical, has a capital top, and is light of offal. Her weight is 14—0—14, which represents but a very small gain on the year, she being quite of the early maturity type that seldom grow so much after two years. It must be very gratifying to Norfolk that the championship of the show, as well as of the females, and one or two other great honours also fell to this heifer. A very close second was found in Mr. J. Thomson's English-bred Angus, that scaled 15—1—6 at a month younger than the first prize one, and is very good in her quality, well finished, and with very even top and bottom line. Mr. E. Mann had also a very fine heifer standing next, and another of first-rate finish h.c. Mr. T. H. Bainbridge also furnished a topper for the second place. Altogether this was a hot class. The classes for cattle bred or fed in Norfolk contained more beasts of first-class breeding and quality than they have done upon several occasions. In the young steer class Mr. R. Matlock was first with a very neat Shorthorn of a year and six months; H.M. the King following with two white steers, both sired by Traveller and pulling up the beam at about 12—2—0, and very level and useful. In older steers, Mr. E. T. Learner was well at the front with a good Angus, ripe and heavy for age, as well as shapely. Very good beasts were also shown by Mr. Groom and Mr. Hargrave that carried off the other money. The Norfolk cow or heifer class was also good, the chief feature being the variable breeds in it. Mr. Hargrave was first with a very fine quality black and white; Mr. T. A. Barton and H.M. the King carried off the remaining money.

Small cattle were of the usual mixed description, but not without one or two of the most sensational cattle in the hall. Mr. R. W. Hudson claimed the first prize and also the championship of the class without any dispute with a little animal of beauty and quality in Danesfield Little Jap, a Dexter and Angus cross, pulling up the beam at 8—2—20 at a year and ten months; she is very ripe, too. Mr. B. de Bertodans was also capitally represented, and carried off second and third for heifers, and first for steers, which were not quite as good a class as the females. Irish cattle were, as far as beef is concerned, a very good class. Mr. C. H. May had the best of these in a very deep, capital, rent-paying class of bullock of Shorthorn, or mostly so, blood, and scaling 19—1—0. Messrs. Fordman, Le Nene, Learner, and Murrell also showed in the prize ring two or three very level Angus and Hereford crosses were shown in these.

The butchers' class was almost on a par with

previous years, containing mostly crosses, Shorthorns, and one or two of mostly or all Angus blood. The first prize was given to Mr. E. C. Groom for a beast of the latter type, well fed, and weighing 17—1—25. Mr. Ben Stimpson obtained the other prize for a very neat one of similar blood, but very much lighter in weight, being but 13—0—10

Sheep.

The sheep section was remarkably well filled, both in numbers and quality, the space for exhibiting the animals, however, is too limited to allow for seeing them to the best advantage. In South Downs, H.M. the King was well to the front, taking first and the championship of the section with a fine level pair of wethers that weighed 5—3—6, and also first for a very good quality pen of lambs that balanced 4—0—9. The Earl of Ellesmere, Mr. C. R. W. Adeane, and Sir Thomas Gooch also exhibited very good pens of this breed and shared the honours.

Mr. H. E. Smith was the only exhibitor of Suffolk wethers, and was awarded first prize for a very good pen that weighed 6—3—24.

Wethers of other breeds were headed by a fine pen of Mr. Rush's crossbreds pulling up 7—1—1; second and third prizes going to Hampshire Down wethers shown by Mr. T. F. Buxton and Sir W. J. Pearce; weight of the second prize pen 7—0—8. Mr. T. F. Buxton also secured first and third prizes for lambs of other breeds with his Hampshires, the best pen of which were 5—2—7, and then divided for the second place by a pen of fine Suffolk lambs of Mr. H. C. Smith of 4—0—22, all of them very ripe. The most enchanting lambs, however, were a pen of Mr. Thomas Hush's Hampshire and Oxford crosses that reached just 6—0—0. These were also awarded the champion prize for best pens of lambs; a second pen from the same flock were also very good; as were also a pen of Suffolk and Hampshire crosses shown by Mr. C. W. H. Cozens-Hardy.

Pigs.

The display of these was very limited in numbers, but quality was quite up to any previous year. Mr. A. Brown and Earl Cadogan divided the Berkshire prizes, and Mr. Mitchell and Mr. Reeves the prizes for pure bred White pigs. Mr. Brown had also a pen of very good cross breds, and Mr. K. M. Clark a pen of Large Blacks that were first and second in the mixed class. The best butchers' pigs being Mr. H. Reeve's Large White Yorkshires and a pen of crossbreds of Mr. Webster's.

Roots and Grain.

The show of roots was a comparatively small one, but in keeping with a fairly good season, the quality of the exhibits was for the most part excellent. This was, perhaps, more apparent with the mangold, there being specimens remarkable for size and solidity. Corn invariably forms, for some reason, a small display at an exhibition of this kind. Mr. William Mitchell, Kirby Bedon, took the premier place in red wheat, second honours going to Mr. G. W. Roe, Uphall, Garboldisham, for a bushel which ran the first prize very close. Naturally the greatest interest was concentrated in the barley section, Norfolk having this year achieved the honour of sending the champion sample to the great Brewers' Exhibition at the Royal Agricultural Hall. Mr. C. G. Miles, Alburgh, Harleston, sent a bushel of the barley which secured the national honour on that occasion, and as may be imagined, this sack, which was awarded first prize on this occasion, commanded a good deal of attention, the sample being freely handled, criticised, and admired, a grand specimen of Webb's Kinver Chevallier, grown with Messrs. Joseph Fison and Co.'s fertiliser. Next to it, and taking a second honour, was a sample of Archer's barley, sent by Mr. W. Mitchell, Kirby Bedon, and this, too, came in for a good heal of admiration.

Judges.

CATTLE: Mr. William Wright, Scamblesby House, Horncastle; Mr. J. Sturley Nunn, Little Welnetham Hall, Bury St. Edmund's.

SHEEP: Hon. A. E. Parker, The Cottage, Doveridge, Derby; Mr. W. D. Little, Middleton Stoney, Bicester.

BUTCHERS' BEASTS AND PIGS: Mr. Frederick Able, High Street, Lowestoft; Mr. P. M. Kett, Sprowston Road, Norwich.

ROOTS AND GRAIN: Mr. William Case, Tuttington Hall, Aylsham; Mr. Charles Waters, Postwick, Norwich.

CHAMPION AND SPECIAL PRIZES.

CATTLE.

The Patron's Prize for the best beast in the show: Mr. E. T. Learner (cross-bred); r., Mr. R. W. Hudson (cross-bred).

The best ox or steer in the show: Mr. R. W. Hudson (cross-bred); r., Mr. E. P. Alexander (Aberdeen Angus).

The best cow or heifer in the show: Mr. E. T. Learner (cross-bred); r., Mr. R. W. Hudson (cross-bred).

The Members' Prize for the best Red Polled beast in the show: Mr. R. P. Cooper; r., Sir Walter Corbet.

The best beast in the show bred and fed in Norfolk: Mr. Edward Mann (cross-bed); r., Mr. A. C. Hargrave.

The best beast in the show exhibited by a Norfolk farmer: Mr. E. T. Learner (cross-bred).

The second best in the show exhibited by a Norfolk farmer: Mr. A. C. Hargrave.

A prize of ten guineas for the best beast in the small cattle classes (13 and 14): Mr. R. W. Hudson (cross-bred); r., Mr. B. de Bertodano (cross-bred).

A Silver Challenge Cup for the best beast in the show exhibited by a Norfolk farmer: Mr. T. A. Barton (cross-berd); r., Mr. R. Mattocks (Shorthorn).

SHEEP.

The Champion Prize for the best pen of sheep in the show: H.M. the King (Southdown wethers); r., Mr. Herbert E. Smith (Suffolk wethers).

The best pen of lambs in the show: Mr. Thomas Rush (Oxford-Hampshire); r., Mr. T. F. Buxton (Hampshire Downs).

The best pen of Shearling wethers in the show: H.M. the King (Southdowns); r., Mr. Herbert E. Smith (Suffolks).

The best pen of sheep, exhibited by a Norfolk farmer: Captain A. B. Feilden, Baconsthorpe, Holt (Suffolk lambs).

Prize List.

Class 1.—Steer of Red Polled breed, not exceeding two years old: 1, Sir Walter Corbet, Acton Reynald, Shrewsbury; 2 Lord Amherst of Hackney, Didlington Hall; 3, the Right Hon. A. E. Fellowes, M.P., Honingham Hall, Norfolk (Honingham Allen); r., Richard P. Cooper, Ashlyns, Berkhamsted (Ashlyns Gem); c., C. E. Simpson, Old Buckenham, Attleborough.

Class 2.—Steer of the Red Polled breed, above two years, and not exceeding three years old: 1, the Right Hon. A. E. Fellowes M.P. (Augustus 9261); 2, John Hammond (Davyson 254th); r., Sir Walter Corbet; c., R. J. Thurman, Ipswich.

Class 3.—Cow of the Red Polled breed, that has produced at least one live calf; or heifer, not exceeding four years old: 1, Richard P. Cooper (Ashlyns Gravel); 2, Sir Walter Corbet, Bart. (Acton Coral); 3, Right Hon. A. E. Fellowes, M.P. (Amoret); r., John Hammond (Davy 272nd); h.c., John Hammond (Davy 269th).

Class 4. Steer of the Shorthorn breed, above two years and not exceeding three years old: 1, H.M. the King; 2, T. B. Earle, Aldbro', Darlington (Coral Prince).

Class 5.—Cow of the Shorthorn breed that has produced at least one live calf; or heifer of the Shortorn breed not exceeding four years old: 1, T. B. Earle (Rockfield Lady VI.); 2, Captain J. P. Meade, Earsam Hall, Bungay (Belle).

Class 6.—Steer of any pure breed, other than Shorthorn and Red Polled, above two years and not exceeding three years old: 1, E. P. Alexander (Aberdeen Angus, Holt Boy); 2, T. B. Earle (Aberdeen Angus, Drax); 3, Sir Frederick E. S. Adair, Flixton Hall, Bungay (Polled Angus, Lord Ruthven); r., R. W. Hudson, Marlow, Bucks (Aberdeen Angus, Danesfield Cumbrian); c., R. Silcock and Sons, Poulton-le-Fylde (Hereford, Bodvean Lad).

Class 7. Steer of any breed (including cross or mixed breed, but excluding Red Polled), not exceeding two years old: 1, R. W. Hudson (Danesfield Blue Boy); 2, H.M. the King; 3, F. J. Steward, Brigstock, Thrapston (Brigstock Prie); r., Sir Frederick E. S. Adair (Charlie); h.c., Sir Frederick Adair.

Class 8.—Cross or mixed breed steer, above two years and not exceeding three years old: 1, R. W. Hudson (Danesfield Midnight); 2, T. B. Earle (Macdonald); 3, E. P. Alexander (Gay Lad); r., Sir Frederick E. S. Adair.

Class 9.—Cow of any breed, other than Shorthorn and Red Polled (including cross and mixed), that has produced at least one live calf; or heifer of any breed, not exceeding four years old: 1, E. T. Learner (Luxury); 2, R. J. Thurman (Aberdeen Angus); 3, Edward Mann; r., Thomas H. Bainbridge, Felton, Northumberland (Aberdeen Angus); h.c., Edward Mann.

Class 10.—Steer of any breed, bred and fed in Norfolk, not exceeding two years old: 1, Robert Mattocks, The Green, Burlingham; 2, H.M. the King; r., Robert Mattocks.

Class 11.—Steer of any breed, bred and fed in Norfolk, above two years and not exceeding three years old: 1, E. T. Learner; 2, E. H. Evans Lombe, Thickthorn, Hethersett; 3, Arthur H. Hargrave, Hemblington, Norfolk; r., Thomas Allday Barton, Watton; h.c., John E. Groom, Stiffkey, Norfolk.

Class 12.—Cow of any breed, bred and fed in Norfolk, that has produced at least one live calf; or heifer of any breed, bred and fed in Norfolk, not exceeding four years old: 1, Arthur C. Hargrave; 2, Thomas Allday Barton, Watton; 3, H.M. the King; r., the Right Hon. A. E. Fellowes, M.P.; c., L. Rodwell, East Rudham, King's Lynn.

Class 13.—Steer, above 18 months and not exceeding three years old, nor exceeding 10 cwt. live weight: 1, B. de Bertodano, Malmesbury, Wilts; 2, Rev. F. Jickling, Smallborough Hall, Norwich; 3, Sir Walter Gilbey, Bart.; r., H.M. the King.

Class 14.—Heifer, above 18 months, and not exceeding three years old, nor exceeding 9 cwt. live weight: 1, R. W. Hudson (Danesfield Little Jap); 2, B. de Bertodano; 3, B. de Bertodano; r., Sir Walter Gilbey, Bart.

Class 15.—Irish bred ox or steer, not exceeding three years old: 1, E. T. Learner; 2, E. and L. Goodman, Dundalk, Ireland; 3, E. G. H. Murrell; r., E. and L. Goodman.

Class 16.—Irish-bred ox or steer, above three years old: 1, C. H. May, Grenton, Bridgewater; 2, W. Le Neve, Tunstead Hall, Norwich; 3, E. and L. Goodman; h.c., Godfrey W. Weston, Hemblington, Norwich.

Class 17. For the best butcher's beast of any breed or age, grazed in Norfolk, which has been the property of the exhibitor for not les sthan six months: 1, E. G. Groom, Manor House, Congham, King's Lynn; 2, B. Stimpson, Bixley, Norwich; r., W. W. Cook, The Abbey, St. Faith's; h.c., Thos. Cook, Hobland House, Great Yarmouth.

SHEEP.

Class 19.—Pen of three Southdown wethers, under 23 months old: 1, H.M. the King; 2, Earl of Ellesmere.

Class 20.—Pen of three Suffolk Black faced wethers, under 23 months old: Herbert E. Smith, Walton.

Class 21.—Pen of three wethers, other than Southdowns and Suffolks, under 23 months old: 1, Thomas Rush, Saffron Walden; 2, T. F. Buxton, Ware (Hampshire Down); 3, Sir W. G. Pearce, Bart., Chilton Lodge, Berks (Hampshire Down); r., T. F. Buxton (Hampshire Down).

Class 22. Pen of three Southdown lambs, lambed in the year 1895; 1, H.M. the King; 2, Earl of Ellesmere; 3, C. W. R. Adeane, Babraham Hall, Cambridge; r., C. H. Berners, Woolverstone Park, near Ipswich; h.c., C. W. R. Adeane.

Class 23. Pen of three pure bred Short woolled lambs, other than Southdown, lambed in the year 1905: 1, T. F. Buxton (Hampshire Down); 2, Herbert E. Smith; 3, T. F. Buxton (Hampshire Down); r., Sir W. G. Pearce, Bart., Hungerford, Berks (Hampshire Down); h.c., Captain A. B. Feilden, Baconsthorpe, Holt, Suffolk; M. G. Hale, Claydon; c., Captain A. B. Feilden.

Class 24.—Pen of three cross-bred lambs, lambed in the year 1905: 1, T. Rush; 2, T. Rush; r., Clement W. H. Cozens-Hardy, Cley Hall; c., Cement W. H Cozens-Hardy.

PIGS.

Class 25. Pn of three Berkshire pigs, above six months and not exceeding 12 months old: 1, A. Brown, Hill Farm, Southampton; 2, Earl Cadogan, K.G.

Class 26. Pen of three pure bred White pigs, above six months and not exceeding 12 months old: 1, W. Mitchell, Kirby Bedon, Trowse; 2, Messrs. H. Reeves, Stalham, Norwich; r. and h.c., A. Brown; c., W. Mitchell.

Class 27. Pen of three pigs other than Berkshires or Whites, including cross and mixed breeds, above six months and not exceeding 12 months old: 1, A. Brown; 2, K. M. Clark, Sudbourne Hall, Orford, Suffolk; r., A. Brown.

Class 28.—The best pen of three pigs of any breed or age most suitable for the butcher, bred in Norfolk: 1, Messrs. H. Reeves; r., Mr. W. H. Webster, Eaton, Norwich.

ROOTS AND GRAIN.

Class 30.—Six long mangolds, drawn from a field of not less than five acres: 1, C. Dewar, Great Massingham Abbey, King's Lynn; 2, J. C. Wiley, Little Plumstead, Norwich.

Class 31.—Six globe tankard, or intermediate mangolds, drawn from a field of not less than five acres: 1, J. Love, Walcot, Stalham; 2, C. W. Waters, Stokesby, Great Yarmouth; r., C. W. Waters; c., G. J. Baly, Attleborough; and A. J. Cubitt, Slowley Old Hall, Norwich.

Class 32.—Six swede turnips, drawn from a field of not less than five acres: 1, Captain A. B. Feilden; 2, W. Case, Tuttington, Aylsham, R.S.O.; r., A. J. Cubitt.

Class 33. One bushel of red wheat, a sample from not less than 15 quarters: 1, W. Mitchell; 2, G. W. Roe, Uphall, Garboldisham; r., F. Nash, Hassingham; c., C. W. H. Cozens-Hardy and W. H. Cooper.

Class 34.—One bushel of barley, a sample from not less than 15 quarters: 1, C. G. Miles, Alburgh, Harleston; 2, W. Mitchell; 3, J. Gooderham; r., C. W. H. Cozens-Hardy.

Class 35.—One bushel of white oats, a sample from not less than 15 quarters: 1, J. Gooderham; r., W. H. Cooper.

Class 36.—One bushel of black oats, a sample fro mnot less than 15 quarters: 1, C. G. Miles, Alburgh, Harleston; r., W. Mitchell.

SEEDSMEN'S PRIZES.

Class 66.—For the best six roots, Daniels' Coronation globe mangel, to be drawn from a crop of not less than two acres: 1, J. M. Outlaw, Pulham Market; 2, E. H. Evans-Lombe, Thickthorn, Hethersett, Norwich; 3, C. Long, Bradwell, Great Yarmouth; 4, W. Hales, Bunwell, Attleborough; r., J. Sparrow, Church Farm, Bawburgh.

Class 67.—For the best six roots, Daniels' Gatepost mangel, to be drawn from a crop of not less than four acres: 1, F. S. Nash, Aldeby; 2, D. Harrison, Acle; 3, G. W. Roe, Uphall, Garboldisham; 4, E. Gladden, Ingham Hall Farm, Stalham; r., H. Reeve, Bridge Farm, Yaxham.

Class 68.—For the best six roots, Daniels' Golden Tankard mangel, to be drawn from a crop of not less than four acres: 1, J. Sparrow, Bawburgh; 2, C. Long, Bradwell; Great Yarmouth; 3, H. Rackham, Corton; 4, W. E. Sawyer, Catfield; r., G. W. Roe, Uphall, Garboldisham.

Class 69.—For the best six roots, Daniels' Norfolk Giant purple top swede, to be drawn from a crop of not less than four acres: 1, W. B. Mickleburgh, Aldeby; 2, J. Hewitt, Great Ormesby; 3, A. Stimpson, Arminghall; 4, H. Reeve, Yaxham; r., W. E. Sawyer, Catfield.

Class 70.—For the best six roots, Daniels' improved purple top swede, to be drawn from a crop of not less than four acres: 1, E. Gladden, Ingham Hall; 2, E. T. Learner, Burgh; 3, W. B. Mickleburgh, Aldeby; 4, F. Nash, Hassingham; r., J. Mendham, Raveningham.

Class 71.—For the best six roots, Daniels' Norfolk Green Round or White Turnip, to be drawn from a crop of not less than two acres: 1, W. E. Sawyer, Catfield; 2, G. Derisley, Stratton Strawless; 3, F. Nash, Hassingham; 4, H. M. Upcher, Sheringham; r., A. Stimpson, Arminghall.

Class 74.—For the best six bulbs of Golden Tankard mangold, supplied by Mr. G. Townsend: 1, C. W. Waters, Herringby Hall; 2, John Mendham; h.c., A. F. Knights, Stokesby, and J. F. Savory, Blickling.

Class 75.—For the best six bulbs of Globe mangel supplied by Mr. G. Townsend: 1, F. S. Nash, Aldeby; 2, C. W. Waters, Herringby Hall; h.c., R. King, Great Plumstead, and H. Kent, Swaffham Prior.

Class 76.—For the best six bulbs of Gatepost Yellow Intermediate mangel supplied by Mr. G. Townsend: 1, F. S. Nash, Aldeby; 2, A. Wright, Caistor; h.c., J. F. Savory, Blickling; c., A. F. Knights, Stokesby.

Class 77.—For the best six bulbs of Defiance or Monarch swede supplied by Mr. G. Townsend: 1, P. Case, Banningham Hall; 2, R. Harris, Sculthorpe; r., Lord Marcus Beresford, Newmarket; h.c., R. King, Stoke Holy Cross, and J. F. Savory, Blickling.

Class 78.—For the best six bulbs of Green Globe, White Globe, or Purple-top Mammoth, supplied by Mr. G. Townsend: 1, S. Wright, Moulton; c., G. Weston, Hemblington.

Class 79.—For the best six bulbs of Kohl Rabi supplied by Mr. G. Townsend: 1, Earl of Derby, Newmarket; 2, W. Case, Tuttington; h.c., R. King, Stoke Holy Cross.

Class 80.—For the best six specimens of Webb's swede, any one variety, drawn from a crop of not less than three acres: 1, J. Love, Walcot, Stalham; 2, E. T. Learner, Burgh, Aylsham; r., W. Le Neve, Tunstead Hall, Norwich.

Class 81.—For the best six specimens of Webb's mangold, any one variety, drawn from a crop of not less than three acres: 1, R. Mattock, The Green, Burlingham; 2, Alfred Brown, Hill Farm, Southampton; r., E. H. Evans-Lombe, Thickthorn, Hethersett, Norwich; h.c., J. Love.

Class 82.—For the best nine specimens of mangold, any one of J. K. King and Son's pedigree varieties: 1, Spear and Villacott, East Hall, Rainham; 2, E. H. Evans-Lombe; r., E. Stacey Spencer, Bentfield, Bury, Stanstead, Essex; h.c., A. Hewett, Home Farm, Ramsay, Harwich; c., R. R. Kidman, South Walsham.

Class 83.—For the best nine specimens of swede, any one of J. K. King and Son's pedigree varieties: 1, W. Le Neve, Norwich; 2, J. Gooderham; r., W. B. Mickleburgh, Aldeby; c., F. Neave, Scottow.

Judges for Birmingham.

Cattle.—Herefords, Devons, Welsh, Kerries, and extra stock.—John Chick, Compton Valence, Dorchester; A. P. Turner, The Leen, Pembridge, Herefordshire. Shorthorns, Scots, and Crosses.—H. Lindsay, Deanbank House, Glamis; R. Wright, Nocton Heath, Lincoln. Butchers' Prizes Cattle.—E. A. Lewis, Hockley Hill, Birmingham; David Rose, jun., Hamstead Road, Birmingham; S. C. Willis, City Meat Market, Birmingham.

Sheep. Cary Coles, Manor House, Winterbourne Stoke, Salisbury; G. F. Hempson, Good Hall, Ardleigh; T. S. Minton, Montford, Shrewsbury.

Pigs. J. Watts, Fairgreen, Chipping Norton.

Oxon. Butchers' Prizes—Pigs.—John P. Flood, Bordesley Street, Birmingham; John Morgan, Digbeth, Birmingham.

Corn.—J. E. Mitchell, Cape Hill, Smethwick, Birmingham; Norman H. Todd, Blythewood, Edgbaston, Birmingham.

Roots.—J. Keen, Hill Top, Longdon, Rugeley; L. Willdey, Dunton, Minworth, Birmingham.

Potatoes.—A. E. Drewett Canwell Gardens, Sutton Coldfield; W. Halliday, Patshull Gardens, Wolverhampton.

SOCIETIES.

Royal Lancashire.

A meeting of the Council of the Royal Lancashire Agricultural Society was held on Wednesday at the Manchester Town Hall. Mr. John White, of Warrington, presided.

The Secretary (Mr. G. Bohane) laid before the Council a statement of the receipts and expenditure for the Liverpool show. The total of the receipts was £12,408. The total expenditure was £11,150, leaving a balance of profit of £1,558. The announcement of this balance was received with applause.

The Chairman, in explaining how the large balance arose, referred to the fact that at Liverpool, for the first time, the showyard had been fitted up by the society's own staff instead of by contract. He moved a vote of thanks to the Works Committee and the secretary (Mr. G. Bohane) for the efficient and economical way in which they had carried out this work. He said he thought the Council would agree with him when he said that there never had been a more finely arranged or more substantially erected showyard than that in which the Liverpool show was held. It was not only a better showyard than they had had before, but it had cost less. It had cost £2,025, whereas if it had been done according to scheduled prices it would have cost £3,195. Therefore, there had been an actual saving of £1,100. This was not all. The showyard was considerably larger than that which they had in Liverpool in 1889 (there were 300 more lineal feet of shedding), yet the expense was £1,600 less than that of the 1889 show. (Applause.)

A desperate attempt had recently been made on the part of the Royal Agricultural Society to capture the secretary of the Lancashire Society. He and other members of the society had brought all the influence they could to bear upon Mr. Bohane in order to induce him to remain. Fortunately they had succeeded in retaining his services.

Mr. W. W. B. Hulton seconded the resolution. It was supported by Mr. William Harrison and carried. Mr. R. Webster and Mr. Windham E. Hale responded on behalf of the Works Committee.

The Council decided to recognise the services of the ex-Lord Mayor of Liverpool (Mr. John Lea) in connection with the show by conferring upon him an honorary vice-president life membership of the society. A similar honour was conferred upon the Rev. L. C. Wood, of Singleton.

It was decided to invite Mr. Herbert L. Storey to accept the office of president of the society for the ensuing year. The secretary stated that the general balance in favour of the society stood at about £12,000.

The Council adopted a draft prepared by the secretary as their annual report. Besides recording the facts stated above, it stated that 143 new members have been enrolled during the year, and that 79 have been lost through death and other causes. The total membership is now 1,372.

NOTES AND NEWS OF AGRICULTURAL SOCIETIES.

Co-operation at Tewkesbury.

A meeting of farmers and landowners was held at Tewkesbury, on Wednesday afternoon, in support of the principles of co-operation as applied to agriculture, and with the object of forming a society for Tewkesbury and the district. The Earl of Coventry presided, and he was supported by Sir R. B. Martin, Bart., M.P., Mr. R. A. Yerburgh, M.P. (President of the Agricultural Organisation Society), etc. The Earl of Coventry said he knew it was rather a difficult matter to get farmers to co-operate for the reason that they were a somewhat fleeting population, and it was not easy for them to keep in touch, but if the farmers would combine and support agricultural organisations they would be able to obtain their implements, cake, and other things used on the farm upon better terms, and would also have an association to watch over their interests. In taking fat stock to market he understood farmers could not get more than sixpence per pound, whilst the price of meat remained as much as ever. The farmer, therefore, got a bad bargain, and probably the purchaser would get as much profit from the animals purchased in three days as the farmer got in three years. If they would co-operate they would do their best to assist each other, and obtain better prices in the market. His Lordship, referring to the condition of land, said that the country was suffering from a superabundance of red tape and a multiplication of local authorities and officials counting increased salaries. All this came upon the rates, and he wished they could return to the practice of thirty years ago, when the affairs of the country were administered quite as well and at far less cost than at the present time. Mr. Yerburgh then delivered a lengthy address upon the advantages of co-operation, and at the conclusion it was unanimously resolved that it was desirable that the farmers of the district should co-operate in their own interest, and a committee was formed.

Woodbridge Horse.

A committee meeting in connection with the Woodbridge Horse Show Society was held at Woodbridge on Thursday, when the prize list for next year's show—to be held on Easter Monday—was considered and revised. It was decided to eliminate class 5, for group of Suffolk yearlings, to reduce the prizes in class 6, for three-year-old Suffolk stallions, to £7 and £3, and increase the prizes in class 9, yearling Suffolk cart stallions, to £3 and £2. Classes 11 and 12 (two and three years old Shire stallions) were amalgamated. Class 13, for draught mares, other than Suffolk, was altered to four-year-old and upwards, and class 14 to include two and three-year-olds. The two classes for tradesmen's turnouts, within a radius of six miles of Woodbridge, were struck out. An extra class was added for high jump for hunters. Bye-law 9 it was decided should stand, but in classes where there are only two or three entries, the stewards should draw the judges' special attention to the bye-law, that no second prize should be awarded unless of special merit. These changes were necessitated by the Society's lack of funds.

Rye Farmers' Club.

The opening meeting for the present session of the Rye Farmers' Club took place on Wednesday, Mr. J. Wadman presiding. A letter was read from the Canterbury Farmers' Club advocating an import duty on hops, and this is to be considered at the next meeting. The Dorset Joint Agricultural Committee invited the Club's support to resolutions urging the passage of the Damage to Crops Bill and the Sale of Butter Bill, and such support was accorded. Mr. Matthews, Secretary of the Central Chamber of Agriculture, gave an address on "Local Taxation and the cost of administering the Education Act," advocating that the cost of education should be borne by the Imperial Exchequer. He also urged the formation of emergency committees in connection with farmers' clubs. A resolution was carried expressing the opinion that the cost of main roads, police, and elementary education should be borne by the Imperial Exchequer, a copy to be sent to the Premier.

PUBLICATIONS RECEIVED.

"Dixon's Law of the Farm." Sixth edition. Stevens and Sons, Limited. Price 26s. The appearance of a new edition of this well-known work, edited by Mr. A. J. Spencer, the author of "Spencer's Agricultural Holdings Acts," and late Assistant Commissioner to the Royal Commission on Agricultural Depression, will be welcome to the landlord, the tenant farmer, the landagent, and members of the legal profession concerned in agricultural or rural questions. Mr. Spencer has introduced marginal notes summarising the text, which will facilitate reference, and he has more fully dealt with the subjects of highways and rates and taxes than in former editions. The chapter on the Agricultural Holdings Act has been re-written, owing to the passing of the Market Gardeners' Compensation Act, 1895, and the Agricultural Holdings Act, 1900. In many other respects the law has been brought up to date. We confess we should like to have seen more space allotted to the question of sewers and drains and water supply, subjects of considerable interest at the present moment in rural England—but this is a matter, after all, for the discretion of the learned Editor. Nothing but praise can be given for the chapters on Trespass, Game, and Sporting Rights Husbandry Covenants and Customs, and Compensation for Improvements under the Agricultural Holdings Acts. The index is excellent. We can thoroughly recommend this new edition, and it ought to find a place in every country gentleman's and landagent's library.

Mr. J. Murray, of 50A, Albemarle Street, London, W., has just issued (price 10s. 6d. net.) "The Book of the Rothamstead Experiments," by Professor A. D. Hall, M.A., Director of the Rothamstead Experimental Station, and, as may be imagined, it deals with that celebrated place and the numerous experiments which have been carried on there during the past sixty years. Professor Hall must have had a most laborious task in compiling this work, but we think it will be generally agreed that he has done it well. The information given is, naturally, not altogether new, but in the new form it should be of great service to the teacher or student of agricultural chemistry, for whom the book is primarily intended, but it will also appeal to every man concerned in the management of the land whether farmer or market gardener, landowner or agent who wishes to learn something of the processes going on in the growing crop and in the soil. Professor Hall makes matters quite plain to the non technical reader, and gives a number of diagrams and simplified tables, so that the persons just enumerated will have little difficulty in understanding what they are reading.

"The Game of British Columbia" is the title of Bulletin No. 17, issued by the Government of the Province mentioned, and it differs from many other bulletins in that it is interesting from beginning to end, and is most profusely and excellently illustrated. The animals and birds which are hunted for sport in British Columbia are numerous and widely distributed over a vast extent of country presenting many opportunities of, as well as many obstacles to, success. The big game, such as grizzly bear, mountain sheep, and caribou, are only found in the mountain fastnesses or the more inaccessible parts of the Province, and, therefore, their pursuit is not to be undertaken lightly. As, however, the difficulties and dangers incident to this life form the principal zest for true sport, British Columbia as a country is, and ought to be, a very attractive field for sportsmen. The Bulletin, it may be added, contains a check-list giving the more familiar birds and mammals. This has been prepared by Mr. F. Kermode, Curator of the Provincial Museum, and it gives the habitat of all the game animals. There is another important feature of the Bulletin, and that is a full list of the British Columbian Game Laws. Those interested in the subject can obtain a copy of the Bulletin, and other particulars, from the Agent-General for British Columbia, namely, Mr. J. H. Turner, Salisbury House, Finsbury Circus, London, E.C.

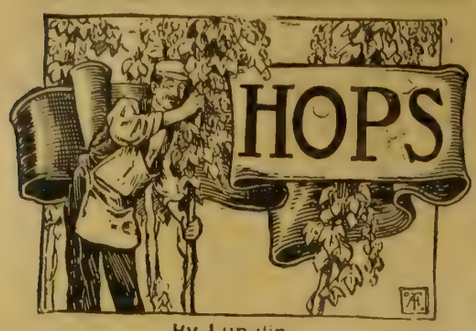
Some practical hints on the cultivation and management of cottage gardens, written from actual experience, are given by Colonel the Hon. R. Stapleton-Cotton, in a pamphlet of some sixty pages, which has been issued by Messrs. Cornish Brothers, Limited, Birmingham. Its object is to promote the love of gardening and to help those whose lack of knowledge on the subject has prevented them from doing justice to their gardens. Its price is only 4d., so that it should have a very large sale and accomplish its object. The proceeds of the sales, it may be added, will be handed over to the Lord-Lieutenant of Staffordshire towards the foundation of a scholarship at the Harper-Adams College for the benefit of the sons of bonâ-fide agricultural labourers or other working men receiving ordinary daily wages in the United Kingdom.

As the majority of our readers are doubtless aware, the first International Millers' Congress was held in Paris during October, and, as a souvenir of such an important event, Mr. G. G. S. Broomhall has issued a nicely got-up booklet, in which are set forth details of the Congress, an interesting illustrated article on the "Evolution of the Flour Mill," and particulars of the various Millers' National Associations, showing their origin, development, and history, whilst photographs of their chief members accompany the letterpress. The souvenir is a worthy one of such an interesting event as the Congress proved.

During the past week we have received No. 2 (dated May 24) and No. 3 (November 4) of the "Journal of Agricultural Science," issued by the Cambridge University Press. This journal has a distinguished list of editors, and the subjects dealt with cover a fairly wide area, but they are far too technical for the average farmer, and thus only appeal to the student and teacher; whilst, again, the price is high—5s. net.

From Messrs. Thomas Kennedy and Co., of Dumfries, has come to hand a catalogue of forest, fruit, and ornamental trees, shrubs, roses, etc., for 1905. It is a somewhat unpretentious list in get-up, but gives particulars of a choice lot of the plants named, from which can be selected stocks to meet the requirements of the large or small garden, etc.

Rugby Horse Fair.—There are not wanting evidences that the great Rugby Horse Fair will soon be an institution of the past, for both the supply of stock and attendance of buyers and others at the fair held last week was meagre in the extreme.



By Lupulin.

Trade Notes.

England.

An important volume of business is continuously passing through the hands of the Borough traders, with the result that the main bulk of the new crop has been transferred, and most of the yearlings have now found buyers. The market is consequently getting into a condition of comparative bareness, choice and bright hops being especially scarce, and the lower qualities are commanding attention and being more freely taken. The earlier atmosphere of depression seems to be at last dispelled, and replaced by a brighter outlook. Firmness is the general characteristic of the present position, and better prices have been realised this week for all descriptions. The disappointing feature of recent transactions is the low figures bid and accepted for the excellent yearlings that were held in the expectation that they would of necessity be of better value than the best new hops. It appears that the changes in our various systems of brewing enable brewers to be less dependent than in former times upon yearlings for the lining of their beers. Thus they have been neglected in favour of the bounteous supply of the 1905 growth, until holders consented to let them go at such rates as buyers were willing to give. Heavy losses have therefore been suffered, and the sanguine hopes indulged in nine months ago are sadly cancelled.

America.

From recent information furnished by my correspondents on the other side I learn that considerable business is being transacted in choice hops at 11½ to 12½ cents, and that good prime qualities can be bought from growers at 9 to 10 cents, lower grades being neglected. As growers are generally anxious to sell, it is not anticipated that even the present low prices will be maintained. It is reported that an enormous quantity of hops has yet to be sold, and as brewers and short sellers are well aware of this fact, they will naturally take advantage of the position, and regulate their buying accordingly, without the slightest regard to the interests of growers. As with us, the holders of 1904 hops are compelled by the force of circumstances to submit to heavy losses, as they are only able to realise about 9 cents for hops which were confidently held in the summer for 30 cents.

Germany.

Although the general condition of affairs on the Nuremburg hop market has not materially altered during the past fortnight, the calm that has prevailed has brought about a tendency towards lower quotations. For choice coloury qualities there is a steady demand, accompanied by a fairly firm tone, but for all medium and inferior sorts prices are somewhat reduced. There is very little support given to the market by the export trade, which goes very slowly, and supplies being in excess of rates, stocks are increasing, so that the outlook is hardly suggestive of any early improvement in general values. Ordinary market hops can be bought from 25s. to 45s., Hallertans from 40s. to 78s., Wurtemburgs from 38s. to 75s., Badens from 55s. to 80s., Spalts from 68s. to 88s., and other sorts in proportion. The arrivals at Nuremburg by rail during September and October were 156,812 cwt., in addition to the supplies sent in by road, while the railway outgoings in the same period were only 73,962 cwt.

It will be remembered that at the close of the Franco-German war, in 1871, the Provinces of Alsace and Lorraine were annexed by Germany. The consequences of this change of nationality are singularly manifest in a reduction in the consumption of wine, and a corresponding increase in the production and consumption of beer. In 1872 these provinces produced 812,454 hectolitres of beer, and imported from Germany 51,808 hectolitres. In 1904 the figures were 1,221,690 hectolitres produced and 335,123 imported. Apparently, as the people think, so they drink, and it seems to be good proof that the Alsatians are well satisfied with the alteration in their government.

Belgium.

The previously reported improvement in the values of hops was checked slightly about a fortnight ago by a temporary falling off in demand. Recovery has, however, taken place, and, with more active business, the market has become distinctly firmer in tone, and prices have further advanced. Contracts made for delivery in November, which were unprovided for, doubtless explain the present upward movement in some degree, as the local brewery demand is only moderate. But the present position and prospects are satisfactory to sellers, as Alosts are realising 50 to 55 francs, and Pops 35 to 40 francs. These figures show improved values since the opening of the season to the extent of nearly double.

MONDAY MORNING. The tendency towards continued firmness in the Belgian hop markets has been checked during the past day or two, owing to the reduced demand from local brewers, and the calmness prevailing in other Continental centres. Quotations are slightly lowered, but there are indications that recovery of previous values will take place shortly.

British Possessions beyond the Seas

AND THEIR

London Representatives.

NOVA SCOTIA APPLES.

An Exhibition of NOVA SCOTIA APPLES, selected and forwarded by the Nova Scotia Government is now on view in the Canadian Court at the Crystal Palace.

Specimens may be loaned for exhibition at local Shows upon application to MR. JOHN HOWARD, Agent-General for Nova Scotia, 57a, Pall Mall, London, S.W.

Agricultural Imports.

The following is an account showing the quantities of certain kinds of agricultural produce imported into the United Kingdom in the week ended Nov. 11, 1905, together with the quantities imported in the corresponding week of the previous year:—

	1904.	1905.		1904.	1905.

Royal Isle of Wight Agricultural Society.

The first general meeting of the above Society since its reconstitution was held at Newport, Isle of Wight, on the 1st inst., under the presidency of Mr. A. H. Wykeham. The report of the Committee, who had drawn up rules and taken other steps to ensure the more successful working of the Society in future, was presented and adopted. It is proposed that in addition to holding exhibitions there shall be quarterly meetings for the discussion of subjects interesting to agriculturists. The Committee reported that Lord Alverstone had consented to act as the first President of the Society, and many landowners and others had promised their valued support as vice-presidents. Captain H. Collingwood Bertram was elected Secretary in place of Major Henry J. Way, who, on retirement, has been made a life member, and will be presented with an address in recognition of his zealous services since the formation of the Society in 1882.

Milk and the Standard.

An interesting lecture with the above title was given by Professor F. J. Lloyd, F.C.S., F.I.C., at a meeting of the North Somerset Agricultural Society, at Nailsea, on Tuesday. At the outset Professor Lloyd said they all knew that milk was liable to very considerable fluctuations in its composition, as they knew that the morning's milk was not so rich as that given in the evening. He then proceeded to describe the construction of the organ in which the cow's milk was secreted—the udder. Milk, he proved, was not a liquid of a constant composition, and he would try to explain why it varied. Though milk was said to be a secretion, it was quite distinct from all other secretions of the body; and the udder also had the property of excretion, as could be seen in the different taints of herbage often found in it. Milk was not merely a secretion of a liquid, but a growth of material. If that fact were realised it would help to explain the vagaries and fluctuations in its composition. The production of serum would influence the quality of the milk and the natural breaking down of certain cells of the udder, which varied in the quantity of fat and solids it yielded.

What was important was the question of the quality of the milk, and that depended entirely upon the production of the cells. Those cells were built up by the blood, and the blood must have sufficient and proper food for the purpose; but it must be remembered that even when an animal was receiving a maximum amount of suitable food there was a limit to its capacity for production. He ventured to state, from long experience, that in many cases, perhaps in the majority of cases, the cows were not obtaining the maximum quantity of food, and that was why, if the food was increased, there was generally an improvement in the quality of the milk.

He went on to explain the changes in the composition which took place—the normal and abnormal changes. With regard to breed and individuality, it was well known that individual cows possessed varying degrees of facility for making milk, and different breeds produced not only milk of different composition, but of absolutely different character, and the art of breeding depended on the study of the quantity and quality of the milk of every cow in the herd. As to the abnormal fluctuations, those which were not regular and which were not natural were the most important.

Proceeding, Professor Lloyd referred to the difference in the character of the milk first taken from the cow when the milking commenced, and towards the finish of the milking. If the milk were an ordinary secretion of liquid, it would be of the same composition from start to finish; but, as they knew, whilst the first few drops contained scarcely any fat, the last two minutes would produce milk with perhaps 8 per cent., though the whole milking would average only 3 to 3½ per cent. The fact of that variation in the composition of milk was one which not only must they themselves realise, but a fact they must make every milker realise, because the composition of the milk they sold depended enormously whether the milker brought away those "strippings" so rich in milk fat, or whether it was neglected, in the hurry to catch the town train.

Early Milking Advocated.

He firmly believed that the poor quality of the milk sent to town often resulted from the milkers failing to get up sufficiently early to do their work thoroughly; and that that question was a serious one they often found to their cost, when prosecutions took place. This might lead them to think of the introduction of the milking machine; but from his personal observation he knew it quite failed to get the best results, because it did not help to bring away the fat globules from the cells, besides which it caused a physiological danger in blocking the growth of the milk-producing cells. The variation in the quality of the morning's and evening's milk, apart from the lapse of time between the milkings, was easy to explain, in that,

because of the fall of the temperature during the night, the material carried by the blood, instead of going to produce milk, was being used to maintain the warmth of the animal's body.

As to the question of the time between the milkings, it must be remembered that the longer the periods, the secretion being made more rapidly than the fat, so it was being gradually diluted, and the milk becoming poorer. This was a great difficulty to the farmers, and he could not see how they were to avoid prosecution at intervals until, as was suggested at the Dairy Conference in Paris, a cheap form of refrigerator was discovered whereby the farmer might keep his milk and sell only from the mixture of the two daily milkings together. He believed that if farmers would combine to sell only one milking the traders in town would soon find some way to meet the changed conditions.

Reducing the Variations in Milk.

It was impossible to account for all the variations in the quantity and quality of the milk, apart from the change of herbage with the season; but there were some points that might be regarded as tending towards reducing them. There was the question of temperature, which, kept regular and not too high, was very important in the production of both the best quality and largest quantity of milk; whilst excitement, caused by dogs, flies, or the noise at a show, influenced a cow very adversely. This year, he said, had been a very exceptional season in affecting the composition of milk; he knew no season in his experience when there had been so much poor milk, and this under apparently normal conditions.

He could not pretend to account for it, but that it was true was shown in cases where 35 cows sent for exhibition at the Royal Agricultural Society's Show and the British Dairy Show gave milk with less than three per cent. of fat. But, generally speaking, there was no real reason for having less than three per cent. of fat, and he advised them not to attempt to get the legal limit reduced, for it would be as bad for themselves in the end as for the general public. Nevertheless, he was of opinion, and had always been of the opinion, that it was very hard indeed that a farmer should be prosecuted for fraud if the milk he sold suddenly dropped below the standard 3 per cent. of fat and 8¼ per cent. of solids, as frequently happened in the spring.

He had, in fact, known of cases where prosecution was made when he had himself watched the milking, and could testify that the milk was sent from the farm exactly as it came from the cow. The law, however, was that an analyst was justified in assuming that there was 10 per cent. of added water, or that the fat had been extracted from it, if it did not come up to the limit, unless the contrary could be proved, and this was, generally speaking, most difficult.

He had appealed to the House of Commons about the injustice it was to farmers, but without success; but, as he believed that a remedy was only to be got by pegging away, he was going to try to induce them to move in the matter, as the British Dairy Farmers' Association had already done, by drawing the attention of the Board of Trade to it in the form of a resolution, which had been acknowledged, with a request for fresh information on the subject, and suggestions for remedying the grievance. A committee had been formed to consider his views and the views of others submitted to it, and they trusted every farmer would move and insist upon the matter being put upon a better basis.

Dutch Butter with 19 per cent. of Foreign Fat.

Mr. F. Wilmot Nicholls, trading as Nicholls Brothers, of 10, Colonial House, Tooley Street, was summoned at the Mansion House on Tuesday by his Majesty's Customs for an infringement of the Sale of Food and Drugs Act, 1899, in having imported Dutch butter containing 19 per cent. of foreign fat, the packages of which were not conspicuously marked with the name and description indicating that the butter had been so treated.

A certificate was put in from Dr. Thorpe, the Customs' analyst, stating that the cases of butter were described as "Guaranteed Pure Creamery Butter (Dutch Produce)," and, on analysis, was found to contain not less than 19 per cent. of foreign fat. Mr. Daldy said the butter in question arrived in London in July, per the steamship "Batavier V.," from Rotterdam. It had been consigned by the Netherlands Butter Union to Messrs. Guyster and Sons, to whom Mr. Nicholls acted as broker. The consignment weighed 33 cwts., and was invoiced at from 94s. to 96s. per cwt. The price of really pure Dutch butter at that time was from 105s. to 114s. It was alleged that the butter had been treated with what was called "a neutral blending," which was a fat prepared in such a way and in such proportions that the compound could not be distinguished from butter without the most intricate analysis.

The defendant, on being summoned, wrote a letter to His Majesty's Customs, stating that he was a butter broker and not an importer, and that in this instance he was simply acting on behalf of the Netherlands Butter Union to collect the money from Messrs. Guyster, the real importers. He was a perfectly innocent agent, had not touched the butter, and had never had any control over it. He had since severed his connection with the Netherlands Butter Union. There was, counsel for the prosecution said, a distinction between creamery butter and factory butter. The creamery butter was produced straight from milk taken from the cow, whereas factory butter was treated in a different way.

Mr. Moresby White admitted that the defendant was an "importer" within the meaning of the Act. His client was simply a forwarding agent in the matter, and had no knowledge of, or control over, the butter. He had dealt with the Butter Union before, and never had any complaint of the goods sent by them. The butter in this case was warranted by the senders as pure, and not containing more than 16 per cent. of moisture. If there had been a contravention of the Act, the shippers and consigners would have obtained any profit, but the innocent agent must pay any penalty. He submitted a nominal fine would suffice.

Sir Alfred Newton said that it was necessary the public should be protected from this kind of adulteration. He imposed a fine of £20 and £10 10s. costs.

Whitchurch Cheese Show.

If any signs were needed to show that the cheese industry is increasing enormously each year it has been found in the success which has attended the recent shows at Chester and Nantwich, and again last week at a rival county show —namely, that of the Whitchurch Dairy Farmers' Association, held in the Market Hall, Whitchurch, on Tuesday and Wednesday. The show has year by year increased in popularity and success, but without doubt last week's exhibition was the best of the lot in every respect. The entries, which numbered in the cheese classes alone 450, constituted a record, and of the dairies entered, only five failed to put in an appearance. Class 1, which contained sixty-six dairies, was one of huge proportions. It was made of no fewer than 800 cheese, and there were other classes—notably the two open classes, each having an entry of sixty-five and eighty-nine respectively—which contained a tremendous weight of cheese. All the cheese shown was, of course, not of the choice quality of the winning dairies; and again the changeable weather conditions recently experienced had affected the quality of many cheeses.

The honour again went to Cheshire of providing the championship dairy. The judges had to choose between the dairy of Mr. John Dutton, Swanley, Nantwich, and that of his son-in-law, Mr. Denson, of Poulton, the winner of the championship prize at Nantwich. Both were represented by twelve coloured cheeses, which were of first-rate flavour and quality, but finally by a majority the judges declared in favour of Mr. Dutton's dairy. Mrs. Mosford, of Tattenhall, a lady whose name has been associated with previous successes, was awarded the premier prize for a fine lot of cheese in Class 2, and another Cheshire exhibitor, Mr. George Walley, of Bickerton, also a noted maker, received the second prize.

In the class in which farmers with occupations not exceeding eighty acres competed Mr. John Williams, of Hollins Green, came into prominence by winning with a capital dairy. The second prize for a nice lot of cheese shown in this class was won by Mr. John Craddock, of Malpas.

Following up his success at Nantwich, Mr. Jones, of Aldersey, Chester, took first prize with a handsome lot of twelve white cheese shown in the open class. History thus again repeated itself in the coincidence afforded by the triumphs recorded by the noted Dutton family, Mr. Jones, like Mr. Denson, being a son-in-law of Mr. John Dutton. Next to Mr. Jones's fine dairy, which was ultimately awarded championship honours for the best dairy of white cheese in the show, was the dairy of Mr. John Hobson, of Audlem, who won further distinction for himself by carrying off the second prize, and by winning the premier prize in the smaller class with a lot of cheese which were of excellent make and flavour. In this class also Mr. James Blake, of Calveley, figured as the winner of the second prize. It is worthy of mention that all the principal prizes in this class, with the exception of the sixth, went to Cheshire makers.

In addition to the second prize which was awarded to him in the class in which his father-in-law won the cup, Mr. Denson, of Chester, with a superb dairy of four coloured cheese in the open class, secured the first prize, beating a good dairy shown by Mr. W. H. Burgess, of Norbury. In the classes in which Captain Etheiston, by the gift of handsome prizes, encourages competition amongst farmers who have not within a certain period won prizes, Mr. C. H. Arrowsmith, of Adderley, and Mr. G. E. Sheen, of Brindley, and Mr. W. H. Buckley, of Malpas, and Mr. George Fitton, of Broomhall, were respectively winners of the first and second prizes. In the latter class seventeen dairies received prizes and cards, and twenty-seven were entered.

There was a splendid show of butter made up ordinarily and in fancy samples. The judges spoke very highly of the quality, and they distributed a great number of cards in each of the five classes, nearly every exhibit obtaining mention.

The Fair.

Mr. T. Nunnerley, secretary of the Whitchurch Dairy Farmers' Association, reports as follows on the prices obtained at the cheese fair and show on Wednesday:—The pitch was a very heavy one, 92 tons, which totalled, with the 100 tons in the show, 192 tons, this tonnage constituting a record weight of show and fair cheese. The demand both in the show and fair for first class dairies was exceptionally good, and the prices realised were very satisfactory to sellers, and a shade in advance of previous quotations. The champion prize dairy in the show realised 120s. per cwt., and the principal prize dairies from 80s. to 90s. The highest grades in the fair made from 69s. to 75s., and medium and lower qualities from 60s to 68s.

Cheese from the Bath and West School.

The fourth draft (over 73 cwt.) of this year's cheese made during the months of July and August at the Cheese School carried on at Glendale Farm, Wedmore, by the Bath and West and Southern Counties Society for the Somerset County Council has just been sold to Messrs. Hill Brothers, of Evercreech, at 68s. per cwt. of 112 lb. The 8,658 gallons of milk made 8,624 lb. of green cheese, which, when sold at an average age of 13 weeks weighed 8,218 lb., showing a shrinkage of about 4¾ per cent. The following particulars with regard to its manufacture will be of interest to cheesemakers:—Temperature at which milk was renneted, 84 deg.; temperatur of first and second scalds, 88 deg. and 93 deg.; acidity of milk when renneted, .18; acidity of whey at close of second scald, .15; acidity of whey when vatted (July), .80; acidity of whey when vatted (August), .85; average time when vatted, 3 p.m. The quantity of whey butter made from each 100 gallons of whey was ½ lb., and the average temperature of cheese room 66 deg. The school, which has been well attended by students, closed for instruction in Cheddar cheesemaking on October 31, but remains open for the teaching of Caerphilly cheesemaking till the end of this month. On November 5, ninety-two gallons of milk made 121 lbs of Caerphilly cheese.

Lancaster Cheese Fair.

The Lancaster November Cheese Fair was held on Tuesday, when the pitch showed a decline of 16 dairies and 286 cheeses, the market comprising 57 dairies and 1,006 cheeses. The lots were of good quality, and sales were effected at 2s. 6d. per cwt. in advance of the last fair. Quotations:—Common 60s. to 62s. 6d., medium 63s. to 65s., best 67s. to 70s., with a few exceptional dairies up to 72s. and 72s. 6d.

At a meeting of the Royal Statistical Society held in London last week under the presidency of Lord George Hamilton, the Guy medal (in silver) was presented to Mr. R. Henry Rew, of the Board of Agriculture, for his work in connection with the preparation of the reports of the special committee appointed by the Society to investigate the production and consumption of meat and milk in the United Kingdom and for his paper entitled "Observations on production of meat and dairy produces."

Co-operative Dairying in Scotland.—At a meeting of the Executive Committee of the Scottish Agricultural Organisation Society, 10, North St. David Street, Edinburgh, a Special Dairy Committee was appointed to investigate into co-operative dairying with a view to consider and draw up a scheme of co-operative dairying in Scotland. The Special Committee has been elected with a view to secure representation as far as possible, and it will hold its meetings at Glasgow. Among others nominated to act are Sir Hugh Shaw Stewart, of Ardgowan, Bart.; Mr. Allan Barns Graham, junr., Craigallian; Dr. David Wilson, of Carbeth, D.Sc.; Mr. Montgomerie Neilson, Barcaple; Mr. A. J. Campbell Colquhoun, Carscadden House; Mr. John Speir, Newton; Mr. Charles Douglas, M.P.,; Mr. James Dunlop, Fenwick; Mr. W. Harling Turner; Dr. Shirra Gibb, etc.

Seasonable Advice.

The weather is now somewhat trying for those last year's birds which have not their full plumage, as they feel the occasional cold nights, and unless fed on stimulating food and provided with comfortable covered runs, they stand moping about, and look very miserable indeed. During November the birds require feeding well, and undoubtedly the best breakfast for them is made of two-thirds biscuit meal and one-third good middlings, during the week at least, and the other two mornings the birds may have middlings or barley meal and house scraps.

The feeding of the birds is now an important matter, as so much depends on how the birds are fed as to the results obtained from them. There are many good laying fowls which are not treated in the right manner, and are therefore not as they otherwise would be. During the cold weather the hot breakfast is of great help to the fowls, as after the long night they have been on the perch they are very hungry and require a nourishing feed. This is specially comforting to them when it is hot.

Poultry-keepers on a small scale generally utilise the house scraps for their fowls, but these are not used to the best advantage when they are thrown to the birds during the day. The better way is to keep a bowl specially for the house scraps, and, as these accumulate, they should be placed in the bowl and kept until the following morning, when the contents of the bowl should be transferred to an old iron saucepan, which should be kept for the purpose of boiling up the house scraps. Sufficient water to cover these should then be poured over, and the whole brought gently to the boil.

When there are any pieces of bacon rind or anything that is likely to cause a stoppage internally they should not be allowed to eat the same; it is a good plan to cut these into smaller pieces before they are boiled up. As soon as the mixture has boiled it should be poured into the mixing bowl, and sufficient middlings and barley meal added to make it nice and crumbly.

Small poultry-keepers can profitably use their house scraps in this manner, but where there is a larger number of fowls kept, some substitute for the nourishing house scraps should be provided, as to produce eggs when the weather is severe, really nutritious food is required. Fowls require sufficient food to sustain them, and a surplus over this to provide nourishment for the egg organs.

The best method of using biscuit meal to advantage is to scald it over night by pouring boiling water over it in a pail or basin, covering the meal well with water, and then placing a linen cloth over the top of the pail to keep the steam in. If the cloth is folded several times the whole of the steam will be kept in, and the meal will swell to about twice its bulk when dry. Then next morning some more boiling water should be poured in and the middlings added, and the whole well stirred to make a crumbly, appetising meal for the birds.

At this time of the year scraps of meat and fat should be added to the fowls' breakfast, and the pieces of bread and scraps of vegetables should be boiled up for the fowls at midday. We have been asked whether it pays to feed fowls thus well in the winter months, and we have no hesitation in saying that it pays well, as many more eggs are produced by fowls thus well fed than will pay for the additional cost of the food, and these extra eggs are all profit, and in addition to the eggs the condition of the birds improves, and they are not made fat internally, as this food nourishes the birds and helps the production of eggs—but does not make fat.

It is time for fowls which are required to breed table poultry to be mated now, and birds for the production of exhibition stock should also be mated during this month. These remarks refer more particularly to the heavier breeds, as Leghorns, Minorcas, and Wyandottes are frequently not mated until February, and then produce good birds for the autumn shows. Care should be taken to provide the stock birds with plenty of ventilation in their houses, and not on any account to overcrowd them. It is most essential to the well-being of the birds that overcrowding be avoided.

Those who keep birds merely for laying and breeding table fowls frequently prefer to breed from cross-bred pullets, as they are so hardy, and when bred from good laying strains, so prolific; and these birds, when mated with cockerels of pure breeds suitable for the purpose for which they are required, answer quite as well as the pure breeds, and the cost of the stock is lessened. During November and December the pullets and hens which are to be kept for breeding purposes should be sorted out from those which are to be sold, and suitable male birds purchased for them.

It is advisable to mate ducks now, in order to secure early eggs and ducklings when prices are the highest. It is a great mistake to put this off until after Christmas, as in purchasing now there is a good opportunity for the birds to get nicely settled down before eggs are required.

Turkey rearers usually purchase a stock cock each season, and where it is possible to make room for the birds before Christmas, it is a good plan to purchase them, as they are to be bought at lower prices then. Those who rear a large flock of turkeys for sale for stock purposes are glad to sell off some of their oldest birds to give the younger ones a better chance of development, and frequently sell at a much lower price than they otherwise would, in order that they may have a less number to run on.

"PAYING POULTRY"
Is the book you need if you would make your poultry keeping a success.

FOR HEALTHY CALVES USE VESTA CREAM MEAL

This, our latest Calf Meal, has been specially made for use with either Skim or Separated Milk, and after the first few days can be used alone.

It is very nutritious, easily digested, prevents scour, and imparts a beautiful sleek skin.

It is one of the richest milk substitutes obtainable, and fine healthy thriving calves are reared on it by the leading breeders of cattle.

It is therefore a *perfect milk substitute.*

T. GITTINS, Esq., Wrentnall Farm, Shrewsbury, says

"I am more than pleased with your Calf Meal, I consider it excellent in every way"

15s. per cwt. Carriage Paid to Nearest Station.

DALMENY SEED POTATOES. For Quality, Heavy Cropping and Disease Resistance. Grown from selected tubers, specially treated for the production of vigorous seed. Illustrated descriptive catalogue and Prices on application to Manager Home Farm Dalmeny Park, Edinburgh.

WANTED TO PURCHASE, some cheap apple trees, large quantity, Standards and half Standards or Pyramids; must be cheap, don't mind if a bit rough; 1,000 or less. Also English Shallots, any quantity. All for cash. Standford Mill, Swallowfield, Reading.

MATCHLESS
FIRST EARLY. New Seedling Potato.
Send for Photo of Crop, with full particulars of this grand early Potato.
Read the following Report of Prof. Malden's trials:—
"I have dug your Potato Matchless, and am pleased to say it has turned out very well. In the opinion of those who saw it dug, only one variety has equalled it and none excelled it in all my trials this year."
Orders should be sent as early as possible to save disappointment. Stock limited to 10 cwt.
Scotch and Yorkshire grown King Edwards, seed size, 20th Century, Davie Warrior, Eldorado, Highlander, Sutton's Discovery, Llewellyn, Duke of York, Sharpe's Express, Recorder, Webb's New Guardian, and Midlothian Early.—Apply,
W. S. BROOKES, Plumtree Lodge, Bawtry.

CHANGE OF SEED
always increases and sometimes doubles the crop.
The Potato benefits more than any other crop by the introduction of FRESH SEED.
This year has again proved the necessity for English growers changing their Potato Seed from Scotland.
The Seed I offer is grown on the high lands of Fifeshire, and from that district they always do well. Most of the new, and all the older, varieties I have grown and tested, and will be pleased to give advice as to what kinds are likely to suit the different soils, &c., and give best results. I have also tried Findlay's latest. These have done exceptionally well.
HOME AND EXPORT.
Write for particulars, stating kind and quantity required.

THE

"BIBBY" CAKE
V.
LINSEED CAKE.

In out-of-the-way districts, amongst farmers who perhaps do not often see the Agricultural papers, there are some few feeders who still fatten bullocks and other cattle on Linseed Cake.

To all such we venture to suggest that the present high price of Linseed Cake affords an opportunity for putting the **"BIBBY" CAKE** to a competitive test.

Consider the saving! At the relative prices the cost of **"BIBBY"** is something like 30s. per ton less than the cost of any good brand of English Linseed Cake, so that on a four-ton truck of Cake a saving of £6 is effected.

But this is not all; we maintain that cattle can be fatted more expeditiously on **"BIBBY" CAKE**, which effects a saving of both time and other keep.

But let us waive the latter point, for the money saving alone is well worth the feeder's attention.

We supply the whole Cakes, or in the form of Cakettes, as may be desired.

We also supply our famous **DAIRY CAKE** in Cakettes, Whole Cake or Meal, and we believe better value for Dairy Cows is not to be obtained than we are now giving in out well-known **DAIRY CAKE, CAKETTES**, and **MEAL.**

Bibby's Quarterly.

The new number of BIBBY'S QUARTERLY, edited by our Mr. JOSEPH BIBBY, is now out, and can be had during this month at all Smith's Bookstalls, price 1/-.

There be those who say that BIBBY'S QUARTERLY is the best periodical which comes into the farmhouse, but there be also gainsayers who affirm that if it dealt more with live stock, and less with high ethics, it would be more acceptable to the average farmer; and we are rather of that opinion ourselves, but the Editor tells us that he edits BIBBY'S QUARTERLY to please himself, and we have to leave it at that; should, however, any reader of BIBBY'S QUARTERLY make a purchase at Smith's Bookstall, and is afterwards doubtful that he has got his shilling's worth, we undertake to make matters straight with him if he apprise us of his dissatisfaction within the present month.

ROOT HARVESTING.

The last crops of the year to be harvested are the roots, and most farmers have clamped a tolerably satisfactory quantity of mangels, but, according to general reports, the swedes, many of them are at the present period engaged in clamping, yield anything but bountiful returns, so far as a large portion of the southern half of the kingdom is concerned. We are almost always compelled to make a broad distinction between the state of things North and South in regard to swedes, so well adapted as they are to the climate of Scotland and that portion of England bordering thereon, and extending even to Yorkshire and the valley of the Trent, but too often the reverse to that portion of the kingdom, where the crop has to be put in at least a month later, where the young plants are so often carried off by fly, and, after they are secured, have to encounter the serious risk of suffering from mildew. This has, unfortunately, been their fate in a great many districts this year, as our reports from farmers have sufficiently made apparent, and, considering how late many of the common turnips were put in, apprehensions may be entertained whether in too many cases the root crop in its entirety will prove sufficient for the requirements of many Southern flockowners during the ensuing winter.

Of course, much will depend on what its character proves to be. The winter of 1904-5 was remarkably mild, characterised by only slight frosts and scarcely any snow south of Yorkshire. In the event of a similar one being experienced, most farmers, by economy and good management in spending, will have a sufficiency without suffering anything akin to famine. But we may possibly have a winter of great severity, such as has often occurred, and for which everybody has the need to be prepared for in the proverbially uncertain climate of the British Isles. If this should happen, root-pulpers will have to be extensively made use of, together with straw chaff, for the pulp to be intermixed with to make the supply last over the length of time required. Straw chaff, if damped and placed in heaps to ferment, engenders a grateful flavour to make it more acceptable to the palates of all stock than otherwise it would be. And not only so, but the fermentation often half cooks the straw and causes it to be far more digestible and wholesome.

There have been winters when owners of large flocks have been compelled to resort to straw-chaff feeding very much, and that too, without any roots worthy of consideration. Either corn or saccharine soups had to be thrown over the chaff, or other auxiliary feeding stuffs to be given along with it. Straw, in such seasons, becomes too valuable a stock-fod to be employed for littering cattle and horses.

We had so many frosts last month that fears may be entertained whether all the mangels were lifted and harvested with sufficient caution to ensure their good-keeping perfectly. Old-experienced growers are well aware how liable mangels are to suffer if handled not only during slight frosts but too soon after them. Not often have we been visited with so many frosts in October as we had last month. Some were so slight that many farmers, in the midst of their mangel-lifting, may have utterly disregarded them. Just here is the point where danger creeps in, for if they left any which had been lifted over night exposed to such slight frosts and handled then in the mornings succeeding, their skins would be almost sure to turn black, and put into clamps they would speedily perish and affect other roots placed with them. And not only these, but mangels lifted too early in the morning, after a slight frost in the night had happened, would not be exempt from sustaining injury by handling.

Too many have suffered by want of caution in these respects not to be aware that mangel-lifting ought invariably to take place in perfectly open weather. The slight frosts might

work little harm perhaps if liftings were delayed in the mornings succeeding them until the mangels were perfectly free of their influence; but it would be perhaps wiser to stay proceedings altogether until a change of wind brought warmer although damper, influences. Strange to state, however severe a succession of night frosts may be, if the crop is allowed to remain uninterefered with until a change of weather ensues, the roots can then be lifted and harvested in good condition for keeping. Either the covering of the leaves protected them from frost, or subsequently are able to throw off any injurious influences received. At any rate, there have been many cases recorded of fields of mangels having been exposed to a series of severe November frosts and having afterwards been secured in damp, rainy weather perfectly sound, and in a state which caused them to keep satisfactorily.

Seasonable Topics.

Birds as Friends and Foes.

The bird question is a more or less evergreen one where farmers are concerned, and of late animated discussions have taken place at Chamber of Agriculture and other meetings as to the usefulness or otherwise of such birds as rooks, wood pigeons, sparrows, starlings, and larks. In our opinion this is a matter which should be looked at with a perfectly open mind. There are cranks, on the one hand, who protest that birds do no serious damage, but these well-meaning individuals are not farmers, and their arguments are consequently not weighty. There are farmers, on the other hand, who are so incensed at the losses they have sustained that they refuse to admit that there is anything beneficial in bird life. Extreme views in either direction are wrong, and the whole question is whether or not the good done by certain birds compensates for the evil. We can hardly think this is so in some cases, but in others we feel sure that it is. There is our perky friend, or rather enemy, the sparrow, for instance; everybody's hand is against him, and yet he thrives and multiplies. Exterminate him! There is no fear of that, for he is far too tenacious, and in protection of our own we must persecute so far as to keep him and his family within reasonable limits. In common with the rest of our fellows, we have suffered through the misdeeds of rooks, but in other ways we know that rooks are useful, and if people who possess rookeries would only feed their sporting appetites with more shooting at the proper season, there would be fewer complaints made against rooks. We hold no brief for the wood pigeon, particularly the foreigner which visits our shores at harvest time in quest of plunder; but the good and bad points of starlings and larks are open to discussion. Our knowledge of what the former bird can do in a cherry orchard prompts us to describe him as no friend of the fruit-grower, at any rate, when cherries are ripe, but we do not consider him to be a sore thorn in the side of the ordinary farmer. Speaking of birds generally, we must protect, but we need not persecute, and keeping injurious birds within reasonable limits is a different thing to indiscriminate slaughter.

* * *

Boy Labour.

A writer in the MARK LANE EXPRESS recently complained that he was paying men to do boys' work, and, owing to the education system at present in vogue, boys are kept at school until they are of no use for work. This is a serious charge to bring against the authorities who administer education, but we must admit that there is room for complaint. Red tape is perhaps responsible, and the want of greater discrimination between the requirements of town and rural districts. We are in favour of every lad, no matter what his station, being equipped with a sound elementary education, but at what age he should be allowed to leave school is largely a question of circumstances. Even in these days the income of an agricultural labourer is not princely, and it is hard on him to have to keep a strong, hungry lad at school until he reaches a certain age or passes a certain standard, when the lad could be bringing some grist to the family mill by scaring birds or leading horses, and, at the same time, he would be helping the farmer. But what about the lad's education? some may ask. Our idea is to connect up day with evening schools at which lads could continue their educations, and they would be better employed in this way during the winter evenings than running the roads or helping to hold up street corners which need no support. We fear, on the other hand, that some people would like to go back to the old days when children commenced work at a ridiculously early age, and were brought up as mere drudges and slaves. It is wrong to make children assume the responsibilities of men, and to keep mere boys everlastingly grinding at work either on a farm or anywhere else, is a means of stunting their intellects, dulling their brains, and making them mere human working machines instead of intellectual men, such as we want, both on farms and in workshops. When they are old enough and big enough, let lads do such work as comes within the range of their capabilities, and while we sympathise with any employer who has to pay men to do boys' work, we, on the other hand, set our face against paying boys to do men's work.

* * *

The Importation of Diseased Cattle.

In a recent speech the President of the Board of Agriculture referred to the action taken by successive Presidents of the Board to stop the importation of diseased cattle, and he deplored the fact that men who would probably hold office in a new Government had openly stated that this question ought to be amended. Surely the strong line taken by the Board of Agriculture in this matter is deserving of commendation, and there can be no doubt about the results when we learn that cattle disease is now practically extinct in this country, and that swine fever has gone down 59 per cent. in the first nine months of this year compared to last. In the way of human beings we are not so particular, and aliens of more or less doubtful character are allowed free entry into this country, with results not altogether satisfactory to the inhabitants; but in the case of cattle, it is eminently desirable that nothing should be allowed to land that is not free from any infectious disease. To be practically free from cattle disease is worth a great deal, and no efforts should be relaxed in order to keep so.

* * *

The Carrier's Van.

The carrier's van, which rumbles its way through the village street, and along the country roads, on its daily journeys to town, is one of the oldest of our rural institutions, and the carrier himself is still a most useful individual, in spite of railways, parcels post, and motor traction. More than once the carrier's occupation has been threatened, but he seems to go on much about the same as he always did. When railways were first started it was urged that the carrier's occupation was doomed, but it has not happened so, for though he may carry less passengers where the iron horse competes with him, his parcel business from the stations has increased. We have ugly-looking, but useful, motor 'busses rattling along the roads and connecting up places that are not yet attached to the railway chain. The big smart-looking motor dashes past the old time worn carrier's van, and seems to jeer at the latter as it goes by; but will the motor drive the carrier off the road? We doubt it, and at any rate the time will not be yet, for the carrier's van is sure, if slow, and, like the sailing ship, which floats while there is a spar left, in comparison to the iron steamer, which goes down quickly and wholesale, the carrier's van has a knack of reaching its destination either by hook or by crook. The carrier, too, as a rule, is a good type of a countryman, a jovial, obliging fellow, who does not consider his trouble, and never thinks a commission too small. The class of merchandise he carries is of a varied character, and if the old carrier's van could speak what a tale of changes it would have to tell. The lines of these conveyances, which are to be seen drawn up in the market places of certain towns day by day shows that the carrier's business still flourishes, and though motor traction may be the thing of the future, the old world carrier's van will take some running off the road.

* * *

The Law of Trespass.

Very peculiar and somewhat antiquated is the law of trespass. If a man grows mushrooms or watercress as crops any person who takes them can be prosecuted for stealing, but if mushrooms spring up in one's field of their own accord, as they invariably do, or there is a stream running through the farm in which watercress grows naturally, it appears that a trespasser has as much right to help himself to these products as the occupier of the farm. This is strange logic, but there are many strange things connected with the laws of the land, and the question of trespass recently occupied the attention of the Staffordshire Chamber of Agriculture. A resolution was passed to the effect that the law of trespass should be altered, but if all the resolutions passed by Chambers of Agriculture went any further a special House of Parliament would be required to deal with them. Not that we are out of sympathy with the resolution, for we know that farmers suffer a good deal through trespassing, and the means of redress are not very efficient, but considering what little Parliament has done for agriculture of late, and the demands that are made as to what should be done, there is not much prospect of a Trespass Bill being introduced in the near future.

* * *

Imported Insect Pests.

Every man who grows apples, be he farmer, fruitgrower, or gardener, is acquainted with the grub of the codlin moth, which bores its way into the fruit and causes the latter to fall prematurely. This is one of the most common and injurious of insect pests, and Professor Theobald, of Wye College, who is an expert on these matters, when speaking at a fruit conference not long ago, held out little hopes of eradicating the pest, so long as millions of the grubs were imported to this country every year in foreign apples. Probably a good many people have never thought of this, but it does seem like adding insult to injury that home growers not only have to compete with fruit that is brought over at rates lower than we can get here, but they also have to put up with the insect pests that are sent over as well. At present the British grower has no jurisdiction, but if he cannot supply apples enough to supply the million it is quite certain that this country produces as many insect pests as can be dealt with, and we want no importations of this kind.

MILLING.

The Modern Plansifter.

Trade in flour has been rather quiet during the past fortnight. Bakers are steadily taking deliveries of old contracts, but there has been very little booking ahead. Prices are nominally unchanged, and a good baker's grade varies from 23s. to 24s. 6d., according to the locality. All kinds of offals have been selling well, the demand having increased with the advent of colder weather. Bran and pollards are in especial request, and, in fact, some millers cannot supply the demand fast enough.

Home-grown wheat has been in moderate supply at late rates, although some very fine samples have made as much as 31s. per 504 lb. Such wheats had a full endosperm, and were clear-skinned and strong for English sorts. Damp weather always affects condition to some extent, but millers have had little to complain of in that direction, as samples are getting now more mature.

There is now a good selection of foreign wheats in British markets from which to make a choice, and they range in value from something like 29s. to 34s. per quarter. The cheapest wheat, perhaps, is common soft Red Winter, but this year it is so

Full of Garlic

that many millers are leaving it alone, as it is such a difficult impurity to remove when the wheat is new. No. 2 Red Winter is a better quality, but this season there is really no "hard" wheat of this sort to be bought. All of it has a certain amount of softness, owing to climatic conditions during growth and ripening. The dearest wheat on British markets is Australian, which is making as much as 33s. to 34s. 6d. per 480 lb. Good Manitoba can be obtained from 32s. 6d. to 33s. 6d., a wheat which is quite equal to Duluth. Choice White Bombay is making nearly as much as Manitoba, as it helps to give a fine colour to the flour, as well as being on the strong side. Other wheats which can now be obtained are Plate, South Russian, Red Walla, White Canadian, and New Zealand. Canadian White of the best quality forms a good substitute for English, as it is colourly and of sweet flavour. The Plates are always useful in the grist, provided they are bought with care. Some of the best parcels are making as much as 33s. per 480 lb., but this price will not permit of a large quantity being put in the mixture unless very superior grades of flour are required. On the whole, it must be admitted that foreign wheats are dear. It is very easy, with the raw material at hand, to make a very superior grist and excellent flours, but the difficulty is, as so many millers find out in these days of reckless competition and cutting of prices, to make a profit at the same time.

Agricultural Politics.

BY A LOBBYIST.

"And where," I asked an eminent Liberal organiser, "will you secure the greater part of this majority of 130 which you anticipate as the result of the General Election?" "Of course," replied he, "you must understand that in that 130 I enclose the Irish Nationalists. Well," he proceeded, "the greater part of this majority will be secured in the counties. The towns have not been so responsive to our agitation. We do not find the same relentless antagonism there to the new economy as we do in the villages. As a fact, in the towns there is a growing belief that to hit back at the foreigner who taxes British products is something in the nature of patriotism; and there is a further conviction that the policy of a protective tax may after all result in greater employment. In the villages, however, the fear of a dearer loaf has all the palsying effect of a scooped-turnip-and-white-sheet spectre lowering upon the labourer from behind the churchyard wall. No, frankly, I do not think that the belief that Canadian competition may mean in the end the usurpation of the British markets, and the ousting from them of the British-growers will be a serious influence. It may be so, of course, but that is not the opinion at the Liberal headquarters. They, there, believe that the fear that the raising of the price of the necessities of the labourer's cot tage will be the real influence."

"And where do you think you will chiefly gain?" I queried.

"Well," said he, "we shall win many seats in the South. We shall capture constituencies in the East and the West. The Midlands will, despite the influence of Mr. Chamberlain, yield their crop of victories. And the more rural districts of the North will add to the tale. As a fact, our successes will be confined to no specific area. It will be national in its character. Note the figure—130. That is, we shall have a majority of over 50, exclusive of the Irish Nationalist vote." As this organiser and I parted, I reflected what would happen under the circumstances if the Irish Nationalist vote were given on a crucial question to the Conservatives. The life of a Liberal Government with only an inclusive majority of 130 will be the life of the toad under the harrow.

• • •

The Bristol speech—the most effective in the oratorical sense that Mr. Chamberlain has delivered of recent years—contains two points of significance to the agricultural interest—two points, I mean, which may be said to be subordinate to its main purpose. In the first place, he deliberately invoked the general community to resist any increase of the suggested tax on corn beyond two shillings a quarter. "I appeal," said the statesman, "to the industrial classes of this country. If I can persuade them to adopt the two shilling tax, of which I am speaking, it will rest with them whether that tax shall ever be increased in the future. For my purpose, two shillings is enough, and that is all that I ask." This explicit avowal—followed by the distinct declaration that any statesman who requested more than two shillings should be deliberately made to prove his case—places the attitude of Mr. Chamberlain beyond all doubt. And let us not forget this two shillings is devised in the interest, not of the British farmer, but in the interest of the colonist. That it may operate to the advantage of the British farmer is an arguable point. For the moment, we have to consider the design of the statesman. Let me quote:—"I think," said he, "if the tax of two shillings upon foreign corn—not upon colonial corn, if that tax worked thus—that the utmost effect that could be possibly expected from it, that this added a farthing to the cost of the quartern loaf, corn that would be very well purchased with the increased trade which you would get from the colonies in consequence." In other words, we should encourage the colonies to supply us with corn, in order that in return the colonies might resort here for their manufactures.

"What is happening is that, in the last few years," proceeded the orator, "is that in the last few years, foreigners are increasing their exports to the colonies more rapidly than we are. You can keep this trade if you will grasp the hands which are still held out to you." Whose hand is to be held out? Will it be the great industrialists of the towns? No. The reciprocal market to be provided for the colonist is to be the market which should be occupied under a fair scheme of protection by the British farmer. It is not assumed by Mr. Chamberlain, or any of his lieutenants, that there will be competition with any branch of British industry. Not a single member of the Tariff Reform Commission anticipates there would be. For the life of me, I cannot see how the new economy can in any way be described as friendly to the rural interest. The colonist is to seek England for his necessities, which can never be agricultural or horticultural, in exchange for the British agricultural market being yielded up to him. Where, in all frankness, can the British farmer possibly come in?

• • •

Lord Carrington's suggestion that landlords should establish relief works on their estates at this juncture—even utilising the provisions of the Settled Land Act in order to secure money for the purpose—is judicious. This policy will not prove to be a panacea; it will not prove to be even an anodyne. It will not seriously affect the out-of-works of our cities and towns. What it might do is to prevent that drifting towards those cities and towns which it is believed has again set in. There were many cautious men who feared that one of the sequels of the Queen's Unemployed Fund would be the attraction of large numbers into the greater centres of our life. The popular view is that the money raised, as a result of Her Majesty's generous impulse, will be distributed to the advantage of the town victims of the wave of unemployment. The untutored mind has conjured up a vision of a ceaseless flow of limitless charity for the urban out-o'-work. The owner of that untutored mind will be anxious to share in this bounty. Lord Carrington's scheme may, at least, serve to operate upon the more responsible section of those too-susceptible persons, upon those, for instance, who have domestic ties attaching them to the villages. Of course, such a policy would entail a personal effort and an expense upon the landlords. Lord Carrington holds that it is a better plan even than subscribing to the Queen's Fund, and he is appropriating the sum he intended for the fund to this purpose. Such a plan, if generally followed, might counteract the too-romantic and delusive vision to which I have alluded as to what may happen in the towns.

• • •

One of the wholesome facts of the economic situation is that even the most strenuous Radicals are shedding themselves of what I will describe as feather-headism in regard to the land question. There was a debate at the National Liberal Club on Monday, the subject of which may be said to have been labour and farm colonies as a means of alleviating the pitiable tragedy of the unemployed question. Introduced by Mr. Will Crooks, M.P., the discussion was characterised, generally speaking, by a sanity, a moderation, and a cautiousness of suggestion which indicated an excellent sense of responsibility. Generally, the idea seemed to be—this was certainly Mr. Will Crooks' suggestion—that farm or labour colonies, though immediately designed, like afforestation and the cultivation of waste lands, to provide work for the unemployed, should be regarded as final providers of rural areas with trained labour. One division and divergence there was during the debate. An excited debater, possessing an impetuous flow of incoherence, and who evidently knew as little about agrarian economics as of the true inwardness of the Nicæan Council, heatedly avowed that the only solution of the dire question is the dispossession of "the thievish landlords." The meeting, however, refused to share the vision which possessed his inflamed imagination, and refused too, to see to the immediate removal of the larrikins and of the flotsam and jetsam of our cities to the rural areas, and, of course, to the possession of farmsteads, anything but a pantomimic remedy and a pantaloon delusion. As a fact, your most vehement land reformer is now aware that the rural labourer is really one of the most skilled of artisans. Agriculture, horticulture, a little of pharmacy, something of chemistry, and not a little of meteorology, all come within his ken. To dump unemployed ignorance, however muscular, on a farm, would be a folly. It is well, this new spirit of Radicalism, admirably well. The old spirit made for nothingness, or, at least, conspired to repel all practical economists and real reformers. The new spirit will make for reform. We may yet see called into being a fount whence will be diffused an adequate supply of labour to the land. The idea of Mr. Crooks is not the establishment of the colonies the immigrants to which should be permitted to live a life of valueless labour. His idea is the creation of colonies where the practical training of men for the rural life should proceed under disciplined conditions.

• • •

I have been asked—by a correspondent in the Midlands—whether Mr. Chamberlain has ever specifically promised to impose upon foreign fruits (my correspondent directly indicates French plums) in order that the fruit markets may be confined to the English growers. I cannot remember that he has done anything of the kind. If a preference be given to the colonial fruit-growers it would mean that our markets would be resorted to more increasingly by the Canadian fruit-growers. As a fact, the Canadian officials are possessed by the anticipation, and are preparing to take advantage of the opportunity which they believe would await them under the new economy.

Agricultural Imports.

The following is an account showing the quantities of certain kinds of agricultural produce imported into the United Kingdom in the week ended Nov. 18, 1905, together with the quantities imported in the corresponding week of the previous year:—

	1904.	1905.		1904.	1905

Thirsk Hirings.—The Martinmas term, which expired on Thursday, saw in the Thirsk district a reduction in wages in male servants to those which were obtained in November of 1904, and, taken all round, they would average £1 to £2 less for the twelve months. Head farm house girls obtained £21; second class girls, £16, and good general servants, £17 and £18 for the year.

NORTHERN NOTES.

Ever and anon proposals to amend the Agricultural Holdings Acts are mooted, but the nature of the desired amendments is not often put clearly forward. Compensation to a quitting tenant for what is known as continuous, good and clean farming during his tenancy is sometimes mentioned, and is certainly desirable, but the great difficulty is to estimate the compensation. Practically it means that a particular standard must be fixed, and compensation given to the outgoer for farming in excess of that standard, or to the landlord for any farming below that standard. But what is the standard to be, and how is it to be defined? If it is to be applicable on all soils, in all climates, and in all districts, it may be safely declared that the man has yet to be found who can formulate the definition in practical terms. And when the standard has been defined, the method of measuring the compensation remains to be ascertained. For the moment it will be much better to consolidate the Agricultural Holdings Acts (England and Scotland), 1883, the Removal Terms (Scotland) Act, 1886, the Allotments and Cottage Gardens Compensation for Crops Act, 1887, the Tenants' Compensation Act, 1890, the Market Gardeners' Compensation (England) Act, 1895, the Market Gardeners' Compensation Act (Scotland), 1897, and the Agricultural Holdings Act, 1900.

The provisions of these statutes are anything but consistent with each other, but in codification the inconsistencies will be removed, and afterwards any amendments desired can be effected with much greater facility. When the Act of 1900 was first introduced into the House of Commons its sponsor promised that its adoption would be properly followed by a Consolidating Act, but five years have elapsed without the slightest sign of that promise being fulfilled, although a Bill to effect such consolidation would meet with little opposition in Parliament.

The fact is legislation by reference has so long been the order of the day, and so many inconsistent enactments have been placed on the Statute Book that consolidation is becoming a most difficult matter. The problems arising out of these inconsistencies have blocked our Law Courts, and are a source of great profit to the gentlemen of the Long Robe. The legal interest is very strongly represented in Parliament, and is far too wideawake to promote legislation which will deprive it of work, and it is just as ready to oppose Consolidating Acts as it is to oppose the Registration of Land. But the public, who have to foot the Bill, find the Land Tax Acts, the Income Tax Acts, the Public Health Acts, the Highways Acts, and the Local Government Acts veritable Chinese puzzles—a bewildering maze.

Sixty years ago, Consolidation Acts were numerous, and it is a pity that some strong minister could not be found who would compel Parliament to devote two or three sessions to consolidation work instead of spending time over those fads and foibles of extremists, which no sensible man is ever inclined to countenance.

It is generally admitted that there is usually some foundation of truth in all the old saws that have come down to us from our forefathers, and there is no doubt in the accuracy of one that is very much in point at this moment: "At Martinmas, wheat should show up green the full length of the drills." For this implies that the plants have made a good start in life, and that their roots are finding their way downwards, and so will escape injury from any but keen and prolonged early frosts. Light frosts have been pretty much in evidence recently, but so far have been productive of good rather than harm, in that they have caused some plants, which are inclined to "spindle up," to curl more closely to the ground.

The question of the particular dressing to be used for seed wheat has been again freely discussed. Sulphate of copper has hitherto been the most popular dressing, but its efficacy is now being questioned. The standard usually adopted was one pound of sulphate, dissolved in from two to two and a half gallons of water, to six bushels of wheat. It is now contended in some quarters that such a dressing is too weak, and one pound of sulphate must be used for four bushels of wheat, and that when so used the germinating power of the grain is affected. The proof of the pudding lies, however, in the eating, and not a sign of smut or bunt has ever been seen in wheat on certain farms (now in mind) where wheat has been dressed with the standard solution for three generations. It may be granted that the dressing would be insufficient if the seed were very badly smutted, but the farmer who knowingly sowed smutted seed no matter what dressing he used—would richly merit any loss he sustained through smut in the crop. Formaline seems to be coming into favour as a dressing against smut and bunt, and is certainly a great improvement on some of the old specifics. In some places arsenic is still used, but it is less efficient than sulphate of copper and is far more dangerous.

Readers may remember the reference in these columns a fortnight ago to a case where a Yorkshire farmer had five horses killed by arseniated wheat, which had been prepared for drilling, and which a farm servant had given to the horses. Proceedings were taken against the servant for giving wheat to horses contrary to orders, but as his master gave him a good character and expressed the opinion that the servant was not aware that the wheat had been dressed, the mitigated penalty of £3 was imposed.

One is bound to conclude that such an essentially dangerous substance should not be used for dressing wheat, more especially as other materials, not in themselves deleterious or more expensive, prove at least equally effective in the prevention of smut. There is, however, reason to believe that some farmers make use of arsenic for other reasons than the prevention of smut. It is well known that arsenically dressed wheat is poisonous, and that if it does not actually kill the birds that feed upon it, it affects them so seriously that they soon learn to avoid fields sown with such wheat. It is an offence against the Poisoned Grain Prohibition Act of 1863 to place poisoned grain in or on any land, and so a farmer may not place grain prepared for the purpose on the land so as to kill rooks or other birds; but the Act excepts from its operation seed dressed in any way bona-fide for agricultural use only and sown for seed. So some farmers dress wheat with arsenic, so that they may avert smut and at the same time keep off birds without bringing themselves within the meshes of the law. It is admittedly a dangerous practice, and very severe illness has been sometimes caused to the men who handle the poisoned wheat.

M. Y.

November 24, 1905.

The Testing of Milk Samples.

The Board of Agriculture has lately pointed out in one of its leaflets that, although in most cases the milk given by cows exceeds in butter-fat and other milk solids the percentage specified in the "Sale of Milk Regulations, 1901," still, occasionally, the milk given by a cow may not contain those percentages (3 per cent. of butter-fat and 8.5 per cent. of other milk solids).

The Gloucestershire County Council accordingly urges upon farmers, dairymen, and all other cow-keepers in the county the importance of keeping themselves acquainted with the variations in the quality of the milk yielded by their cows, and to this end arrangements have been made with the Agricultural Sub-Committee whereby the percentage of butter-fat in any sample of milk can be determined at the County Council Dairy School, Gloucester, for a fee of sixpence. Full particulars of these arrangements, together with instructions as to taking and forwarding samples, have recently been published, and can be obtained on application.

The attention thus directed to the subject of milk testing invests with peculiar interest the milk records that have been kept in Gloucestershire for the last six years, viz., in the dairy department of the Royal Agricultural College, Cirencester. In order to render the instruction and experience of the students as comprehensive as possible, the College dairy includes representatives of the chief dairy breeds in the Kingdom, and the following are the records of the various breeds from January, 1899, to December, 1904:—

BREED.	Number of Cows.	Days in Milk.	Total Milk in lbs.	Daily average in lbs. per cow.	Average percentage of Cream per cow. *	Average percentage of Butter-fat per cow. *
Shorthorn ...	21	5,701	132,105½	23·17	10·20	3·51
Ayrshire ...	11	2,871	75,992	26·46	8·50	3·33
Red Poll ...	9	1,932	42,150	21·26	9·04	3·48
Jersey	8	2,214	43,123¼	19·20	16·30	4·64
Guernsey ...	7	1,779	26,126½	14·68	13.90	5·33
Dexter Kerry	7	1,794	24,350	13·57	10·00	3·60

* Note.—The percentages of cream and butter-fat tests here noted are those taken from morning's milk only.

The live and dead stock, consisting of twenty valuable Shire horses, twelve brood mares, two fillies, stallion, the well-known herd of pure-bred Middle White pigs, etc., belonging to Mr. C. Sheppard Marsh, is to be sold by Messrs. J. R. Eve and Son on Thursday next, the 30th inst., at Little Offley, Herts. All the Shire horses are entered being eligible for the Stud Book, and include some prize-winners of Hitchin Conqueror and Harold blood. Catalogues can be obtained of the auctioneers, 2, St. Paul's Square, Bedford, and Hitchin

Midland Notes.

"Cattle show weather" is as much a by word in Birmingham as "festival weather" at Worcester, but whereas the Severn-side city feels itself aggrieved if a few showers should happen to fall during its fashionable music-meeting, Birmingham looks forward to rain, or sleet and mud, and general discomfort through the great Bingley Hall show week as a matter of course. One can remember many shows which have been favoured with bright, crisp, and perfect wintry weather, but the week has a bad name, and a bad name is apt to stick. At the time of writing it looks as if it might be justified this year, for the frost seems to be at an end, the barometer is falling, and the forecasts are unpromising. But there is time for amendment before the popular days of the show are reached.

Now that the frost is gone, its effects upon the land are good to see. That unique property of water, its power to expand with irrisistible force as it congeals, must always make it a finer disintegrator of the soil than anything devised by human ingenuity, and to-day one sees how it has broken up hard clods to powder, and done more to ease and expedite the work of plough and harrow than could be achieved by any other agency. If only the market outlook were equally cheerful, there would be little to complain of; but, alas! it is not so. Beef is selling poorly in all markets, and graziers have to part with beasts at hardly more than they gave for them in spring.

On the other hand, stores have come down also, and as beef can surely hardly go any lower, they ought to pay satisfactorily for wintering—that is, if they are thrifty beasts and economically fed. One cannot speak with so much confidence as to sheep, for lambs are still very dear to buy. As a general rule, there seems to be no scarcity either of hay and straw, or roots, but the demands upon the fodder produced at home will be increased by the dearness of oil cakes just now.

Out of evil, we know, good may spring. The split at the Countess of Warwick's Agricultural College, which led to the departure of the warden (Miss Edith Bradley) and others from Studley Castle seems to be a case in point, for it has cleared the way for a new development of the work—the establishment of a women's co-operative agricultural settlement on a large scale. Lady Warwick's scheme has shown that horticulture, the lighter branches of agriculture, poultry and bee-keeping, fruit growing and preserving offer promising openings for properly trained women of the right stamp who must perforce do something to maintain themselves, and now Miss Bradley and her associates offer an opportunity to old pupils and others to put their training and experience to the test.

There are details in the scheme—the "band of local charwomen properly organised" to wit—which rather lend themselves to ridicule, but one cannot but wish the newly-formed Mercia Agricultural Association success in its enterprise. As it is reckoned that the Association, whose headquarters are at Bredon's Norton, near Tewkesbury, will need anything from £10,000 to £20,000, according to the price of the estate, to make a start, it will be seen that the scheme is ambitious, and one foresees some difficulty in raising the money, even though influential friends are supporting the movement. Perhaps at the beginning a part of the land might be leased by the Association for a term of years, and sub-let to members.

November 24, 1905.

Transactions in Store Stock.

Reported to the Department of Agriculture and Technical Instruction for Ireland.)

Fethard, co. Tipperary, November 21.—Large fair: good demand for cattle with quality and condition suitable for shipping, but small and backward animals sold slowly, and a good number went home unsold. Small supply of springers, for which there was fair demand. Calves, 2nd class, £3 10s. to £4 10s.; yearlings, 1st class, £8 5s. to £9 5s., 2nd class, £5 15s. to £7 10s.; two-years-old, 1st class, £11 10s. to £13, 2nd class, £9 to £11 5s.; three-years-old, 2nd class, £13.

Collooney, co. Sligo, November 21.—Large fair of nice young cattle; good demand for those suitable for Scottish and North of England shippers, and a large number sold. Calves, 1st class, £3 10s. to £4 10s.; yearlings, 1st class, £7 to £8 10s., 2nd class, £5 10s. to £6 5s.; two-years-old, 1st class, £10 10s. to £11 5s., 2nd class, £8 to £9, 3rd class, £6 to £7 2s. 6d.; three-years-old, 2nd class, £10 5s. to £12; springers, 1st class, £15 to £17, 2nd class, £11 to £13 5s.

Railway Platelayers and Cottages.

SIR,—Why should it not be more obligatory on our railway companies to build houses along their lines for their employees—to wit, the platelayers, who keep them in running order? These useful men mostly live where they can procure a home, and having a superior wage to the country labourer, they engage the best cottages. Provided the railways built for their men, other workers could be provided for, and most of the companies could issue stock at a premium to do so. I commend this to shareholders at coming meetings. The same remark apply to our counties and the rural police.—Yours obediently,

November 22. YEOMAN.

Kent: District, Romney Marsh—Bountiful Grass.

SIR,—The district of Romney Marsh has been favoured this year with a very bountiful supply of grass—indeed, more than most graziers could cope with. The growth of lucerne came late, and it was impossible to take advantage of it, owing to the high prices of lean stock. Sheep and lambs, however, did well, and have sold satisfactorily. A good crop of wool was grown, and returned better prices. It will, however, require several years, at the present range of values, to make up the serious losses tenants have suffered in recent bad seasons.

The wheat crop is not heavy, and its low price and the cheapness of straw make a very bad return for the arable farmer. Oats are generally light, and the potato crop in many cases a complete failure. The recent heavy rains, although needed, have in many cases made it impossible to put in wheat this autumn.

November 24, 1905.

The Season in East Suffolk.

SIR,—The season on the whole has been very favourable for autumn work, and most farmers are getting very close up with plough. It is many years since land ploughed up so light and tender on our heavy soils, and it will probably be found that more wheat than usual has been planted, owing partly to the easy seed-bed provided, and the dissatisfaction felt at the price of barley. Farmers feel that they are obliged to take considerably less than value considering the quality of barleys this year, and many refuse to sell any at less than 28s., using it rather for feeding purposes. It was hardly to be supposed after the way the brewers succeeded in bearing the barley market last year that they would not adopt the same tactics.

Fortunately, the Burton buyers have found our barleys to their liking, and have been taking some thousands of quarters out of the district, and although even their prices compare very unfavourably with those of a year or two back, it has naturally hardened the trade for commoner sorts, and we have heard maltsters complain that they could not get sufficient for their requirements at prices to meet the conditions imposed upon them.

Stall-fed beef, mutton, and pork have all been selling well, and will probably prove to have given a fair return for their food. It is noticeable how quality is increasingly considered, and how important a factor it is in the price realised in all kinds of stock. Twenty years ago the supply of beef on Ipswich Market in the autumn consisted almost entirely of grass-fed beasts from the shires and marshes, with only an occasional stall-fed beast of inferior quality. Now there are always a good number of ripe home-grazed beasts to be found, the best commanding almost fancy prices.

The Season in Cornwall.

SIR,—The past season has been a very fair one, on the whole, in this district. Corn crops were very good, and the mangolds an excellent crop; turnips, of which there are not so many grown as formerly, have mildewed badly during the autumn. Potatoes turned out well, Up-to-Dates still maintain their superiority here for the main crop, and Reading Giants for the early crop.

Wheat, which averaged 40 bushels per acre here, was the best yield of the cereals, and is selling fairly well. Malting barley is also selling well, but is not so much grown on account of the poorness of the straw. Beef has found the worst market this year, many prime bullocks selling as low as 52s. per cwt. Feeders of beef, in spite of being able to buy stores cheap, have dropped money. Mutton has been selling at fair prices, but has fallen considerably lately. Wool has gone up, and sellers anticipate a further rise after Christmas. Horses are very plentiful and cheap; in fact, there seems to be no demand for them. Labour is much more plentiful than for several years.

The weather now is very cold, and there is every prospect of a hard winter, if the aurora borealis is a sign of one, as no one has seen it so plainly before as on Wednesday night, the whole sky being like a sheet of flame; but, with plenty of rough grass and roots and hay, I do not think we have much fear of running short of keep for the cattle through the winter.

The work on the farm, thanks to the lovely fine weather we have been having, is in a very forward state. Wheat is coming up looking well, in spite of the feeds the rooks have had. There are a great deal too many of these birds in these parts, they have become a great pest all the year round. J. P. M.

November 18, 1905.

Crops and Markets in Mid Staffs.

SIR,—Until the beginning of this week the weather has been mild and the grass land fresh and green. We have had since several days of fog, with sharp frosts at night. Again the fog and frost have disappeared, and there is a likelihood of a fall of rain. Autumn-sown wheat has been slow in making an appearance above ground, and the first start of germination has been greatly injured by rooks and jackdaws, so that the plant will be very deficient.

The generally poor crop of swedes has apparently brought about a flat demand for draft cows at our autumn fairs, and the glut of second and third qualities of beef—both imported and of home origin—has been almost unprecedented.

So far, the graziers have done very badly, and it remains to be proved whether there will come a revival in the demand at the Christmas sales, which will begin early in December.

As there is considerable activity in the coal and iron trades of the Midland counties, the expectation of a rise in price of beef seems to have a reasonable foundation. Good milking cows are in demand, at a price which seems to be high in comparison with store cattle and with fat beasts of all qualities.

In short, all descriptions of dairy produce will make a better return for the season than either fat cattle or young stock of the last two years' raising. J. C. S.

November 22, 1905.

Nottinghamshire Prospects.

SIR,—The weather has been of a seasonable character for Martinmas, and, on the whole, farm work is well forward before the changing of servants. However, there are not nearly so many Martinmas servants as there used to be some twenty or thirty years ago. Carting roots—of which there are some record crops this year—is about completed; many mangels and common turnips have reached large dimensions. Ploughing has been executed under favourable conditions, and wheat sowing has been finished some little time on the heavy clays. Early pieces are looking extremely well; the same may be said of winter tares and beans. Potatoes are now practically all stored, but the crop, as a rule, does not seem to have been a very remunerative or satisfactory one for the grower, not because disease is rampant, but owing to the poor yield and out-turn. The country side begins to have a wintry aspect; the pastures still afford some keep and look greener since the rainfall, although the sharp frosts robbed them a little of their freshness; in fact, the herbage has changed colour. The early frosts are said to be an omen of an open time to follow, so we shall see if the old adage obtains—that if the ice bear a duck before Martinmas there will be nothing but "muck and splash" after. Some say—that is, wise sages—that where the wind is on Martinmas eve it will generally prevail for some time, so it was in the south-west, hence they would have us expect some nice, mild open weather, which will be extremely welcomed by the farmers in North Notts, for the hay-stacks are of a "dwarfed" nature.

Farmers have had to resort to foddering during the spell of harsh weather, and some had taken up their "fresh" meated beasts, so as to keep them warm and try to hinder them from "running off"—i.e., getting lean. Cattle are reported to be healthy and sheep in good request. The latter have sold wonderfully well this back end, lambs especially; in fact, this has helped many a struggling farmer out of his financial difficulty.

As most are aware, now is the rent audit time, and farmers have to get prepared for the ordeal, and then there are Christmas bills and incidental charges, all of which have to be met at this season of the year. Thrashing has proceeded briskly, and there are some good yields, six quarters of wheat, barley, and oats being not uncommon. However, some samples of barley are "steely," coming out unevenly, with many discoloured and unripe corns, and in consequence the samples are less saleable and the value depreciated. The question of the incidence of taxation still holds the field, and a deal of discussion arises concerning the high rates, especially the education rate, comes in for severe criticism, and nothing more yet.

Tariff reform claims a deal of attention by the farmers. Many are going to vote for Mr. Chamberlain's scheme when they get a chance, so they say, for they are like a chameleon many of them. Something will have to be done, for there are many farm labourers out of work already, with more to follow, in North Notts.

POULTRY.

The Utility Poultry Club's Show at Plymouth Exhibition.

The Utility Poultry Club is holding its show this year in connection with the Plymouth Exhibition, which is being held in the Drill Hall from November 15 to December 6.

Poultry appliances which will be on view during the show were judged on the 15th inst. An interesting classification had been provided, but entries were not very strong in some of the classes, most makers finding Plymouth somewhat remote. The houses on wheels were not so strong a class as that for houses not necessarily movable. In the former class H. Hebditch won the silver medal and E. C. Walton and Co. the bronze; in the latter class, E. Tripe and Co. were awarded the gold medal, F. Atwell Millar the silver medal, and E. C. Walton and Co. the bronze. For foster-mothers the gold medal went to Mr. F. A. Millar, the silver to the J. M. D. Appliance Co., and the bronze to R. E. Collings. In the coop with run class, E. C. Walton and Co. won the silver medal and the J. M. D. Co. the bronze. Trap nests were a strong class, there being eleven entries. The gold medal and special was awarded to W. F. Snell, the silver to Charles Parsons, and the bronze to J. Brown and Son. W. F. Snell and E. Tripe and Co. respectively carried off the silver and bronze medals for drinking fountains. In the egg box classes the Street and District Collecting Depot won the silver medal, Robinson's Patents the bronze in the Large Box classes; W. F. Snell and Robinson's Patents secured the medals in the Parcel Post Box class. In the class for any new invention most useful to poultry-keepers, the premier award went to a capital contrivance for moving portable houses shown by A. Jellicoe, of Warwick House, Theale; J. Dobbie took second prize for an automatic fountain and feeder; while in the classes for useful appliances above and under £1 the premier award in each case went to A. Neaverson for chicken houses.

The exhibition of table poultry, both alive and dead, and eggs takes place from November 29 to December 1, when some fine birds will be shown. During this week a large part of the exhibition will be devoted exclusively to the club's show. Messrs. G. A. Palmer, T. R. Robinson, W. F. Snell, and C. E. J. Walkey are giving lectures, and Mr. F. Browning will demonstrate in trussing, shaping, packing, and cramming throughout that week.

The Cow at Fault.—At Teddington Police-court on Monday a dairyman named Jones was summoned for selling milk deficient in fat to the extent of 18 per cent. An officer went to the defendant's premises and obtained a sample of milk "direct from the cow." When the milk was analysed it was found to be deficient to the extent named. The chairman asked what the explanation was, and the inspector said the deficiency might have been caused by the cow not being "stripped" at the time of milking. A sister of the defendant said that was so. Only sufficient milk to supply the officer was drawn from the cow. The defendant was ordered to pay the costs.

By Lupulin.

Are We Making the Best of Our Produce?

The past season will doubtless be memorable for some years to come as marking a record in the history of English hop-growing. The average weight per acre is so much in excess of any previous experience that it is hardly likely to be equalled for at least another decade, and it is more than probable that a still longer period will elapse before Nature will again be so bountiful in our plantations. One result of this superabundance is seen in the excessive proportion of inferior qualities found in the 1905 growth. This is not altogether due to the natural failure of the plant in the perfecting and enrichment of the fruit, as the consequence of its extreme efforts to put forth a heavy crop, although cause and effect are doubtless in this respect very closely connected. But there is another most important reason to be given for depreciation of quality, suggesting the query at the head of this article. In all previous years of heavy cropping many of our growers have been unable to deal efficiently with the call upon their kilns, which are generally of too limited extent for more than a normal yield. This difficulty was most acutely felt during the last season; although several of the more important planters have, by fixing steam-driven fans and installing hot-air apparatus, enlarged their facilities for handling big quantities in a given time. The great majority of growers, however, remain as they were, with their old kilns, their open fires, and their ancient and somewhat risky habits. To them pressure means haste, involving, in most cases, either slack drying by want of time or scorching by excessive heat. It is admitted that a very large number of pockets of hops, spoiled by one or other of these causes, have been put on the market this year. A certain quantity of such damaged produce is always present, but this season the proportion much exceeds the average. The recent range of prices proves the necessity of closer attention to this most important section of the industry, for while well-managed hops have realised 55s. to 70s., thousands of hundredweights of those not "made the best of," have been sold at 25s. to 35s. The growers who overload the market with such inferior samples not only suffer in their own pockets, but create a general tone of depression which burdens the whole of the trade.

Experience clearly teaches that the answer to my query must be generally negative. There is clearly a demand for much improvement in our present usual system of curing our hops, and there is certainly ample scope for it. "But," says the average planter, "while I agree with you in the main, how am I to meet the case? Fans and hot-air drying are all very well, but I cannot afford the necessary outlay." There is reason in this objection. The excellent systems of Davidson's "Sirocco," Jones Brothers, and Clemens Horst, recently described in this column, have been proved to be most effective in avoiding the failures noted, and in producing perfectly cured hops, but the initial outlay is too heavy for the majority of our people. I have therefore been expecting to hear of some device possessing the advantages of the more elaborate arrangements, but applicable to existing kilns, and with moderate cost. My thoughts have been directed to a more effective form of the old-fashioned and discarded "cockle," which was certainly free from some of the risks of the open furnace, although its faulty construction was otherwise evident. Comparing the effects of the heat rays emanating directly from an open fire with those of a diffused current of air heated by contact with pipes or other closed reservoirs of heat, it may be shortly stated that in the first case the substance operated upon is more or less toasted or "fired," and in the other it is merely dried by the removal of its redundant moisture. In Belgium some years ago, a State Commission condemned the drying of hops by the "feu nu" or naked fire. Throughout Germany, Bohemia, and America the closed fire system is in use. It therefore appears desirable that if English growers are to keep abreast of their competitors they should seriously consider this view of the matter, and if they can see their way to the necessary alteration, they should not hesitate to adopt them. That such an adaptation is practicable was demonstrated by some experiments made last September at the farm of Mr. W. L. Pritchett, of Prior's Court, Ledbury, where a modified arrangement of Joyce's well-known Reek Dissipator was erected. The furnace being entirely closed, none of the products of combustion are carried through the hops, but they are directed through a series of large tubes discharging outwards of the kiln. One current of air is conducted through the hollow bars of the furnace fire, and issues above the hop hair, warming the upper chamber, preventing reek, and creating draught. Another current is directed into a chamber heated by the furnace tubes, with which it comes in contact, and, being raised in temperature as desired, passes through the load of green hops, drying them evenly, and rendering both "coddling" and scorching practically impossible. The system is absolutely automatic, the temperature can be maintained with certainty and with a minimum of attention at a uniform point for any desired period, and it is quite clear that all risks of the communication of arsenical fumes from the fuel are certainly avoided. I need not now give further details of this patented invention, but it appears to me that it includes all that is necessary to accomplish the desired results and to obviate the evils previously referred to, while it possesses the marked advantage of adaptability to all kilns as they stand, without any important or prohibitive outlay. I honestly believe that if this, or some similar system, were universally adopted, the quality standard of our English hops would be generally raised, better prices would be realised, the financial results of our hop-growing would be materially enhanced, and the answer to my inquiry would no longer be negative.

Should any of my readers desire further information concerning this system, I shall be happy to put them in communication with the inventor.

BARLEY AND MALT.

Barley at the Brewers, Exhibition.

Messrs. Dale and Reynolds, managing directors of the Brewers' Exhibition and Market, have been good enough to communicate to us the following letter, which they have received from Mr. Frank Flinn, of Bishop Stortford, the chairman of the barley judges:—

"In submitting to you the final list of awards in the barley competition at the Brewers' twenty-seventh annual Exhibition at the Agricultural Hall in October 1905, your barley judges wish to call your attention to the very satisfactory number of entries in all classes, and the predominating quantity of fine samples, and not, as is so often the case, that there are about a dozen samples from one particular district which stand considerably higher than anything else, but a large quantity of very good barleys had to be brought forward for the chief prizes. You will notice the best barleys in classes 1 and 2 embrace several counties—viz., the champion, Norfolk; 2nd in class 1, Lincoln; 3rd in class 1, Hunts; v.h.c. in class 1, Oxford; h.c. in class 1, Suffolk; 1st in class 2, Salop; 2nd in class 2, Herefordshire; 3rd in class 2, Middlesex; which we think is very satisfactory, as showing the interest taken in the Exhibition and the care in trying to grow good barley.

"Although the thrashing of the samples exhibited shows some improvement upon years gone by, we consider there is much to be desired in that direction, and we might mention that several samples would have taken a much higher place in the awards had it not been for the fact that the ends of the grain were damaged and the skin broken, through improper thrashing. Too much attention cannot be given to this important subject, because we know that barleys are very often damaged to such an extent as to render them pratically unfit for malting purposes, and in other cases are reduced in value by several shillings per quarter.

"We are pleased to hear that you intend to offer in next year's show additional prizes for the best-thrashed barleys in classes 1 and 2, to go to the man who drives the engine and the man who feeds the thrasher—viz., 1st prize, £1 1s. to the engine driver, and £1 1s. to the thrasher feeder; 2nd prize, 10s. 6d. to the engine driver, and 10s. 6d. to the thrasher feeder; as we look upon it as a stroke in the right direction, and we feel sure that it will be appreciated very much by the competitors.

"It was gratifying to see that although there were only a few entries from our Colonies, they were of a very good quality and condition.

"A very interesting item in this year's show was that the exhibitor who took the champion prize has been a keen competitor for 10 years and has at last been awarded the premier honours."

The National Potato Show.

The second exhibition of the National Potato Society was held in the Horticultural Hall, Westminster, on Thursday and Friday last, when there was a large and representative gathering of potato raisers and growers. Last year, it will be recollected, the fixture took place at the Crystal Palace, but this year's venue certainly scores on the point of accessibility. There was plenty of staging last week of good potatoes which showed no trace of any disease. Perhaps the most interesting exhibit comes from Messrs. Sutton and Sons, of the Royal Nurseries, Reading. It is not an ordinary display, but represents many of the species of potato which this famous firm have used, or will do so, to infuse new blood into the race. There are wild potatoes from over the seas, and many curious forms which the French chef would convert into tasteful and attractive dishes. The Small White Fir is a strange little tuber, even picturesque, and the Congo is a dusky form which we can imagine fit food for the dwellers in the far-off forests.

Amongst other distinguished exhibitors whose displays were not for competition must be noted Mr. A. Findlay, of Auchtermuchty, N.B. It was this grower who first raised the "Eldorado," a modest-looking vegetable, though veritably the root of many fortunes, and practically the origin of the recent boom. Mr. George Massey, another non-competitive exhibitor at the exhibition, himself a great grower, paid eighteen months ago the record price of £1,400 for 14 lb. weight of these, selling again 1 lb. for £250 sterling, and a single specimen for fifty guineas. When it is remembered the potato is infinitely reproductive, the magic attraction of such figures will be readily understood. Northern Star, another of Mr. Findlay's discoveries, created a great sensation by its disease-resisting properties when it first rose above the agricultural horizon, and though it has cheapened since then, Mr. Findlay says, "of all the varieties I have sent out, no one of them so nearly approaches my ideal potato as this."

The following firms also exhibited potatoes which were not entered for competition:—J. Bettinson, Parkfield, Outwell, Wisbech; J. W. Boyce, Welney, Wisbech; Bradley Brothers, Bardney, Lincs.; C. W. Breadmore, 120, High Street, Winchester; Wm. Coleman, Culverden Down, Tunbridge Wells; F. G. Crampton, Gate House, Sissinghurst, Kent; Daniels Brothers, Limited, Royal Arcade, Norwich; W. Davie and Co., Market Street, Haddington, N.B.; Wm. Deal, Brooklands, Kelvedon, Essex; W. Dennis and Sons, Kirton, Lincs.; Alex. Dickson and Sons, 55, Royal Avenue, Belfast; Dobbie and Co., Rothesay, N.B., and Mark's Tey, Essex; Fidler and Sons, Reading; James Gardiner, Perth, N.B.; R. W. Green, Wisbech; Hogg and Robertson, Mary Street, Dublin; W. W. Johnson and Sons, Limited, Boston; James Kerr, Dumfries, N.B.; Peter Kerr, Leith Walk Station, Edinburgh; A. Lighton, jun., The Nurseries, Kirton, Lincs.; G. Massey and Sons, 17, Market Place, Spalding; A. W. Pepper, Bridge Farm, Downham; F. Pickering, Pinehurst, Woodhall Spa; R. W. Pinney, Coleshill, Birmingham; Isaac Poad and Sons, Walmgate, York; T. A. Scarlett, Market Street, Edinburgh; Henry Scott, Warminster, Wilts; Arthur J. Sole, Cowgate, Peterborough; R. Sydenham, Tenby Street, Birmingham; S. M. Thomson, 7, Warrender Park Crescent, Edinburgh; J. F. Williamson, Summer Hill, Mallow, Ireland; David Wilson, East Linton, N.B.

Coming to the competitive classes, the principal award was a sterling silver challenge cup, value £50, to the exhibitor who shall grow and stage the best collection of twelve distinct varieties, nine tubers of each, selected from the list named below. All to be raised from tubers obtained direct from either Messrs. James Carter and Co. or from Mr. Archibald Findlay, Esq., in the spring of 1905. The winner was Mr. Ben Ashton, who exhibited magnificent tubers of the following varieties:—Mr. Ambrose, Advancer, Empire, Royal Kidney, Evergood, Northern Star, Goodfellow, Ruby Queen, Monarch, Klondyke, Empress Queen, and Snowball.

A silver challenge cup of the value of £10 10s., presented by Sir John T. D. Llewelyn, Bart., for the best exhibit in the show, was won by the well-known Scotch firm, Messrs. Dobbie, of Rothesay. The great Scotch variety, the Factor,

was splendidly shown, and this is a potato which is relished on the table. A silver cup, presented by Mr. J. Deal, for the best yield of twelve roots, went to that expert grower, Mr. J. Gemmell, who also won Mr. Scarlett's gold medal.

In addition to the above awards, gold medals were allotted to Dobbie and Co., G. Massey and Sons, Webb and Sons, Daniels Bros., and Sutton and Sons. Silver medals were won by T. A. Scarlett, W. W. Johnson, W. Deal, Dennis and Sons, Hy. Scott, J. Kerr, Hogg and Robertson, Pead and Son, R. W. Green, W. Davie and Co., J. F. Williamson, Fidler and Son, and F. G. Crampton.

Can British Agriculture be Resuscitated?

Before the Leicestershire Chamber of Agriculture meeting on Saturday, November 18, Mr. P. F. Astill, Cossington, Leicester, read an excellent paper on the above subject. He reviewed the products or gross returns of an ordinary farm, and asked his hearers to note the salient change brought about by the fall of prices and its effect on the nation. The farm to be considered should consist of 200 acres—100 grass and the other 100 arable land. The grass should be half feeding and half store pasture, and the arable should be half light enough to fold sheep upon, a sandy loam, and the rest a heavier, a clay loam; such a farm as could be let in Leicestershire at 32s. per acre. In estimating the stock it would carry and the crops it would grow, he wished to treat the grass as if it were independent of the plough, and vice versa. On the 50 acres of store land there would be a flock of 40 ewes, which might be expected to rear from 50 to 60 lambs. With the ewes could be grazed 20 head of young stock and the four farm horses. On the feeding land could be grazed 40 beasts and 20 sheep. What would be the return? He estimated, from a detailed calculation, that the income would be £348, and the expenditure £271 16s. 6d., leaving a net profit of £76 4s., or 15s. 3d. per acre. The crops on the arable land would be barley, clover, oats, wheat, and roots, a five year rotation. The root crop was the difficult one to value, as it was only reached by the increase value of the stock wintered.

What amount of stock could be kept and what profit could be made? The roots grown would be mangolds, turnips, and cabbage. He found that an acre of straw with roots and cotton cake would winter a bullock. The 40 acres of barley and oat straw would keep 40 bullocks, which could be expected to increase in value £3 per head. This increase could be equally divided between straw, roots, and cake. Sixty lambs could be fed on the turnips on the light land, paying, with a generous allowance of cake, £1 per head. Part of the clover would be consumed by the horses; the rest by stall-fed cattle. He would not go into what could be realised by consuming the clover, but would place it at its recognised worth of 50s. per ton, and add £20 to the root crop for roots consumed by the stock eating the clover. The wheat straw would be required for thatching. The total receipts (of which Mr. Astill gave a full and detailed statement covering each item) he estimated would be £707 10s., and the total expenses £649 16s., leaving a net profit of £57 14s., or 11s. 6d. per acre. The two great differences to be observed between the grass and arable cultivation were a double gross return from, and four times the amount of wages paid on, the arable. They had noted that there was a profit of 15s. 3d. on the grass, and 11s. 6d. on the arable per acre, and when they took into consideration the amount of trouble in management and dependence on the weather on the plough land compared to the pasture, was it surprising that more than 100,000 acres went out of cultivation annually? It was the heavier fall in the price of the produce of the arable land that had caused the great change. The effect of that change had been to drive many thousands of the labourers into the towns, and make England as a nation more dependent than was really necessary on imports of the absolute necessities of life.

Though that great depression had continued for a generation, they had received practically no State help. He could not help thinking it was because the average elector believed that agriculturists had no better grounds for their demands than a wish that their lives should be made less strenuous at the expense of the electors. If they were to measure the loss caused by the change from arable to pasture land, they must refer to the agricultural returns. They were first collected in 1866, but the Board of Agriculture considered that the figures of 1867 more accurate for comparison. During the nine years following that date the cultivated area of Great Britain increased nearly two million acres, owng to agriculture being very profitable. That brought them to the high-water mark of British agricultural success. In 1876 there was approximately 17½ millions of acres of grass and 18 millions of arable land. In 1886, though the cultivated area had increased by another million acres, the arable land had decreased by a million. Supposing the reclaimed area to be half grass and half arable, this gave an annual decrease of 150,000 acres of arable land. This was the effect of the first fall of prices.

The returns of 1896 (ten years later), which included the year when wheat fell to £1 a quarter, showed a further loss of 1,220,000 acres of arable land. From 1896 to 1902, with a slight recovery, at least in the price of wheat, they got a reduced annual loss of arable land—viz., 40,000 acres. This brought them to the last three years, with a loss greater than ever—viz., 172,367 in 1903, 189,530 in 1904, and 133,216 this year. He had shown at the outset that it was easier to gain a profit on the grass than on the arable land. Why need they regret? As farmers they need not regret. That was the nation's loss and the labourer's loss, not the farmer's. That conversion of three million acres was an annual loss of £10,000,000 to £12,000,000 value of produce to the nation. It meant a loss of £4,500,000 in wages to the labourer, and £1,500,000 in wages to the artisan. It meant a displacement of more than 100,000 labourers and 23,000 artisans. If they looked at the value of the produce of the arable land they would see what a small increase in the price per quarter would make the arable land more profitable than the pasture. It was the annual loss of 165,000 acres of arable land which it should be their first effort to remedy. This meant an annual displacement of 5,625 labourers in Great Britain alone, numbering with their families 28,000 people, annually driven into the towns. Was it surprising that they heard so much of want of employment and poverty in their great cities?

They were confronted with politicians who were always crying "Back to the land," but who were determined to withhold those conditions which alone could make the land support a greater number. They did not see on the Continent the rural depopulation that we saw in this country. The case of Germany had been cited by Mr. Haldane as similar to ours, but Germany's loss of rural population during the past 20 years was only 3 per cent., whilst ours was 26 per cent. Moreover, Germany had not lost an acre of cultivated land. Could British agriculture be resuscitated? Yes. There might be many methods of assisting this good work—reduction of rates on the land, security of tenure, land purchase, small holdings, co-operation, and other useful measures. But what was fundamental, was a better price for the produce of the arable land. It was because he was profoundly convinced that much good could be realised at no cost to the nation that he was proud to be a humble follower of the great protagonist of fiscal reform.

Rural Houisng.

"Such conditions prevail in the cottages in some parts of rural England as to make decency impossible and morality a miracle." Such was the emphatic remark of Sir Walter Foster, M.P., at the annual meeting of the Rural Housing and Sanitation Association, held last week under the presidency of Sir John Gorst, at the Westminster Palace Hotel. Painful illustrations of the truth of his denunciation were given in the pages of the annual report submitted for adoption.

For instance, the inspector relates of one cottage:—Roof defective; no through ventilation. Top floor room occupied by father and mother, boy of thirteen, and four other children, ages twelve, ten, eight, and five. Three sons occupy a ground floor bedroom, ages twenty-two, twenty, and sixteen. So that there are ten persons in the three rooms. Tenants would like more room if it could be got. In a second:—Top floor room occupied by father and mother, boy of thirteen, and three girls of eleven, seven, and four years respectively. The room has no through ventilation. Tenant would like more room.

The association has, however, in several instances, been able to bring about reforms by its appeals to owners and to the sanitary authorities. An interesting speech followed from Mr. C. Fairfax Cholmeley, who rather deprecated the idea that cottages could not be built to pay. He gave an account of his own work in building cottages at a cost of £150 apiece at Brandesby in Yorkshire.

ESTIMATED PRODUCE OF CROPS IN 1905.

Last week the Board of Agriculture issued the following Preliminary Statement showing the Estimated Total Produce and Yield per Acre of the Principal Crops in Great Britain in the Year 1905, with Comparisons for 1904, and the Average Yield per Acre of the ten Years 1895-1904. As regards the Produce of Hops for 1905, it is pointed out that a Preliminary Statement was issued on October 9th, and this showed a total estimated produce of 695,943 cwts, being an estimated yield per acre of 14·21 cwts.

CROPS.		Estimated Total Produce.		Acreage.		Average Estimated Yield per Acre.		Average of the ten years.

CORN MARKETS.

LONDON.

Mark Lane. Wednesday. — General firmness continued, most cereals being reservedly held, and a moderate number of buyers attended. English wheat in moderate supply is firm. Imported wheat was held for fully recent prices. No. 1 Northern Manitoba, 34s 6d to 34s 9d ex ship; Australian, ex store, 34s to 34s 6d; Russian, as to sample, 32s to 34s 6d; La Plata, 30s to 33s per quarter. Flour steady at late level. No. 1 town households, delivered in; Iron Duke, 21s 6d ex store. Grinding barley weaker. Azoff, 20s 1½d ex quay. English malting barley generally quiet, but steady. Oats quiet; 34lb Russian, 19s 6d to 16s 9d ex quay. Maize firm; American mixed, 25s 6d; and La Plata, 25s to 25s 3d landed. Beans and peas well maintained.

Mark Lane, Friday.—Steady tone, but buyers were listless, and the close was quiet, with quotations generally at last day's level. English wheat quiet; foreign grades steadily held. No. 1 Northern Manitoba quoted at 34s 9d, Australian at 35s, and New Zealand at 31s. Maize attracts but little attention; mixed American landed offered at 25s 3d, ex ship at 25s, and La Plata at 25s and 24s 9d. Flour quiet; Iron Duke held for 22s 6d. Barley steady at dust rates; Odessa-Nicolaieff 20s and American 19s 3d asked. Oats quiet at 16s 6d to 16s 9d for 38lb. Russian. Beans held for 1s advance; English quoted at 35s; peas slow of sale.

COUNTRY.

Ashford. Tuesday. Wheat at late rates, best samples making up to 30s per quarter. English barley was in good demand, and holders were firm, but there was no advance in prices beyond the 32s last quoted. Mazagan beans made 28s; tick beans, 31s to 32s; oats, 17s to 21s; foreign grinding barley, 23s to 24s; and maize, 27s to 28s per quarter. Flour unchanged, at 31s per sack for whites, 28s seconds, and 26s sealing.

Banbury. Thursday.—Wheat, red, new, 28s to 29s; barley, 24s to 30s; beans, new, 29s to 30s; ditto, old, 33s to 34s; oats, 17s to 21s; ditto old, 20s to 24s; peas, 27s to 30s per quarter.

Berwick. Saturday.—Average attendance, with limited supplies of grain. Barley firmer, and met with a ready sale at fully late rates. Oats dull. Wheat, 27s to 30s; barley, 25s to 29s; oats, 18s to 20s 6d.

Birmingham. Thursday. About the usual attendance, but trade moves very slowly. English wheat makes from 28s to 30s per quarter (496lb) delivered Birmingham. Oats very firm and make from 18s 6d per quarter (312lb) and upwards delivered Birmingham. Very little doing in foreign wheats, which are easy at last week's prices. Plate maize is 3d lower, and flat 6d. Grinding barley is unchanged at 21s per 400lb Sharpness. English beans 12s 3d to 12s 6d per bag (196lb) delivered.

Brighton. Thursday. Quiet trade at last week's prices. Small attendance. New white wheat, 30s to 31s; new red ditto, 30s to 31s; barley, 29s to 33s; grinding ditto, 22s to 23s; oats, English, 17s 6d to 20s; peas, 29s to 30s; beans, 31s to 32s.

Bristol. Thursday.—Trading during the past week has been quiet on the whole. English wheat to-day in moderate supply at late rates. Foreign wheat 3d lower on the week. Maize 3d lower. Barley and oats unaltered. Flour unchanged.—GRACE BROTHERS.

Bury St. Edmund's Wednesday.—Wheat: Supply below average; trade steady, at last week's prices; reds or whites, 29s 6d to 30s; rivetts, 28s to 29s per quarter. Barley: Supply again small; no change in prices, but there is a steady tone in the trade at 28s to 32s for malting runs, with grinding sorts and screenings firm at 24s 6d to 25s per quarter. Oats and beans in short supply, with a firm trade at fully last week's prices. Other feeding corns firm. Linseed cakes 2s 6d per ton dearer.

Cambridge, Saturday.—During the week the wheat trade has been without any fresh feature; supplies continue but moderate, and condition not so good as a month ago. There was a fair supply of wheat, for which farmers succeeded in making late rates although trade was slow. Red wheat 29s to 31s, and white up to 31s per 504lb. Barley in moderate supply, and prices quite steady. Beans in sellers' favour. Oats dull, turn cheaper.

Canterbury, Saturday.—A firm trade in wheat, at from 28s to 32s per qr.; oats in short supply, spring corn making from 18s to 21s; malting barley a steady trade at from 28s to 31s; grinding qualities 23s to 25s per qr.

Carlisle, Saturday.—Largest supply of oats shown in our market to-day this season. Good demand at last week's prices; 18s to 19s 6d per 336lb.—THOMAS ROBINSON.

Chester, Saturday.—Wheat with the poor demand, was quiet 2d per bushel lower, and Indian corn was 3d per sack lower. English oats being less freely offered maintained late prices. Offals firmer. Quotations: Wheat, white and red, 4s 4d to 4s 7d per 75lb.; barley, grinding, 3s to 3s 2d per 64lb.; beans, 6d, 5s 9d to 6s per 80lb.; oats, new, 2s 3d to 2s 7d; ditto, old, 3s 3d to 3s 6d per 46lb.; Indian corn, 13s 6d to 13s 9d per 240lb.; River Plate, new, 12s 9d to 13s per 240lb.

Chichester, Wednesday.—Attendance good, trade fair. New white wheat, 30s to 31s; new red ditto, 30s to 30s 6d; barley, 28s to 32s; grinding ditto, 21s to 21s 6d; oats, English, 17s to 21s; peas, 29s to 30s; beans, 31s to 32s; maize, 25s to 26s; flour, 25s to 27s.

Colchester, Saturday.—The supply of wheat was moderate to-day, and the market was dull and prices rather easier. Barley steadier. Beans a firm trade at the usual advance. Oats 1s per quarter cheaper.—JOSEPH WILES AND SON, LTD.

Coventry, Friday.—A moderate attendance, and the supply of wheat being fairly liberal, trade was quiet. Barley was quiet, with small demands. Peas and beans firm, with the turn in buyers' favour. Quotations: Old wheat, 11s to 11s 6d per 196lb; new wheat, 10s 3d to 10s 9d per 196lb; barley, 27s to 32s per 448lb.; old oats 23s to 25s per 352lb.; new oats, 19s to 22s per 352lb.; old beans, 12s 6d to 13s per 196lb.; new beans, 11s 9d to 12s 6d per 196lb.; peas, 11s 6d to 14s per 196lb.

Derby Friday. Wheat continued in small supply, and very quiet at last week's prices. Spring corn unchanged. New white wheat, 30s to 31s; red wheat, 28s to 30s; malting barley, 26s to 28s; old beans, 33s to 34s; new beans, 30s to 31s; old oats, 23s to 24s; new oats, 19s to 20s.

Devizes. Thursday. There was a small supply of oats. There was no alteration in the value of any description. The following were the quotations: New wheat, 14s 6d to 16s; secondary, 15s to 14s; best barley, [illegible]; secondary, 20s to 24s; rye, 22s to 24s; old [illegible] 24s to 25s; new ditto, 16s 6d to 19s; malting [illegible] to 30s; beans, 16s to 18s; fine flour, 24s to [illegible] extra fine, 27s to 30s.

Doncaster, Saturday.—Market well attended. Very small show of English wheat, but trade fairly steady at about last week's prices. Top value, 11s 6d per load. Foreign wheat slow, and last week's prices were barely maintained. Large supply of barley, and rather difficult to dispose of at last week's rates. Oats were firm. Beans and maize made fully late rates. Other things unchanged.

Dorchester, Saturday.—Very small market, both as to supply and attendance; samples came to hand in rather poor condition, and a very quiet trade resulted throughout. Wheat about maintained values for both English and foreign, and the same may be said of flour. Barley, steady trade for both grinding and malting descriptions. Oats inactive and less firmly held, but no decline in values to note. Maize steady. Beans and peas unchanged.

Dublin, Friday.—Wheat, 17s 6d to 19s; malting barley, 14s 6d to 15s 3d; grinding ditto, 12s 9d to 14s; oats, 10s to 13s 3d; oatmeal, extra pinhead, 12s 6d to 14s 6d; flour, 10s to 12s 6d; pollard and bran, 6s to 6s 6d.

Exeter. Friday.—Trade somewhat dull. English wheat firm at last week's prices; foreign rather easier. English barley rather dearer. Flour unchanged. Maize 3d cheaper. Oats firmer. English wheat, 3s 6d to 3s 9d; English barley, 3s 3d to 4s; superfine flour, 25s to 28s; fine, 23s to 25s.

Glasgow. Friday. — The market is, if anything, steadier for wheat, the American advices being somewhat better. The business passing is, however, of the poorest character. Flour moves slowly at nominally late prices. Mixed American maize extremely scarce, and held for full prices, viz., 15s 6d per 280lb.; Plate dull at 14s 6d. Calcutta peas and feeding beans remain firm. Other articles steady but quiet.

Gloucester. Saturday. The market was inactive. English wheat was in fair supply, and prices the turn easier. Foreign was 3d cheaper, and maize and barley showed similar declines. Oats 3d dearer.—WAIT, JAMES AND CO.

Grantham. Saturday.—There was a fair supply of wheat, which made 29s to 30s per quarter. Barley was well represented, and a much better demand prevailed, the quotations being 26s to 32s per quarter. Oats were plentifully shown, but trade was slower, the sales effected showing a decrease of 6d per quarter, 19s to 21s. Beans averaged 32s per quarter, an advance of 6d on the week. Peas ranged from 36s to 46s per quarter.

Hereford. Wednesday. The attendance was moderate, and trade generally quiet. English wheats displayed a slightly easier feeling. Barleys quotably unchanged. Oats firm. Beans dull. Wholesale quotations:—Wheat, 3s 4d to 3s 7d per 62lb; barley, 3s to 3s 9d per 56lb; old oats, 2s 6d to 3s per 40lb.; new oats, 2s 2d to 2s 6d per 40lb; old beans, 4s to 4s 6d per 65 1-3lb; new beans, 3s 8d to 3s 10d per 65 1-3lb; vetches, 5s 6d to 6s 6d per 55½lb.

Ipswich, Tuesday.—Wheat: With an average supply the trade was firm at last week's prices, good reds or whites being worth about 31s per 504lb. Barley: Supply distinctly short for the time of the year, with no pressure to sell, and prices if anything the turn better, useful malting runs being in steady demand at 28s to 32s per quarter; grinding sorts very firm at 24s 6d to 25s 6d per quarter. Oats: In very moderate supply, and firm, at 20s to 21s 6d, with old corn at 22s 6d to 23s 6d per quarter. Maize unchanged, at 25s 6d to 26s per quarter. Beans, peas, and other feeding corns all firm on the week, as also oil cakes and milling offals.

Leeds. Friday.—There was very little demand for English wheat, and in a few cases 6d lower was accepted. Foreign met with a slow sale at slightly lower prices. No change in barley. Oats declined 6d. Other feeding stuffs unaltered.

Leicester. Saturday.—Fair attendance of buyers and dealers, with good supply of home-grown wheats. Trade steady. Red wheats, 29s to 30s per 36 stones; white wheats, 30s to 32s per 36 stones. Good barleys were in request, but many samples were faulty and rough. Prices ranged from 25s to 29s per 32 stones. Beans in better demand at 34s to 36s per 38 stones; fine oats, 20s to 23s per 26 stones.

Lincoln. Friday.—Moderate show of English wheat, which sold freely at last week's prices. All classes of barley firm at late rates. Oats and beans firm and unaltered.

Manchester, Thursday.—English and foreign wheat were unchanged on the week, with only a moderate demand. Flour was 6d lower. Indian corn ruled about 1d lower for mixed American, but Plate was unchanged. Oats were on the easy side, and barley was very quiet, in buyers' favour. Peas and beans unchanged. Bran and thirds in fair demand and unchanged.

Norwich, Saturday.—There was a better supply of wheat on offer at our market to-day, with a dull trade at late rates. Barley was in better supply, the trade ruling firm for all useful lots. Frosty weather has prevailed during the past week. Wheat, red, 30s to 31s per quarter, weight 63lb per bushel imperial. Corn inspector's return for the week ending November 11, 1905:—Wheat, 4,285, 28s 11d; barley, 20,614, 24s 7d.—J. ARTHUR MILLS.

Northampton. Saturday.—Better attendance; small show. Wheat at last week's prices; barley trade slow; oats and beans firm. New wheat, 27s 6d to 29s; malting barley, 25s to 32s; new white oats, 18s to 20s; new black, 18s to 19s; new beans, 28s to 30s; peas, 27s to 28s; flour, 24s 6d to 28s 6d.

Nottingham. Saturday.—Wheat in fair supply; last week's rates supported. Barley less offering, and values maintained. Oats and beans small show and firm in price.—ROBT. HUBBLE.

Newark, Wednesday.—There was a firm trade in wheat at previous prices. Barley steady at full prices. Oats unchanged in value. Beans 6d per quarter dearer. Wheat, 29s to 30s; barley, 24s to 30s; oats, 18s to 20s; beans, 29s to 31s per quarter.

Newcastle-on-Tyne. Saturday.—A quiet demand for wheat of all descriptions, and prices of last week were barely maintained. Maize quiet and in buyers' favour. A fair demand for oats, and prices of last Saturday were maintained. Barley steady, unchanged in prices. Beans and peas unaltered.—JOSEPH POLLARD AND CO.

Oxford. Saturday.—The attendance was small, and trade ruled dull. English wheats were freely offered at former quotations, but only a limited business was done. The supply of barley was on a smaller scale, and holders were steady at about late rates.

Peterborough. Saturday. — There has only been a moderate supply of wheat and a quiet trade at about same prices as last week. Barley held firmly, but the demand was not active. Oats sold at late rates.—THOMAS HILL AND SON.

Preston. Saturday.—During the week trading has been smaller, and prices easier for grain. There was a fair attendance, and prices showed little, if any, change for local wheat and oats. The latter are offering more freely, and prices are rather easier. Flour, 6d per sack lower. Quotations: Wheat, white, new, 13s to 13s 6d per windle of 36lb; ditto, red, 12s 9d to 13s; oats, new, 2s 9d to 2s 10d per bushel; beans, 16s to 16s 6d per windle; bran, 10s 6d to 11s.

Reading, Saturday.—The market was very well attended and some fairly satisfactory business was transacted. Wheat made from 27s 6d to 31s 6d per qr., and barley ranged from 24s to 32s. Oats were in fair request from 16s to 21s 6d, but inquiries for beans and peas were not numerous, and trade in consequence rather on the dull side; what were sold, however, changed hands at current rates.

Retford. Saturday. The wheat trade was firm, and there was a fair amount of business transacted, but quotations were not materially changed at 29s to 29s 6d per quarter. Not much alterations in value of malting barley, the chief demand being for really choice qualities, which were difficult to meet with. There were some useful lots on offer, and currencies generally ranged from 24s 6d to 28s 6d; grinding barley, 24s 6d; new English beans, 31s to 31s 6d; old ditto, 38s; black oats, 18s to 19s; white ditto, 20s to 20s 6d; maize, 26s; rye, 22s; tares, 45s per quarter.

Ripon, Thursday.—Quiet trade. Samples consist chiefly of malting barley. No quotable alteration in prices. New wheat, 28s to 29s 6d; wheat (foreign), 33s to 36s 6d; barley (grinding), 23s to 24s; barley (malting), 25s to 28s; new oats, 18s to 20s; maize (round), 26s to 26s 6d; maize (flat), 25s 6d to 26s 6d per quarter.

Shrewsbury, Saturday.—Quotations:—Wheat, 12s 6d to 12s 9d per 225lb.; old white oats, 15s to 16s; new oats, 11s 6d to 12s 6d; peas, 11s 6d to 12s 6d per 240lb.; beans, 15s 6d to 14s per 240lb.; barley, 14s to 19s per 280lb.

Stamford. Friday. Large attendance and good trade. Quotations: Wheats, 29s to 30s; barleys, 25s to 28s, and up to 31s for malting; oats, old, 19s to 21s; new oats, 22s to 24s; beans firm at late rates; peas, 40s to 50s; maize, 23s 6d ex port.

Sunderland. Saturday.—Moderate supply of wheat, which sold at about last week's prices. Little doing in spring corn. Arrivals:—Coastwise: Barley, 374 quarters; foreign nil.—E. AND F. RICHARDSON.

Tunbridge Wells, Friday. — New white wheat, 32s 6d to 33s; new red ditto, 32s to 32s 6d; barley, 28s to 34s; grinding ditto, 21s to 24s; oats, English, 17s 6d to 20s; rye, 25s to 26s; peas, 32s to 37s; beans, 32s to 35s; tares, 44s to 52s; maize, 26s to 30s.

Warwick. Saturday.—Fair supply of wheat, which sells at about last week's prices. Good samples of barley in good demand, and make rather more money. Feeding stuffs unchanged. Oats and beans very scarce and dearer.

Winchester, Saturday.—English wheat held at fully last week's prices. Foreign unaltered. Barley and maize unchanged. Oats occasionally 3d advance. Flour a fair demand at late rates.—FEAR, COLEBROOK, AND CO.

Wisbech, Saturday.—A short supply of grain. Wheat firm at late rates; reds, 30s to 30s 6d. Oats dearer from scarcity; 18s to 21s. Other articles unchanged.—JAMES FLETCHER.

Worksop, Wednesday.—Small attendance and moderate show of grain. Slow trade for barley, and last week's prices practically unaltered. White wheat, 28s to 30s; red wheat, 26s 6d to 28s; best malting barley, 28s to 30s; secondary qualities, 26s 6d to 28s; grinding barley, 22s to 24s; white oats, 17s to 18s 6d; black oats, 16s to 17s 6d; maize, 25s to 27s 6d per quarter.

Yeovil, Friday.—Best quality home-grown wheat made from 31s 3d to 31s 9d per qr.; secondary, 28s 6d to 30s; foreign, 33s 6d to 35s 6d; malting barley, 31s to 35s; feeding, 21s 6d to 23s 3d; foreign, 21s to 21s 6d; beans, 32s 6d to 38s; maize, 24s 3d to 25s 9d; rye, 22s to 23s 9d; oats, black, 18s to 20s; white, 17s to 20s; Irish, black, 17s to 17s 9d; rape, 46s to 49s; vetches, 6s to 7s per bushel. Fair inquiry for flour, which was selling at 6d per sack less money, fine making from 24s 6d to 25s, and extra fine 26s 6d to 27s. Milling offals and meals in good request at unchanged rates.

York. Saturday.—Only a small market, owing to the hirings, and little wheat was on offer, and trade was slow at last week's prices. Fine white, 30s to 31s; red and mixed, 29s to 30s per quarter of 36 stones. Barley quiet, fine 27s to 29s; good, 25s to 27s; ordinary, 23s to 25s per quarter of 32 stones. Oats rather slow, and very few on offer; white Tartary, 17s to 18s; black 18s to 19s; white Garton 19s to 20s per quarter of 24 stones; rye, 22s to 22s 6d; beans, 30s to 33s per quarter of 36 stones.

FOREIGN.

Hamburg, Saturday.—We had some snow and frost, but since yesterday the weather is again mild. The autumn-sown crops in general are lacking in appearance. Reports about the yield of the potato crop vary, but even where a good quantity was carried, there are complaints about rot. Market rather quiet, with drooping prices, but there is no general depression and the least impulse from abroad is likely to cause a rally. The imports since November 1 amounted to 27,904 tons wheat, 3,266 tons rye, 31,251 tons barley, 41,065 tons maize, 11,285 tons bran. Fine Holstein and Mecklenburg wheat is selling at 33s to 34s per 504lb. f.o.b.; American hard winter No. 2 is held at 31s 6d; 75-76 Ko Danubian at 30s 9d; 80 Ko River Plate at 32s 6d; 75 Ko Entre Rios at 30s 9d per 480lb. c.i.f. Hamburg. Rye quiet; 9 15-20 Odessa afloat is offering at 27s 6d to 29s per 480lb. c.i.f. Hamburg. There is a good demand for malting barley, considerable quantities of Danish being sold at 31s to 32s; Chilian at 27s to 31s 6d per 448lb.; Austrian and Hungarian is scarce, stocks in those countries being nearly exhausted. Good Bohemian is held at 34s 6d to 36s 6d; Silesian and Oderbruch at 29s to 33s 6d; 60-61 Ko South Russian barley afloat is offering at 19s 3d to 19s 6d; American feeding at 18s 6d to 18s 9d per 400lb. c.i.f. Hamburg. Mixed maize on the spot is selling at 24s to 24s 6d; January shipment 21s 3d; River Plate afloat 24s; May-June 21s 6d per 480lb. c.i.f. Hamburg.—JOHN TATLOCK.

Paris, Wednesday.—At the Bourse de Commerce the tendency was very undecided throughout the day; however, fairly numerous offers from holders of surplus stock caused prices to fluctuate, and the market closed with a fall of from 10c to 15c for flour and 10c for wheat. Rye: Nothing doing, but prices remain firm. Oats quiet, at practically late prices. At the weekly spot market the cold weather has caused business in home-grown wheat to revive, and the demand for flour and offals is also better. The market is firm, and, as millers have to pay high prices for good wheat, the price of flour also tends to stiffen. The market closed with a rise of 25c for French wheat, whilst foreign sorts remained neglected. In consumption marks flour bakers still abstain from purchasing, preferring to wait till threshings become more important, when they hope to buy at cheaper prices. Due to the dearness of the raw material, business in rye flour continues to drag, but prices remain unchanged.—*Dornbusch.*

HOPS

Worcester. Saturday. The scarcity of hops now on offer has caused a somewhat stronger feeling on the market, and holders ask more money or are inclined to wait further developments. Sales made are at advanced prices.—CHARLES FARAM AND CO.

THE BALTIC.

The London Corn Trade Association quote White Calcutta wheat at 33s. 6d., Soft Red Calcutta at 32s., and Choice White Kurrachee at 33s. 3d.: all per 492 lb. for cargoes on passage. No quotations are available for Bombay or Delhi wheat, or for Red Kurrachee.

Other wheat cargoes are steady. The following sales have occurred:—Russian Azima 34s. 6d. per 492 lb. for best, and 31s. 6d. for common; Odessa Ghuka, 32s. 6d.; Roumanian, 31s. 9d. per 504 lb. for fine, 31s. per 492 lb. for ordinary. Australian 33s. per 480 lb. for new crop February shipment; Rosario, 30s. 9d. per 492 lb. for January shipment; No. 1 Northern Manitoba, 32s. 6d. per 480 lb. for prompt shipment.

There was a cargo of Argentine maize sold on Friday for May shipment, a very long future. The price paid was 21s. 6d. per 480 lb. The week's sales of American have included two cargoes for December shipment at 22s:, and two for January shipment at 21s. 6d.

Barley cargoes have been slow of sale; 21s. 6d. is the lowest price accepted for Californian. Azoff is quoted 20s. 9d. per 400 lb. for first spring shipment.

For oats there is less demand. A cargo was sold on Saturday for 15s. 2d. per 304 lb. American prompt shipment, and hay is below previous lowest price accepted.

The arrivals of grain and seed-laden vessels at Ports-of-Call for the week were nil.

The sailings of grain and seed-laden vessels from Ports-of-Call for the week were 1 maize (Waterford), 1 linseed (Bristol).

Since January 1, 1905, the total arrivals have been 297 wheat, 2 flour, 2 wheat and oats, 1 wheat and linseed, 1 flour and wheat, 13 barley and wheat, 10 barley, 11 maize, 1 beans, 4 locust beans, and 52 linseed—total 394.

Last year during the same time the arrivals were 278 wheat, 1 wheat and maize, 37 barley and wheat, 17 barley, 11 maize, 6 beans, 4 locust beans, 1 rye, 41 linseed, and 1 canaryseed—total 397.

Ricemeal	...	12,000	12,000

MANURES.

Liverpool, Friday.—Nitrate of soda continues firm at £10 15s to £11 per ton. A fair amount of sales have taken place in kainit and basic slag, but so far the deliveries for home consumption have not been equal to previous autumns, and the demand as regards basic slag is chiefly for the highest grades; values are as annexed. The colder weather of the past week has imparted more firmness to the market for oil cakes, etc., but the consumptive demand continues a disappointing one, and lacks that activity usual at this period. Small sales of Peruvian cotton cake ex quay have been made at £7 5s. per ton. Fattening cake, prime, Liverpool make, in bags £6 12s 6d to £6 15s; feeding or dairy cake, prime, Liverpool make, in bags, £6 5s to £6 7s 6d; nitrate of soda, best quality, i.e., guaranteed 25 per cent., pure, in bags, £10 15s to £11; East India bone meal, in bags, £5 5s to £5 7s 6d; kainit, prime, 23 per cent., sulphate of potash, in bags, £2 to £2 2s 6d; palm nut cake, prime, in bags, £5 15s; linseed cake, American thin oblong, prime, in bags, £8 7s 6d; linseed cake, English, prime, in bulk, £8 7s 6d to £8 15s; linseed meal (pure crushed linseed), in bags, £14 to £15; Cottonseed cake, N.A. decorticated, good ordinary, in bags, £6 17s 6d to £7; cottonseed cake, English decorticated, prime (scarce), in bags, £7 1s 6d to £7 17s 6d; cottonseed cake, English, undecorticated, prime, in bulk, £4 12s 6d to £4 17s 6d; cottonseed (crushed), 20 to 25 per cent. oil guaranteed, prime, in bags, £7 to £7 2s 6d; maize germ meal, prime, in bags, £5 17s 6d to £6; corn oil cake, prime, in bags, £6 to £6 2s 6d per ton; linseed,, fine bold feeding, in bags, £2 7s to £2 8s per qr. (416 lb.); cod liver oil, cattle feeding, prime, in casks, 4s 6d per gal.; treacle, feeding prime, in barrels, 4s 6d per cwt.; D.N.S. brand superphosphate of lime, guaranteed, 25 to 27 sol., in bags, £2 to £2 2s; D.N.S. brand superphosphate of lime, guaranteed, 30 to 31 sol., in bags, £2 5s to £2 7s; superphosphate of lime, guaranteed, 35 to 36 sol., in bags, £2 15s £2 17s; basic slag, prime quality, guaranteed, 30 to 35 per cent. phos., in bags £1 11s to £1 13s; basic slag, prime quality, guaranteed, 38 to 45 per cent. phos., in bags, £1 19s to £2; basic slag, finest quality, guaranteed, 46 to 50 per cent. phos., in bags £2 2s to £2 5s per ton (at depots .....).

—H. JONES LANGAR AND CO.

Review of the British Corn Trade

DURING THE PAST WEEK

Written exclusively for the Mark Lane Express.

The Government estimate published on Saturday puts the yield of wheat in Great Britain at 32.78 bushels per acre, which is 2.22 bushels above the average, but about a bushel less than the usual trade estimates for this season. The barley crop is put at 33.91 bushels to the acre, which is 1.09 bushel above the average, and is an estimate that many brewers will call optimistic. The bulk of inferior barley, however, remains to be proved by sales in 1906, for the deliveries since September 1 have mainly been of the brewing and malting grades. Oats, according to the Board of Agriculture, have yielded 38.16 bushels, or about half a bushel below the average. The yield in Scotland has exceeded the mean, so that the deficiency in England is reduced to a moderate figure for Great Britain as a whole. Beans are put at 32.28 bushels, or over 4 bushels above the average. This is a very optimistic estimate, and deliveries since harvest have not been heavy. Of peas the crop is officially put at 25.71 bushels to the acre, a very modest view.

The total yields for Great Britain are as follows:—

Wheat	58,902,499 bushels.
Barley	58,110,064 bushels.
Oats	116,436,887 bushels.
Beans	8,201,730 bushels.
Peas	4,439,483 bushels.

In Argentine a spell of frost unusually late in the season has gravely affected wheat prospects in the extreme South, while locusts are invading the more tropical provinces, and, as usual, tax the authorities' powers of destruction. The decline of 6d. per qr. in grain freights since Michaelmas makes the market for immediate futures weak, but the crop news warrants firmer holding of wheat for January and February shipment. The Australian colonies are now expected to have between them 6,000,000 qr. of wheat available for exportation, and another million may be available later on, from New Zealand and Tasmania. The want of labour has compelled the abandonment of maize growing over large areas in Queensland, and for the same reason the enormous acreage of possible wheat land in West Australia remains undeveloped. Cape Colony only expects a small wheat crop in January, and will have to buy half a million qr. of wheat from other countries.

The average price of English wheat has crept up during November from 27s. to 28s. 7d., and is now only 1s. 7d. lower from a year ago. The sales of twelve completed weeks at the statute markets have been as follows:—

This season 1,053,000 qrs. at 27s. 3d. per qr.
Last season 563,000 qrs. at 30s. 2d. per qr.

The sales of barley have been larger this season than last, but not nearly to the same extent as wheat. Prices last week differed a penny only between the two years, but on the twelve completed weeks since harvest a difference of 9d. is revealed. Returns are:—

This season 1,716,000 qrs. at 24s. 4d. per qr.
Last season 1,652,000 qrs. at 25s. 1d. per qr.

The sales of oats are increasing, but thus far have been a good deal less than last year.

Last season 339,000 qrs. at 16s. 6d. per qr.
Last season 426,000 qrs. at 15s. 11d. per qr.

It will be perceived that the more moderate supply to market has had the good effect of securing 7d. net advance in the price.

Imports last week were as follows:—

Wheat, 392,000 qrs.; a good supply.
Flour, 163,000 sacks; a fair supply.
Barley, 137,000 qrs.; over an average.
Oats, 143,000 qrs.; a full supply.
Maize, 66,000 qrs.; barely a third of expectations.

Since harvest, twelve completed weeks' imports have been:—

Wheat, 4,810,000 qrs.; less than last year.
Flour, 1,409,000 sacks; a fair supply.
Barley, 2,244,000 qrs.; a large supply.
Oats, 1,187,000 qrs.; less than usual.
Maize, 2,537,000 qrs.; rather short arrivals.

Sales of British wheat in London during the past week have been unusually good for the time of year, and argue that millers appreciate the excellent quality of 1905 grain. Of barley and oats the sales have been up to a November average. The price of wheat in London has picked up to 29s. 9d. per 480 lb., or 31s. 3d. per 504 lb., but barley remains depressed in price. Oats are at a reasonable quotation.

Supplies of wheat on passage show a very great change from a week ago. The changes in the items, however, are not without interest.

	This Week. Qrs.		Last Week. Qrs.
Californian	245,000	..	180,000
American	320,000	..	380,000
Russian	280,000	..	376,000
Indian	276,000	..	226,000
Argentine	430,000	..	400,000
Australasian	40,000	..	50,000
Various	30,000	..	50,000
Total	1,621,000	..	1,662,000

These figures reveal at a glance the increasing and decreasing items of supply. Of flour the total on passage is only 284,000 sacks.

Of barley the quantity on passage is as follows:—

American and Californian	240,000 qrs.
Russian and Roumanian	245,000 qrs.
Asia Minor and Persia	85,000 qrs.
Total	570,000 qrs.

Of oats 250,000 qr., and of maize 640,000 qr. are on passage. The quantity of rice on passage has risen from 23,000 to 31,000 tons, and of linseed has advanced from 180,000 to 184,000 qr.

Shipments last week were rather liberal from America, the chief items being 196,000 qr. of wheat, 180,000 qr. of barley, 162,000 qr. of oats, 96,000 qr. of maize, and 143,000 sacks of flour. Argentine's exports are surprisingly large for the closing weeks of the season. Actual figures were wheat 170,000 qr., maize 286,500 qr., and linseed 64,000 qr.

Russia sent off remarkably large quantities of grain—viz., 499,000 qr. of wheat, 330,000 qr. of barley, 390,000 qr. of oats, and 2,000 qr. of maize. Roumania added 347,000 qr. of wheat and 116,000 qr. of barley. After December 1, maize will be allowed to be exported from Roumania.

India shipped 27,000 qr. and Australasia 3,000 qr. of wheat, while 10,000 tons of cottonseed were exported by Egypt, and the shipments of barley from Asia Minor amounted to 12,000 qr.

The World's Wheat Crops.

On Friday evening *Beerbohm's Shipping List* published its annual estimate of the world's wheat crops. The following are the totals:—

1905	407,700,000 qrs.
1904	395,900,000 qrs.
1903	408,495,000 qrs.
1902	397,400,000 qrs.
1901	370,770,000 qrs.

Anything over four hundred millions represents a decidedly good year.

BUTTER

(Price per lb., except where otherwise stated.)

Thursday.—Axminster: 1s 2d to 1s 3d. Birmingham: 1s 3d to 1s 4d. Brigg: 1s 2d to 1s 3d. Devizes: 1s 5d to 1s 6d. Driffield: 1s 1d to 1s 2d. Evesham: 1s 2½d to 1s 4d. Kidderminster: 1s 2d. North Tawton: 1s 2d. Peniston: 1s 3d. Plymouth: 1s 3d to 1s 5d. Ripon: 1s 8d to 1s 11d per 24 oz roll. Wellington: 1s 2d to 1s 3d. Wetherby: 1s 2d to 1s 3d.

Friday.—Altrincham: 1s 3d to 1s 4d. Ashburton: 1s 3d to 1s 4d. Barnstaple: 1s 3d to 1s 5d. Chester: 1s 3d. Congleton: 1s 3d. Crewe: 1s 3d. Camelford: 1s 1d. Dartmouth: 1s 3d to 1s 5d. Derby: 1s 4d. Helmsley: 1s 2d. Knutsford: 1s 3d to 1s 4d. Leyburn: 1s 10d to 2s per 24oz. roll. Lincoln: 1s 1d to 1s 2d. Lostwithiel: 1s 1d. Macclesfield: 1s 3d. Northwich: 1s 3d. Nantwich: 1s 3d. Otley: 1s 11d per 24oz. roll. Redruth: 1s 5d. Runcorn: 1s 3d. St. Austell: 1s 4d to 1s 5d. Stamford: 1s 2d to 1s 4d. Stockport: 1s 3d. Tavistock: 1s 2d to 1s 4d. Totnes: 1s 3d to 1s 4d.

Saturday.—Appleby: 1s 1½d to 1s 3d. Berwick: 6d to 10d. Bridgnorth: 1s 1d to 1s 3d. Carlisle: 1s 3d to 1s 4d. Doncaster: 1s 2d to 1s 4d. Grantham: 1s 2d to 1s 3d. Howden: 1s 1d to 1s 3d. Ipswich: 1s to 1s 2d. Lancaster: 1s 1d to 1s 2d. Malton: 1s 1d to 1s 3d. Pontefract: 1s 2d to 1s 3d. Retford: 1s 3d to 1s 4d. Richmond (Yorks): 1s 2d to 1s 3d. Shrewsbury: 1s 2d to 1s 3d. Skipton: 1s 1d to 1s 2d; Stokesley: 1s 2d to 1s 3d. Whitby: 1s 4d. Worcester: 10d to 1s 3d. York: 1s 2d to 1s 4d.

EGGS

(Number per 1s., except where otherwise stated.)

Friday.—Altrincham: 5 and 6. Ashburton: 1s 8d to 1s 9d per dozen. Camelford: 8. Chester: 6. Crewe: 6. Congleton: 6. Dartmouth: 1s 9d to 2s per dozen. Derby: 6. Helmsley: 7. Knutsford: 6 and 7. Leyburn: 7. Lincoln: 7. Lostwithiel: 12. Macclesfield: 5 and 6. Nantwich: 6. Northwich: 6. Otley: 5and 6. Redruth: 1s 8d per dozen. Runcorn: 6 and 7. St. Austell: 6. Stamford: 6 to 8. Stockport: 5 and 6. Tavistock: 6. Totnes: 1s 10d to 1s 11d per dozen.

Saturday.—Appleby: 5 and 6. Berwick: 1s 7d to 1s 9d per dozen. Bridgnorth: 7. Carlisle: 5. Doncaster: 6 and 7. Grantham: 7. Howden: 6 and 7. Ipswich: 6 to 8. Lancaster: 6 and 7. Malton: 8 and 9. Pontefract: 7. Retford: 2s 10d to 3s per score. Richmond (Yorks): 6. Shrewsbury: 6. Skipton: 6 and 7. Stokesley:

Indian	41 to 43

SUNFLOWERSEED. per 418 lb.	
Finest	48 to 52
Ordinary	40 to 44

TO-DAY'S MARKETS.

MARK LANE, MONDAY, November 27.

FIRST REPORT.

English wheat to-day sold well in retail; both white and red sorts moved off without delay at previous full terms. Foreign was quiet; millers complain of a comparatively restricted choice of types. Russian does not quite give so much satisfaction as last season; Indian is scarcely obtainable, and Argentine of the old crop is decidedly a small supply. Barley was dearer for Californian and firm for 448-lb. English. The market was also a little dearer for Roumanian. On the other hand Russian was a trifle lower on the week, and American fell 6d. per qr. Oats are against sellers, the competition of America and Russia inducing 6d. fall on the week in some instances, though not in all. Round maize was not offered, but yellow and flat types competed at 25s. level. Beans and peas were still tending to rise in price, but oilseeds were the turn in buyers' favour. Rice was firm; the new Burmese crop was quoted 7s. 3d. per cwt. for January shipment. There was a good demand for sugar in Mincing Lane. Rice and sugar increasingly bear on the corn trade, nor can any leading operator in feeding stuffs afford to ignore them.

CLOSE OF THE MARKET.

THE CLOSE OF THE MARKET WAS RATHER LACKING IN CONFIDENCE, AND HOLDERS WERE MORE DISPOSED TO MEET BUYERS THAN AT THE OPENING.

THE FLOUR TRADE.

MARK LANE, MONDAY, November 27

LONDON FLOUR.

London makes were the turn in favour of buyers, both Whites and Households being occasionally parted with at 3d. decline on the week. Country flour, with large supplies, was difficult to maintain at the full rates of the 20th, but there were few firms actually accepting any less money. American flour on spot was unchanged; fine patents for December shipment were offered at 26s. 3d. c.f.i. There was some Australian offering at 24s. 3d., and some good Hungarian at 31s 6d., but neither Russian or Argentine types are any longer in evidence. Bran, pollard, and middlings were a firm trade, and a tendency to higher prices only needed a week of cold weather to become a definite advance.

LONDON TERM MARKET.

This market is open to elected members only and is held at the Baltic Club, St. Mary Axe. No business except for future delivery is done, and the smallest quantity that can be purchased is 1,000 quarters, or 4,800 cental.

Prices quoted on Saturday at the close of the week's trade were as follows:—

WHEAT (per cental).

No. 2 American Red	6s. 11d.	Dec. delivery.
,, ,,	6s. 11d.	Jan. ,,
,, ,,	6s. 10d.	Mar. ,,
,, ,,	6s. 11d.	May ,,

MAIZE (per cental).

American	3s. 5d.	Jan. delivery.
,,	4s. 4d.	Mar. ,,
,,	4s. 4d.	May ,,

Wheat speculation to-day showed diversity of view. For December delivery 6s. 10d. was taken, but 6s. 11d. was made for March. For May, however, 6s 9d. was quoted. Maize was cheaper for remote futures; 4s. 3d. accepted for May.

CHEESE.

Glasgow, Wednesday.—Arrivals of cheese are liberal, but as holders were asking firmer prices business was rather checked. Cheddars are quoted 58s to 63s; Dunlops, 56s to 61s per cwt.

Newport, Wednesday.—A supply of about ten tons, and a brisk demand. Quotations:—Caerphillies, 53s to 58s per cwt; fancy dairies, 59s to 62s; truckles, 50s to 53s; Derbys, 58s to 62s; Cheddars, 60s to 63s.

SEEDS

London, Monday.—A fair trade has developed in clovers and grasses at firm to rising prices. The new English reds are coming out more freely, but both qualities and prices are various. The bulk of the samples shown so far appear very ordinary quality.—JOHN PICARD AND Co.

GRAIN AND FLOUR FACTORS REPORT.

Offals.—The demand for bran not quite so active, but no change to report in prices.—GREENHILL BROS. (Belfast).

Flour. Trade generally dull; buyers still holding aloof from purchasing; prices nominally unchanged. GREENHILL BROS. (Belfast).

Flour. Winter wheat flours are unchanged, but Springs are in buyers' favour. Grain.—American Indian corn is practically finished on spot, so that near at hand parcels bring good prices. Plate maize is dull at 14s. 6d. Oats, pease, and beans are steady. Gram, grey pease, peayin, and other Indian grains are all in good demand at advancing prices. Oilcake firm. Oatmeal 6d. per sack dearer. Mill Stuffs.—Bran and Thirds continue to be wanted at full prices.—MCKINNON AND MCDONALD (Glasgow).

Flour.—Trade to day has been very quiet and prices are about 3d. lower on the week.—T. S. MEDILL AND SONS, LTD.

We have moderate supplies of wheat, and the demand is slow, prices being 3d. and 6d. per qr. lower. Flour, prices are maintained. Maize, a slow sale at late prices. Barley and oats unchanged.—COVENTRY AND SHEPPARD.

Milling Offals remain scarce and firm at last week's prices.—JOHN BAWCOMB AND Co.

FEEDING STUFFS.

London, Monday.—Linseed cake: Trade is much better, and London made have advanced 2s 6d per ton on the week. Americans are again attracting buyers owing to the comparative low figure now asked. Cotton cake: This being one of the cheapest feeds on the market meets with a ready sale.—Linseed: In very good demand and a strong market.

ROBERT AND JOHN HEWETSON.

THE BALTIC. 1 p.m.

STATE OF TRADE.

Wheat and maize cargoes are to-day neglected, and oats are offered at a slight decline. Barley is steady for grinding and firm for fine types. Linseed cargoes are 6d. cheaper on the week. Cottonseed dull but steady.

BUSINESS DONE.

WHEAT.—Blue Stem, 33s 3d per 500lb., January shipment; White Calcutta, 33s 9d per 492lb., nearly due; No. 2 Manitoba, 32s per 480lb., January shipment; Santa Fé, 3s per 488lb., January shipment.

MAIZE.—Argentine, 23s per 480lb., on passage; American, 23s 3d per 480lb., on passage.

BARLEY.—Kustendje, 20s 9d per 416lb., December shipment; Californian, 28s 6d per 448lb., December shipment (fine); Californian, 27s 6d per 448lb., December shipment (ordinary); Syrian, 24s 6d per 448lb., December shipment.

OATS.—Libau, 16s 3d per 304lb., on passage; South Russian, 16s 6d per 304lb., prompt shipment.

BEANS.—New Zealand, 34s per 504lb., prompt shipment.

PEAS.—White Indian, 31s 3d per 504lb., prompt shipment; White Indian, 29s 6d per 504lb., May shipment; Green Indian, 25s 6d per 504lb., on passage; Green Indian, 24s per 504lb., May shipment.

LINSEED.—Calcutta, 39s 6d per 410lb., on passage; Argentine, 37s per 416lb., February shipment.

RAPESEED.—Ferozepore, 39s per 416lb., April shipment; Jamba, 34s 3d per 416lb., January shipment.

COTTONSEED.—Egyptian, £5 12s 6d per 2,240lb., January shipment; Bombay, £4 15s per 2,240lb., December shipment.

PROVISIONS.

London, Monday.—Bacon: The arrivals of bacon last week were from Ireland 2,278 bales, and from foreign ports 10,440 bales. The bacon market continued steady, with fat selections of Irish 1s to 2s dearer; however, the Canadian market was not quite so strong, and sellers more ready to meet buyers at a slight reduction. Quotations ranged:—Irish, 61s to 64s up to 66s; Danish, 56s to 64s up to 66s; Canadian, 55s to 57s up to 60s. Butter: The Butter market was steady, and a good trade passing in all Colonials, but Danish was rather slower at 1s to 2s less money:—French, 100s to 116s; Danish, 120s to 123s; Russian, 96s to 108s; Argentine, 112s to 114s; American, 86s to 106s; Irish, 102s to 105s; Canadian, 106s to 108s; Australian, 100s to 116s. Lard: Lard was a steady market: Irish, 56s to 64s; Danish, 52s to 60s; American, 37 3d to 38s 6d.

HOPS

London, Monday.—W. H. and H. Le May, 67, Borough, London, report:—The demand continues for English hops, which are still offering at prices below the cost of production. Stocks are now in a very small compass, and values are consequently hardening all round.

CATTLE.

Metropolitan Market, Islington.

Monday, Nov. 27, 1905. Monday,

	Mon., Nov. 27, 1905. British.	Total	Mon., Nov. 28, 1904
Beasts	1,180	1,180	1,650
Sheep and lambs	5,900	5,900	7,750
Calves	10	10	
Milch cows	50	50	60

Quotations per 8lb (sinking the offal)

ENGLISH.

	Inferior.	Second.	First.
Beasts	2s 10d	3s 6d	4s 0d
Sheep	3s 10d	4s 8d	5s 10d

Milch cows, per head, £16 to £22.

British arrivals include as follows:—Scotland, nil; Eastern Counties, 95; Midland, Home and Western Counties, 1,018; Devon, 25; Ireland, 42.

We note to-day a decrease of ten head, compared with Monday last, for both prime and second quality beasts. Trade opened and continued throughout the day of a slow and dragging nature; nevertheless, late currencies were maintained for choice quality cattle. Irish descriptions were exceedingly slow of sale at a decline of 2d per 8lb. in value. The arrivals from this country consisted entirely of Waterfords. No store cattle being offered for sale. Fat butchering cows and bulls met with a limited inquiry by both town and country buyers, rates favouring them to the extent of from 1d to 2d per 8lb. The prospects of a clearance being made is very doubtful. The following are top quotations per 8lb. (sinking the offal):—

	To-day.	Monday, Nov. 28, 1904.
Devons	4s 4d to 4s 6d	4s 4d to 4s 6d
Hereford	4s 4d to 4s 6d	4s 4d to 4s 6d
Norfolks	4s 4d to 4s 6d	4s 4d to 4s 6d
Runts	4s 0d to 4s 4d	4s 0d ex 4s 6d
Lincolns	3s 10d to 4s 0d	3s 10d ex 4s 0d
Irish	3s 6d to 3s 8d	3s 10d to 4s 0d
Fat Cows	3s 4d to 3s 6d	3s 4d to 3s 6d

There was a decrease of 500 in the number of sheep and lambs penned, compared with the corresponding day last week. Trade for both wethers and ewes was a disappointing one, rates ruling in favour of the buyer, but not sufficient to quote any lower prices. On the other hand, Irish and Scotch descriptions were quoted 2d lower; this is partly due to the bad trade experienced at the dead meat market. There is little prospect of a clearance being effected even at a further reduction. Undermentioned quotations are at per 8lb (sinking the offal), and are for the best of each class penned:—

	Nov. 28, 1904.
7½ to 8st Downs	5s 8d to 5s 10d..5s 10d to 6s 0d
9st Downs	5s 6d to 5s 8d..5s 8d to 5s 10d
10st Half-breds	5s 4d to 5s 6d..5s 4d to 5s 6d
10st Irish	5s 4d to 5s 6d..5s 2d to 5s 4d
10st Down ewes	3s 10d to 4s 0d..3s 10d to 4s 0d
11st Half-bred ditto	3s 8d to 3s 10d..3s 8d to 3s 10d

Trade not worth noting or quoting.

No pigs on offer.

Deptford, Monday.—Beasts, 670. To-day's supply of beasts, compared with Monday last, showed a decrease of 390 head, and consisted entirely of shipments from the United States. Trade was of a firmer and steadier nature, at an advance in value of 1d per 8lbs. Besides the above, 550 more were withheld for Wednesday. The best States on offer were quoted at from 4s to 4s 1d; seconds, 3s 8d to 3s 9d per 8lbs. (sinking the offal). On Saturday 1,996 beasts from the United States and 304 Canadians were offered for sale, and met with a slow trade at from 3s 6d to 4s for the former, and from 3s 4d to 3s 8d for the latter. Besides the above 500 more Canadians were withheld for to-day.

London (Central), Monday.—Fair supplies. Trade quiet. Beef: Scotch, 3s 6d to 4s 2d; English, 2s 10d to 3s 2d; American, 2s 8d to 3s 2d. Mutton: Scotch wethers, 4s 4d to 4s 8d; English wethers, 4s to 4s 4d; ewes, 3s to 3s 4d; New Zealand, 2s 4d to 2s 8d; lamb, New Zealand, 2s 8d to 2s 10d; veal, 3s to 4s; pork, 4s to 4s 8d per 8lbs.

Liverpool, Monday.—Supply of cattle smaller than last week, demand fair and prices a shade better. A considerable decrease in the number of sheep on offer; notwithstanding this, trade was very slow; finished handy weights hardly maintained late quotations; strong and rough sorts lower. Beef, 5¾d to 4½d; mutton, 9d to 6d per lb. At market, 1,314 cattle and 3,756 sheep.

GAME AND POULTRY.

Smithfield, Saturday.—A dull demand met a fair supply. Prices: Pheasants, 3s to 4s; young grouse, 4s to 4s 6d; old, 3s; young partridges, 3s 6d to 4s; old, 1s 6d per brace; ducks, 2s 6d to 3s 5d; geese, 5s to 6s; Surrey fowls 2s 6d to 3s 2d; Essex fowls, 2s 3d to 2s 9d; Lincolnshire fowls, 2s to 2s 9d; Irish fowls, 1s 6d to 2s; Russian fowls, 1s 8d; wild ducks, 1s 9d; woodcock, 2s to 2s 3d; snipe, 6d to 10d; quails, 9d to 1s 6; black game, 1s 6d; feathered pigeons, 8d to 9d; Bordeaux pigeons, 10d to 1s 1d; English hares, 2s 3d to 2s 9d; leverets, 1s 9d; Scottish hares, 1s 6d; tame rabbits, 1s 2d to 1s 6d; wild rabbits, 8d to 11d; live hens, 1s 9d to 2s 3d each; Australian rabbits, 5s 6d to 7s 6d per dozen.

Scottish Chamber of Agriculture.—A meeting of directors will be held within No. 5, Saint Andrew Square, on Thursday, the 30th inst. (second day of Fat Stock Show), at 2 p.m.

Mr. Samuel Rowland, a well-known farmer and dealer, was suddenly charged by a vicious boar at the Dorchester cattle market on Wednesday afternoon. He was knocked down and his foot was bitten through, whilst the animal had to be beaten off by the bystanders. Mr. Rowland was taken to the hospital, and the boar was shot.

Addressing a large meeting at Clapham Junction on Saturday night, Mr. John Burns, M.P., said he was against labour colonies, for what would be the use of taking, say, a watchmaker or optician to dig gravel on Salisbury Plain in the hope that he might get a few tomatoes grown? Farm colonies were only doss-houses, in which good men were brought down to the level of tramps and wastrels, and eventually became chargeable to the parish.

LIVE STOCK AND MEAT TRADE REVIEW

(Written Specially for the "Mark Lane Express.")

Trade in London.

In reviewing the week's trade at both the English and Foreign Market, namely, Islington and Deptford, trade opened on the first market day of the week at the former of a decidedly firmer and steadier nature, rates ruling in favour of the seller, though barely sufficient to enable us to quote higher rates; the supplies were heavier than on the previous week, due to larger arrivals from the Midland Counties and Ireland; these latter consisted of 12 Dublins and 55 Waterfords; this class of cattle also ruled steady, anything choice finding ready buyers. Fat butchering cows and bulls met with a firm and steady inquiry from both town and country buyers at an advance of 2d. per 8 lb. in value; these rates were upheld also on Thursday with a somewhat slower trade; a few fat beasts were held back in the market, lairs having met with no demand.

At Deptford on Monday and Saturday trade was of a fairly steady nature at about late values. On Wednesday no market was held owing to the non-arrival of steamers, these being delayed by the recent fogs. The total number penned at both markets was 4,690, as against 4,010 during the previous week, consisting of 1,330 British (increase 380) and 3,360 foreign (increase 300); these latter comprised 1,996 from the United States and 304 from Canada. The following were the top rates obtained per 8 lb. (sinking the offal): 80 to 90 stone Devons, 4s. 4d. to 4s. 6d.; 90 to 95 stone Herefords, 4s. 4d. to 4s. 6d.; 95 stone Runts, 4s. to 4s. 4d.; 100 stone Shorthorns, 3s. 10d. to 4s.; 95 stone Irish, 3s. 8d. to 4s.; 90 stone States, 4s. to 4s. 2d.; 95 stone Canadians, 3s. 7d. to 3s. 9d.; 90 stone fat cows, 3s. 6d. to 3s. 8d.

The sheep trade at Islington on Monday for all descriptions of English Downs and Halfbreds was of a slow but firm nature, late rates being well maintained; the same remark also applies to Scotch descriptions. Irish met with a fairly steady enquiry, but showed a marked falling off in regard to numbers. On Thursday trade was practically at a standstill owing to the marked absence of buyers and the inclement weather; the tendency in regard to value was a downward one, though not quotably so. The total number penned at both markets was 6,490, as against 5,410 during the previous week, consisting entirely of British consignments. Best pens made per 8 lb. as follows (sinking the offal): 7½ to 8 stone Downs, 5s. 8d. to 5s. 10d.; 8 stone Scotch, 5s. 8d. to 5s. 10d.; 9 stone Downs, 5s. 6d. to 5s. 8d.; 10 stone Irish, 5s. 4d. to 5s. 6d.; 10 stone Downs, 5s. 4d. to 5s. 6d.; 10 stone Halfbreds, 5s. 4d. to 5s. 6d.; 10 stone ewes, 3s. 10d to 4s.

Calves numbered 20; trade nominal.

Pigs 20; trade slow, best small breeds quoted at 4s. 6d. per 8 lb.

Trade in the West.

The inclement weather we are experiencing is seriously accentuating the prevailing dulness in all kinds of store stock, more especially ordinary kinds, and anything coming under the category of "rough," for which there is practically little or no sale, except at abnormally low prices, at which stockowners do not care to part unless absolutely obliged to do so. Good fresh conditioned young bullocks, well on the way towards beef, being readily gauged up by graziers at from £12 to £17 apiece (which is almost as much as some will realise when finished off), plainer kinds selling from £7 to £11, which, as stock is now selling, is by no means a bad price. With the fair at Andover and that at Martinstown—the trade in the latter being fairly brisk for best drafts of old sheep—the sales of store sheep for the present season may be said to have come practically to an end, the few now changing hands being disposed of through private medium, and although we can give no reliable quotations, we heard on all hands that sheep are keeping very dear, and fully maintaining outside values.

The trade in fat beasts, as well as sheep, continues excessively dull, with a steady decline in value for everything but the very choicest grades of either. The top price now ruling for the choicest Devons is from 4s. 6d. to 4s. 8d. per stone; good medium qualities, 4s. 2d. to 4s. 4d.; seconds, 3s. 8d. to 4s.; with fat cows a very dragging sale at 3s. 2d. to 3s. 6d. Calves continue to hold their own, but 8½d. per lb. is now the best price ruling. The best qualities in mutton choice Downs and halfbreds sell very fairly at 5s. 6d to 5s. 10d.; heavier weights making 5s. 2d. to 5s. 4d.; young ewes, 4s. 6d. to 4s. 8d.; coarse heavy sheep, 4s. 2d. to 4s. 4d.; the latter attracting but little attention anywhere. Pigs, small weights, continue to maintain their supremacy on the market, all the lighter grades finding a very quick sale at from 10s. 9d. to 11s. 6d. per score; and hogs, 9s. to 10s.; heavy pigs at their value, which range, according to quality, from 7s. 6d. to 8s. 6d.

Trade in Scotland.

The number of fat cattle on offer has been rather larger, and the general quality considerably better. A good demand has been experienced, and while the best cattle made previous prices, secondary made more money. A large supply of fat cows, and they met a trade similar to last week. Fat sheep in full supply, and the general quality also improved. A steady trade has been got, and previous prices well maintained. Fat calves a full show and slightly cheaper, but fat pigs made the highest prices of the season. A moderate supply of store sheep, and generally of a very indifferent class. Anything good got easily and well sold. There was a fair supply of store cattle, but these met a very quiet dragging trade, and a considerable number of those on offer were left unsold. Milch cows of the best class made previous prices, but others were cheaper. Quotations: Top price of best cattle per live cwt., 38s. 6d.; current, 35s. to 37s.; Irish, 30s. to 35s.; mutton, 7d. to fully 9d. per lb.—John Swan and Sons, Limited.

Trade in Ireland.

There was a large increase in the number of cattle at last Dublin's Thursday market, fully making up for the deficiency of supplies on the previous market day. There was a good attendance of cross channel buyers on the look-out for Christmas beef, so the larger supply did not affect business, and, in fact, prices were higher for tip-top qualities, as there was an improved inquiry for best cattle, which was only checked by the large cargoes of beef at present on their way to Liverpool and other English ports. Really well-finished beef was scarce, and there appears to be a likelihood of values hardening up a bit; but for inferior cattle (of which the market was mainly made up last Thursday) there was no improvement, and a very slow trade was done. The best qualities of beef were worth from 30s. to 31s. per cwt. live weight, but other sorts of good cattle sold at from 25s. per cwt. upwards. The dead-weight prices showed an improvement, best beef selling at from 48s. to 52s. per cwt., while some extra finished lots made up to 56s.; good second-class beef from 45s. to 47s., and inferior from 42s. to 44s. per cwt. The number of cattle was 4,271.

Sheep were in increased supply, there being nearly 500 more than the previous week. The demand was steady for good, well-meated sheep, and hoggets of nice quality received more attention; but, generally speaking, the market was quieter all round than the last day, owing to a very small export demand.

Prime wether mutton sold at from 6½d. to 7d. per lb.; ewe, 5¾d. to 6½d.; and rough sheep from 5d. to 5½d. per lb. Large fat hoggets made from 42s. to 55s., and small to medium ditto from 32s. to 42s. each. There was a small show of veal. Choice calves were worth from 7d. to 8d. per lb., other sorts from 5d. to 6d. Milch cows were a smaller market, but really first-class cows were scarce. In the pig market business was again active, English buyers being in good attendance, and purchasing liberally. An early clearance was effected at firm prices. Choice light-weight pigs made from 50s. to 52s., and in some cases for extra choice, 54s. per cwt.; inferior pigs made from 32s. per cwt. upwards.

LONDON.

Islington, Thursday.—Beast supply, compared with Thursday last, showed an increase of 60 head, and consisted entirely of fat butchering cows and bulls and rough cattle, for which trade, although slow, was firm in value, late currencies governing all sales. Top value, fat cows, 3s 6d to 3s 8d; fat bulls, 2s 10d to 3s 3d per 8lb. Sheep supply consisted entirely of Downs and half-breds, no Scotch or Irish being offered. Trade was dull and dragging, with downward tendency in value, though barely sufficient to quote it so, chiefly due to marked absence of buyers and very inclement weather, and clearance considered more than doubtful. Best pens made per 8lb. as follows: 8st Downs, 5s 8d to 5s 10d; 9st ditto, 5s 6d to 5s 8d; 10st ditto, 5s 4d to 5s 6d; 10st half-breds, 5s 4d to 5s 6d; 10st Down ewes, 3s 10d to 4s. Calf trade not worth noting. Pig trade slow but steady; best small breeds quoted 4s 6d per 8lb. Quotations per 8lb, sinking the offal: Beasts, 2s 10d to 3s 8d; sheep, 3s 10d to 5s 10d; pigs, 2s 10d to 4s 6d. Total supply: Beasts, 140; sheep, 90; calves, 10; pigs, 20; milch cows, 5.

London (Central), Friday.—Supplies were on a heavy scale, for which a slow demand existed, at lower values. Beef arrivals included 80 tons Scotch, 220 Liverpool-sides, 2,500 hindquarters, and 1,700 forequarters American refrigerated; also 1,300 Argentine chilled hindquarters and forequarters. Quotations: Beef: Scotch short sides 3s 10d to 4s 2d, long sides 3s 8d to 3s 10d, English 3s to 3s 2d, American (Deptford killed) 3s to 3s 2d, Liverpool sides 2s 8d to 3s, American refrigerated hindquarters (best) 3s 4d to 3s 6d, forequarters 2s 4d to 2s 8d, New Zealand hindquarters 2s 2d to 2s 4d, forequarters 1s 9d to 1s 10, River Plate hindquarters 1s 10d to 2s, forequarters 1s 8d to 1s 9d, Argentine chilled hindquarters 2s to 2s 4d, forequarters 1s 10d to 2s. Mutton: Scotch tegs 4s 4d to 4s 8d, wethers 4s to 4s 8d, ewes 3s 4d to 3s 6d, English wethers 4s to 4s 4d, ewes 3s to 3s 4d, New Zealand 2s 4d to 2s 8. Veal: English and Dutch 3s to 4s. Pork: English 4s to 4s 8d, Dutch 4s to 4s 6d per 8 lb.

COUNTRY.

Ashford, Tuesday.—Beef sold slowly, the best up to 4s 6d per stone, and cows to 4s. Mutton rather sharper trade; Downs up to 6s and Kents up to 5s 8d. Veal 2d dearer, best making 5s. Pork still very dear; roasters made 4s 2d to 4s 8d, and large hogs 3s 8d to 4s stone.

Berwick, Saturday.—A much smaller show of cattle—319 less than the previous week. Attendance of farmers and buyers was small, and trade slow. Calves, £4 10s to £5 10s; stirks, £7 15s to £10 5s; two-year olds, £10 to £11 10s; three-year-olds, £12 to £13; shorthorn bulls, £11 10s.

Birmingham, Thursday.—Fair supply of pigs; small supply of beasts and sheep. Trade fair for pigs, but slow for beasts and sheep. Bullock beef, 5½d to 6½d per lb; cow and bull beef, 5½d to 5½ per lb; mutton, 7d to 9d per lb; bacon pigs, 9s 8d tot 9s 10d per score; cutting pigs, 10s to 10s 6d per score; porkets, 11s to 11s 8d per score; sows, 8s to 8s 2d per score.

Bristol, Thursday.—Beef was in fair supply, but demand limited, and, with a slow trade, prices of secondary quality fell from 53s to 52s per cwt. Sheep were not so numerous as usual, and business was quiet, ewes advancing from 6d per lb to 6½d. Pigs were in short supply, and last week's values maintained.

Canterbury, Saturday.—A fair offering of bullocks, but the store beast trade is nearly over. Two-year-old heifers were selling up to £13.

Calne, Friday.—Present prices for prime pigs, in lots of not less than ten, on rail with in 100 miles of Calne.

Prime Stores.	Thickness of fat in any part of Back.	Price per Sc. s.	d.
6sc. 10 lb. to 9 sc. 10 lb.	2½ in. and under	9	6
Under 10 sc.	Not exceeding 2½ in.	9	6
Under 11 sc. 10 lb.	2¾ in.	9	0
Under 12 sc.	3 in.	8	6

C. and T. Harris and Co., Ltd.

Carlisle, Saturday.—There were almost 300 Irish store cattle exposed on the Sands. The attendance of buyers showed a distinct improvement on late weeks, and trade was also brisker. Quotations:—Wintering heifers, £7 10s to £13; others for finishing or ffpurposes, to £14 10s; horned bullocks, £9 10s to £10 10s; and polled bullocks, £7 10s to £9.

Chichester, Wednesday.—There was a large company of buyers, and both fat and store sheep met a steady selling trade at last market's rates. There was a large entry of fat cattle, and trade for good quality, handy-sized beasts was better, but half-fat cattle and cows met a dragging trade. Quotations: Prime Devon steers, 4s 6d to 4s 8d; prime Southdown sheep, 6s 4d to 6s 8d; prime West Country sheep, 5s 8d to 6s; fat ewes, 4s 4d to 4s 8d; veal, 4s 8d to 5s 4d; porkers, 4s 4d to 4s 8d. Cattle 947, sheep, 2,463, pigs 717, calves 152, horses 22; total stock, 4,301.

Chester, Thursday.—With an average supply of stock and a fair attendance of buyers the best lots maintained their values, and a good trade was done, but inferior cattle were difficult to realise, and prices were irregular. Quotations:—Milch cows, £18 to £22; calvers, £14 to £19; heifers, £9 to £14; barrens, £10 to £13; stirks, £6 to £10.

Colchester, Saturday.—Trade was good, and although there is still a shortage of mutton, beef and pork were in fair supply. Beef, 4s 4d to 4s 6d per stone; mutton, 6s to 6s 4d per stone; pork, 9s to 9s 6d per score.

Doncaster, Saturday.—Good supply of cattle, chiefly stores, and a fair attendance of buyers. Moderate trade, and late prices firm. Milch beasts, £16 to £22; bullocks, £12 to £17; heifers and drapes, £11 to £15; stirks, £8 to £10; young stores, £5 to £7 each. Very small supply of sheep and few inquiries. Prices from 36s to 40s each.

Dorchester, Saturday.—Heavy supplies of stock at the cattle market at both Messrs. Duke and Son's as well as Messrs. Symonds and Sampson's auctions, the former having a special sale of barreners, at which some very good bullocks were stalled. Trade was about the same for most things, except barreners, which undoubtedly found a better market at from £22 to £26 apiece, and from £12 to £19 10s for plainer kinds. Milch beasts also in more request, the best making £17 to £19 10s, and others £11 10s. to £15; store bulls, £7 10 to £10 10s. Some very choice steers and heifers were on offer, and these found a fairly active sale at from £16 10s to £22 for the best grades, and others from £12 to £14, there being a slight revival in sales. Mutton sold at about late values, but inquiry was slow.

Dublin, Thursday.—Numbers in market: Beasts, 4,471, increase 617; sheep, 5,944, increase 498; calves, 27, decrease 3. A better inquiry for choice cattle at slightly improved prices. Rough cattle formed a very large portion of the exhibits. Demand for these was slightly better, but quotations remain unchanged. Sheep trade without alteration. Cattle, live weight (best), 27s to 30s per cwt; exceptional for Angus cross-breds, 32s per cwt. Mutton, dead weight, 5¾d to 7½d per lb.—Ganly, Sons, and Co.

Edinburgh, Wednesday.—Store cattle met an exceedingly slow trade; polled bullocks to £13 10s, horned to £12 10s, and stirks to £9. Cow trade not so brisk; Shorthorns to £25, crosses to £21, and Ayrshires to £16 10s per head. Sheep met a good trade; half-bred ewes to 38s, half-bred hoggets to 33s, crosses to 33s, and black-faced Dinmonts to 31s each.

Exeter, Friday.—Large supply of beasts, but only best quality in demand. Steers and maiden heifers found a ready sale at 11s per score. There was a poor sale for cows, 9s to 10s per score. The supply of mutton was of an indifferent character, principally small lambs. Few best quality hogs and wethers, 7½d to 8d per lb; ewes, 6d. Demand for lambs for turnips, 32s to 38s each. Calves, 7½d per lb.

Glasgow, Wednesday.—Demand was fair for cattle and sheep, and prices steady. Top Scotch cattle, 63s; secondary, 56s to 58s; top Irish, 55s per cwt; best hoggs, 9d to 9½d; best wethers, 8d to 8¾d; best ewes, 7d per lb. Dead meat in better request, as supplies are smaller; best Scotch beef, 6d; best Canadians, 4¾d; best hoggs, 7¾d; best wethers, 6¾d per lb.

Gloucester, Saturday.—Messrs. Bruton, Knowles and Co. report their sales as follows: 80 cows and calves with good trade, the highest prices being £22, £21 15s, £21 5s. Upwards of 200 store cattle, with a slight improvement in trade.

Hereford, Wednesday.—Beef not being an over supply, there was a slight improvement in the demand, especially for best quality bullock and heifer, at 6¼d to 6½d per lb. Fat cows met with a slow trade and no improvement at 5½d per lb. top price. There was a very moderate supply of sheep for the time of the year. Best wethers and ewe tegs, which were very few, reached 8d per lb., fat ewes 6d to 6¾d per lb. Butchers' lambs, which were few, also made 8d per lb. Store lambs were in good demand. A few good veal calves had a slightly

improved trade at 7d per lb. Small rearing calves sold well. Pigs were a rather small supply. Nice quality porks and bacons made 6d per lb. Big store pigs were selling well, but weaned pigs experienced a very slow trade. Store cattle a dragging trade at lower prices.

Leicester, Saturday.—Full consignments of home-bred bullocks. Buyers were moderately represented, and trade ruled unequal. Choice milch cows were scarce, and in active demand at £26 to £24; good useful lots, £17 to £19; secondary, £14 to £16; shorthorn cattle £12 to £15; Irish stock, £11 to £13 10s; Welsh cattle, £9 to £12; calves, 15s to 40s per head.

Lincoln, Friday. Good consignment of horned stock, and a slow trade was experienced. Yearlings £8 to £10, two-year olds £12 to £16, drapes £10 to £12. Sheep were in small numbers, and the demand was fair. Heggs made 38s. to 43s. each.

Lynn, Tuesday.—Smaller show of fat beasts; trade firm; 7s to 8s per stone. Stores smaller show; trade slow; £6 to £14 each. Fat sheep small show, 9s to 10s per stone. Scarcely any store sheep, 40s to 45s; few store lambs, 35s each.

Manchester, Friday.—Beef: Firsts 4¾d; seconds 4¼d, thirds 2¾d to 3¼d. Mutton: Firsts (Scotch) 7¼d, and others 7d, seconds 6d to 6¼d; thirds 5d to 5½d. Veal: Firsts 6¼d, seconds 5¾d to 6¼d, thirds 4¾d to 5¼. Bacon pigs: Firsts 5¾d, seconds 4¾d to 5¼d, thirds 3¾d to 4¼d. Porket pigs: Firsts 6¾d, seconds 6¼d to 6¾d, thirds 5¾d to 6d per lb.

Norwich, Saturday.—Slight falling off in trade for fat beasts, 7s 6d per stone being the top price; less store animals offered and values maintained, prices ranging from £6 to £16 per head. Short supply of store sheep and demand quiet, keeping hoggets fetching 30s to 45s per head; fair trade for fat sheep, which were in good supply, prices averaging 10s. to 10s 6d per stone. Ready demand for fat and store pigs, which were sparsely penned, former making 7s to 7s 6d per stone and latter 36s to 58s per head.

Nottingham, Saturday.—There was a fair show of milch beasts, with trade slower; best milch cows realised £18 to £21 10s; and in-calf heifers, £13 to £17. A small show of store beasts, with very few inquiries; strong heifers and steers made £9 to £13, and younger beasts £6 to £9. Calves, 25s to 45s. There were only a few lambs on offer, and no pigs.

Preston, Wednesday.—As the result of a much larger supply of cattle prices ruled rather higher than a week ago. There was not a very large show of sheep, and a rather slow trade was experienced. Cows and bulls, 5d to 5½d; heifers and bullocks, 5½d to 6d; choice country heifers, 6¼d; hoggs, 8¼d to 8¾d; tups, 5¼d to 6d; ewes, 6d to 7d; and lambs, 8¼d to 8¾d per lb.

Retford, Saturday. Store stock was not very plentiful, and there was only a small muster of farmers and dealers. Milch cows, £16 to £18.

Romford, Wednesday.—Short supply of fat beasts, better trade for best animals, at 4s 4d to 4s 6d per stone; middlings, 3s 10d to 4s stone. Calves scarce, trade better, at 5s 2d to 5s 4d per stone. Sheep in average supply, trade better; best, 5s 8d to 5s 10d; middlings, 5s 2d to 5s 4d; ewes, 4s to 4s 2d per stone. Pig trade unchanged.

Shrewsbury, Tuesday.—Usual supplies. Beef trade not so good as last week. Pork trade brisk. Sheep and calf trade moderate. Quotations:—Beef, 5¾d to 6¾d per lb; mutton, 8d to 9¾d per lb; veal, 7¼d to 8¾d per lb; porket pigs, 10s to 11s per score; bacon pigs, 9s 3 dto 10s per score.

Truro, Wednesday.—Business fairly brisk, attendance very good. Fat bullocks, 54s to 58s per cwt; barreners and store bullocks, 40s to 45s per cwt; cows and calves, £10 to £16; rearing calves, 20s to 35s; wethers, 7d to 7¼d per lb; ewes, 5¾d to 6d; lambs, 7¼d to 8d; pigs, 8s 6d to 42s each; beef, 6d to 8d per lb; mutton, 6d to 8d; lamb, 6d to 8d; veal, 6d to 8d; pork, 6d to 8d; bacon (uncured), 6d to 7¼d; ditto (cured), 7d to 9d; pork (carcases), 4½d to 5¼d. Numbers in cattle market: Bullocks, 244; calves, 62; sheep, 313; pigs, 242.

Wolverhampton, Wednesday.—Trade for beasts slow, and fair for sheep. Fair supply all round. Beef, 5d to 6¼d per lb (a few at 6¾d); mutton, 6d to 8¾d per lb; veal, 6¼d to 7¼ per lb.

Worksop, Wednesday.—Much better supply of stock than of late, with trade brisk. Mutton was up quite ½d per lb. Best Southdown wethers and cross-bred yearlings, 8d to 9d; choice hoggs, to 9¾d per lb.; best beef, 7s to 7s 3d; secondary qualities, 6s 3d to 6s 9d per stone.

Yeovil, Friday.—Cows and heifers of best quality, with calves, sold at from £16 10s to £19; secondary ditto, from £10 15s to £15 10s; in-calf heifers, £9 15s to £12 5s; barreners, £9 5s to £10 15s; coming two-year-old heifers, £8 to £9 10s; store steers, £9 to £10 5s. Down ewes, 31s to 40s; Down wethers, 42s 6d to 50s; horn ewes, 33s to 47s 6d; horn wethers, 44s to 51s; cross-bred lambs, 32s to 37s 6d.

York, Thursday.—About 3,500 store cattle were penned, the English being in smaller supply, but there was a large entry of Irish beasts of strong sorts. There were probably fewer customers than at the previous market, and the depression which has marked the autumnal trade continued. The reduction in prices was scarcely appreciable, however, late rates being maintained. A few lots of the best three-year-old bullocks, full of flesh, made up to £16, but a lot of other useful cattle changed hands at £11 to £12 10s. A few south country buyers were present in search of English stirks, and purchased a few lots, prices ranging from £7 to £9 each. There was an average supply of calving and milch cows, with a satisfactory demand for the best sorts; secondary sorts were difficult to sell. Several very good cows made £20 to £22, second-rate cows £14 to £17 each. There was a light show of all classes of sheep, especially shearlings, and the total number would not exceed 1,450. Shearlings made 40s to 46s, best twice-crossed lambs to 40s, other twice-crossed lambs 30s to 36s. Masham lambs 22s to 27s. A few good half-Down lambs were on offer, and sold up to 44s. Trade, on the whole, was somewhat slow, though anything good was easy to sell.

WET GRAINS.

London, Friday.—Wet Grains.—Owing to the recent spell of frosty weather brewings were very much curtailed, with the result that prices firmed up to 18s 6d to 20s (ale) and 14s 6d to 16s (porter) per ton. Should cold weather prevail heavy prices may be looked for, with little probability of any reduction should the weather be milder. Wet distillers' grains are without change at from 30s to 32s 6d per ton. Pressed white distillery meal, 32s 6d to 35s per ton. Dried grains.—There is still a good demand, and as all factories are closed, prices are advanced on the week: ale, 102s 6d; mixed, 97s 6d; porter, 95s; and distillers, 115s per ton. Dried distillery meal, containing 45.80 per cent. of oil and albuminoids, 117s 6d per ton. This article will appreciate in value owing to advance in the price of rice meal and decorticated cotton seed meal. All the above are free on rail London.—HAMLYN AND CO.

COLONIAL DAIRY PRODUCE

London, Friday.—The supplies of Canadian butter are virtually over for the season, as the stocks in Canada will be mainly required for consumption at home. Values have advanced in Montreal, and this will have the effect of still further checking exports. Prices here are virtually unchanged on the week. The demand for Australian butter continues good and the market remains firm. The arrivals during the week have been 7,393 cwt. against 12,592 last year, and the shipments are 21,222 cwt., against 27,220 twelve months since. New Zealand arrivals during the week have been 6,159 cwt. against nothing for the corresponding week in 1904. "Choicest" brands of Australian are selling at 112s. per cwt., with an occasional 114s. for some special factory. "Choicest" New Zealand brands find buyers at 114s to 115s, with an occasional 116s. "Finest" grades of both kinds are selling at 4s to 6s per cwt. less than the above figures. Unsalted Australian and New Zealand is making 1s per cwt. more than salted. The market in Copenhagen is reported dull, and there is a fall of 2s 3d per cwt. in the official quotation; which, however, remains at 101 kroner against 93 kroner last year. French butter is 4s per cwt. dearer, but Russian and Argentine remain the same as last week's figures. Cheese.—There has been a good demand for Canadian this week, although there has not been sufficient briskness to warrant any further advance in prices, which consequently remain unchanged.—W. WEDDEL AND CO.

HAY AND STRAW.

Birmingham, Friday.—Small supply; trade quiet. Hay, £3 5s to £3 10s per ton; clover, £3 17s 6d to £4 per ton; straw, 2s 6d per cwt.

Derby, Friday.—Best clover, 80s. to 90s. a ton; wheat straw, 60s to 70s; pressed straw, 50s to 60s; oat straw, 50s to 60s; peat moss litter, 35s to 40.

Manchester, Friday:—Hay, 4½d to 5d; clover, 4½d to 6d; wheat straws, 3½d to 3¾d.; oat ditto, 3¼d to 3¾d per stone.

Whitechapel, Saturday.—Supplies were large, but demand continued quiet. Best clover, 72s to 80s; inferior ditto, 60s to 70s; specially-picked hay, 72s 6d; good ditto, 60s to 70s; inferior ditto, 45s to 57s 6d; mixture and sainfoin, 67s to 72s 6d; straw, 25s to 34s per load.

WOOL.

Canterbury, Saturday.—Several purchases have been made at from 12d to 12½d for Kent fleeces, 8d for lamb wool, and from 4d to 5d per lb for locks.

Halifax, Saturday.—Demand has improved for home-grown wools, with quotations up to or above the recent level. Thus, Lincoln hogs, which may be taken as a standard, are now up to about 1s 1¾d; North hogs, 1s 2d; selected Irish, 1s 1¼d; and picked Shropshires, 1s 1¾d. Wether wools are stationary; Lincolns, 1s 0¼d. Irish barely 1s 0¾d.; Scotch, 1s 1d; and Shropshire, 1s 1¼d. Merinos have improved, and cross-breds are firm.

London, Saturday.—English, per pk. of 240 lb. Fleeces, South Down hoggs, £14 to £14 10s; half-bred hoggs, £12 10s to £13 10s; half-bred wethers, £12 10s to £13; Kent fleeces, £12 10s to £13; South Down ewes and wethers, £13 10s to £14 10s; Leicester ditto., £12 to £12 10s;. Colonial per lb.—Vic., fleece super., 1s 11d to 2s 1d; scoured good, 2s 1d to 2s 2d; scoured, average, 1s 11d to 2s; greasy, average to fair, 1s 1½d to 1s 2½d; New South Wales, second average, 1 8½d to 1s 9d; greasy average, 11½d, to 1s; South Australian, greasy average, 9d to 9½d; New Zealand, scoured average, 1s 2½d to 1s 10d; greasy average, 10¾d to 11½d; Cape, scoured super., 1s 10d to 1s 11d; fleece average, 10d to 10¾d; greasy average, 7½ to 8¾d; Natal, scoured, 1s 5d to 1s 6d; greasy average, 8¾d to 9½; crossbreds (grs.), Vic., good to super., 1s 2d to 1s 3d; New Zealand, fine, 1s 2d to 1s 3d; New Zealand, medium, 1s 0¾d to 1s 1½d; New Zealand, coarse, 11d to 1s.

POTATOES.

Borough, Saturday.—Fair supplies were to hand, but a quiet demand was experienced. Best silts, 60s to 65s; Blacklands, 50s to 55s; Scotch, 60s to 70s; Dunbar, grey soil, 80s to 90s per ton.

Goole, Wednesday.—Large attendance, but prices have not changed. King Edwards and Dates being the best potatoes. These are selling at 57s 6d per ton. A large quantity of Evergoods are being shipped off to America at £2 per ton. In the retail market potatoes are 4d to 6d per stone.

Manchester, Saturday.—Yorkshire Warps, 7s to 9s; Sands, 6s to 7s; Cheshire Kidneys, 4s 6d to 5s 6d per load; Irish, 3s per cwt.

Southwark (Waterside), Saturday.—During the past week the arrivals have been heavy, for which trade has been slow, with prices for all samples in buyers' favour. The following are this day's quotations:—Scotch Up-to-dates, 55s to 65s; ditto British Queens, 55s to 65s; Lincoln Evergoods, 55s to 60s; ditto Up-to-dates, 60s to 70s; Blackland Up-to-dates, 50s to 57s 6d; ditto British Queens, 50s to 55s; ditto Evergoods, 50s to 55s per ton.—R. G. BROWN.

Spitalfields, Saturday.—Supplies of both English and Scotch are heavier, and met a very slow sale. Royal kidney's 60s to 65s; British Queens, 60s to 65s; Blacklands, 55s to 60s; Up-to-dates, 65s to 70s; Scotch dates, 60s to 65s; Queens, 60s to 65s per ton.

York, Saturday.—Farmers only offered very few potatoes, and there was no change in either prices or the character of the trade. Samples made 40s, and Warps 45s to 50s per ton.

Irish Live Weight Quotation.

Department of Agriculture and Technical Instruction for Ireland.)

The following returns are those of actual sales made in Robson's Cattle Mart, Belfast, the stock being weighed either before or after sale, for week ending Oct. 3, 1905.

FEEDING STUFFS.

Hull, Tuesday.—Linseed: The arrivals are 75 qrs. from Harlingen and 9,836 qrs. from St Petersburg; total, 9,936 qrs. The shipments for the week ending November 17, were: Calcutta to Continent, 6,000; Bombay to Continent, 9,000; Plate, orders and other U.K., 20,000; Continent, 22,500; total, 51,000. Linseed has improved in value about 6d to 9d per qr. on the week. River Plate: Spot has sold up to 3os 6d, October-November and November-December made 30s 3d to 30s 4½d; new crop, January-February, 29s 6d, but none done. Baltic sorts have sold at 30s 3d to 30s 6d per 8cqs and Libau and Riga to 31s 6d to St. Petersburg. Cake need. The market has been dull all the week and lower prices accepted all round; Egyptian, on spot, 25s 1½ 6d, whole; cakes, passage, and to January, a fair business done thereat yesterday, at close November and December-January offers at £5 11s 3d. Bombay, for three months' shipment, sold at £4 18s 9d to £4 17s 3d, and December at £4 17s to £4 16s 3d, and still sellers at the lower price. Oilseed cakes. Linseed cakes: A firmer feeling, and at present prices Hull is the cheapest market in the country; foreign continue very scarce. Cotton cakes: Deliveries are fairly good and inclined to improve, but they are mostly on contract, fresh sale being new at the moment. The colder weather is expected to improve things.—KEIGHLEY MAXSTED AND CO.

London, Thursday.—Linseed: The market is quiet, and very little desire shown for business either by buyers or sellers. Calcutta-London, spot 40s 3d, afloat 42s 3d, October-November 40s, November-December 39s 6d, April-June 38s. Hull: Dull; La Plata spot 30s, passage 32s, October-November 30s, December-January 30s 9d, and January-February 30s 9d. Rapeseed still firmly held, but buyers less in evidence. Brown Cawnpore November-December 41s. Fine-zepore, November-December 41s. Cotton seed has been steady, with a fair business passing. London: Passage £5 15s, November-January £5 13s 9d. Hull: Spot and passage £5 12s 6d, November-January £5 12s 6d sellers. Oil cakes.—Linseed cakes: Firm. London made £7 17s 6d to £8. Cotton cakes firm; London made £4 17s 6d to £5.—THE PRODUCE BROKERS CO., LTD.

Mark Lane, Monday.—Linseed cakes: The trade is exceptionally quiet for the time of year, but with only moderate supplies of foreign and several of the home mill's shut down, there is no anxiety to sell, and consequently values are well maintained. Russian continue to come along slowly, and quotations are firm at £27 11s 3d to £7 12s 6d in mats, and £7 15s to £7 17 6d in bags. American are still obtainable at £7 10s to £7 12s 6d ex quay. Fair Indian seed parcels may be bought at £7 15s to arrive. London made, being in small production, command full prices of £8 2s 6d to £8 5s per ton. Cotton cakes: The market is almost bare of stocks of Egyptian, but for early arrival there are sellers at £4 16s 3d to £4 17s 6d, while for forward delivery rather less money would be accepted. English meet an improved inquiry at £4 17s 6d to £4 18s 9d, and Bombays at £4 10s. Decorticated London made remain best value, being procurable at the low figure of £6 17s 6d for cake, £7 for meal, and £5 5s for special digestive meal. Rape cakes do not offer. Maize germ meal: A steamer parcel of white American shortly due is quoted at £5 17s 6d free to trucks, while English makes are only sparingly offered at £5 17s 6d to £5 18s 9d. Maize gluten meal is in good request, and manufacturers to-day ask £6 per ton, both in spot and forward positions. Rice meal: In spite of some fairly heavy shipments of Rangoon, prices rule firm at £4 17s 6d to £4 18s 9d ex ship terms, while parcels in warehouse make £5 2s 6d to £5 5s. Broken Rangoon rice in bags is cheaply offered at £4 15s per ton. Locust beans maintain their value at £5 10s for whole and £5 15s for kibbled. Nitrate of soda is, if anything, the turn dearer at £10 10s per ton ex quay.

MOLASSINE FEEDING MEAL, packed in bags of 1 cwt each. Price per ton, £6 15s., in ton lots and upwards. £7 10s. per ton in less than ton lots. Free on rail, Liverpool or London. Uniform delivered price for small quantities, 10s. per bag of 1 cwt.

FRUIT AND VEGETABLES.

Covent Garden, Saturday.—A steady demand prevailed for a fairly good supply of fruit and greenstuffs. Quotations of English produce: Grapes, 2s 6d to 4s per lb; cranberries, 12s to 15s per case; apples, 1s to 12s per bushel; tomatoes, 2s 6d to 5s per box; beetroots, 2s to 2s 6d per bushel; sprue, 8s to 10s per dozen bunches; horseradish, 8s 6d to 12s per bundle; celery, 6s to 12s per dozen rolls; onions 4s 6d to 6s per cwt; endive, 1s to 1s 6d; cucumbers, 3s to 5s per dozen; Brussels sprouts, 9d to 1s; artichokes, 1s 3d to 1s 6d per half sieve; parsnips, 2s to 2s 6d per bag; cabbages, 3s 6d to 5s; cauliflowers, 3s to 9s per tally; mushrooms, 8s to 12s per 12 lb; parsley, 1s 6d to 2s; carrots, 2s to 2s 6d; turnips, 2s to 2s 6d per dozen bunches; potatoes, 65s to 85s per ton.

SOCIETIES.

Essex.

A meeting of the Council of the Essex Agricultural Society was held in London in Wednesday, Mr. William Rome, President, occupying the chair.

With regard to next year's show, the Secretary (Mr. F. W. Taylor) said there was to be a meeting at Brentwood that night, to consider the question of inviting the society to hold their show there, and the matter would be definitely settled. Lord Petre, however, had absolutely declined to accept the post of President. He thought the name of Mr. J. H. Horton would be suggested as President. Mr. J. H. Landon, who would act as local secretary, thought he would be able to raise £400 locally.

Mr. T. Usborne moved that the salary of the Secretary be increased to £150 a year, mentioning that this was the salary their late Secretary, Mr. F. Whitmore, received. When Mr. Taylor was first appointed, it was understood that his salary was only preliminary, and that if his work met with the approval of the Council it would be increased. There was no doubt the Council had approved of the manner in which the Secretary had done his work. (Hear, hear.)

Mr. C. E. Ridley seconded the resolution, observing that all those who had had the honour of being President knew that a deep debt of gratitude was owing their Secretary. It was only his energy and tact that enabled them to carry out their work so smoothly and successfully.

Other members spoke in high terms of the Secretary's work, and the resolution was carried unanimously.

Mr. Taylor, who had been out of the room when this matter was being discussed, was then called in, and the Chairman informed him that the Committee had unanimously passed this resolution.

The Secretary, in thanking the Council, mentioned that the work had much increased of late.

A report was received from the Sub-Committee appointed to consider the question of field trials for 1906. This will be found dealt with in our Implement Supplement.

A statement was presented, giving the financial position of the society on October 31, 1905. The receipts were as follows:—Balance at bank, £183 14s.; subscriptions, £811 8s.; special prizes, donations, and grants, £661 5s. 6d.; entry and shedding fees, £546 2s. 2d.; horse boxes, £52 10s.; gate receipts, £1,000 4s.; grand-stand receipts, £203 3s.; refreshment premium, £30; luncheon receipts, £32 12s. 6d.; Suffolk Sheep Society, £5; sale of timber, etc., £50 10s.; dividend on Consols (four quarters), £22 10s. 4d.; miscellaneous, £4 6s. 3d.; total, £3,603 5s. 9d. The payments totalled £3,160 8s. 5d., thus showing a balance to the good on the year's working of £259 3s. 4d.

Mr. Ridley said the balance-sheet showed they were not wrong, after all, in altering the entrance fees.

Several members thought that the result of the Southend Show was very satisfactory, and Mr. J. H. Horton remarked, if Brentwood did invite the society to hold its next year's show there, they would take the matter in hand with their whole heart and soul.

An Invitation to Brentwood.

The Brentwood Local Committee held a meeting on Wednesday night, and unanimously resolved to invite the society to hold its show at Brentwood next year. It was also resolved to ask the Council to invite Mr. John Henry Horton, J.P., C.C., of Mascallo, Brentwood, to become president. Mr. Frank Landon, the local secretary, announced that £218 had already been promised. He thought they would easily get the amount necessary, and that a suitable site for the show would be available. The show was last held at Brentwood ten years ago.

Suffolk Agricultural Association.

Next Year's Show.

The annual meeting of the Suffolk Agricultural Association was held at Halesworth, on the 17th inst. Mr. E. C. Ransome presiding.

At the Committee meeting held previously, an invitation for next year's show, to be held at Ipswich, was received from the Mayor (Mr. Bunnell H. Burton), who wrote that at the meeting of the Town Council it was unanimously resolved a cordial invitation be sent to the Suffolk Agricultural Association, to hold the summer exhibition in Christchurch Park, in 1906. The Council resolved that the Association should have exclusive use of the Park for three days. The Mayor added that at present he had not had the opportunity of approaching his fellow townsmen upon the subject of the contribution which the town would make to the prize fund, but he felt confident he might promise a good sum towards such a fund. The Committee unanimously agreed to recommend the members of the annual meeting to accept the invitation.

The Chairman, in bringing this recommendation to the notice of the meeting, said previous exhibitions at Ipswich had always been a success, and he had no doubt, should it be decided to hold the 1906 show in that town, another good show would result.

The recommendation received the general approval of the meeting.

Mr. Alfred Smith, proposing that Mr. E. G. Pretyman be chosen as President, said after mentioning that gentleman's name, it was unnecessary to say anything further.

This motion having been accepted, Mr. H. S. R. Sherwood said it behoved him to express sincere thanks to the Earl of Stradbroke for the great interest he had taken in the recent show. They would not have had so successful an exhibition but for his lordship's efforts. (Applause.)

Mr. J. R. Grimsey said the Earl and Countess displayed a very kindly interest in anything appertaining to the welfare of Halesworth and the neighbourhood, and nothing was too small to command their attention. (Hear, hear.)

The resolution was carried with acclamation.

Mr. P. M. Browne afterwards introducing another, extending thanks to the people of Halesworth for the hearty support given to the Association. Every member of the Committee endeavoured to make the show a success. He expected a loss of £200, but the hope he expressed at the show that they should have a profit of at least £1 had been realised, for the balance on the right side was 30s.

Mr. Stanford said he was delighted to find the work of those who were associated with him had been appreciated.

On the motion of Mr. P. M. Browne, it was agreed that the show should be held on Thursday and Friday in the first week of June, the dates being June 7 and 8.

The balance-sheet showed the expenditure to be £2,786 3s. 7d., leaving a banance of £1 10s. 11d. on the Halesworth show.

The Prize Committee was elected as under:—Messrs. Alfred Smith, Cordy, S. Wolton, S. R. Sherwood, P. M. Browne, F. Paine, W. Toller, F. H. Jennings, H. Cross, Herman Biddell Fred Smith, E. C. Ransome, and W. Wilson.

Mr. Robert Bond, answering Mr. Alfred Smith, said he hoped to obtain ten acres of land for field trials adjoining the Avenue Meadow, at the top of Christchurch Park.

The Chairman said, in a letter the retiring President raised the question of the desirability of the annual meetings all being held at Ipswich, and he though such a course would be desirable, seeing that Ipswich was easy of access from all parts of the county.

Mr. P. M. Browne agreed, and moved a resolution to that effect; after being seconded by Mr. S. R. Sherwood, it was adopted. The latter said he was pleased to find it was acceptable to the West Suffolk members.

Mr. Alfred Smith, in proposing the thanks of the meeting to Mr. Ransome for having presided, made very feeling allusion to the loss sustained by his father's death, but, at the same time, expressed gratitude at his son being ready to follow in his footsteps, and take an active interest in their work.

Mr. Ransome said he was pleased, as was his father, to do something for agriculture, and for the Suffolk Agricultural Association. (Applause.)

Peterborough.

The annual meeting of the Peterborough Agricultural Society was held on Wednesday, the chairman, Mr. W. G. Moore, presiding, when an interesting report from the Council was presented. In the course of this it was stated that the annual summer show was favoured with splendid weather on all the three days, but, as with nearly all the shows this year, a falling off had to be noted in the money taken at the gates and stands, a result which is generally attributed to the bad times, and the consequent shortness of money with the classes generally patronising shows of stock.

The statement of accounts, submitted by Mr. E. Swallow, the auditor, showed that the total receipts for the year had been £3,475 4s. 7d., as against £3,848 17s. 10d. in 1904, a decrease of £373 13s. 3d., and expenditure £3,589 2s. 9d., as against £3,718 12s. 4d. in the previous year, or £129 9s. 7d. less. The excess of payments over receipts was £113 18s. 2d. New timber, however, cost £78 10s. 6d. Allowing for subscriptions written off as bad, and with the good ones to come in, the net loss on the year was £88 4s. 2d., as against a profit of £151 17s. 6d. in 1904. The Society, however, has a good balance at the bank, its total assets amounting to £1,350.

On the motion of Mr. Gresswell, seconded by Mr. Smith, the report and accounts were adopted.

The Chairman said he was requested by the Council to ask Mr. Leonard Brassey, of Apethorpe Hall, to take the office of President, and, in reply, Mr. Weigall had written that Mr. Brassey would have much pleasure in accepting the office for the coming year. (Applause.)

Mr. Brassey had hoped to be at that meeting, but at the last moment he had written to say that he could not come and that he had asked Mr. Weigall to attend on his behalf.

The resolution that Mr. Brassey be President was carried unanimously.

Mr. Weigall expressed Mr. Brassey's great regret that he was unable to be present and his keen sense of appreciation of the honour the Society had done him in asking him to be President for the coming year. The Council of the Society might rest perfectly assured that in anything Mr. Brassey could do to make the show of 1906 a success, they had only to command him. There was an old saying that "nothing succeeds like success," and, if that was true, the future of the Peterborough Agricultural Society must be a very happy one. Mr. Brassey would subscribe £50 to the show, and desired to leave himself entirely in the hands of the Council, with just the broad reservation that he would like to see half of it in classes that were open and the other half in classes confined to tenant farmers within the usual radius, but he did not lay that down as a hard and fast rule.

Other officers were re-elected, including the Secretary, Mr. Lille, whose valuable services to the Society are warmly appreciated by the members.

The schedule was revised, but no alterations of importance were made.

British Possessions

London Representatives.

NOVA SCOTIA APPLES.

An Exhibition of NOVA SCOTIA APPLES, selected and forwarded by the Nova Scotia Government is now on view in the Canadian Court at the Crystal Palace.

Specimens may be loaned for exhibition at local Shows upon application to MR. JOHN HOWARD, Agent General for Nova Scotia, 57a, Pall Mall, London, S.W.

NOTES AND NEWS OF AGRICULTURAL SOCIETIES.

Liskeard.

At a meeting of the Liskeard and District Agricultural Association the Secretary (Mr. W. H. Rule) stated that the receipts from the show held on July 12 amounted to £485, against £492 at the previous show, but the balance to the good from the exhibition was £26 13s. 7d., compared with £21 19s. 6d. on the previous occasion. The profit balance of the association was now £126 5s. 6d., in addition to which there was unsold timber valued at £25. The annual dinner and meeting of the association were arranged to be held on the first cattle market day next year.

Taunton Farmers.

Some interesting discussions on current agricultural questions took place at the last meeting of the Taunton and West Somerset Farmers' Club. Among the matters dealt with was the neglect of local authorities to adequately enforce the Sale of Food and Drugs Act and other Acts to prevent adulteration, and it was agreed "That it is desirable that the police or inspectors of food and drugs be empowered to obtain foods and drugs from purchasers direct, under proper safeguards, and have the same analysed." A communication was read from the Liverpool District Farmers' Club to the effect that agricultural lands should be relieved of all rates in connection with the Education Act. Mr. S. Kidner said that agriculturists looked forward to having the whole question of rating dealt with when the next Parliament came in, whichever side might be placed in power, and the Central chamber therefore decided that this resolution should lie on the table. He proposed, and it was carried, that the club should adopt the same course. Another resolution passed was to the effect "That the agricultural land of this country, being raw material, should be free from assessment for the purposes of local rates, but that the houses and buildings should be assessed at their full value as the manufactory of the farm." The Central Chamber of Agriculture wrote asking for information as to weighbridges at railway stations, and desiring that the club should obtain evidence from members regarding the stations in this locality at which weighbridges were required. This request was complied with. Other subjects considered by the club were the law of trespass, birds and agriculture, and the amendment and consolidation of the Agricultural Holdings Act.

Live Stock Record.

THE BIRMINGHAM CHRISTMAS FAT STOCK SHOW.

The show which opened in Bingley Hall last Saturday, and which will be open to the public this week until Thursday night, is quite up to the average in numbers of live stock, the entries being 98 of cattle (or three less than those of last year), sheep 61 pens against 58 (or three more), and pigs 70 instead of 53, which gives the considerable increase of 17 pens. H.M. the King is, as usual, a large exhibitor, both of cattle and sheep. As is tolerably well known, there are herds of the Shorthorn, Hereford, and Devon breeds at the Royal Windsor farms, all of which are strongly represented and the tale of their Victories is really remarkable as will be gathered from our report which appears in another column. The cattle section of this show is noted for three things. First, the strong entry of Herefords, especially steers under two years; secondly, the very considerable number in the two classes of original character open to all breeds for best butchers' bullocks; and thirdly, the valuable challenge cups which the leading animals may win. For a considerable length of time—almost from the first establishment of the show—the Elkington £100-cup for the best beast exhibited has been awarded, but in recent years Messrs. Webb and Sons and Messrs. Joseph Thorley and Co. have offered £100-cups also, and since last year £50 challenge cups have been announced to be given by the *Birmingham Daily Post* and by Mr. J. J. Cridlan. H.M. the King sends four pens of wethers and lambs from his famous Sandringham Southdown flock, the sheep which won at Norwich being among them. The Shropshire, Hampshire, and Oxfordshire breeds, as usual, make grand displays. As was the case last year, a challenge cup for sheep, called after its donor, Mr. Coo er, was awarded on Saturday, and likewise a cup for the best pen of pigs, the gift of the hotelkeepers of Birmingham.

The exhibition of poultry at this show is always a very large one, the entries for the one now being held being 2,664, besides 1,052 of pigeons. One of the compartments of Bingley Hall is entirely appropriated to these birds. Then there are the samples of corn and exhibits of roots and potatoes in the gallery overlooking the fat stock, which are always such a great attraction. These are not quite so numerous as last year, when the entries were considerably over the average. They are now of corn 67, roots 111, potatoes 71, the total entries, all stock and produce included, being 4,324, against 4,392 last year.

Not only the people of Birmingham, but the inhabitants of a widely surrounding district, are justly proud of this show, as the large attendances sufficiently prove. For poultry it is to the Midland what the Crystal Palace one is to the Southern and Home Counties. The mangels and swedes have always brought out remarkable specimens, and the present exhibition is by no means deficient in them, or in the superb symmetrical shape and high quality of potatoes, carrots, etc. But in clashing with the Edinburgh Show, the bovine department would have been much larger; but those who visited the show on Saturday found the live stock generally quite numerous enough for the accommodation at Bingley Hall which it was generally agreed that the quality was better than usual.

STOCK AND SHOW NOTES.

By Herdsman.

The Mark Lane Express was the first to introduce illustrations of live stock into the Agricultural Press, and that it still leads the way in this direction was strikingly shown last week, for it was the only one of the agricultural journals issued on Monday to have photographs of prize winners at the Norwich Fat Stock Show, held on the previous Thursday and Friday.

Mr. James W. Lord, of Church House, Northam, Sussex, had sent two young pedigree Sussex bulls to South Africa, which, he has just heard, had arrived safely at Durban, and were much admired.

The entire herd of Shorthorn cattle, belonging to Mr. W. E. Balston, is, in consequence of the owner's ill-health, to be dispersed by auction on Thursday, December 7, at Bardon, Potter's Bar, Herts, Messrs. J. Thornton and Co. being the auctioneers. The herd is a choice one of first-class breeding, well known herds in Scotland and England having been drawn upon, and the animals to be offered will be found in healthy breeding condition.

A sum of £450, in addition to numerous specials, is offered for the fifty-fifth annual exhibition of the West of England Fat Stock and Poultry Show, to be held on December 13 and 14, and there is every likelihood of the show being another success, for the exhibition is growing in popularity each year, and now attracts the best stock from various parts of the country.

I am informed that another Large White Yorkshire in-pig gilt has just been sold for a long price from the well-known prize-winning herd belonging to Sir Gilbert Greenall, Bart., of Walton Hall, Warrington. This animal was personally selected from the Walton herd by Mr. A. O. T. Bennett, of Gately Hall, on behalf of a client in Germany, and was shipped from Grimsby to Hamburg on Tuesday last.

The principal feature of the prize schedule of next year's Hackney Show, which has just been issued by the Hackney Horse Society from its office at 12, Hanover Square, W., is the very considerable increase in the harness section of the show. Classes are provided for single harness horses between the limits of under 13 hands and over 16 hands, each class rising in height by 2 in., the only condition being that each horse shall be by a registered hackney or pony sire. The schedule now provides classes for stallions, mares, and geldings of every age, and height, both in hand and in harness, and as horses may be exhibited in more than one class, the amount of prize money to be won is considerable.

The total of cash prizes and challenge cups offered is £1,685, as compared with £1,460 at the last show. Among the most practical of the innovations are the prizes of £55 for the sire of the three best harness horses, and £65 to the best pony stallion in harness; also a pony produce group on the same lines as that for hackneys. As the best single harness horse can win £60, and some of the most successful harness horses have been exported this season, leaving the field open to new comers, a record entry is anticipated. The last show was distinctive by reason of the large number of foreign buyers in attendance, and steps will be taken to make the details of the show widely known to all the principal horsemen abroad. Entries close on January 15, and with late fee on January 22, and application to the secretary for prize schedules, forms, or other particulars, will receive immediate attention.

In consequence of the Staffordshire, also the Lincolnshire Agricultural Society having selected July 18 and 19 for their 1906 show prior to Wirral and Birkenhead Society arranging for the same dates, the last-named society has now decided to hold its show a week later than previously announced, viz., on Wednesday and Thursday, July 25 and 26.

The annual general meeting of the National Sheep-breeders' Association will take place (by kind permission of the Smithfield Club) in the Prince's Saloon, situated at the end of the Arcade Gallery, on Tuesday, December 5, at 3 p.m.

A very typical large-bred gilt was despatched from Mr. Dewhirst's Rycroft Herd of pedigree pigs per Messrs. Wilsons' steamship to Stettin, on Friday, to the order of an old customer.

Messrs. J. Thornton and Co. announce that on March 21 next they will disperse by auction the entire herd of pure-bred Red Polled cattle belonging to Mr. J. Hammond, of Bale, Norfolk, the reason being the advanced years of the owner. Mr. Hammond has been a breeder of Red Polled cattle for the past half-century, and has been a most successful exhibitor at our principal shows, so that his herd is well known all over the country, and its dispersal will be regretted by breeders generally. The sale of such a fine herd will, however, afford an excellent opportunity for obtaining first-class cattle fit for any herd in the country.

Contagious Diseases of Animals.

NOTE.—The figures for the current year are approximate only.

On Thursday, November 23, the Right Hon. F. J. S. Foljambe's rent audit was held at the Reindeer Inn, Sturton-en-le-Steeple. Mr. C. W. Lister-Kaye attended to receive the rents. Subsequently about sixty of the tenantry sat down to dinner, and a convivial evening was spent in toast and song.

Shifnal Annual Fair, the origin of which dates back to the fourteenth century, was held in the main thoroughfare at Shifnal on Wednesday. The supply of both cattle and horses was less than has ever been known at any previous fair; there was a falling off in the attendance, and money was scarce. In-calf cows brought from £10 to £20 each, heifers £6 to £10, and barrens £8 to £10.

BIRMINGHAM CATTLE SHOW.

A Fine Exhibition.—His Majesty Wins Championship with Hereford Steer.—Shorthorn Heifer Reserve.—Mr. Flower's Champion Hampshires.

Birmingham Fat Stock Show opened on Saturda in the Bingley Hall in fine and seasonable weather. The first day of the show is always confined to the judging and is purely of a business character, with the result that the awards are quickly and satisfactorily run through. The public benefit under this arrangement as the show opens complete this morning and will not close until Thursday next. The present exhibition is the fifty seventh held in Bingley Hall, and past traditions are worthily maintained, the show being an excellent one in every respect. The feature of the show is the success which has attended His Majesty the King's stock from Windsor, his Hereford steer and Shorthorn heifer having swept the board of the Challenge Cups.

The Championships.

The many, many champion honors to be competed for at Bingley Hall are naturally the great sensation in the judging department, and this year quite as much interest was evinced as usual, though from the early morning, it was generally conceded that one or other of the magnificent animals from the Royal herd would be the champion of the yard. The shorthorn heifer Madeleine was singled out by a great many, especially the advocates of the shorthorn; whilst those of independent tastes, as well as the admirers of the white faces, were equally sanguine that the magnificent breed cup Hereford steer would acquire the coveted fame. In this there was no disappointment, and the award was received without a dissentient voice. Rarely has a better Hereford been seen in Bingley Hall. It is a great honor to the Royal herd and its management, that the reserve, as well as the championship should be won, this honor being conferred on the shorthorn heifer Madeleine.

As these animals were both bred by H.M. the King, a long list of champion honors have to be recorded to them. The Breeders' Champion Prize being followed by the Elkington Challenge Cup, the Thorley Challenge Cup, and the Webb Challenge Cup, each of a hundred guineas value; the Challenge Cup given by the proprietors of the "Birmingham Daily Post" to the exhibitor of the best animal under two years old, was carried off by Mr. R. W. Hudson's first prize cross-bred heifer, the reserve being the same exhibitor's first prize Angus steer. The heaviest beast in the show was a shorthorn of Mr. H. D. Dennis', scaling 20 cwts. 2 qrs. 11 lbs.

Herefords.

As usual the Herefords occupied the premier position in the catalogue, and it may be added that in the Midlands the people prefer the prime carcases of the "white faces" almost to any other type of cattle except perhaps the shorthorn. It is therefore not surprising that a good show of Herefords can usually be found at the show, and the evenness of merit and keenness of the competition is gathered from the fact that of the twenty-five exhibits no fewer than twenty-two are noticed by the judges. The presence of the King's champion adds distinction to the section, but apart from that the collection is an excellent one. The best class is for yearling steers, some of the youngsters being so good that they ought to be trained another year. There are a dozen entries, and the whole have received commendation from the judges. Mr. J. Edwards owns the best in Lemco, a level and handsome beast, weighing nearly 14 cwt. at five weeks under the age limit. Mr. R. Phipps is second and third with a pair of fine steers well fleshed, firm to the touch, and of ripe quality. The best Hereford female is the Hon. F. G. Wynn's Bodveau Primrose, a wide, compact animal, true to type, and of the choicest quality. The King comes second, and the Earl of Coventry is third with a useful butcher's beast nearly 4 cwt. heavier than the winner.

Shorthorns.

The display of the world famous red, white and roans at Birmingham is one that our Country as well as our Shorthorn breeders may be justly proud, seldom, if ever, has there been a better show of this breed, and it may safely be said that the junior steer class and the heifer class have never been excelled. The older class of steers is not so outstanding in merit. The great features of the young steer in heifer classes are their extreme quality and beautiful symmetry, combined with good weights which are a sure indication of good flesh.

The judges had quite a difficult task in dealing with each of these classes, and several animals were dismissed from the ring without honours that many a time would have been considered good enough for the prizes.

Steers exceeding two and not exceeding three years' old were the first section to be adjudicated upon. There were eight entries of these, mostly thoroughly ripe, well finished animals, with slope and first-class flesh, in one or two instances there might, from a breeder's point of view, be a little want of style, which probably accounted for such animals having been cast aged during a period of such unprecedented demand for breeding purposes. The first steer was bred and exhibited by Sir John Swinburne sired by Lord St Clair, out of a Waterloo cow, a red in color and scaling 16 cwt. 3 qrs. 21 lbs. whilst just under the age limit is satisfactory though not excessive, he is covered with a capital coat of hair ripe and handling well, with a good rib, and he walks out well. The second steer was bred and fattened in the Royal herd at Windsor and so was the third prize one. The former is a white by Royal Duke out of Maid of Denmark 4th, and in size is none too big, as he scales but 15 cwt. 2 qrs. 7 lbs. and is pretty close up to the age limit, in quality, however, he quite excels, his roasting parts are well covered, hind quarters very level and well filled, he stands on short legs and in breed character is quite sweet. The third steer is a son of Silver Plate, and though considerably younger than the first and second prize ones he scales much the heaviest, being 17 cwt. 3 qrs 7 lbs. In general appearance he is not very striking, but in brief he is good, and will doubtless prove a good butcher's animal. Sir Oswald Mosley obtained the reserve card for a very ripe steer by Beauty's Pride, and a second was accorded Mr. T. B. Caile for a good thick fleshed steer.

Steers not exceeding two years old had no less than fourteen representatives, mostly good roans in colour, and making up a beautiful class. The first thing for the judges to do here was to dismiss the weaker portion of the class, and some very fine steers were sent empty away. The leading honour here was very closely contested between a red and white steer of H.M. the King's by Royal Duke, bred at Windsor, and a roan steer of Captain Townshend's, bred in the north by Mr. Finlay Munro, and sired by Maxwell. In weight there is but ten pounds difference, the lightest steer being 13 cwt., 3 qrs., 12 lbs., and the heavier 10 lbs. more. The Royal steer stands very squarely on his legs, with correct bottom line and a level good back; he also handles well, and is good in his roasting beef from a breeder's point of view. He is just a little plain about the head, the northern bred steer is a roan with capital coat and quality, as well as very perfect symmetry, and he is lengthy and shows nice character. After careful inspection the two animals were placed in the above order. The third prize was awarded to a red and white of Mr. James McWilliam, sired by Mafeking, a sappy good fleshed steer, and in weight only eight pounds lighter than the winner. Lord Tredegar was given the reserve for a red steer by Union Jack, and quite one of the best steers in the class, his outline, character, and flesh are very satisfactory, and his weight three pounds heavier than the first-prize steer. A very good steer of Lord Calthorpe's was h.c., and c. cards were also allotted to two very neat steers shown by Sir John Swinburne and Miss Alice de Rothschild. Coming to the female class, some half-score of beautiful heifers were standing in line, several of them very good roans in colour, mostly covered with excellent coats of hair, and in symmetry and breeding, altogether a beautiful lot.

The Royal herd once more triumphed, a roan by Silver Plate, out of Moss Rose, being the selected heifer. Madeleine, as she is called, is very symmetrical, with a wide and very level back, fine loin, frame well covered and handling well too; she also possesses a pleasing sweetness of character that helped her much, and her weight, 17cwt. 1qr. 15lb., is quite astounding, proving that her flesh must be very dense and void of blubber. Another very good heifer of somewhat similar appearance followed. This was Mr. T. B. Earle's Rockfield Lady 5th, bred by Mr. Finlay Munro and sired by Maxwell. She too is very good in her symmetry, and well filled in her roasting parts. Her quality too cannot be complained of; in weight, however, she suffers considerably, not quite reaching 15cwt. The third heifer in this capital class was Miss A. de Rothschild's Waddesdon Butterfly, bred by exhibitor and sired by Sheldrake. She has been a winner in the best company on several occasions during the summer, and must be classed altogether as a grand heifer and a close follower of her more favoured opponents. She scales 15 cwt. 1 qr. 5 lb., and her outline, well covered top and firm handling are altogether most satisfactory. The reserve card fell to Sir Oswald Mosley's Lofty of Rolleston, a heifer that upon many occasions would easily have headed the class. She is full of good flesh, level, and a heifer of the right character all round. Lord Tredegar was h.c. for a famous heifer in Lady Langibby, a roan by Prince Alto, of good symmetry, and breeding and a c card was also bestowed upon Tulip 20th, from the same herd. As His Majesty's herd had secured two out of the three first prizes it would have been rather hard if the Shorthorn breed Cup had not gone to Windsor, and so Madeleine was the favoured recipient of this great distinction, the reserve going to Mr. T. B. Earle's second prize heifer.

Devons.

This year the Devons were not quite up to their usual merit as regards quality, and were small in numbers. In the class for steers exceeding 2 and not exceeding 3 years old there were only two entries. Here the first prize went to a steer bred and fed by His Majesty the King, that was served by Quintock Bridegroom out of dam Lovely 5th. It was a grand broadside animal with a splendid sirloin and rare back, its ribs were well sprung and heavily coated, this steer was subsequently awarded the £20 as being the best Devon. Second to it was Lord Rosebery's steer, bred by Mr. R. J. Stranges, South Molton, Devon. It made a grand pile of beef, well fed and firm though a trifle uneven.

The class for steers not exceeding 2 years old made a larger entry, there being a quartette. Here Viscount Portman, Bryanstead, Blandford, was to the fore with a very mellow even kindly one that had done well. It was good over the back and loin, but did not quite finish at perfection's point. Second prize went to a smart steer bred by Mr. John Thorne, North Molton. Togo has still a future before it, as though it was scarcely forward enough to head its class this year, it has a grand sound walk and plenty of vigour to grow for another year. The reserve went to the Hon. Claud B. Portman with Farewell, a steer that was a trifle hard to the touch and a bit uneven. The remaining steer in the class was from His Majesty the King's herd, and must evidently have been sent as a travelling companion to some of the other exhibits. Four entries comprised the class for Devon cows or heifers, and here the King was much better represented by Dewdrop, that was placed at the head at once by reason of her merits; she is a deep mellow heifer that turns the scale at a weight that deceives the eye, and with a sirloin that would delight an epicure, she has just reached her highest point and can hardly be expected to display herself better than she did at Birmingham, and though she was outweighted she was scarcely outclassed from being the best instead of the reserve best Devon; the second prize went to Lord Calthorpe's Miss Lyddon 7th, which has had a somewhat adventurous career. Bred by Mr. R. W. C. Everest, at Spaxton, Bridgwater, Somerset, she was sold at his sale and purchased by Colonel Walter Burwood, she won several breeding prizes last year at the Somerset, Devon and other shows. This year she was again sold by auction at Colonel Walters, sale and purchased by Lord Calthorpe. She is "very nice heifer still, with a good back, but has scarcely kept her form so well on to the ends The reserve went to Viscount Portman's Fossie, sired by Model, with a good dose of the Whitstone character obtained through its dam Whitstone Fancy. It was very well fed, firm and good, but it failed somewhat across the back, and this caused it to be reserve instead of second.

Aberdeen Angus.

This famous beef breed has for the past few years suffered somewhat at the Birmingham shows by comparison with the display it made at a prior date. Doubtless some of the cause in this decline may be fairly attributed to the institution of the Edinburgh Fat Stock Show; at any rate, the classes have of late shown less of outstanding merit as regards their quality, whilst numerically they have also fallen off. This year, though there are several remarkably good beasts, there was little approaching championship form, Mr. R. W. Hudson had, as usual, consigned one or two admirably finished beasts, with shape and quality, too, and that inveterate breeder and fancier of the "Bonnie Blacks," Mr. J. J. Cridlan, was also well in evidence with first class beef. The judging of these, however, was a much less formidable task than assigning the honors to the shorthorns.

The first class again to come before the judges was that for steers over two and not exceeding three years old, of which five animals were catalogued. Mr. J. J. Cridlan was given supremacy here pretty readily. In Black Prince, by Junic, bred by Sir James Duke, was a steer that stood well in the money last year in London. He has gone on remarkably well since that time, and though he does not pull up the beam any too well,

being but 16cwt. 1qr. 16lbs., still he is a couple of months under the age limit of his class, which should have some allowance made for it. He has covered himself wonderfully with flesh, his roasting parts being admirably filled, and he stands on very short legs, being fed nearly down to the ground; his handling, too, is altogether first rate. The second prize was dealt out to Mr. T. B. Earle, for Drax, by Equerry of Ballindalloch, bred by Mr. J. H. Bridges, at Horley, in Surrey, he is put under the three years, and was fourth in his class in London last year. He has opened out and grown capitally, and also laid on flesh well, though he does not touch quite 16cwt.; his outline is correct, and he is altogether a good steer. Mr. R. W. Hudson was reserved for Danesfield Cambrian, half brother to the second prize steer, and bred in the Danesfield herd. He is well brought out, handling properly, and covered with a wealth of the best of flesh. No other honours were dispensed.

Steers under two years old had but six representatives; these, however, included one or two remarkably nice steers, the best of which was Mr. R. W. Hudson Donesfield's Negro by Kilgraston, bred by his owner, and at a year and ten months pulling up the beam at 12cwt. 0qr. 24 lbs., In symmetry he is about as perfect as it would be possible to have a steer, top and bottom line are both level, and in his breeding and style he is very pleasing, whilst as regards beef he handles first-rate and is filled to the full in all his roasting parts. The second prize was awarded to Mr. J. J. Cridlan's The Black Knight, by Elate, a capitally bred steer and very level in his outline: in beef, too, he handles well, and his weight is a little over that of the winner at a year and nine months old. Mrs. Macpherson obtained the reserve card in the class for a steer by Ellamere, very small, but level in his outline and good quality. A second entry from this herd was also c., and a second entry of Mr. Cridlan's h.c. There were only four entries of cows or heifers of this breed, the best of which was shown by Mr. T. H. Bainbridge and bred by Mr. Archibald White, sired by Melville Castle; this was Neat Nellie, a very level cow and neat and good in her quality for her age, 6 years 10 months; her weight is 15cwt. 3qrs. 7lbs. A very choice second was found in Captain Townshend's Ovina V., bred by Mr. Conachie, and a particularly symmetrical and beautiful heifer, standing close to the ground, handling well, and showing good breed type; she is just a little on the small side, and scales but 14cwt. 1q. 1lb. Mr. J. J. Cridlan was given the reserve card for Mariella by Eimes, a thick fleshed and very useful specimen, and an h.c. was also given to Mr. McIntyre for a neat and good heifer.

The breed cup of this section was pretty readily dealt out to Mr. R. W. Hudson for his first prize junior steer to which Mr. Cridlan's older steer was second.

Galloways.

This breed were not by any means a large display as there were but two entries of each sex, the quality, however, was satisfactory in the weight of the first prize steer, very good, 16 cwt. 2 qrs. 17 lbs., as just under three, this was shown by Mr. J. Pattinson, and is a straight and good quality steer. The Earl of Durham owned the second prize, one also of very good quality for West End purposes, The two heifers were shown, by Mr. Alfred Palmer and Sir John Swinburne, and were placed as named, in symmetry and quality both are satisfactory, but their weights are a little on the light side.

Welsh.

The Black breed of the Principality comes out well at Birmingham. In the class for two-year-old steers, there are 8 exhibits; those are honoured with commendations which had no higher awards, so that the judges appreciated highly this class. The first prize steer of Mr. R. M. Greaves called Twich is very shapely and of high quality. His under line is very straight, his top well covered, and he is altogether a handsome one such as is seldom seen. The second winner exhibited by the Coed Coch Trustees is rather more weighty, scaling at just under 3 years old, 17 cwt. 3 qrs. 27 lb. Mr. R Roberts gets reserve with Glanrafon Boy, lengthy in form and almost as heavy as the second prize one but the weightiest in the class is Mr. Roberts' Larn Boy, his scaling being 18 cwt. 2 qrs. 16 lb. Mr. Wynne's exhibit is likewise 2 lb. over 18 cwt. Seven steers under 2 years compete and also make an excellent class. The first winner in which is Mr. R. Hughes, whose steer carries nice form with chaste flesh lining. He has also a second of like character, which is hc. Mr. R M. Greaves wins second prize with Towyn, which has very straight upper and nether lines, a shapely form well covered. Mr. R. Roberts gets third prize and reserve with animals of the right stamp of good quality and nicely fleshed. This very good class was hc. entire. There were only three heifers in the other class, but very nice ones indeed. Mr. Greaves came to the front with a very symmetrical one, showing rare quality. Mr. R. Hughes' Queen, the second winner, carried an excellent top, and her form has good covering. Waen, belonging to Mr. Greaves, gets Reserve, and is also very shapely with a compactness of a ve itable dumpling character.

Cross-bred Animals.

There is again a large and good entry in this section, several first-class animals standing in the ranks, and many of them as butchers' beasts must be considered quite first rate; in shape, too, they are very good, though as regards champion honours the section this year must decidedly take second place to the pure breeds. Steers above two and not exceeding three years were represented by nine entries, of which Mr. R. W. Hudson's Danesfield Midnight Champion steer at Norwich, and still in excellent form, was an excellent first; he scales 16 cwt. 2 qr. 8 lb. Mr. Peter Dunn followed for second place with another Angus cross of good outline and well finished, and the third prize fell to the Earl of Durham for a heavier bullock than either of the preceding and of similar breeding. Other good ones were Mr. Eiles' reserve and a very nice hc. steer of Sir John Swinburne. Steers of this section not exceeding two years old were a large class, twelve animals being catalogued, and the general quality could not be found fault with. Mr. Charles Emmerson had the best of these in a northern bred shorthorn Angus cross, very small, being but 11 cwt. 3 qr. 19 lb. at a year and nine months, but his outline and flesh are very pleasing. The Earl of Durham came in second with a much heavier steer of the same cross, and good in symmetry. Captain Townshend was also well represented with a blue-grey of better weight and good shape, and Mr. Hudson's reserve was heaviest of the four and extra good beef; he scales 14 cwt. 2 qr 15 lb. Sir Oswald Morley also takes an hc. for a Galloway and shorthorn cross with quality. Heifers over two and under three years old contained a number of capitally finished beasts. Mr. E. T. Learner's Luxury, that recently championed the entire show at Norwich, was quickly drawn out and held the first place to the finish, the Earl of Durham following with a Galloway and shorthorn cross just half a cwt. heavier and of excellent symmetry and feeding. Mr. Peter Dunn was reserved with another cross of Galloway and shorthorn taking the latter colour, and capitally brought out. Sir John Swinburne and Mr. C. E Morris also obtained minor cards for very useful heifers. The junior section of these was proportionately quite as well represented as the older portion. Mr. R W. Hudson stood at the front with one of the most perfect heifers in the hall of Angus and Dexter cross, taking the type of the former breed and pulling up the beam at 12 cwt. 3 qrs. 5 lbs., a second entry from the same herd also came in second and a very sweet heifer of Miss A. de Rothschild was reserved.

The breed cup of this section was accorded Mr R W. Hudson's first prize steer in the over two years' class, Danesfield Midnight.

Kerrys or Dexters.

The Steer Class for these kindred breeds has five entries. Mr. R. W. Hudson is at the front of it with his tolerably well-known Danesfield Jim of stylish character and chaste quality. Mr. de Bertodano La Mancha Kite, the second winner, has a very handsome appearance likewise. He is red and white in colour, and has not been fed quite so much as the first winner. The Duchess of Newcastle's Hardwick Jack, which gets the Reserve, scales more than either, but devoid of coarseness. The two heifers which appears are Mr. Hudson's Danesfield Jilt and Mr. De Bertodano's Cowbridge Little Nell, both of which display well, and are an honour to the Dexter breed.

Butchers' Prizes.

There were 33 head of these in the two classes. The first of those exceeding 13 cwt., and the other for the remainder, not rich in that limit. In the former are to be found some of the heaviest beasts in the show. Sir W. Corbett, for instance, showed a Red Poll Ox, which weighs 20 cwt.. 2 qrs., 2 lbs., and Mr. H. G. Dennis, of Ruabon, a Shorthorn, 9 lo. heavier. There is also a third in the class over a ton. Mr. E. P. Alexander's cross-bred 20 cwt., 1 qr., 8 lb. This exhibitor's dark grey, nothing like so heavy, obtained second prize, the one put above him for the first premium being Mr. A. B. Dryburg's Aberdeen-Angus from Staffordshire which scales 2lb. over 18 cwt. and stands low to ground, not the most symmetrical beast in the show, but one no doubt attractive to the eyes of butchers. They give three prizes, and the other winner is Mr. Lionel Phillips, who brings from Hants an Aberdeen shorthorn displaying the grey colour with indications of very little waste beef. The reserve is also a blue grey belonging to Mr. W. H. Parsons, Brandon Wood, Coventry. A two-year-old Welsh steer which was a very firm handler was h. c. In the class of less weight the Aberdeen-Angus-Dexter crossbred, La Mancha Dado of Mr. De Bertodano was selected by the knights of the cleaver for their first winner, just the kind of high quality animal with plenty of lean flesh would be approved by them Mr. H. C. Stephens's Highland-Galloway cross, a young cow called Grand Duchess was their selection for second winner, the third being Mr. Hudson's Danesfield's Red Ruby, an Aberdeen-Angus shorthorn which displayed very fully the Poll character. Several others had barren honours.

Extra Stock.

There was an extra stock class for either sex, but only two males appeared, and Mr. Alexander's grey cross-bred being under 3 years, would appear to have been wrongly entered. Mr. C. E. Morris's red-and-white, which received second prize, had a very broad level top, with plenty of substance, and scaled 18cwt. 12lb. The female class had a nice cross-bred heifer belonging to Mr. E. P. Alexander, which was first, Mr Charles Bell bringing from Cheshire a 3-year-old Shorthorn to win second prize, and Mrs. Holland, of Wharton Grange, Salop, getting reserve with one of the Hereford Aberdeen Angus cross.

Below we give our usual table showing the average daily gain of the prize-winning animals:—

Breed and Owner.	Age.	Weight.	Average Daily Gain.
HEREFORDS.			
(Steers over 2 and under 3 years.)	Days.	lbs.	lbs.
1 H.M. the King	1,003	2,028	2·02
2 Mr. P. Coats (Sheepcote Wonder)	98.	1,816	1·84
3 Earl of Coventry (Virtuoso)	992	2,120	2·14
(Steers not exceeding 2 years.)			
1 Mr. J. Edwards (Lemc.)	686	1,562	2·27
2 Mr. R Phipps (Beefsteak)	689	1,564	2·25
3 Mr. R. Phipps (Sirloin)	668	1,607	2·40
COWS OR HEIFERS.			
1 Mr. E. Caddick (Nora)	985	1,419	1·44
2 H.M. the King (Sophia)	1,033	1,623	1·57
3 Earl of Coventry (Golden Fairy)	1,025	1,936	1·88
SHORTHORNS.			
(Steers over 2 and under 3 years.)			
1 Sir J. Swinburne	1,085	1,897	1·74
2 H.M. the King	1,070	1,743	1·62
3 H.M. the King	988	1,995	2·01
(Steers not exceeding 2 years).			
1 H.M. the King	712	1,552	2·17
2 Capt. H. L. Townshend (Cicero)	716	1,562	2·18
3 Mr. J. McWilliam	654	1,544	2·22
COWS OR HEIFERS.			
1. H.M. the King (Madeleine)	1,061	1,947	1·82
2. Mr. T. B. Earle (Rockfield Lady 5th)	1,062	1,673	1·58
3. Miss A. de Rothschild (Waddesdon Butterfly)	1,014	1,713	1·69
DEVONS.			
(Steers over 2 and under 3 years.)			
1. H.M. the King	1,003	1,671	1·66
2. Earl of Rosebery (Nelson)	976	1,822	1·86
(Steers not exceeding 2 years.)			
1. Viscount Portman (Reggie)	703	1,272	1·80
2. Earl of Rosebery (Togo)	658	1,206	1·83
COWS OR HEIFERS.			
1. H.M. the King (Dewdrop)	1,040	1,466	1·41
2 Lord Calthorpe (Miss Lyddon 7th)	1,030	1,312	1·27
ABERDEEN ANGUS.			
(Steers over 2 and under 3 years.)			
1 Mr. J. J. Cridlan (Black Prince)	1,028	1,836	1·78
2 Mr. T. B. Earle (Drax)	1,081	1,785	1·65
(Steers not exceeding 2 years.)			
1 Mr. R. W. Hudson (Danesfield Negro)	671	1,368	2·03
2 Mr. J. J. Cridlan (The Black Knight)	642	1,389	2·16
COWS OR HEIFERS.			
1 Mr. T. H. Bainbridge (Neat Nellie)	2,493	1,771	0·71

SHEEP

In the peculiar arrangements of Birmingham the wethers are all penned together, and the lambs of the different breeds together, instead of the sections being according to breed. The wethers were judged first, and in the class for Southdowns His Majesty the King had a similar triumph to Norwich in winning both first and second premiums, to which the Earl of Ellesmere's pen was placed reserve. Seldom, if ever, have three more beautiful pens appeared at a Birmingham show. The Shropshire wethers were a splendid collection, the two pens of the executors of the late P. L. Mills having nice matching character and proving good handlers. Mr. R. P. Cooper's reserve pen was the heaviest in the class, 7 cwt. 3 qrs. 22 lb. Next came the Oxfordshires, and Mr. James T. Hobbs won with a grand pen which pulled down the scales to 2 cwt. 1 qr. Miss Alice de Rothschild obtained the second premium with fine, upstanding lengthy sheep, not of the substance of the Maiseyhampton ones. Nor were Mr. James Horlick's third prize ones so weighty, although both pens for the matter of that were sufficiently fat. The other pen, which belonged to Mr. John Hazel Stoke, Lyne, Oxon, received reserve, they scaled 7 cwt, 3 qrs. Hampshire wethers occupied 6 pens, and the judges, after awarding the two prizes to Mr. James Flower and Mr. T. F. Buxton, and giving also reserve to the latter, awarded h.c.'s. to other pens belonging to Sir W. G. Pearce and Mr. Flower, and commended the remaining one. Seldom has such an even collection of high quality competed together. Cross-bred fat wethers, were the last class of the section, in which Mr. Rush came to the front with his Norwich winners, Mr. Norman Hague following with his Oxford Shropshires. The former scaled 7 cwt., 2 qr., 11 lb., the latter, 7 cwt, 1 qr., 15 lb.

Lambs of nearly all the breeds were of extremely high merit. Seven pens of Southdowns had been entered, but Mr. Adeane's two pens did not turn up, and the competition was restricted to the King's two pens and those of Mr. C. H. Berners, the Earl of Ellesmere, and the Duke of Devonshire. The King's chief pen was 2 lb. over 4 cwt., and this was the heaviest in the class. There were seven pens of Shropshires, Capt. Townshend's being selected for a front, which was not the heaviest, this being the second prize one bred by the late P. L. Mills, the third pen being from the same flock, and only 2 lb. less weight. Mr. Victor Cavendish, M.P., won Reserve, and two pens sent by Lady de Rothschild were c. The Oxfordshire lambs, of which there were 6 pens, came out exceedingly well. The pen of Mr. W. H. Lovell, Stanwick Manor, Wellingboro', weight 5 cwt. 3 qrs. 27 lbs, and at this great weight were also very good otherwise, so that first prize was awarded them. The second pen of Mr. H. W. Stilgoe was noteworthy for good shape and quality rather than substance, and for those characteristics obtained second prize, the third going to Mr. James Horlick for a pen, the scaling of which was 5 cwt. 1 qr. 14 lbs. Mr. J. G. Hobbs, who had also a nice pen obtained Reserve. In the Hampshire class which had no fewer than nine entries, only one fell under 5 cwt., the weightiest being 5 cwt. 3 qrs. 5 lb. This was the second prize one of Mr. A. C. Hall, Great Rollright, Chipping Norton. First prize was worthily awarded to Mr. James Flower, whose lambs were of beautiful character, scaling 5 cwt. 1 qr. 21 lb. Mr. T. F. Buxton had two very nice pens of even matching character, which were third and h.c.; Mr. H. C. Stephens getting reserve. The cross-breds, which had six pens, were headed by that of Mr. T. Rush, which won the special prize at Norwich. The pen scaled 5 cwt. 1 qr. 21 lb. Those of Mr. H. C. Stephens, which won the second and third premiums, were of the Shropshire-Hampshire cross, and of exceedingly nice character, one of the pens scaling 27 lb. over 5 cwt.

The mangels were of stupendous size, and some also were exceedingly weighty, while others, on being sounded, seemed hollow. The first class in this department is always what is termed Proctor and Ryland's Prize, the lots competing for it having to be of two kinds of mangels, shown along with swedes. Mr. John Percy, Oswaldkirk, won the first prize, as also did he the two silver cups given by Messrs. Webb and Sons for the best sample of their Mammouth Long Red and the best of their Yellow varieties, either Globe Intermediate or Tankard. Mr. Thomas Penn, Worminghall, Oxon, came reserve to Mr. Perry in these three classes. In the Open Class for Long Mangels, Mr. Lefeuvre brought from the Island of Jersey the first winner grown from Carter's seeds. Mr. John Perry, before mentioned, was second with Webbs. In the Open Class comprehending other varieties of mangels, Mr. Thomas Penn had the honour of being first with Webb's Globe kind and Mr. John Perry won the second premium with the same variety; three or four other lots in the Class getting notice, among which were good roots grown by Lady Wantage of Sutton's Golden Tankard Mr. J. Perry got another first prize for kohl rabi grown from Webb's seeds and he also won the second prize, the green and purple varieties being both shown. The reserve was of Sutton's variety shown by the Walthamstow District Council.

The silver cup for the best specimens of Webb's Imperial swedes brought only a single exhibit but Mr. John Perry's roots which won it were very good In the Open Class which had twenty entries, Messrs. Shaw and Clay, Watnall, Notts, won with grand specimens grown from Webb's seeds, Mr. J. H. Wilkinson of the neighbourhood of Birkenhead, winning the second premium with very fine, shapely roots with a variety not mentioned. Two other exhibits which were H.c. were those of Mr. Wm. Bone from Scotland and Mr. John Perry, both being of Webb's varieties. The Duke of Portland carried all before him in the classes for white fleshed and yellow-fleshed turnips, and they were of Sutton's celebrated varieties. They could scarcely have been of more symmetrical shape in an ideal pictorial representation of what a turnip ought to be. The Earl of Dartmouth, as well as Mr. John Perry, won barren honours with Webb's varieties, which also very shapely and of high merit.

In the two classes for carrots and in that for ox cabbage, the Duke of Portland was quite as successful as in those for common turnips. He appears credited with all the prizes. His white Belgian carrots were very large yet of good quality, and his long red ones were very tapering and shapely with beautiful skins. His Grace grows cabbages of a kind called Barron's, of immense size and weight, but those at Birmingham are very sound-hearted. Two other good lots of cabbages which were h.c. were those grown by Mr. John Perry from Webb's seeds, and those of Mr. O. Roberts of Sutton's. Potatoes were in a large number of classes but had not so many competitors as usual, Mr. D. A. Wells from Warwickshire, and Mr. Stephen T. Parker from Lancashire, Mr. Benjamin Parker also from Lancashire and Mr. Francis Williams of Thornbury, Glasgow, were the winners in the first four classes which were for 12, 6 and 4 varieties of distinct kinds respectively. In the class of 4 varieties suitable for field culture, The Duke of Portland competed and carried off first prize, the second being won by Mr. Francis Williams. In the class for a single variety of the Long or Kidney shape, the Duke was again first exhibiting his new *Shirwood* specimen, which is of very beautiful shape extremely uniform, with a nice delicate skin. It is stated to be of nice edible quality and ought to be one of the most highly appreciated potatoes of the future. Mr. Wills who was second came first in the class for single round varieties, Mr. Benjamin Parker getting the second premium. For the most handsome dish of any variety, the Duke of Portland was first and also for the best new variety not yet in commerae. Of course the latter was the celebrated *Shirwood* above referred to.

Pigs.

The pig classes were well filled with pigs that are tending towards the everyday requirements of the English provision trade that is the fining down of coarse shoulders and the substitution of flesh for fat, and this was most noticeable throughout all the classes. The Berkshires were very fine indeed in the class for twos not exceeding nine months old. Mr. Beryfield was first with a few of superb quality, they had nice backs, good loins, and well let down hams, this pew was somewhat closely run by Mr. J. A. Ricker's pair that was nearly equal in all respects except size. Mr. Alfred Brown was reserve with a pair scarcely so well finished as their breeder usually exhibits them. There was a rather larger class for Berkshires exceeding nine and under twelve months old. Lord Calthorpe here drew to the fore with a pair that were as straight along the back as though moulded, carried their heads well, and could also more freely dispute the amount of weight they carried on their small amount of bone. Second prize went to Mr. Arthur Hiscock with a nice quality pair, but smaller; Mr. Alfred Brown was placed third with pigs that were not quite so symmetrical forward, the reserve going to Mr. Nathaniel Benjafield, whose pigs did not quite show themselves to advantage before the eye of the judge. Tamworths had a most decided look up as regards quality, and new blood is evidently winning its way. In the younger class first prize went to an excellent pen. These pigs had length, with capital loins, considerable depth, but they draped somewhat hastily at the end. The second prize also went to a very similar pair, also sent by Mr. Thomas Mathers, out of the heart of the Tamworth country. The reserve went to Mr. Robert Ibbotson with pigs that would command the attention of a butcher anywhere.

In the older class the competition was even keener, and the Tamworth men rejoiced greatly at the pig championship, which honsists of the Hotel and Inkeeper's Challenge Cup, falling to this breed. The fortunate winner was Mr. Robert Ibbotson, who sent a pair of the real colour. They were very long and deep in the chhice meat, had rare hams, and were full of quality, both from a breeders as well as a feeders point of view, and this pen was supported by another pen from the same yard that secured the second prize. The reserve card was given to Mr. W. H. Mitchell's pair, that though they had excellent coats were not really so good beneath them as were the others, and it was nearly a question whether the judge might not have placed Mr. H. R. Stock's highly commended den up into reserve position, especially so when viewed in the pens.

Produce Classes.

The exhibits of corn, roots, and potatoes were all alike of great merit in the Birmingham competition of Saturday. Barley had 10 exhibits, and the first prize sample of Mr. James Poulton, from Herefordshire, of Garton's Standwell variety was a very prime malting one, as were the two exhibits of Mr. Wm H Hill, Claverley, Wolverhampton, and Mr. F. Horne, Salter's Hall, Bobbington, Stourbridge, the second and reserve ones, both of which were of Webb's Kinver Chevalier kind.

There were two large classes of White and Red Wheat. Mr. F. A. Horwood, White Waltham, Maidenhead, was first for White with Carter's Rough Chaff, Mr. F. Folley, Bledlow, Prince's Risboro', getting second prize with Webb's and Mr. W. Avery, farming in the same parish, was h.c., also with Webb's. The reserve sample of Mr. J. H. R. Horwood, Drayton Beauchamp, was, however, of Carter's Standup. There were no fewer than fifteen exhibits of Red Wheat, and Mr. F. A. Smith, East Hendred, Berks, was first with one of Webb's varieties. Among the others that were noticed were two of a sort termed Squarehead's Master, shown by Mr. John Smith, Lea Marston, Birmingham, and Mr. W. Mitchell, Kirby Bedon, Norfolk.

The Oats were divided into two classes for White and Black. Mr. H. J. Daine, Huyton, Liverpool, had first for White Oats with Garton's Abundance, Mr. Thomas Frith, Rainhill, getting second prize with the same variety, and Mr. J. Horne being reserve with one of Webb's varieties. Mr. Thos. Frith came to the front for Black Oats with Garton's Excelsior. Mr. T. C. Lindsay exhibiting the second sample, a sort not stated from Ayrshire. Mr. J. H. R. Horwood received reserve for Carters. The Beans and Peas were very even matching in their samples. The first prize and reserve one for Beans of Mr. D. H. Wells and Mr. J. L. Brooks were of Webb's Tick variety. Mr. Jas. Collings also won second prize with a Tick sample. For Peas, Mr. F. A. Horwood won both prizes, the first with Blue, and the second with White ones.

JUDGES.

HEREFORDS, DEVONS, WELSH KERRIES, AND EXTRA STOCK.—John Chick, Compton Valence, Dorchester; A. P. Turner, The Leen, Pembridge, Herefordshire.

SHORTHORNS, SCOTS, AND CROSSES.—H. Lindsay, Deanbank House, Glamis; R. Wright, Nocton Heath, Lincoln.

BUTCHERS' PRIZES—CATTLE.—E. A. Lewis, Hockley Hill, Birmingham; David Rose, Junior, Hamstead Road, Birmingham; S. C. Willis, City Meat Market, Birmingham.

SHEEP.—CARY COLES, Manor House, Winterbourne Stoke, Salisbury; G. F. Hempson, Good Hall, Ardleigh; T. S. Minton, Montford, Shrewsbury.

PIGS.—Colonel F. A. Walker-Jones, Manor House, Burton, Westmoreland. Butchers' Prizes—Pigs.—John P. Flood, Bordesley Street, Birmingham; John Morgan, Digbeth, Birmingham.

CORN.—J. E. Mitchell, Cape Hill, Smethwick, Birmingham; Norman H. Todd, Blythewood, Edgbaston, Birmingham.

ROOTS.—J. Keen, Hill Top, Longdon, Rugeley; L. Willdey, Dunton, Minworth, Birmingham.

POTATOES.—A. E. Drewett, Canwell Gardens, Sutton Coldfield; W. Halliday, Patshull Gardens, Wolverhampton.

Champion and Special Prizes.

PIGS.

The Breeders' Champion Prize.—A Silver Cup or £25 is offered as a champion prize for the best animal in Classes 1 to 25: H.M. the King (Hereford Steer); r., (Shorthorn heifer Madeline).

The Elkington Challenge Cup.—A Silver Challenge Cup, value one hundred guineas, to the exhibitor of the best animal in Classes 1 to 25, to be won three years by the same person before becoming the property of the winner: H.M. the King (as above).

The Thorley Challenge Cup, value 100 guineas, for the best animal in Classes 1 to 25: H.M. the King as above.

The Webb Challenge, value 100 guineas, for the best animal in Classes 1 to 25, bred by exhibitor: H.M. the King (as above).

The "Birmingham Daily Post" Challenge Cup, value £50, to the exhibitor of the best animal, not exceeding two years old, in the Hereford, Shorthorn, Devon, Scotch, Welsh, Crossbred, and Kerry Classes: Mr. R. W. Hudson (crossbred heifer Danesfield Honey Bee); r., ditto (Aberdeen Angus steer Danesfield Negro).

The Maisemore Park Challenge Cup.—A Silver Challenge Cup, value £50, for the best Aberdeen Angus animal in Classes 10, 11, and 12: Mr. R. W. Hudson (Danesfield Negro).

An extra prize of a Silver Cup, value ten guineas, is offered for the heaviest beast in the show: H. D. Dennis (weight 20 cwt. 2 qrs. 11 lbs.).

An extra prize of £50 (in addition to the class prize) is offered for the best Hereford in Classes 1 to 3: H.M. the King (Class 1.); r., Hon. F. G. Wynn (Bodvean Primrose, Class 3).

An extra prize of £50 (in addition to the class prize) is offered for the best Shorthorn in Classes 4 to 6: H.M. the King (Madeline); r., Mr. T. B. Earle (Rockfreed Lady 5th).

An extra prize of £20 (in addition to the class prize) is offered for the best Devon in Classes 7 to 9; H.M. the King (Class 7); r., ditto (Class 9).

An extra prize of £50 (in addition to the class prize)

is offered for the best Scot in Classes 10 to 16 inclusive: Mr. R. W. Hudson (Danesfield Negro); r., Mr. J. J. Cridlan (The Black Knight).

An extra prize of £10 is offered for the best animal in Classes 17 to 19: Mr. R. W. Greaves (Welsh steer Twitch); r., Mr. R. Hughes (Welsh steer, Class 18).

An extra prize of £30 (in addition to the class prize) is offered for the best Crossbred in Classes 20 to 23 inclusive: Mr. R. W. Hudson (Danesfield Midnight); r., Mr. E. T. Learner (Luxury).

An extra prize of Five Guineas for the heaviest beast in Class 26: Mr. H. D. Dennis (20 cwt. 2 qrs., 11 lbs.).

SHEEP.

The Cooper Challenge Cup, value 25 guineas, for the best pen of sheep in Classes 30 to 39: Mr. James Flower (Hampshire Lambs); r., H.M. the King (Southdown wethers).

An extra prize of a Silver Cup, value five guineas, is offered for the best pen of Oxford-shires in Classes 32 or 37: Mr. W. H. Lovell; r., ? ? ? ? ? ? ?

An extra prize of two guineas for the heaviest pen of lambs in Classes 35 to 39: Mr. W. H. Lovell (5 cwt. 3 qrs. 27 lbs.).

PIGS.

A Silver Challenge Cup, value 20 guineas, for the best pen of pigs in Classes 40 to 48: Mr. R. Ibbotson (Tamworths), Class 45); r., Mr. A. Hiscock, junior (Large Whites, Class 46).

Class Prizes.

HEREFORDS.

Class 1.—Hereford steers, exceeding two and not exceeding three years old: 1, His Majesty the King, Windsor; 2, Peter Coats, Sheepcote, Clifford, Herefordshire (Sheepcote Wonder); 3, Earl of Coventry, Croome Court, Worcester (Virtuoso); r., Peter Coats (Sheepcote Monarch); h.c., W. H. Cooke, Stanford Bridge, Worcester (Ruler); c., W. H. Cooke (Wilton 4th).

Class 2.—Hereford steers, not exceeding two years old: 1, James Edwards, Court House, Pembridge (Lemco); 2, Richard Phipps, Buckenhill, Bromyard (Beefsteak); 3, Richard Phipps (Sirloin); r., W. H. Evans, Pembridge, R.S.O.; h.c., Earl of Coventry (Bright Day), A. E. Hughes, Wintercott, Leominster (Prelate), and His Majesty the King; c., Earl of Coventry, Croome Court, Worcester (Golden King and Gold Coin), G. D. Faber, M.P., Rush Court, Walingford, Hon. F. G. Wynn, Bodvean Hall, Pwllheli, Carnarvonshire (Bodvean Hero and Bodvean Rufus).

Class 3.—Hereford cows or heifers: 1, Hon. F. G. Wynn (Bodvean Primrose); 2, His Majesty the King (Sophia); 3, Earl of Coventry (Golden Fairy); r., Edward Caddick, Edgbaston, Birmingham (Nora).

SHORTHORNS.

Class 4.—Shorthorn steers, exceeding two and not exceeding three years old: 1, Sir John Swinburne, Bart., Capheaton, Newcastle-upon-Tyne; 2 and 3, His Majesty the King; r., Sir Oswald Mosley, Bart., Rolleston Hall, Burton-on-Trent; h.c., T. B. Earle, Aldbro' Hall, Darlington (Coral Prince).

Class 5.—Shorthorn steers, not exceeding two years old: 1, His Majesty the King; 2, Captain H. L. Townshend, Caldecote Hall, Nuneaton (Cicero); 3, James McWilliam, Stoneytown, Mulben, N.B.; r., Lord Tredegar, Tredegar Park, Newport, Mon. (Prize Boy II.); h.c., Lord Calthorpe, Elvetham Park, Winchfield; c., Sir John Swinburne and Miss Alice de Rothschild, Waddesdon Manor, Aylesbury (Waddesdon White Orchid).

Class 6.—Shorthorn cows or heifers: 1, His Majesty the King (Madeleine); 2, T. B. Earle (Rockfield Lady 5th); 3, Miss Alice de Rothschild (Waddesdon Butterfly); r., Sir Oswald Mosley (Lofty of Rolleston); h.c., Lord Tredegar (Lady Llangibby); c., Lord Tredegar (Tulip 20th).

DEVONS.

Class 7.—Devon steers, exceeding two and not exceeding three years old: 1, His Majesty the King; 2, Earl of Rosebery, Mentmore, Leighton Buzzard (Nelson).

Class 8.—Devon steers, not exceeding two years old: 1, Viscount Portman, Bryanston, Blandford (Reggie); 2, Earl of Rosebery (Togo); r., Hon. Claud B. Portman, Child-Okeford Manor, Blandford, Dorset (Farewell).

Class 9.—Devon cows or heifers: 1, His Majesty the King (Dewdrop); 2, Lord Calthorpe (Miss Lyddon 7th); r., Viscount Portman (Fessie).

PURE SCOTCH BREEDS.

Class 10.—Pure-bred Polled Aberdeen-Angus steers, exceeding two and not exceeding three years old: 1, J. J. Cridlan (Black Prince); 2, T. B. Earle (Drax); r., R. W. Hudson (Danesfield Cumbrian).

Class 11.—Pure-bred Polled Aberdeen-Angus steers, not exceeding two years old: 1, R. W. Hudson (Danesfield Negro); 2, J. J. Cridlan (The Black Knight); r., Mrs. Macpherson (Norman of Wyrley); h.c., J. J. Cridlan (Ruy Blas); c., Mrs. Macpherson (Punch of Wyrley).

Class 12.—Pure-bred Polled Aberdeen-Angus cows or heifers: 1, T. H. Bainbridge, Eshott Hall, Felton, Northumberland (Neat Nellie); 2, Captain H. L. Townshend, Caldecote Hall, Nuneaton (Ovina 5th); r., J. J. Cridlan (Mariella); h.c., John McIntyre, Theakston Hall, Bedale, Yorks (Pride 7th of Theakston 36618).

Class 13.—Galloway steers, not exceeding four years old: 1, Jonathan Pattinson; 2, Earl of Durham, Lambton Castle, Fence Houses (Harry).

Class 14.—Galloway cows or heifers: 1, Alfred Palmer, Wokefield Park, Mortimer, Berks (Meg); 2, Sir John Swinburne.

Class 15.—Pure-bred West Highland oxen or steers, of any age: 1, Sir John Swinburne (Ben); 2, Earl of Durham (Tom).

Class 16.—Pure-bred West Highland cows or heifers: 1 and 2, H. C. Stephens, Cholderton, Salisbury.

WELSH.

Class 17.—Welsh steers, exceeding two and not exceeding three years old: 1, R. M. Greaves, Wern, Portmadoc (Twich); 2, The Coed Coch Trustees, Llawes-y-Coed Farm, Abergele (Garlley); r., Robert Roberts, Bronygadair, Portmadoc (Glaurafon Boy); h.c., Robert Roberts (Larn Boy); c., R. M. Greaves, Wern, Portmadoc and Hon. F. G. Wynn (Prince William).

Class 18.—Welsh steers, not exceeding two years old: 1, Robert Hughes; 2, R. M. Greaves (Towyn); r., Robert Roberts (Cymro); h.c., Hon. F. G. Wynn (Prince of Belan), Robert Hughes (Will), and R. M. Greaves (Twin).

Class 19.—Welsh cows or heifers: 1, R. M. Greaves; 2, Robert Hughes (Queen); r., R. M. Greaves (Waen).

CROSS-BRED ANIMALS.

Class 20.—Cross-bred steers, exceeding two and not exceeding three years old: 1, R. W. Hudson (Danesfield Midnight); 2, Peter Dunn, Pasture House, Sigglesthorne, Hull (Weaver); 3, Earl of Durham (Johnnie); r., T. B. Earle (Macdonald); h.c., Sir John Swinburne (Joe); c., Miss Alice de Rothschild (Waddesdon Boy Blue).

Class 21.—Cross-bred steers, not exceeding two years old: 1, Charles Emmerson, East Layton, Darlington; 2, Earl of Durham (Mathew); 3, Captain H. L. Townshend (Jardy); r., R. W. Hudson (Danesfield Blue Boy); h.c., Sir Oswald Mosley; c., C. F. Reginael, Porters Park, Shenley, Herts (Erehwon).

Class 22.—Cross-bred heifers, exceeding two and not exceeding three years old: 1, E. T. Learner, Burgh, Aylsham, Norfolk (Luxury); 2, Earl of Durham (Rose); r., Peter Dunn (Pretty Polly); h.c., Sir John Swinburne; c., Charles E. Morris, Wood Eaton Manor, Stafford (Wood Eaton Pigmy and Wood Eaton Pere (2).

Class 23.—Cross-bred heifers, not exceeding two years old: 1 and 2, R. W. Hudson (Danesfield Honey Bee and Danesfield Ruby Lass II.); 3, Miss Alice de Rothschild (Waddesdon Primrose); h.c., Thomas Irman Earle, Kirkbridge Aldbro', Darlington.

KERRIES OR DEXTERS.

Class 24. Kerry or Dexter steers, not exceeding three years old: 1, R. W. Hudson (Danesfield Jim); 2, B. de Bertodano, Cowbridge House, Malmesbury (La Mancha Kite); r., Duchess of Newcastle (Hardwick Jack).

Class 25.—Kerry or Dexter cows or heifers: 1, R. W. Hudson (Danesfield Jilt); 2, B. de Bertodano (Cowbridge Little Nell).

Class 26. For the best butchers' beast, of any breed or age, exceeding 13 cwt.: 1, Andrew B. Drybrugh, Lovedale, Stafford; 2, E. P. Alexander, Glen-yr-Afon, Holt, Wilts; 3, Lionel Phillips, Tylney Hall, Hook, Hants; r., William Henry Parsons; h.c., Charles E. Morris; c., William Henry Parsons, Brandon Wood, Coventry.

Class 27. For the best butchers' beast, of any breed or age, not exceeding 13 cwt.: 1, B. de Bertodano; 2, Duke of Sutherland; 3, R. W. Hudson (Danesfield Red Ruby); r., J. H. Hartill; h.c., G. D. Smith, Stronsham Court, Worcester (Surprise); c., B. de Bertodano and Sir Reginald Hardy, Dunstall Hall, Burton-on-Trent (Ruby).

EXTRA STOCK, NOT QUALIFIED TO COMPETE IN CLASSES 1 TO 25.

Class 28.—Oxen or Steers, not exceeding four years old: 1, E. P. Alexander; 2, Charles E. Morris.

Class 29.—Cows or heifers, not previously exhibited at the Birmingham Fat Cattle Show: 1, E. P. Alexander; 2, Charles Bell, Norley Hall, Norley; r., Mrs. L. H. Holland, Warton Grange, Newport, Salop.

SHEEP.

WETHER CLASSES.

Class 30.—Three fat Southdown wethers, not exceeding 23 months old: 1, Exors. of the late P. L. Mills, Ruddington Hall, Nottingham; 2, Exors. of the late P. L. Mills; 3, A. S. Berry, Church Farm, Wattington, Lichfield; r., R. P. Cooper, Shenstone Court, Lichfield; h.c., Captain H. L. Townshend.

Class 31.—Three fat Shropshire wethers, not exceeding 23 months old: 1 and 2, Exors. of the late P. L. Mills; r., R. P. Cooper; h.c., Captain H. L. Townshend.

Class 32.—Three fat Oxfordshire wethers, not exceeding 23 months old: 1, James T. Hobbs, Maisey Hampton, Fairford, Glos.; 2, Miss Alice de Rothschild; 3, James Horlick, Cowley Manor, near Cheltenham; r., John Hazell, Stoke Lyne, Bicester, Oxon.

Class 33.—Three fat wethers, Hampshire and other Downs, not exceeding 23 months old: 1, James Flower, Chilmark, Salisbury; 2, T. F. Buxton, Waters Place, Ware, Herts; r., T. F. Buxton; h.c., Sir W. G. Pearce, Bart., Chilton Lodge, Hungerford, Berks, and James Flower; c., Sir W. G. Pearce, Bart.

Class 34.—Three fat Cross-bred wethers, not exceeding 23 months old: 1, T. Rush, Mitchells, Saffron Walden; 2, Norman Hague, Lillington, Leamington; r., Edward Price, Heath House, Oaken, Wolverhampton.

LAMB CLASSES.

Class 35.—Three fat Southdown wether lambs, lambed in 1905: 1 and 2, H.M. the King; 3, Earl of Ellesmere; r., Duke of Devonshire; h.c., C. H. Berners, Woolverstone Park, Ipswich.

Class 36.—Three fat Shropshire wethers lambs, lambed in 1905: 1, R. P. Cooper; 2, Exors. of the late P. L. Mills, Ruddington Hall, Nottingham; r., Victor C. W. Cavendish, M.P., Holker Hall, Cark-in-Cartmel; h.c., Captain H. L. Townshend; c., Lady de Rothschild, Aston Clinton, Tring (2).

Class 37.—Three fat Oxfordshire wether lambs, lambed in 1905: 1, W. H. Lovell; 2, H. W. Stilgoe, The Grounds, Adderbury, near Banbury; 3, James Horlick; r., James T. Hobbs.

Class 38.—Three fat wether lambs, Hampshire and other Downs, lambed in 1905: 1, James Flower; 2, Sir W. G. Pearce; 3, T. F. Buxton; r., H. C. Stephens; h.c., A. C. Hall, T. F. Buxton, and Sir W. G. Pearce; c., J. G. Williams, Pendley Manor, Tring.

Class 39.—Three fat Cross-bred wether lambs, lambed in 1905: 1, H. C. Stephens; 2, H. C. Stephens; 3, T. Rush; r., William Canning, Debden, Barford, Warwick; c., William Canning and Enoch Bostock.

PIGS.

BERKSHIRES.

Class 40.—Two fat pigs, not exceeding nine months old: 1, Nathaniel Benjafield, Shorts Green Farm, Motcombe, Shaftesbury, Dorset; 2, J. A. Fricker, Burton Mere, Wilts; r., Alfred Brown, Hill Farm, Southampton.

TAMWORTHS.

Class 41.—Two fat pigs not exceeding nine months old: 1, Thomas Wathes, Flanders Hall, Hurley, Atherstone; 2, Thomas Wathes; r., Robert Ibbotson, Knowle.

LARGE WHITE BREED.

Class 42.—Two fat pigs, not exceeding nine months old: 1, Arthur Hiscock, jun.; 2, Alfred Brown; 3, Alfred Hughes, Packwood Grange, Knowle; r., Philip Baker, Mount Cottage Farm, Monkspath, Shirley, near Birmingham.

MIDDLE WHITE OR SMALL WHITE BREEDS.

Class 43.—Two fat pigs, not exceeding nine months old: 1, J. A. Fricker, Burton Mere, Wilts; 2, Nathaniel Benjafield; r., T. Simpson Jay, Warren Farm, Wimbledon.

BERKSHIRES.

Class 44. Two fat pigs, exceeding nine months old and not exceeding twelve months old: 1, Lord Calthorpe; 2, Arthur Hiscock, jun.; 3, Alfred Brown; r., Nathaniel Benjafield.

TAMWORTHS.

Class 45.—Two fat pigs, exceeding nine and not exceeding twelve months old: 1 and 2, Robert Ibbotson; r., W. H. Mitchell; h.c., H. R. Stock, Shelfield Square Farm, Alcester.

LARGE WHITE BREED.

Class 46.—Two fat pigs, exceeding nine months and not exceeding twelve months old.—1, Arthur Hiscock, jun.; 2, John Riddell, Timberley, Castle Bromwich; 3, Alfred Hughes; r., Samuel Green, Hadley Farm, Ombersley, near Droitwich.

MIDDLE WHITE OR SMALL WHITE BREEDS.

Class 47.—Two fat pigs, exceeding nine and not exceeding twelve months old: 1, Samuel Green; 2, Alfred Brown; 3, J. A. Fricker; r., Samuel Green; h.c., W. Midwinter, Highfields, Erdington, near Birmingham.

ANY OTHER PURE BREEDS OR CROSS-BRED.

Class 48. Two fat pigs, not exceeding twelve months old: 1, Kenneth M. Clark, Sudbourne Hall, Orford, Suffolk; 2 and 3, Alfred Brown; r., The Executors of the late P. L. Mills; h.c., J. A. Fricker; h.c., Samuel Green.

THE BUTCHERS' PRIZES.

Class 49. Two fat pigs, not exceeding twelve months old: 1, W. Midwinter; 2, Arthur Hiscock, jun.; r., Alfred Brown.

CORN.

Class 1.—Barley: 1, James Poulton, Strangford Farm, Ross-on-Wye, Herefordshire (Garton's Standwell); 2, Wm. H. Hill, Claverley, Wolverhampton (Kinver Chevalier); r., F. Horne, Salters Hall, Bobbington, Stourbridge (Webb's); h.c., W. Dyer, Sheibourne House, Edwardstone, Colchester (Webb's); c., T. W. Purser, Tan House, Colnbrook, Slough (Webb's).

Class 2.—White wheat: 1, F. A. Horwood, Bury Court Farm, White Waltham, Maidenhead (Carter's Rough Chaff); 2, F. J. Folley, Westfield Farm, Bledlow, Princes Risborough (Webb's); r., J. H. R. Horwood, Manor Farm Drayton Beauchamp, Tring (Carter's Standup); h.c., W. Avery, Brewhouse Farm, Bledlow, Princes Risborough (Webb's).

Class 3.—Red wheat: 1, F. A. Smith, The Home Farm, East Hendred, Steventon, Berks (Webb's); 2, F. A. Smith (Webb's Standard); r., W. Mitchell, The Vale, Kirby Bedon, Trowse, Norwich (Squarehead's Master); h.c., John Smith, Lea Marston, Birmingham (Squarehead's Master).

Class 4.—White oats: 1, H. S. Daine, Woolfall Hall, Huyton, near Liverpool (Garton's Abundance); 2, Thomas Frith, Rainhill (Garton's Abundance); r., F. Horne, Salters Hall, Bobbington, Stourbridge (Webb's).

Class 5.—Black oats: 1, Thomas Frith, Rainhill (Garton's Excelsior); 2, Thomas C. Lindsay, Aikenbrae, Monkton, Ayrshire; r., J. H. R. Horwood, Manor Farm, Drayton Beauchamp, Tring (Carter's).

Class 6.—Beans: 1, D. H. Wells, Tysoe, Kineton, Warwickshire (Webb's Tick); 2, James Collins, Bales Farm, Normandy, Guildford (Tick); r., J. L. Brookes, Manor Farm, Uckington, Cheltenham (Webb's).

Class 7.—Peas: 1, F. A. Horwood, Bury Court, White Waltham, Maidenhead (Blue); 2, F. A. Horwood (White); r., J. H. R. Horwood, Manor Farm, Drayton Beauchamp, Tring (White).

ROOTS.

Class 1.—Proctor and Ryland's Prize, for the best collection of three following varieties—viz., Long Mangold Wurzel, Globe Mangold Wurzel, and Swedes—six roots of each to be shown for this prize alone: 1, John Perry, The Grange, Oswaldkirk, York (Webb's); r., Thomas Penn, Worminghall, Thame, Oxon (Webb's).

Class 2.—Webb and Sons' Prize for the best six specimens of the Mammoth Long Red Mangold (new and improved selection): 1, John Perry, The Grange, Oswaldkirk, York; r., L. J. Smith, The Scarr, Newent, Gloucester (Webb's).

Class 3.—Webb and Sons' Prize for the best six specimens of one of the following varieties of Mangolds—namely, New Champion Yellow Globe, Yellow Intermediate, or Yellowfleshed Tankard: 1, John Perry, The Grange, Oswaldkirk, York (Webb's New Champion Yellow Globe); r., L. J. Smith, The Scarr, Newent, Gloucester (Webb's).

Class 4.—Long Mangold Wurzel: 2, Thomas Penn, Worminghall, Thame, Oxon (Webb's); r., Philip Le Feuvre, Morville House, Trodez, St. Owens, Jersey (Carter's); h.c., John Perry, The Grange, Oswaldkirk, York (Webb's).

Class 5.—Globe and Intermediate Varieties of Mangold Wurzel: 1, Thomas Penn, Worminghall, Thame, Oxon (Webb's Globe); 2, John Perry, The Grange, Oswaldkirk, York (Webb's Yellow Globe); r., Philip Le Feuvre, Morville House, Trodez, St. Owens, Jersey (Carter's Yellow Intermediate); h.c., John Perry, The Grange, Oswaldkirk, York (Webb's Yellow Intermediate); c., L. J. Smith, The Scarr, Newent, Glos. (Carter's Golden Tankard); J. L. Brookes, Manor Farm, Uckington, Cheltenham (Webb's).

Class 6.—Kohl Rabi.—1 and 2, John Perry, The Grange, Oswaldkirk, York (Webb's Green); r., Walthamstow Urban District Council, Walthamstow (Sutton's).

Class 7.—Swedes.—Messrs. Webb's and Sons' Prize for the best six specimens of the Imperial Swede: 1, John Perry, The Grange, Oswaldkirk, York (Webb's).

Class 8.—Swedes of any variety: 1, Shaw and Clay, Hall Farm, Watnall, Notts (Webb's); 2, J. H. Wilkinson, Poplar Farm, Saughall Massie, Birkenhead; r., John Perry, The Grange, Oswaldkirk, York (Webb's Arctic); h.c., William Bone, Shalloch Park, Girvan, N.B. (Webb's); c., Shaw and Clay, Hall Farm, Watnall, Notts (Webb's).

Class 9.—Common Turnips, White Flesh: 1, W. Watts, Sheep Court, Bonvilstone, Cardiff (Sutton's Green Globe); 2, Duke of Portland, Welbeck Abbey, Worksop (Sutton's); r., John Perry, The Grange, Oswaldkirk, York (Webb's); h.c., Earl of Dartmouth, Patshull, Wolverhampton (Webb's Green Globe); c., John Perry, The Grange, Oswaldkirk, York (Webb's).

Class 10.—Common Turnips, Yellow Flesh: 1 and 2, Duke of Portland, Welbeck Abbey, Worksop (Sutton's); r., W. Pringle, Temple Farm, Gorebridge, N.B. (Webb's); c., Earl of Dartmouth, Patshull, Wolverhampton (Webb's Invincible).

Class 11.—Carrots, White Belgian: 1, 2, and r., Duke of Portland.

Class 12.—Carrots, any other variety: 1, 2, and r., Duke of Portland; c., Thomas Penn, Wormingham, Thame, Oxon (Webb's Red).

Class 13.—Ox Cabbage: 1 and 2, Duke of Portland; r., John Perry, The Grange, Oswaldkirk, York (Webb's); c., O. Roberts, Willington Lodge, Tarporley (Sutton's).

POTATOES.

Class 14.—Twelve varieties, distinct: 1 and 2, D. H. Wells, Tysoe, Kineton, Warwickshire; 3, Benjamin Parker, Scotforth, Lancaster.

Class 15.—Six varieties, distinct: 1, Stephen T. Parker, 15, Ashforth Road, Scotforth, Lancaster; 2 and 3, D. H. Wells, Tysoe, Kineton, Warwickshire.

Class 16.—Four varieties, distinct, two white and two coloured: 1, Francis Williams, High Street, Thornbury, R.S.O., Glos.; 2, Stephen T. Parker, 15, Ashford Road, Scotforth, Lancaster; 3, D. H. Wells, Tysoe, Kineton, Warwickshire.

Class 17.—Four varieties, distinct, most suitable for field or farm culture: 1, Duke of Portland; 2 and 3, D. H. Wells, Tysoe, Kineton, Warwickshire.

Class 18. Two varieties, distinct, long or kidney shaped: 1, Duke of Portland; 2, Benjamin Parker, Scotforth, Lancaster; 3, D. H. Wells, Tysoe, Kineton, Warwickshire.

Class 19.—Two varieties, distinct, round: 1 and 2, Duke of Portland; 3, Francis Williams, High Street, Thornbury, R.S.O., Glos.

Class 20.—One variety, long or kidney shaped: 1, Duke of Portland; 2, D. H. Wells, Tysoe, Kineton, Warwickshire.

Class 21.—One variety, round: 1, Benjamin Parker; 2, Stephen T. Parker, Scotforth, Lancaster.

Class 22.—The most handsome dish, any variety: 1, Duke of Portland; 2, D. H. Wells, Tysoe, Kineton, Warwickshire.

Class 23.—The best new variety, not yet offered in commerce: 1, H. D. Wells, Tysoe, Kineton, Warwickshire; 2, Francis Williams, High Street, Thornbury, R.S.O., Glos.

Lord Tredegar's.

The annual show held at Newport, Monmouth, and promoted by Lord Tredegar, is always an interesting event, and so it proved last week. It has been annually organised by his lordship for a very long period and intended primarily for the advancement of agriculture and stock breeding in the district, but entries are now attracted from a very wide area, and the show is getting to big dimensions. There were nearly 1,800 entries, and though in some classes there was a falling off, yet in others the entries showed an increase on last year; whilst the quality of the animals shown was fully up to the standard maintained at these annual exhibitions, many of the winners having distinguished themselves at the Royal, the Bath and West, and other well-known shows. The judges were as follows:—Shorthorns, Messrs. J. A. Preece, Thrapston, and T. H. Hutchinson, Catterick; Herefords, Messrs. T. S. Minton, Shrewsbury, and Francis Evans, Bredwardine; without regard to breed, Messrs. T. H. Hutchinson, Catterick, and Francis Evans, Bredwardine; cattle championships and referee, Mr. Samuel Kidner, Milverton, Somerset; sheep (short wool) and pigs, Messrs. Samuel Kidner, Milverton, Somerset, and T. R. Hulbert, Evesham; mountain sheep, Mr. W. S. Miller, Forest Lodge, Brecon. The Shorthorns were, generally speaking, probably the best collection that has ever been seen at Newport, the only fault being that, after treatment for show purposes during the whole of the summer, some of the animals were a little too fat. Mr. Richard Stratton, the well-known Monmouthshire agriculturist, took the honours for the best old bull with that noted animal Great Mogul, which was a winner at the Bath and West and the Hereford and Worcester Shows, and also at the Royal. He has a remarkably fine head and legs, is of good length, and walks very well. The second, Elevetham Monarch, belonging to Lord Calthorpe, is a fine massive bull with plenty of bone, and this was by no means the first time he had taken a card. The whole class was a good one, and the work of the judges was far from being a sinecure. Great Mogul was also reserve champion, but on previous occasions he has taken the premier honour.

The bull calves were strong in number and quality, and the winner of the blue ribbon was Bapton Viceroy, belonging to that well-known breeder Mr. J. Deane Willis, of Codford, Wilts. He is an animal of fine proportions, and will doubtless make a great name during the next few years. Alastair the Second, the property of the Earl of Powis, is also a grand specimen of the breed, and it was a hard task to judge between him and Bapton Viceroy. Mr. Deane Willis also carried off the championship plate for the best male animal in the show with Bapton Viceroy. White Heather, also belonging to Mr. Willis, was first in the milking cow class, and also won the female championship prize. This is the third time in succession she has won the latter distinction at this show. Lord Tredegar had the best two-year-old heifer in Lady Llangibby, and the prize for the best yearling went to Mr. Fred. Phillips.

Although the Herefords were beaten in the champion classes, the entries included some of the best-known show animals, and the section altogether was exceptionally strong. Endale, belonging to Mr. Peter Coats, beat all opposition in the old bull class, being an easy winner. Captain Heygate added to his long list of successes with Cameronian in the yearling class. Mr. Rees Keene's Rugby, which has won at all the big shows, was once more the best bull calf shown. Mr. Coats also carried off the honours in the cow class with Dolly. The calves were an exceptionally strong lot, and the heifer shown by Mr. W. Thomas, of Sully, Barry, is a very promising youngster. Steers, of any breed, were a very fine lot, and the pair shown by Lord Tredegar were good enough for any company.

In the sheep classes Hampshires were mostly the winners. Mr. J. Matthews, Winterbourne, Bristol, showed the best ram lamb, the best three ewe lambs, and the best three fat wether lambs. Pigs were a good all-round sample. Walton Trader and Walton Baroness 14th took honours for Mr. C. D. Phillips, of Newport, in the white breed classes; and the successful exhibitors in the black breed section were Mr. J. Jefferson, Peel Hall, Chester, and Mr. J. G. Talfourd Inman, Highmoor Hall, Henley-on-Thames. There was a very fine poultry exhibit, which included several of the cup winners at the recent Crystal Palace Show.

The horse section was a very good one, and a marked improvement on that seen here a few years ago. In the heavy classes some magnificent animals were shown, and altogether the section was the finest ever seen at this show. In the light horse section, although some excellent animals were shown, the quality generally was not up to expectations. The chief prizes in the cart horse classes went to Sir P. A. Muntz, of Dunsmore, and Sir A. Henderson, M.P., of Faringdon, Berks. Dewstow Pioneer was a good winner in the county class, beating Mr. H. O. Fisher's Lockinge Great Heart by a good number of points. The Dunsmore blood was to the fore in the two-year-old class and the yearling class, but in the cart mare class Sir A. Henderson's Ivy Fashion, a well-known winner, added yet one more to her long list of successes. Quality, a Royal and Bath and West winner, took honours for the Dunsmore Stud in the two-year-old cart filly class; but in the yearling class, Sir P. A. Muntz had to stand second to Sir A. Henderson's Buscot Phantasy, a ruling which has been observed through the kingdom this season. In the local classes there were also some very fine exhibits. In the light classes the results at Weston, Abergavenny, and Monmouth were generally upheld; but it was noticeable that on this occasion Balmoral, belonging to Colonel the Hon. F. C. Morgan, M.P., was not ticketed.
